Today we have this dilemma of giving our money, unconditionally and thus throwing it away, or giving our money with strings and not losing it earning the resentment of the Europeans. We can resolve it if we grapple first with the military crisis, maintain aid and strengthen our force in Europe, and stop this barren policy of retreat and pay.

We have two armies out against us: the army of the Soviet Union spread half across Europe, and the army of the Communist Party spread most of the rest of the way. You cannot halt either with dollars any more than you can hold a donkey with a fence made of hay.

As it stands now the Marshall plan is not only taking money on false pretenses. It is giving it away under false pretenses.

Let's get something better.

Observance of Boy Scout Week

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article that appeared in the Lawrence Sunday Sun, Lawrence, Mass., February 1, 1948, entitled "Observance of Boy Scout Week Time for United States To Consider Great Importance of Scouthood," by Bill Collins, Jr.:

OBSERVANCE OF BOY SCOUT WEEK TIME FOR UNITED STATES TO CONSIDER GREAT IMPORTANCE OF SCOUTHOOD—MANY WORTHY PROGRAMS ON BOY SCOUT CALENDAR

(By Bill Collins, Jr.)

(Boy Scout week opens next Friday and runs through February 12; time for people to recognize vital good being done by scouting in giving boys with growing bodies and growing minds fine ideals to live by.)

Not so long ago, a man known to almost everyone in Greater Lawrence called this writer's attention to an article then appearing in a national magazine. The prominent citizen was rightly angered at the ridicule and half-hearted humor contained in the magazine story. It had to do with Boy Scouts and was inanely titled "Rub Two Boy Scouts Together."

MAN PERTURBED

I read the piece, as requested, and found it be nothing more, apparently, than the remarks of a man who was perturbed because some Boy Scouts threw stones in a lake when he was fishing. The fact that almost every youngster, when walking through woodlands, finds the urge to skim rocks on water irresistible was not considered. The article, which pointed in somewhat sniggering manner to various aspects of Scouting, did not offer any solutions to the faults supposedly discovered. It was much like a man grumbling about a leak in a roof but doing nothing about fixing the roof.

BOY SCOUT WEEK

Today, with Boy Scout Week about to begin next Friday and run through February 12, we would all do well to give pause and consider how important Scouting is to our youngsters. And such consideration, in a time when juvenile delinquency is a threat and the way of life of a people trying to return from a wartime basis to a peacetime security is still somewhat muddled, should be done in seriousness, without any jibe tossing.

IMPORTANT TO UNITED STATES

There are more than 2,120,000 United States members of the Boy Scout organization which was founded 38 years ago. When that many American boys band together in one outfit and enjoy it and what it has to offer, it certainly must be doing some good. When over 2,000,000 youngsters find pleasure in gathering together in troop meetings, Cub Pack meetings, and other activities, the threat of juvenile delinquency is dealt a powerful blow. Such a contribution—by the boys themselves—toward victory in the Nation's fight to keep its youngsters from wrong influences and in a state of mind where they find enjoyment in clean, healthy recreational functions, should not be underestimated. It means a great deal to our country.

TRUTH

Perhaps it is being trite to say that the youth of today are the America of tomorrow—but it is the truth. And it is truth, as well, to say that the Boy Scouts of America is an organization for which we, as Americans, should be thankful.

OVER 2,000,000 BOYS

Over 2,000,000 boys—growing minds—are united. This year the theme of their anniversary is: The Scout citizen at work in his home, in his community, in his Nation, in his world. They are engaged in programs which may mean much to the world, but which already mean much to themselves and the country to which they belong. A Boy Scout is not "just a kid looking for a good deed to do"—he is America's future and the promise of a proud nation.

BIG PROGRAM

Today, the Boy Scouts are engaged in a program of saving and producing food to alleviate the world's food shortages. Each Boy Scout this year is expected to save a bushel, grow a bushel, share a bushel of food. The report of their progress will be made to the President of the United States, to Congress and to the United Nations.

Could you live up to that program or make such a report?

OTHER POINTS

In addition to conserving food and natural resources, the Boy Scouts will emphasize safety and fire prevention, home repairs and personal health. Through their world friendship fund of voluntary gifts they have sent more than 3,000 tons of supplies to help Scout organizations overseas to rebuild. This aid will be continued, for Scouting is having a rebirth in many war-ravaged countries. The Boy Scouts International Bureau in London reports a world membership of 4,409,780 boys and leaders in 42 nations.

WORLD PEACE

Another objective of Scouting is world peace and mutual understanding. Through world Scout Jamborees and the resultant expanding interest in friendships, understanding and personal relationship through correspondence these aims are increasingly being met. Last summer, the sixth world jamboree brought 30,000 Boy Scouts and leaders together in France from 38 nations.

DEMOCRACY AT WORK

At special Boy Scout week meetings, fathers, mothers, and friends will see that the Scout unit is an example of democracy at work. Scouts and parents alike will enjoy an evening given to Scout games, stunts,

campfire songs, and skits. At these meetings each unit will make public part of the report to the Nation, listing the community services it rendered in 1947 and its plans for this year. Scout delegations will also call upon the local government to report on what Scout citizens have done in community service and the scope of the work to be undertaken for the community in the months ahead.

BOY SCOUT SUNDAY

February 8 the actual anniversary date of the original incorporation of the movement in Washington, D. C., will be marked in countless churches of all denominations as Boy Scout Sunday. Scouts and leaders will attend church services in uniform. Those of Jewish faith will hold their observances in synagogues and temples on Friday and Saturday evenings of this week.

IMPORTANT OUTFIT

Since 1910 more than 14,000,000 American boys and men have been identified with the Boy Scouts of America. These are statistics. They are not to be passed over and forgotten—for they are evidence of what an important, vital organization the Boy Scouts of America is.

A BOY SCOUT

A Boy Scout is not just a kid looking for a good deed to do—he is the hope of America's future—the promise of a proud nation.

Thoughts at 70

EXTENSION OF REMARKS

OF

HON. DAVID M. POTTS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. POTTS. Mr. Speaker, Dr. Frank S. Hackett is the founder and headmaster of Riverdale Country School, an American world school situated in the Riverdale section at the northwest part of New York City. In accordance with unanimous consent given to me for the purpose, I submit herewith for inclusion in the Appendix of the RECORD his Thoughts at 70, which I am sure will make very interesting reading not only to the Members of Congress but to all people interested in education as a means of settling conditions in a troubled world:

THOUGHTS AT 70

(By the founder-headmaster of Riverdale, Frank S. Hackett, Litt. D.)

The prayer of dominant desire in this atomic age is universal—to help further conditions essential to a just and lasting peace.

There has been found no one way. The accumulative effect of many diverse efforts, however, makes each single worthy enterprise a matter of importance.

"Since wars begin in the minds of men, it is in the minds of men that the defense of peace must be constructed" (UNESCO).

Though minds of men must be enlightened in groups, at all ages, by all means, the hope of the world lies in the development of better individuals.

When in the heart of one, there rises determination to attack a given problem, a start is made. If he has sufficient equipment of character and intelligence to enlist cooperation, he adds to progress.

Movements such as UNESCO, designed to affect masses of people in every conceivable way, are fundamental.

Ultimately, however, they must depend upon the small unit which reaches the individual—the village church, the "freshwater" college, the little school, and other centers of sustained personal influence.

Forty years for Riverdale, relatively a little school (though grown from 12 students to almost 600, and from one unit to four), confirm the conviction that in this one small educational enterprise, there are possibilities of world-wide influence.

A completely new and unexpected circumstance, New York, the political capital of the world, the home of UN, focuses upon our city, attention of people everywhere. There is now no more influential center of culture, commerce, industry, or communication. Whatever forward steps are taken here, are likely to spread more favorably than those elsewhere.

Through higher education, Columbia and our other great universities affect the world. A school here which exemplifies a vital emphasis in education, transcends the local and the provincial, and as a beacon extends its light to the ends of the earth.

Who can prove that one stage of education is more important than another; that a favorable start affects life more or less than an advanced degree?

The "set" usually comes before college. What a student accomplishes there, depends chiefly upon the ideals and the equipment with which he enters.

A school at the capital of the world, committed to training American youths and their fellows from ther lands for world citizenship, surely is of relative importance to an institution of higher learning.

Necessarily small, that the influence may be personal, such a school may nourish notable lives.

What a difference if several members of UN committees, or even of the Security Council, were schoolmates. Or if representatives of business, the professions, or government in various parts of the world had in youth formed life-long friendships. Or if any, or all, had carried into their relationships the commitments of their school to further the brotherhood of man.

During 40 years, Riverdale has thriven through scholarly, friendly teaching of individuals—classes limited to 15 each.

In the First World War, refugees were welcomed, and ever since, youths from abroad have formed warm friendships with our American students. During World War II, refugees came from all except six European countries, and from Asia Minor and Australia. Today, 21 nations on every continent except Australia, are represented by 50 students—one in six.

For our preponderance of American youth, this is broadening.

They learn that the hearts of their fellows from other lands, beat just as high as their own for progress toward the conditions of peace. They see that they are just as good students, sportsmen, and citizens.

They gain understanding and respect for difference in background.

They develop friends from everywhere. When they visit abroad, they enjoy the homes of those fellows who have been their guests.

Youths from abroad preparing for college here catch the spirit both of our country and of UN.

They take home not just book learning, but understanding.

They realize our best, our less than best, and our worst, and they return determined to emulate the one, and avoid the other.

Perhaps in no other American college preparatory school is there a student body of greater potential world influence. For this high purpose, certainly no other is now better located.

These facts present a responsibility and an opportunity which, at seventy, are challenging. All that has gone before seems preparatory to the improvement and the extension of Riverdale as an American world school.

A year prior to the statesmanship and generosity of the Rockefeller family, through which our city became the capital of the world, we had by many small gifts acquired for the development of Riverdale as an American world school, an additional site of 28 acres in Riverdale. This plateau of virgin land, a quarter mile in length and in breadth, is 255 feet above the river, 10 feet higher than Fort Tryon Park at the north end of Manhattan Island, where stands the Cloisters. Views are even more magnificent.

The story is interesting:

Toward the close of the war, old Riverdale boys in service had used long vigils on Pacific islands or in Europe to consider why the tragic folly of war persists, and to grope for a better future. Their conclusion was unanimous—that we must cause education to do a better job; to produce better men; men who will transcend their national interests with a sense of humanity.

This thought predominates with serious men and women who have experienced wars. It has now spread everywhere. It is in the air. People constantly discuss it, and educators seek for ways to make it effective.

"What is our Riverdale doing about this?" was the challenging cry of our graduates.

We looked at ourselves, and we recognized that our little school is, indeed, a little world.

"Let us develop the American world school we already have," was our answer. "Let us make it better, and enlarge it, so that, continuing our friendly, scholarly teaching in small groups, we may train together for world citizenship more Americans and more fellows from other lands."

Men are made on playing fields as well as in classrooms. Our present site of 12 acres has for years been fully used. There is no room to expand.

Training for world citizenship is, moreover, a continuous process from the beginning of school. Since at Riverdale a boy or a girl can be under the same educational influence until college, it was clear that the development of the whole school in the direction of world understanding must be our effort. For the improvement of every unit of Riverdale, the need for an additional site was apparent.

From the bloody conquest of Okinawa, a Riverdale graduate had just returned safe and sound. A timely visit with his father unfolded the plan to develop Riverdale as an American world school. At once, he welcomed the idea as an expression of thanksgiving and as a means of bettering his own world-wide profession. He volunteered to give 7 acres of this wonderful property, provided the other 21 acres could be secured.

It is a pity that this far-seeing father insists upon anonymity. His generous gift started an unbounded influence.

A number of small owners of the remaining acres were glad to sell their holdings. Through gifts of over a hundred other parents, the school secured title to this whole superb site, from which views over the Hudson to the Palisades and hills of New Jersey and over Van Cortland Park to hills of Westchester, give a sense of remoteness. It seems unbelievable that the home of UN in the center of New York is but a half-hour distant.

In the brief period since the initial gift, careful faculty studies as to the best conditions for the teaching of the future have furnished a basis for preliminary plans by architects—Skidmore, Owings, and Merrill. They have prepared a model of a school community specifically designed to foster world friendship among 600 youths of high-school age, and their teachers. In addition to spacious playing fields, schoolhouse, chapel, gymnasium, auditorium, school of music and of art, there will be 10 residences, each for 30 boys, chosen about equally from other parts of this country and of the world, and from the metropolitan area. Apartment houses for families of teachers and of the maintenance staff of the whole school will constitute perhaps the first school community of this kind.

Thoughts at Seventy concentrate upon this means of broadening school training. Improve and extend here at the capital of the world what Riverdale has long been doing as an American World School, and you will influence schools everywhere to welcome students of other lands, and to train them together for world citizenship, for furtherance of the brotherhood of man.

We Americans, moreover, by sharing with youth of other countries the best we can learn, will make our land "a praise in the earth."

At 70, what is needed is not alone conviction, but the power to convince.

What has thus far been done is heartening.

In but a little more than 2 years, the idea has taken form, become clarified, and appreciably spread.

The great site, which must otherwise have been snapped up for apartment development, has been saved for education. (This site, by the way, is just a little larger than that of Columbia University on Morningside Heights.) Faculty studies in the direction of specific training for world citizenship have already caused the introduction of two new courses, self-examination as to all our procedures, and definite plans for the immediate future, and for the new site.

What remains to be done, however, necessitates the attainment of fresh powers.

First, the school of today, children, boys, girls, parents, teachers, helpers, must catch the vision—feel themselves partners in extending the brotherhood of man through the development of their own Riverdale as an American world school.

Next, this same spirit must be caught by the 3,500 other families whom Riverdale has served in 40 years—the Riverdale family. Knowing what Riverdale has contributed to themselves and to the cause of broadening education, they have reason to become crusaders for the further development of Riverdale as an American world school.

Through the Riverdale family, and those to whom they explain and interpret this concrete effort toward better understanding between peoples, there must be reached that extensive company of men and women to whose vision and support the progress of American education is largely due. They know that education is the key to permanent peace.

They must be made to realize that school is just as important an instrument as college or university.

They will readily see that the scholarly friendly teaching of the individual in small units, is the surest means of personal influence.

They will appreciate that a school committed to training for citizenship of country and of world, located at the seat of UN may well nourish leaders for progress toward peace.

They can be made to see that a great school at the capital of the world may become relatively just as important an influence as a great university.

This is the job that must be done. At 70, to be entrusted with it, begets humility—you measure what you are by what you must be; and you know you need the strength of ten!

Such a responsibility leads into fresh fields and pastures new.

It emphasizes that Riverdale is far more an opportunity than an achievement.

It means growth and development—mountains of "doubt, hesitation, and pain" for faith to remove.

It commands full use of the best you have ever learned, and can learn.

It makes "Thoughts at 70" a misnomer. There is but one thought, one "prayer or dominant desire"—that through the development of the American World School which Riverdale has long been, there may be furthered the supreme essential of peace—the Brotherhood of Man.

It makes vivid the truth that "every morning, life begins."

"It is not the things done which challenge enthusiasm, but the things to be done—the long vista, and the yet unfolded close."

The Port of Boston

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an interesting article on the port of Boston, written by Frank S. Davis, manager of the Maritime Association of the Boston Chamber of Commerce, showing the advantages of Boston as a port, and also the improvements being made in the port of Boston:

BOSTON'S WATER FRONT DUE FOR A REAL "FACE LIFTING"

(By Frank S. Davis, manager, Maritime Association of the Boston Chamber of Commerce)

Nineteen forty-eight promises to be a big year for the port of Boston, at least with respect to the physical improvement of the water front and the port's facilities for the handling of water-borne commerce.

Already since the end of the war 16 additional deep-water berths have been made available for ocean-going vessels by the turning over to the Port of Boston Authority for commercial operation of the Government's Castle Island Terminal and the leasing of the Army Base Wharf and pier sheds to private operators for commercial operation. Castle Island has seven berths and the Army Base nine berths, capable of handling the largest type freighters.

If and when the comprehensive port program of the port of authority is carried out, and it should be given unqualified public and official support, the port's waterfront is due for a real "face lifting" operation during the next year or two.

Already the authority has started work on a $3,000,000 Hoosac Pier equipped with modern facilities including improvement of the present obsolete million-bushel capacity Hoosac grain elevator. Thus the present pile of rubbish, which has been useless for more than 2 years, will be replaced by a port facility that will match anything along the seaboard for the expeditious turn-around of steamers loading or discharging cargo, especially bulk grain, for the economical handling of which the port has long lagged behind other Atlantic ports.

The port authority's $7,000,000 program for reconstructing Mystic Piers at the mouth of the Mystic River, in Charlestown, has likewise progressed to the point where actual construction work will undoubtedly be well under way during the coming year.

Congress has already authorized extension to the new Mystic Piers of the 40-foot inner harbor channel from a point abreast Commonwealth Pier No. 1, in East Boston, where it now ends. This dredging project will be started soon as funds are made available and work on the new Mystic Piers begins.

Completion of these Hoosac and Mystic Piers is important because an analysis shows that more than 50 percent of the port's water-borne commerce originates at or is destined to the busy industrial communities north of Boston.

MODERNIZED PIER

At East Boston the port authority's comprehensive plan includes reconstruction of Commonwealth Pier No. 1 and the acquisition and replacement of the adjoining pier of the Boston & Albany Railroad by a thoroughly up-to-date pier structure.

An outstanding recent addition to the port's facilities is the enlarged and modernized pier of the Boston & Albany Railroad at Jeffries Point in East Boston.

This pier is now equipped with twin giant Gantry cranes capable of handling heaviest lifts—something the port has lacked in the past. Other important developments along the East Boston waterfront include the Hazelton plant at Central Square, and the shipbuilding yard of the General Ship and Engine Works, where modern oceangoing vessels are now being constructed on the site of the old Donald McKay Clipper Shipyard.

Of course, the fifty-million International Logan Airport is rapidly approaching completion and this great project has already proven its national as well as local value, and has provided the port of Boston with a facility that cannot be matched by any seaport in the country.

What Atlantic port has an airport that can be reached in 15 minutes from the business and financial center of the city? The Commonwealth and indeed all New England, may well be proud of this great New England enterprise.

Perhaps the project that will prove to be one of the port's most useful and widely publicized port improvements the coming year will be the $20,000,000 high-level Mystic River Bridge between Charlestown and Chelsea.

The efficient and vigorous Mystic River Bridge Authority has already issued its bonds, completed engineering plans, and awarded some construction contracts.

PLANS FOR NEW BRIDGE

This bridge, when completed, will eliminate the harbor's worst bottleneck and most serious obstruction to navigation.

Likewise, the city of Boston has completed plans and will shortly advertise specifications for a new Meridian Street Bridge over Chelsea River, between East Boston and Chelsea.

So much for the improvement of the water front. But what about increased commerce? Well, here the prospects are good in some respects and not so good with respect to other phases.

Foreign imports and foreign exports show a healthy growth since the war ended, and are rapidly reaching prewar volume. In fact, exports have substantially increased, now running about double the prewar volume. This is due largely to active solicitation of field agencies of the Port of Boston Authority, and also the congested conditions of New York which has caused heavy financial loss to New England industries in the form of delays and extra charges assessed against their exports and imports routed through New York during the past year.

It is difficult to understand why many of our New England industries persist in routing their water-borne traffic through New York when the costly delays could be avoided by utilizing the facilities of their own port of Boston.

Steamship operators may well be subject to the same criticism. A steamer, for instance, from a foreign port, will call at Boston, discharge a few hundred tons of cargo here, and then proceed to New York to discharge thousands of tons, much of it destined to Midwest communities; whereas if discharged at Boston, for forwarding to the interior destinations, much extra expense and delay would be avoided, the goods delivered

much more promptly, and the vessels' turnaround expedited.

NAVIGATION PROJECTS

Prospects with respect to domestic waterborne commerce the coming year are not so promising.

A fine dependable weekly or more frequent service is being maintained by the Intercoastal Lines operating between Boston and Pacific coast points via the Panama Canal. Indications are that this excellent service will be expanded as the volume of cargo warrants.

The UN on Trial

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following editorial taken from the Boston Herald, Boston, Mass., of January 27, 1948, entitled, "The United Nations on Trial":

THE UN ON TRIAL

The United Nations is at a critical point in its development today, and the United States and Britain seem to have turned their backs on it. This is the situation resulting from the failure of the UN thus far to enforce its decision on the partition of Palestine. If the Arabs, in their open defiance of the two-thirds majority vote, succeed in preventing the establishment of a Jewish state, then there seems no alternative but to say a requiem over another world-peace organization. The UN will be done. It cannot surrender in its first clear decree and endure as anything more than an international discussion group.

But in this crucial test the two powers that should be most concerned in maintaining the UN's prestige and authority have averted their gaze. By a flagrant "neutrality" they are implicitly encouraging the Arabs to nullify the partition decision.

The United States is doing this first by invoking the embargo provisions of the Neutrality Act to deprive the Jews of arms, and by failing to take the leadership in setting up some sort of UN police force to enable the Palestine Commission to do its job. Palestine is surrounded by land with Arab states, from which arms can readily be obtained by the former Grand Mufti's guerrilla bands. The Jews must look farther for arms, and especially to us. When we refuse arms to both Jews and Arabs, we are really unneutral, for it is the Jews who feel the effect of the embargo. We are refusing support to the UN decision for which we worked.

We are spending millions to defend Greece against guerrilla bands from adjoining countries, and there the UN issue is less clear than in Palestine. Yet in the Holy Land we facilitate the incursions of guerrillas from Transjordan, Syria, and Egypt.

Within the UN, we have sat back since the adoption of the partition plan, as if we expected it to become a reality without further effort. We are calmly watching the deliberate sabotage of a UN verdict, as if the fate of the thing were no concern of ours.

As for the British, they have dismally failed to keep order in Palestine. They have refused to evacuate a port for Jewish immigration by February 1, as recommended in the partition plan. They have supplied arms to Arab states, where attacks on Palestine are being organized, while denying arms to the Jews. All this Britain has done with a pretext of exercising neutrality. As if this were a time for neutrality when international outlaws were defying the single body of law and order recognized by the greater part of the world!

It is true that the one group able, with arms, to defend immediately the UN's decision is the Jewish Haganah, which has gone beyond defensive policing to engage in reprisals, such as the attack on the Semiramis Hotel. It would be better if it had not, or if the UN had its own constabulary, or if the British could or would keep order.

But the Arabs were indisputably the aggressors, indisputably the ones to institute bloody warfare on civilians. When we deny arms to the Haganah we are offering up scores of little Jewish settlements to the cruel vindictiveness of the ex-Mufti's barbarians.

It takes more than pious words to maintain the United Nations. Now is the time for that something more.

The Climate of Freedom

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. HAGEN. Mr. Speaker, most of us read the newspapers every day. Many of us read books and articles on matters of domestic and world importance. The more we read, the more confused the situation becomes, it seems.

That is why, Mr. Speaker, I would like to call attention to a series of very simply phrased articles in the form of advertisements which appeared during the month of January in several of the outstanding publications of the country such as Newsweek, Time, Nation's Business, and several New York newspapers.

The author put his finger directly on the factors that make America different than any other country in the world. Because these articles have made such a fundamental point, I feel that they would be interesting and beneficial to the Members of Congress and to the readers of the CONGRESSIONAL RECORD.

The articles follow:

THE CLIMATE OF FREEDOM

America has more passenger cars than the rest of the world put together—far more bathtubs and many more radios. It's that way with clothes or food or almost any comfort, convenience, or necessity you can mention.

Other countries have as much metal and enough manpower. There are no atom secrets in a four-door sedan. Modern bathtubs are hardly confidential. And the mysteries of the light bulb are "old hat."

What other countries don't have is "the climate of freedom," the economic and political freedom of enterprise that lets a man or a company pick its own destiny and labor toward it.

Burlington Mills has 75 plants, operating in this climate of freedom where the greatest good for the greatest number is the ultimate yardstick.

This climate of freedom is a precious thing to Burlington Mills, whose plants have prospered under its influence.

From these mills in constantly greater volume come Bur-Mil women's suitings, men's suitings, women's dress fabrics, ribbons, shirtings, and fabrics that go into umbrellas, millinery, comforters, blanket bindings, and an endless list of other items.

The climate of freedom is not exclusively ours, but favors all who produce for a better way of life for America. In our own case the better way means better rayon fabrics at prices low enough to please the millions.

ARE AMERICANS WISER THAN CHINESE?

Are Americans wiser than the Chinese? Of course not. The Chinese have more thousands of years of wisdom behind them than we have.

Then why do Americans have more food than the Chinese?

Is the average American a better man than the average Pole? Of course not. There are countless American citizens whose ancestry is Polish.

Nevertheless take any civilization in recorded history and see if you can find a land or a people so blessed with the things that make life good and worth the living.

Why is this? After all, Americans are just like the peoples they sprang from in other lands.

No supermen built this country. It was the climate of freedom that made the American businessman prosper where, in other lands, his work was partially nullified by unfavorable political systems of one kind or another.

We at Burlington Mills consider ourselves fortunate that we were able to work in this climate of freedom and build perhaps the greatest textile organization of its kind in the world—prodded on by the competition of other mills also free to seek the favor and patronage of the American people.

Thus, unwittingly, because Bur-Mil fabrics are worn by millions and used to adorn millions of homes, Burlington is "woven into the life of America."

CLOTHES MAKE THE COUNTRY

During the war, our soldiers were the best fed and best clothed in the world. In peace, too, Americans eat better and dress better than do other people. Some call it the American way—as if it happened just because Americans want it.

Italians want it, too. So do Germans, Russians, and Portuguese. But they don't have it—even though they have land, resources, manpower.

They have a scarcity of one commodity, however, that is plentiful in America—freedom—freedom of enterprise.

It has made America great. It has made its people better clothed, better housed, and better fed than any other people in recorded history. Because men were free to make things—and because people were free to accept or reject those things—men vied for public acceptance by making their products better and lower priced.

That's how we got a higher standard of living—how business grew great—how the American way came about.

And that's how Burlington Mills became one of the world's greatest producers of textiles. Today, millions are clothed in suits, dresses, shirts, slacks, and hosiery which are Bur-Mil products.

Millions of homes are decorated with drapes, spreads, furniture upholstery made of Burlington fabrics.

Only by making better rayons at lower prices could Burlington have won this preference from these millions.

Only in America could Burlington have been free to seek this preference—a preference that will continue as long as Burlington quality can merit it.

The Battleship "Oregon"

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Oregonian for January 25, 1948:

BARNACLED HULK OF BATTLESHIP "OREGON" LIES FORGOTTEN, NEGLECTED OFF GUAM

The barnacle-crusted hulk of the battleship *Oregon* lies neglected and forgotten at anchor off the south coast of Guam, an indignant ex-Portlander reported last week in a letter to his father.

Lawrence M. DeLong, civilian engineer with the island public works on Guam and son of Merton DeLong, 3291 Southwest Fairmount Boulevard, recently visited the historic warship and made photographs of it. Writing to his father about what he saw and inclosing the pictures, he urged the elder DeLong to head a movement to return the *Oregon* as a monument, museum, and activity center at her old berth by the seawall.

Brought to Portland after being decommissioned by the Navy after World War I, the *Oregon* was a familiar sight in the harbor for many years. Among the organizations which met regularly aboard the vessel was the sea scout ship *Dana*, to which Lawrence DeLong belonged as a youth.

The Navy reclaimed the ship during World War II, removed her engines and superstructure and towed the hulk to the South Pacific with a load of explosives.

DeLong said the *Oregon* now is moored fore and aft in 40 feet of water between Merizo beach and the island of Cocos.

Anxious to get aboard the vessel on which he spent many happy hours as a sea scout, DeLong applied for permission to Rear Adm. C. A. Pownall, commander of the Marianas and Governor of Guam. The Portlander was taken to the *Oregon* on a small patrol boat and allowed to go aboard for an inspection and picture-making tour.

The old ship is empty except for a heavy load of gravel ballast aft which causes her to lie about 6 feet down by the stern and with a slight list to port, DeLong said. Before abandoning the ship the Navy built a cover over a hole cut in the deck for removal of machinery. There is little water in the bilges and the hull and decks are in good condition except for rotten wood planking on the main deck, he reported.

A graduate of Oregon State College in 1938, DeLong worked in the Albina Engine and Machine Works engineering department here during the war, and moved to Tucson, Ariz., later before going to Guam 3 months ago.

Minnesota Potatoes Take on Glamour

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. HAGEN. Mr. Speaker, a well-known columnist and radio commentator, Cedric Adams, of Minneapolis, Minn., writing about a product of the famed Red River Valley area, which partly comprises the Ninth District of Minnesota, which I have the honor to represent, had the following to say:

The lowly spud, of all things, has slid over into the glamour department. Most of us think of a potato as a grubby little product that comes out of the ground, sprouts in the spring if you don't watch it, and goes very well with pan gravy. Members of the Red River Valley Potato Growers Association want to change all that and are well on their way. This year the association members sent out boxes of spuds—gift wrapped, if you please. The message that went with the potatoes read: "You have just opened a gift box of fine potatoes raised in this most fertile region in the Nation. Our potatoes are famous for their wonderful flavor and fine cooking quality. They are stored from digging time to market time in nature's own cold storage plants and are, therefore, available from September to May."

The association also wants you to know that its spuds were grown within sight of the Northern Lights. There's no explanation of what effect that condition has on the spuds, but the statement is on the letterhead anyway. The Red River Valley produces 31,878,000 bushels of potatoes annually. Each spud was individually wrapped, too, like an orange or an apple. Progress, that's what it is. Progress.

This Red River Valley is truly a great inland agricultural empire. It is about 100 miles wide and extends more than 200 miles through eastern North Dakota and South Dakota and western Minnesota into Canada. Through its length runs the famed Red River of the North.

It is an immense area of rich, black loam and rightfully has been named the "Bread basket of the world." The United States Department of Agriculture recognizes the valley as an expansive tract of the Nation's most fertile soil. For several months each year winter locks up that fertility and saves it, hence, with proper farming methods, the valley will retain its high productivity indefinitely.

The total annual agricultural income in the valley exceeds $500,000,000. Major crops produced in 1945 were: wheat, 45,213,940 bushels; oats, 44,766,800 bushels; barley, 28,400,500 bushels; flax 5,201,400 bushels; sugar beets, 305,000 tons; livestock, $70,108,350; potatoes, 31,878,000 bushels.

The above statistics were included in the letter quoted by Cedric Adams. The Red River Valley Potato Growers Association concluded the communication with the following boast:

We want you to try our potatoes and compare them with those from any other region. Baked, boiled, mashed, or fried, you'll find them above par. Residents of the valley take pride in sending you this gift box, and strongly urge you to visit our great Red River Valley empire and inspect its many products.

What has been accomplished in the Red River Valley during the past few years demonstrates vividly the effectiveness of free enterprise in a free republic.

Some Views of a Thoughtful Citizen

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. CUNNINGHAM. Mr. Speaker, every once in a while there comes to my desk a letter which is thoughtful and indicative of the thinking of some of the people. The following is such a letter, and I hope many of my colleagues will take the time to read it. Mr. James, the writer, is an outstanding attorney of Des Moines, Iowa:

DES MOINES, IOWA, *January 26, 1948.*
Hon. PAUL CUNNINGHAM,
House Office Building,
Washington, D. C.

MY DEAR PAUL: Washington must, indeed, be an interesting place to be in these days; the most important city in the world; for decisions made there, right or wrong, affect the entire world; and the results are inescapable. Never has it been more important to be right; never so tragic to be wrong.

It seems to me to be our inescapable responsibility to go through with the Marshall plan. We cannot, for our own safety, allow western Europe to become vassal to Communist Russia. There is no happy choice, between peace and war. We are going to have to take "the least bad" course, in many instances. And while it is hard to have to throw billions more into Europe, it is certain that unless we do, we shall have to eventually pay far more, in both blood and money to save ourselves.

I had hoped that the United Nations might be created with the essential power to preserve peace, and bring the world together as a unit to preserve law and order. But it is evident that Stalin is no better than, and no different from Hitler. They, too, want "one world," by conquest, or intimidation, over which they propose to rule as the masters. Opposed thereto, however, we have created, and we insisted upon it, an international debating society, powerless to use any force to preserve order, powerless to make any laws or any rules, and hamstrung at every turn by a Russian veto.

It is clear if the United Nations is to be saved, and civilization saved from an atomic war, that a convention must be called to amend the charter, to give us a United Nations with the power to meet these problems; and, if Russia refuses to go along, let her go, keeping the door open for a voluntary return, but bring the peace-loving nations into accord, and cooperation in an effective and powerful international organization. Otherwise, we will continue to find ourselves operating unilaterally, and losing the friendship and support of those whom we are protecting.

I am also concerned about the tax problem. The present rates are such that no ordinary mortal, like me, can hope to become self-sustaining at or upon retirement. How many can ever hope to accumulate as much as $100,000, with present rates of income tax? And, if they did so, with interest at 2½ percent they could hope for an income of $2,500 per year, and be safe. A professional man in these times cannot see his way clear to independence, ever. He finds that he has been and is paying income taxes beyond anything he can save for his old age.

Have been thinking that it would be good policy, and help on the inflation problem, if

every taxpayer was granted an exemption up to a certain percentage of his income, for all sums invested by him annually in Government bonds. This would encourage people to save for their own old age; it would soak up excess funds, and retard inflation; it would bolster and sustain the bond market; it would provide extra billions for Government purposes; and it would reward men and women to some small extent for prudence and concern for their own old age.

Most of us, I am sure, would prefer to care for ourselves in old age, and the thought of dependence upon anyone else, including Government hand-outs is anathema. Having educated three children to university degrees, and having a son with six more years of college and university ahead of him, and with Uncle Sam my principal "dependent," to whom I have been contributing more than I have to any member of my family, myself, or possible saving for old age, I am concerned. This sort of a situation is general, I am sure. And it isn't good for morale. All of us need, and must have, reasonable hope for the future, reasonable assurance that we can make it to a reasonable degree of modest independence. That is denied us under the present rate of taxation; and the present, and probable future return (interest) on what little we can save.

None of us want to shirk. We all want to do our fair share, even sacrifice for the common good. This whole problem is very personal for every taxpayer.

It does seem to me that the suggestion I have made has merit; and that later, we would build up an abundance of private capital (savings) with which our free enterprise system can be given the necessary support to keep on building. Capital comes only from savings. If we continue to make saving impossible, or hopeless in achievement of any worth-while ultimate reward, we shall have no private capital, and we shall find ourselves confronted, as was Britain, in going socialist, and turning to state ownership, and state financing, because the citizens do not have the capital to support essential development of necessary industry.

The Government is either going to have to recognize the importance and necessity of sustaining individual accumulation of capital savings, and incentive to individual independence in old age; or the Government is going to have to provide the ways and means of supporting substantially all of its people at retirement age, and likewise providing the essential industrial capital to support and sustain production.

A reasonable exemption for personal savings would, in my opinion be a most salutary provision in the new law; and, in my judgment, bring the Treasury billions of dollars at a low rate of interest, and build up a fund of private capital for later investment, that will undoubtedly be badly needed, and will save the free enterprise system from grave danger, if not collapse.

Kindest regards.

Yours,

PAUL G. JAMES.

American Air Power

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. WILLIAMS. Mr. Speaker, according to an Associated Press story of January 29, Air Force Secretary Stuart Symington ranks the United States third among the major powers in air strength. He cited previously printed reports that Russia is building planes at a rate of 75,000 to 100,000 per year, most of them being front-line ships.

According to the story, Secretary Symington stated that even with the proposed 70-group Air Force in the United States, we would still have only a one-shot proposition in the event of attack.

Mr. Speaker, these figures and assertions on the part of Secretary Symington are alarming and should tend to awaken the American people to the realization of the complete inadequacy of our present military machine, and more particularly our Air Force.

While Congress ponders whether or not to gamble $19,000,000,000 in an attempt to purchase the good will and political ideologies of Europe, Russia is building and equipping the mightiest peacetime air armada in history.

To me, Mr. Speaker, it would appear to be pure folly for us to appropriate $19,000,000,000 during the next 4 years with which to carry on our cold war against Soviet Russia, and at the same time fail or refuse to back up that effort with a first-class fighting potential. Whether we pass the Marshall plan or not, we must strengthen our air defenses to the point where this country would be able to defend itself with action as well as words.

It has been shown in the past that totalitarian dictators speak only the language of force in their dealings with their neighbors. Stalin is no exception to this rule, and we must, if we are to survive as a nation, arm ourselves to such a degree that we would, if necessary, be able to implement our words with military action.

Mr. Speaker, I consider the information contained in the previously mentioned news item of such major importance that I wish to include it herewith as part of my remarks. It follows:

AIR CHIEF RANKS WORLD AIR POWER: RUSSIA, FIRST; GREAT BRITAIN, SECOND; UNITED STATES, THIRD

WASHINGTON, January 29.—Air Force Secretary Symington believes that the United States ranks behind Russia and England in air power.

He fears that a force of the presently planned size would be wiped out early in any new air war, unless it got huge reinforcements fast.

He figures it would get a large part of that beating in trying to help evacuate American forces from Europe and avoid a new and magnified Bataan.

Symington expressed his views in an article written for American magazine, in which he gave this formula for the Nation's security:

"An impregnable air curtain—a curtain sufficiently strong so that no fleet of hostile planes or waves of guided missiles can reach the mainland of this country."

"No longer are we the leading air power of the world," Symington said. "In quantity we have slipped behind the Soviet Union, and qualitatively, both Russia and England have numerous developments that exceed our own efforts. England, despite her severe economic strain as a result of the war, is devoting a greater portion of her defense budget to an air force than we are."

He repeated previously printed reports that Russia is building planes at a rate of 75,000 to 100,000 a year, and is turning out copies of the B-29 superfortress in fairly sizable numbers.

Symington said the 70-group Air Force now planned would be "strictly a one-shot proposition." Without tremendous, quick replacement, he figured it too little for these jobs:

"1. To support our own industries.

"2. To support the evacuation, if possible, of our pitifully out-numbered occupation troops in Europe, where there is the ever-present danger of Bataan being repeated on a large scale, plus protection of the advanced bases from which our own air offensive must strike.

"3. To launch and sustain a full-scale air offensive and destroy the enemy's industry and economy with atomic bombs and the latest weapons."

JET PLANE LAG

Symington asserted that this country is still behind the British and Russians in jet planes, although we are catching up in this field.

He said that the British have a jet fighter more advanced than ours and that the Russians had 100 new jet planes in one show last August, and exhibited at least eight different types of jet planes including a four-engine jet bomber.

"One of their fighters is a swept-back wing type," the Secretary said.

"At time of this writing the United States has produced only one experimental model of this type. It indicates that the Soviet air force is preparing to hurdle the trans-sonic speed barrier. We haven't done that yet."

(An Air Force research plane with straight wings has exceeded the speed of sound, although the Air Force declines to say so publicly, and much more advanced research planes are being built. The Air Force has a swept-back wing fighter, the XP-86, in production, and swept-back wing six-engine jet bomber flying. It has an eight-engine jet bomber, two four-engine jet bombers, a four-engine jet all-weather fighter, and numerous jet fighter types flying or ready to fly. This country has built nearly 2,000 jet planes.)

HUGE RED OUTPUT

Symington said that the Russian massing of 100 jet planes indicated the Soviet must have at least 300 to 500 such planes in existence and an indicated monthly output of at least 2,000.

Symington said this country must have a 70-group Air Force, backed by an industry able to expand that force with "extraordinary rapidity to at least 180 groups and perhaps as high as 350 groups if the war should last 3 years."

He said the Air Force would have to spend $8,100,000,000 annually for a 70-group force.

The President's Air Policy Commission has accepted the Air Force's long-standing recommendation putting the cost at $4,229,000,000 for this calendar year and $4,539,000,000 for 1949.

Asserting that from its position as the world's mightiest air power, the United States has "demoralized as well as demobilized," Symington said, "if we had kept strong, there might not even have been a threat of World War III today."

"If we hurry and catch up, the threat may recede. But the very nature of air preparedness demands that we waste not another single day."

Mr. Speaker, Secretary Symington has sounded a warning that must not be ignored.

Admiral Richard E. Byrd

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I append the following copy of the speech made by the junior Senator of Virginia, the Honorable A. WILLIS ROBERTSON, at the Statler Hotel, on January 29, 1948, on the occasion of the presentation of a gold medal of achievement to Rear Adm. Richard Evelyn Byrd:

It gives me pleasure to present on behalf of the Society of Virginia its gold medal of achievement to one of Virginia's most distinguished sons. He was born in the historic city of Winchester, just 1 year after I was born in the neighboring city of Martinsburg and spent a boyhood in the company of heroes of the Confederate Army who were followers of Lee and Jackson and some of whom participated in the 49 battles in which Winchester was either won or lost during the War Between the States.

It is not surprising that one reared in that atmosphere should have selected Jackson's school in Lexington—the Virginia Military Institute—as his first college after leaving a preparatory school that gave military training, the Shenandoah Valley Military Academy. After taking literary courses at the University of Virginia he entered the United States Naval Academy, where he was graduated in 1912.

It has been truthfully said that the three major factors influencing a man's destiny are his heredity, his environment, and his will power. Admiral Byrd inherited the spirit as well as the blood of the Englishmen who started with four little islands that could have been placed in the State of Texas where his father was born with an area the size of Virginia left over and developed them into an empire on which the sun never set. His environment was that which produced Daniel Morgan of the Long Rifles, in the Revolutionary period, leaders in the War Between the States, and leaders in the subsequent business, political, and religious life of the Old Dominion, which frankly makes all of us proud to say that we are Virginians.

But over and above all else, the destiny of Dick Byrd was shaped by his will power, which overcame the physical handicap which he incurred from a naval injury and which caused him in many an emergency to meet danger unafraid because he had faith in God and faith in himself.

When he had been out of the Naval Academy for less than 7 years, he had received 17 governmental citations, 4 of which were for bravery in World War I.

Ten years later he was promoted to the rank of rear admiral, being the youngest officer up to that time to hold that rank in the Navy.

In two world wars he served in an outstanding way. The lack of publicity concerning his service in World War II is thus explained by the Chief of Naval Operations, Admiral Nimitz, who recently said:

"From the many questions asked about Admiral Byrd, I know that there is a very widespread interest in this country as to what has become of him after he vanished from the news columns 6 years ago after his last expedition ended in 1940. Now it can be told.

"He disappeared from view in 1941, first, because his work has been largely of a very secret nature, and, secondly, because he chose and insisted upon completely subordinating himself in teamwork as good naval officers believe in doing.

"I am happy to tell you that Dick Byrd did the splendid job in the war that his fellow citizens would expect of him. This is his fourth citation for war work. He was overseas four times, having been at both fronts in connection with aviation and other matters. He has not been frozen in at the South Pole during all these years, but has been serving his country."

In between those two wars Admiral Byrd was a member of the crew of the ZR-2, which blew up in England over the Humber River and killed 42 out of the 46 men aboard, he commanded the aviation unit of the Navy-MacMillan Polar Expedition in 1925, he flew over the North Pole in 1926, he made a nonstop flight to France in 1927. He led a 2-year expedition to the South Pole in 1928 and a second expedition to the South Pole in 1933, and the Government expedition to the South Pole in 1939. For his war services and for his contribution to science Admiral Byrd has received 70 medals. Of the 25 citations that he has received from the United States Government 10 mention courage, including 2 mentions of extraordinary heroism.

The greatest, noblest, and most important to human society of all of his explorations is the one in which he is now engaged, namely, to plumb the depths of the human heart to find the way by which men can live together in peace and unity, and civilization as we know it can be protected from an atomic war which undoubtedly would fulfill the prediction of H. G. Wells, who said:

"Civilization, which commenced in a cave and behind a windbreak, will end in the disease-soaked ruins of a slum."

With all the accumulated evidence in the 2,000 years of recorded history which recounts the futiltiy of mankind to permanently settle international differences by means of armed conflict, Dick Byrd will need, more than he ever needed when he faced the killing power of enemy batteries, his faith in God. But Dick Byrd believes that peace begins in a man's heart when he demonstrates his faith. In his own life he has found that peace. His present supreme mission in life is to take that message to others. He realizes that the conflict that is shaping up in the world is between those who profess faith in God and those who deny that faith. He realizes that those who profess faith in God far outnumber those who deny it, but that they lack the zeal and willingness to sacrifice of the smaller group. He realizes that no material measure—no political change, no economic reform, no international organization—will of itself establish peace, and that peace has escaped the chancelleries mainly because it has found no home in the hearts of men. While he wants us to continue to work through international cooperation for the economic welfare of the masses and a system of law throughout the world based upon equality and justice, he also wants us to recognize the fundamental fact that progress is first mental and spiritual. Therefore, he is working to help us find peace at home by overcoming hate, greed, and fear, and by our works to prove our faith in the Golden Rule.

I am happy to associate myself with him in the belief that if we do so we will find that there is a power stronger than the atomic bomb to rend the iron curtain behind which 180,000,000 misinformed people regard us as enemies bent upon their destruction.

In voting to award Admiral Byrd its first Gold Medal of Achievement the Society of Virginia likewise desired for that award to be accompanied with the following citation:

"The citation for the Gold Medal of Achievement of the Society of Virginia, awarded Rear Adm. Richard Evelyn Byrd, January 29, 1948.

"Taking counsel of his own courage, spurred on by an irresistible desire and an indomitable will to explore the flaming walls of the world, steeled by a quiet determination to obtain for his country and for science first-hand knowledge of the unknown lands in the icy embrace of the two poles, Richard Evelyn Byrd, in a series of precarious and daring adventures by land, sea, and air, extending over a period of 20 years, in constant and unceasing jeopardy of his own life and carrying the fearful responsibility of the lives of others, explored, chartered, and added to the geography of the world for all time the seas, lands, and mountain ranges of the vast regions of the Poles.

"He is the first man to fly over the North Pole, the first man to fly over the South Pole, and the only man to fly over both. He has looked down upon more square miles of unknown area than any human being in all history. He has added to the knowledge of mankind scientific data of incalculable value, geographical, geological, meteorological, and geodetic. He has carried the American flag over both poles and planted it at the farthest points north and south that have ever beheld its shining folds.

"He is the only living American who has added one square mile of territory to his country's empire and the only American since Lewis and Clark who has extended the American domain by exploration and discovery. With the antique courage of an Achilles, the dogged perseverance of a Ulysses and the skill and daring worthy of his long line of Virginian forebears, he has made himself a scientist notable in an age of science, a patriot outstanding in an age of patriotism, and an explorer high in the rank of all time and second to none in the world today. Sic Igitur ad Astra."

Admiral Byrd, warrior, scientist, and Christian leader, I salute you; the sons and daughters of your native State salute you; the whole world will applaud my action in now presenting to you this Gold Medal of Achievement.

Bill To Call in and Exchange All United States Currency, To Strengthen the National Defense, and To Make European Aid More Effective, Introduced in Congress Today

EXTENSION OF REMARKS
OF
HON. FRANK L. SUNDSTROM
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. SUNDSTROM. Mr. Speaker, I have today introduced a bill directing the Secretary of the Treasury to call in all United States currency and give new currency equal in exchange therefor.

If enacted into law, the effect of my bill would be to—

First. Greatly strengthen financially the governments of those nations to which we are sending dollars in aid.

Second. Increase confidence in these strengthened governments, thereby enabling them more effectively to resist

communism and help to avert a third world war.

Third. Determine with greater accuracy the ability of these governments to help themselves.

Fourth. Save the United States Government a huge sum which would otherwise be required for European relief.

Fifth. Lighten the financial burden necessary for us to maintain our isolated national defense by utilizing the military strength of rehabilitated governments in Europe and Asia.

Sixth. Improve gold cover for our currencies through relating gold cover to the amount of our currencies actually in existence and outstanding.

As of September 1947, $28,567,000,000 in United States currency was in circulation. No one knows how much of this amount is hoarded abroad by persons and private foreign-business interests. Estimates are based partly on prewar American properties; military expenditures by our Government and by our overseas military personnel in World War II; current tourist expenditures, and international-exchange manipulations. Competent authorities believe that this amount will run into billions of dollars.

Europeans and Asiatics always have hoarded American dollars, both while in their native land and after arrival here, should they enter the United States. There is not a European or Asiatic government today which commands the unreserved confidence of its own nationals. My plan would rob no hoarder, but it would require that, within a certain time limit, these hoardings be turned into the central government, which would turn them over to our Government and receive new currency, dollar for dollar, in exchange therefor.

There are many other advantages for my plan, including destruction of black markets, and closer control of tax evaders and counterfeiters.

A Cost-of-Living Pay Increase for Postal Employees

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. MASON. Mr. Speaker, when this Congress passed H. R. 3035, the postal salary reclassification bill of 1945, most of the inequalities and injustices that had existed in the postal service for many years were corrected. That bill provided a permanent annual basic pay increase of $400 for all postal employees; it increased the opportunities for promotion and advancement in the postal service; and it introduced the principle of longevity pay into many branches of the postal service. H. R. 3035 also provided for time and one-half for overtime work, 10 percent extra on the hourly day rates for night work; and it gave all postal employees 15 days leave of absence and 10 days sick leave with pay each year. That bill was a comprehensive postal-salary-increase bill, carefully worked out, a bill that provided the long-overdue revamping of the postal service pay schedule, and a long-overdue reward for the loyal efficient service of the postal employees.

Mr. Speaker, Congressman Thomas Burch, of Virginia, chairman of the Post Office and Post Roads Committee, was the author of H. R. 3035, and he is entitled to most of the credit for its preparation and passage. H. R. 3035 was passed 3 years ago. That bill could be classified as a good job well done. Almost everyone connected with the postal service felt that the long-deferred justice for the forgotten postal employee had finally been brought about, and the postal employees had finally been given proper recognition for their loyal, faithful service.

However, Mr. Speaker, that was 3 years ago. What has happened since then? We all know that the cost of living has skyrocketed during the last 3 years. A postal pay increase that was adequate and fair in 1945 does not mean that the postal employee's pay today is adequate when we consider the present inflated cost of living. And so the Post Office and Civil Service Committee has before it for consideration today Congressman BUTLER'S bill, H. R. 4640, and various other bills, all providing for a cost-of-living pay increase for postal employees to tide them over this period of price inflation.

Mr. Speaker, under present living conditions is a cost-of-living pay increase for postal employees a fair request? I believe it is, and I believe it should be granted. As a Member of this Congress, who served 10 years on the Post Office and Post Roads Committee, and as a result of that service learned something about the postal service and its needs, I stand ready to vote for a fair, equitable, cost-of-living pay raise for the employees of the postal service; and I urge that favorable action be taken by the Post Office and Civil Service Committee upon such a pay raise bill.

Mr. Speaker, as a part of my remarks, I insert the following excellent statement entitled "Dollars or Sense" which gives a clear-cut analysis of the situation confronting the postal service today. It was prepared by Leo E. George, president of the National Foundation of Post Office Clerks, and was carried in the January 1948 issue of the Union Postal Clerk, the official organ of that organization:

DOLLARS OR SENSE

Again is heard the cry that the postal service is in the red. The Committee on Appropriations is considering the items to be included in various bills to be presented to the second session of the Eightieth Congress for the expense of operating the United States Government during the fiscal year ending June 30, 1949.

There will be millions, lots of millions of dollars for the executive departments, the judiciary, and the Congress, and numerous independent offices and agencies.

SERVICES ESSENTIAL TO NATION

They are all agencies of the United States Government that have been established by the Congress to perform specific functions that are essential to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity. They are all essential services and in the interest of the welfare of the people and of the Nation.

The post office, the function of which is to collect, transport, and deliver more than 35 billions of pieces of mail annually and to render millions of special-service transactions, serving every one of the country's 140 million people, individually as well as collectively, is the only Government agency that incurs a deficit.

Although postal service is an essential to nearly every individual and to every business, as well as to the social and cultural life of the community, it is singled out, among all public services, to be the whipping boy when appropriations are considered.

CLOSEST TO THE PEOPLE

The anomaly of the position of the Post Office Department is that it is charged with performing a universal service that comes closest to most of the people and that is, to most people, the most essential service rendered by the Government. However, its appropriations, as well as its charges for service, and most of its rates of expenditures, are determined by the Congress or by some other Government agency.

Postage rates are fixed by Congress. In the determination of postal rates, due consideration is given to the public welfare and in many cases are deliberately set far below the cost of performance in the interest of unrestricted dissemination of news and knowledge or to encourage the exchange of commodities.

Rates of compensation to the railroads and to the air service companies for carrying the mail are set by the Interstate Commerce Commission and the Civil Aeronautics Board, respectively, and in their determination first consideration is given to the welfare of the carrying companies.

Yet, when expenditures exceed revenues, the Post Office Department is tabbed the Government's "venture in big business" and the meager salaries paid to postal employees cited as the cause for a so-called deficit. A comparison of salaries paid in the Postal Service with those in any Government department or comparable private business or industry will yield some startling and enlightening facts. From the Postmaster General down to the lowest paid custodial laborer, no business worthy of the name would expect efficient service at wages or salaries paid in the Postal Service for comparable service and required qualifications.

MUST HAVE MODERN EQUIPMENT

Also, if the postal service is considered primarily as a business instead of a public service, good business practice would prompt immediate expenditures for modern buildings and equipment that would be investments in efficiency and economy rather than merely expenditures.

The making of bricks without straw was simple compared to rendering efficient and economical service in buildings, that are inadequate, dirty, dingy, and without ordinary sanitation and safety standards that would be required in other business structures, or with equipment that is obsolete or obsolescent, or without modern equipment of any kind. These are conditions that exist, not figures of speech.

RIGHT TO ADEQUATE SALARIES

Postal employees are rendering efficient service. It can be made better. They want to make it better. They have pride in their service and want it to be without flaw. Postal

employees are also human beings and, as American citizens, have responsibilites and problems and duties to family, church, and State in the same measure as other citizens.

They do not expect nor do they ask for the unreasonable. They do ask, and have a right to expect, adequate salaries and conditions of work commensurate with American standards.

Sabotaging the Northwest

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian for January 29, 1948:

SABOTAGING THE NORTHWEST

The Rockwell reclamation bill, as amended and passed by the House of Representatives, 232 to 120, last week, is the most dangerous threat yet made against the industrial and agricultural development of the Pacific Northwest. It is also a loaded gun aimed at the head of the Republican Presidential nominee and Republican Members of Congress, because if the Senate approves it in its present form President Truman doubtless will veto it. The President will make votes and the Republican Party will lose them in the Northwest.

Powerful interests of the East, the South, and California have at last a vehicle to realize their long-time hope of stifling industrial growth in the Northwest by forcing upward the basic rates for electricity from the Columbia River system.

Senator CORDON'S office reports that Interior Department experts have found no alternative to a drastic increase in the $17.50 per kilowatt year wholesale rate for Columbia River power from the Bonneville-Grand Coulee system if the bill survives. One group tentatively estimates that a rate of $19.50 would be necessary; another group thinks the increase may have to be to $22 or more. Studies have not been completed.

The Rockwell bill, H. R. 2873, was sponsored by the national reclamation association last session as an answer to criticism that the repayment of power features of western reclamation projects was not required by law to include interest, and that interest when paid voluntarily or by interagency agreement (as for Grand Coulee, at 3 percent) might be applied by the Reclamation Bureau on new projects rather than being turned into the Treasury.

The House Committee on Public Lands reported a compromise bill requiring 2½-percent interest on power repayments and limiting the repayment period on power facilities to 78 years. That portion of power revenues assigned to the repayment of irrigation costs would have been paid, without interest, within a "reasonable period of years" not exceeding the useful life of the irrigation features.

The amendments proposed from the floor by Representative ALFRED J. ELLIOTT, of California, and adopted by the House with an overwhelming vote of eastern and southern Members limited the repayment period on both features to 50 years.

Present law does not fix a definite amortization period. By agreement, the Bonneville Power Administration and the Bureau of Reclamation provided a power-repayment schedule based on fixed supply and revenues for the Columbia Basin project. When the agreement was made rising costs already had added $74,561,820 to the projected total. The continued advance in costs now has raised that figure to nearly $100,000,000. These were to be amortized by extension of the amortization period. The schedule, based on 1940 costs, would have been completed, with applied power revenues totaling $665,044,190, in the year 2017. Fourteen or fifteen years would have been added to take care of the cost increase due to higher prices for materials, wages, etc.

The amended Rockwell bill demands that commercial power revenues applicable to the Columbia Basin project be paid by the year 2002, cutting 29 or 30 years off the amortization period. The minimum estimate is that this would add $3,000,000 annually to BPA's payments, or $2,000,000 more than can be obtained under the present $17.50 rate from scheduled availability of Grand Coulee power. BPA cannot incur a deficit. Hence, higher power rates.

But that may be only the beginning. New Reclamation Bureau projects will not have the favorable earning capacity from power installation that Grand Coulee has. Still higher rates would have to be figured for them, if the 50-year amortization is upheld.

No one yet has devised a method of identifying kilowatts from Grand Coulee from those of Bonneville or elsewhere when turned into the same system. The obvious result would be a system-wide increase in rates, readjustment of long-term power contracts, and deadly discouragement of new industries which are expected to pay the bill.

The amended Rockwell bill is political dynamite for the Republican Party. But it is also sabotage of the Northwest's future, which intimately is linked with low-cost power. The Senate should bury it beyond hope of revival.

Farmers Home Administration

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. FISHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which I have received from Hon. Dillard B. Lassiter, Administrator of the Farmers Home Administration, together with an excerpt from the Budget of the United States, 1949:

DEPARTMENT OF AGRICULTURE,
FARMERS HOME ADMINISTRATION,
Washington, D. C., January 30, 1948.

Hon. O. C. FISHER,
House of Representatives.

DEAR MR. FISHER: We appreciate your interest in the program of the Farmers Home Administration as evidenced by your letter of January 19, and we are glad to furnish you the information requested.

I believe the enclosed excerpt from the Budget of the United States—1949—will provide a good general picture of the background and operations of this agency and its predecessors, and the enclosed publications which describe our farm purchases and our operating loans will probably furnish the general information you desire regarding the way the program operates at the county level and the types of farm families who are eligible.

The proposed budget for the fiscal year 1949 calls for an increase of $15,000,000 in the funds for production and subsistence loans, while the proposed amounts for land purchase and water-facilities loans remain the same as the amounts provided this year. This increased budget recommendation was believed necessary despite the substantial increase in farm production and income because the most recent census reports show that more than half of our farmers received gross incomes of less than $1,500 per year and one-fourth had gross incomes under $600.

The need is also indicated clearly by the number of applications received in our county offices. In Texas, for example, applications for production and subsistence loans on hand at the end of 1947 totaled 3,174, of which 1,597 are veterans; 112 applications wanted credit for installing water facilities; and there were 6,615 applications, 3,981 of them from veterans, for farm-purchase loans. In addition, there were 6,379 persons, 3,473 of them veterans, who did not file for loans because they learned when calling at the county office that funds were already exhausted.

Actual distribution of the 1948 fiscal-year appropriation to the various States allowed Texas $2,222,600 for new applicants who desired annual or adjustment-type operating loans, and by the end of 1947, $1,238,395 of this had already been obligated. Most of the less-than-a-million dollars remaining would be required for processing loans already approved by county committees, and few of the 3,174 applications now on hand can be considered before new appropriations are provided.

Apparently a similar story must be told of the 6,379 persons who have applications on file for farm-ownership loans. Of the $15,000,000 appropriated nationally, Texas has already used $613,408 in processing the 58 farm-purchase loans made in that State. There are more applications on file in the State of Texas alone than could actually have been made with the entire appropriation received for the Nation for this fiscal year.

The records being made by the borrowers who were able to obtain loan funds is so outstanding in Texas that they deserve special mention. In the farm-ownership program to date, 5,008 families have been helped to buy farms of their own, and of these 1,263 have already repaid in full, 30 or more years ahead of schedule. Of those remaining, not a single borrower has been dropped from the program for failure to repay, and only two have been changed over to collection-only status because they have left the farm owing the Government a balance on their indebtedness.

Collections throughout the program have been excellent. A total of $114,470,470 has been repaid on real-estate and rehabilitation loans in Texas, while the remaining outstanding indebtedness as of the end of 1947 was only $49,473,991. Most of this money is owed by the 15,886 active operating loan borrowers or the 3,743 active real estate loan borrowers whose indebtedness has not yet matured, and who may have, in the case of the farm-ownership families, up to 40 years remaining of their scheduled amortization period. Of the additional $54,000,000 loaned under the emergency crop and feed loan program, over $46,000,000 has been collected to date.

These unusual collection records have been made possible because the Farmers' Home borrowers receive more than credit when they participate in the agency program. Before a loan is actually processed, the applicant and the county supervisor sit down together and draw up a realistic farm and home plan which will fit the applicant's ability, can be performed by the family without outside labor, and will work on the farm which the applicant will operate. Then

they figure out the funds necessary to make the plan work, and the application is for this amount. Following this planning session a committee of three local farmers studies the plan, discusses it with the supervisor, and frequently calls in the applicant for questioning. If the loan is to purchase a farm, this committee also appraises the farm to be purchased.

If the committee approves the loan, we provide the needed credit, but do not end our services with the delivery of a check. We follow up the loan making by on-the-farm guidance in sound farm and home management methods, farm record keeping, and technical information. And the committee, too, follows up each case through annual analyses of the records made by the borrower. This committee may recommend that the family be graduated to private credit sources because they are considered as qualified for it, or that we make a further loan to give the borrower an opportunity to expand or to operate more efficiently, or may recommend that the borrower be dropped from the program for failure to repay on schedule or to follow his plan of sound operations.

I hope that we have given you the information you desire, but if you need more specific information or other types of information, we will be more than glad to hear from you and to be of any further help that we can.

Sincerely yours,

DILLARD B. LASSETER, *Administrator.*

[Excerpt from the Budget of the United States—1949, p. 264]

FARMERS HOME ADMINISTRATION

The Farmers Home Administration is authorized to (1) make farm-ownership loans up to the normal value of a farm and necessary improvements at 3.5 percent interest, loans to be amortized over 40-year periods; (2) to insure 40-year farm-ownership loans by private lenders up to 90 percent of the normal value of the farm; (3) make production and subsistence loans up to $3,500 for 1 to 5 years at 5 percent for buying livestock, seed, farm equipment, and other farm needs. Water facility loans also are made by the Administration in the 17 Western States under authority of the Water Facilities Act of 1937. From the beginning of the farm-ownership program in fiscal year 1938 through fiscal year 1947, a total of 47,104 families had received loans amounting to $234,000,000 for the purchase and development of family-type farms. Since inception of the program, over $104,000,000 of principal and over $28,000,000 of interest have been repaid, and 11,233 borrowers have paid their loans in full. About 25,000 active borrowers are ahead of schedule on their payments, aggregating nearly $22,000,000. Liquidations since inception of the program have resulted in a net loss to the Government of $50,830, or one-fiftieth of 1 percent of the total loans made. The insured mortgage program is just being initiated during the current fiscal year.

From 1935 through October 31, 1946, loans aggregating $1,000,000,000 of the rural rehabilitation type were made by the predecessors of FHA to over 1,000,000 families for livestock, equipment, and other farm needs. Farm supervisors helped these families plan their farming and put the plans into practice. Principal repayments on these loans have amounted to approximately 90 percent of maturities. Annual emergency crop and feed loans made by the Farm Credit Administration and predecessor agencies from 1918 through October 31, 1946, amounted to $576,000,000, of which approximately 80 percent has been repaid. These annual and rural rehabilitation loans were replaced by the production and subsistence loans under the new FHA act which became effective November 1, 1946.

While farm production and farm income have increased substantially in recent years, the 1945 census shows that half the Nation's farmers received gross farm incomes under $1,500 in 1944, and one-fourth of the farms produced agricultural products valued at less than $600. It is estimated that nearly 1.5 million farms are failing to provide an adequate family living because of inadequate working capital. To help alleviate this situation, an increase in loan funds from $60,000,000 to $75,000,000 is proposed for 1949. Also recommended is an increase of $2,000,000 for administering the program.

Democracy

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. HUBER. Mr. Speaker, it is with a great deal of pleasure and pride that I insert in the RECORD one of the winning 5-minute talks of the recent I Speak for Democracy contest sponsored by the National Association of Broadcasters, the Radio Manufacturers Association, and the United States Junior Chamber of Commerce.

A resident of my district, Miss Janet Geister, 16, of the Cuyahoga Falls High School, Cuyahoga Falls, Ohio, was one of the four national winners. With the other three national winners, she took a $500 cash prize, a wrist watch, and a certificate of recognition signed by Commissioner of Education John W. Studebaker, from more than 20,000 contestants in more than 500 communities in 39 States and Alaska.

The contest was planned to encourage young people to think about the democratic form of government and to express its philosophy in spoken words, no limit except that of time being placed on their work.

It was inspiring to me to witness the presentation of the awards by Attorney General Tom Clark. I am also glad to learn that the United States Office of Education is making transcriptions of Miss Geister's talk and the other winning talks in this year's contest available to schools throughout the country, and that the contest is scheduled to be continued next year.

Miss Geister's talk follows:

TALK BY JANET GEISTER, OF CUYAHOGA FALLS, OHIO

When I was given the opportunity to enter this contest, "I Speak for Democracy," the first thing I did was to look up the word "democracy" in the dictionary.

Mr. Webster defined it as "government by the people, government in which the supreme power is retained by the people and exercised by representation."

There is a vast meaning in those words—a meaning bigger than Mr. Noah Webster's conception or George Washington's, or Abraham Lincoln's, or yours or mine.

But perhaps you'll listen a few moments to one person's idea of democracy.

I am 16 years of age and attend a public high school in a comparatively small town in Ohio. Of course, like most people, I have ideas on certain subjects. Some of these are good, some bad, some right, and some wrong. Perhaps as I grow older my ideas will change, but I know my idea of democracy will not. Because it is more than an idea, it is an ideal.

To me, democracy means a way of life. As I grow older, it means I will be able to help choose the representatives in the Senate, the House of Representatives, and the President himself. This means that I will have a real voice in my Government. And it also means that I will undertake a great responsibility. And I will accept this responsibility gratefully, even eagerly, knowing that only in a democracy could a citizen have such an opportunity.

As I grow older, I will also realize more fully what is meant by "freedom": Freedom of worship, freedom of speech, freedom of the press, and freedom to rise as far in any field as a person's hard work and ability can take him, regardless of his race or creed.

I wonder how many children in other parts of the world can look forward to such a future of freedom.

But right now democracy means to me the everyday things in life, the things which we accept and enjoy without full appreciation of their meaning and often take so much for granted; the things that give us pleasure, the things that give us happiness: Drinking a soda at the corner drugstore, attending high school, outside activities such as the concert course we attend every month, which gives such a grown-up feeling, clubs at school, the fun we have participating in the community plays, football games on Friday night, the idea that an opportunity is given to persons my age to enter a contest like this and give an opinion on an important subject such as democracy.

For democracy is important. To the people in other countries of the world where other forms of government exist, the United States and democracy are the one shining light and hope in an otherwise dark world. If democracy fails, what next?

Oh, not that democracy is perfect, not that it doesn't have its faults. But when 130,000,000 people believe in the same principle and are working toward that principle—well, it just has to be a success. That's the only way.

Democracy is on trial. The United States and other members of the United Nations are the deciding factors in the difference between the success and the failure, not of the peace, but of the world. As our forefathers fought and died to leave us this proud heritage of freedom, so must we strive to preserve that freedom for future generations—strive to eliminate racial discrimination, and strive to preserve the principles of free enterprise that have made our country the leading power that it is today.

Our responsibility to the world is great. We must not fail to live up to this responsibility. Yes, I do speak for democracy. I speak wholeheartedly, knowing that here in America people enjoy a way of life which is only hoped for by people of other countries.

Civil Aeronautics Board Appointment

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. POULSON. Mr. Speaker, it is becoming every day increasingly evident that the present administration has become more and more under the influence of military men. With the peace machinery of this country in the hands

of military trained men in such posts as our principal ambassadorships and the Secretary of State office, the President has now started to extend this military influence into our domestic life. The statement which I am inserting was written by one of the most independent and fearless men in American today, Harold L. Ickes:

MAN TO MAN

(By Harold L. Ickes)

I think it was Benjamin Franklin who observed that little boats should stay close to the shore. It is doubtful whether President Truman considered, if it occurred to him at all, that he was sailing out into deep and dangerous waters when he rudely dismissed, without benefit of clergy, one of the ablest of his keymen, James M. Landis, former dean of the Harvard Law School and chairman of the Civil Aeronautics Board, and reached into the military, a continuing bad habit, for Maj. Gen. Laurence S. Kuter to replace him.

General Kuter is 42. He is said to be one of the ablest of the younger air officers. Something of an infant prodigy when he entered West Point at the age of 15, he served in Europe, in the Pacific and in Air Force planning in Washington. On the basis of his record, I do not question either his qualifications as a soldier or his ability as a pilot. I am even willing to assume that he has the particular executive and other abilities that the chairman of the Civil Aeronautics Board must have to give a successful administration and to solve wisely questions that pertain not only to domestic, but to international aviation.

But even admitting that General Kuter has all of the necessary qualifications, it was a bad appointment. Mr. Truman has sent to Congress a hurry-up request for special legislation that will permit the general to take the post while still holding his rank and position in the Army. The bill would exempt him from military supervision, but would continue his military pay and perquisites, with the Civil Aeronautics Board reimbursing the Air Force. This would make it a rather nice deal for the Air Force, too, because it could advance someone else to the Kuter job. But if the bill should become law, General Kuter's fellow members of the CAB would be discriminated against because their salaries are fixed by statute at $10,000, while General Kuter's Air Force pay is reported to be $15,200.

He has, besides, the privilege of free medical care for himself and his immediate family, he can eat at the low-cost officers' mess, and buy as he likes from the service stores. Altogether, pay, allowances, and privileges would probably amount to the equivalent of something close to $20,000 a year.

What the President proposes to do is not only unfair to the other members of the board, it would throw out of joint the whole Federal pay structure. Moreover, by this neat little trick Mr. Truman would be raising indirectly a salary that the Congress has declined to raise, and if he does it in this instance, why not in others? Why not an entire CAB composed of generals and admirals with Army and Navy pay and emoluments? And what would prevent extending the same principle to the Supreme Court? If the President should again yield to his propensity to fire a good man, as Landis undoubtedly was, why not fill the resulting vacancy by borrowing a Supreme Court Justice, with salary attached?

Moreover, this typical Truman blunder is flying in the face of a deep-rooted American tradition. Mr. Truman does not seem to know it, but there is an American predisposition against turning civilian affairs over to the military. It is also a sad commentary on Mr. Truman's lack of qualities of leadership that he could find no civilian willing to fill the brutally created Landis vacancy. Mr. Truman has made it clear again to all of the world that a job in his administration, especially if the holder thereof is competent and regards the public interest as paramount, is extra hazardous.

If General Kuter drove a good bargain, Mr. Truman drove a bad one. For one thing, he has shaken the morale of faithful Democrats in Congress. It will be recalled that it was through House Democratic Leader SAM RAYBURN that Mr. Truman sent to Landis assurance of reappointment. It was when Mr. RAYBURN was far away in Texas that Dr. Landis was called to the White House, 48 hours before his term expired, to be told roughly that he was through.

It is also reported that Senator BARKLEY, Democratic leader of the Senate, heard of the Truman intention when he was in Paris. He cabled Mr. Truman asking for a chance to talk with him before taking final action. How Mr. Truman reacted to that request is history. How Senator BARKLEY treated the palpable snub is not yet history, but it can quite readily be imagined. It is said that Mr. Truman got more than a whiff of a rising storm when the Senator shortly thereafter reached the White House.

Another and heavier penalty that Mr. Truman will pay for his too-ready compliance with Secretary of Commerce Harriman's demand for Dr. Landis' head lies in the fact that by his own willful and deliberate act he has given occasion for a spreading public alarm over the increasing influence of the military in American civil life. Henry A. Wallace will make the most of it. So, in all likelihood, will Senator TAFT, and others. It is not often in a Presidential year that the man in the White House forgets to wear his suspenders.

Rehabilitation of Japan

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. POULSON. Mr. Speaker, being from the Pacific coast I am much interested in the progress of rehabilitation in Japan. I have found this address by the Honorable Kenneth C. Royall, Secretary of the Army, before the Commonwealth Club of San Francisco on January 8, 1948, to be very informative on this subject and under leave to extend my remarks, I insert it in the Appendix of the RECORD:

To many American citizens—including myself—the most surprising development—and one of the most disappointing aspects of our victory over Germany and Japan has been the responsibility and cost which have been placed upon us in the matter of occupation. There were few who originally recognized the extent of this burden. And today every citizen of our country is justified in asking the "what" and the "why" of our occupation policies.

On this occasion I will speak specifically of Japan. Immediately after the surrender, the objectives of our policy were stated to be, first, "To insure that Japan will not again become a menace to the peace and security of the world," and, second, "to bring about the earliest possible establishment of a democratic and peaceful government which will carry out its international responsibilities, respect the rights of other states, and support the objectives of the United Nations."

The underlying idea was the prevention of future Japanese aggression—direct prevention by disarmament, and indirct prevention by creating a type of government unlikely to develop again the spirit of aggressive war. The real well-being of Japan—or her strength as a nation—was decidedly a secondary consideration—secondary to protection of ourselves against Japan, and secondary to payment of reparations to the victorious Allies for the damages inflicted upon them.

This attitude is clearly shown by the emphasis in the original directive, which stated in part: "Japan shall be permitted" (not encouraged but permitted) "to maintain such industries as will sustain her economy and permit the exaction of reparations * * * but not * * * enable her to rearm. * * * Access to, as distinguished from control of, raw materials should be permittted. Eventual Japanese participation in world trade * * * will be permitted."

It is clearly understandable—and it was fully in accord with the then feelings and opinions of our people—that in 1945 the main purpose of occupation should be protection against an enemy which had viciously attacked us and which had committed brutal atrocities against our troops and our private citizens.

Since then new conditions have arisen—in world politics and economics, in problems of national defense, and in humanitarian considerations. These changes must now be fully taken into account in determining our future course, but it should be remembered that these developments arose in large part after the original policies were set.

These original policies were promptly carried out. Within a few months after the end of hostilities, all Japanese tactical units had been dissolved and all implements of war destroyed or insulated. The top Japanese military organizations, as well as the infamous secret and terroristic societies, were abolished. Those who formulated the Japanese policies of conquest and aggression were removed from important political and economic positions.

War-making industries were marked for removal and reparation. This included arsenals, private munitions plants, aircraft factories, military research laboratories, synthetic-rubber and oil plants, shipbuilding installations, and certain chemical, machine-tool, precision-bearing, thermo-electric, and metal factories, nonferrous and others. Commitments were made to other nations for payment of reparations with those plants.

Other steps followed, including those leading to the dissolution of concentrations of property ownership and economic power. At the end of the war—and for a long period before the war—land ownership had been in the hands of a comparatively small part of the population. The system was analogous to the feudal system of past centuries, and in Japan the land barons used their power to encourage war.

In the business field, the Zaibatsu, or money cliques, dominated completely and ruthlessly the Japanese economy—through holding companies and monopolies. A dozen families controlled over 75 percent of the country's commerce, industry, and finance.

The influence over the Japanese Government of these and other monopolies was almost unbounded, and they were linked inseparably with the militarists. This joint group over a course of years—and particularly in the year and a half before Pearl Harbor—encouraged Japan toward war and destruction.

Steps were taken to break both types of concentrations. Under a directive issued by the Supreme Allied Commander, the Japanese Diet enacted in the fall of 1946 a land reform law under which, through local land commissions, the 5,500,000 Japanese farm families could acquire land from the present owners

at a reasonable price and pay for its over a period of years. This program will be completed by the end of 1948. Just as in America the small landowner is symbolically and factually democracy in practice, so we expect that in time the strength of Japanese democracy will find roots in similar soil.

Action against the Zaibatsu has proceeded vigorously, and its control has now been virtually abolished. Sixty-seven holding companies, with 4,000 subsidiaries and affiliates, have been marked for liquidation. The two largest holding companies—Mitsubishi and Mitsui—have been closed. Others of the larger ones have been almost wholly liquidated.

The Japanese Government has been directed to prepare legislation prohibiting international cartels. Stringent antitrust and deconcentration legislaiton has been prepared and passed in part. A Holding Company Liquidation Commission has been established and is functioning in the supervision of the entire program.

While these various steps were being taken, new developments were arising, and old factors were changing in importance. Japan had never been able to provide all of its own food—nor to produce enough of many other necessities of life. Seventy-eight million Japanese occupy an area smaller than California and of that area only 16 percent is capable of cultivation.

The population is still growing at an enormous rate. It is expected to reach 84,000,000 by 1951. The current troubled condition in Asia leaves practically no food available for import into Japan, even if the currency and Japanese export situation would make food purchases possible—which they would not.

And yet without food and other necessities, Japan would be faced with widespread starvation and disease—would seethe with unrest and disorder and hopelessness. Even aside from the simple principles of humanity, we could not, under such conditions, accomplish our original objective of a peaceful Japanese Government. Nor could we hope that Japan would be other than susceptible to totalitarian demagogues from within and without. Without help the country would become a prey to nondemocratic ideologies of aggression.

To meet this situation America has supplied Japan with food and other necessities. This assistance has given the country a base upon which to build, and it has been possible to supplant totalitarianism and Shintoism with democracy, to begin to replace educational regimentation with academic freedom, and to build the foundations for a peace-loving government of the people.

For this and other achievements in Japan, great credit must be given to General MacArthur and his staff. America was indeed fortunate that for this vital task, it had an outstanding leader who could bring the Japanese to a complete realization of their defeat and at the same time obtain their full cooperation in forming a free and stable government.

But the Department of the Army and the Department of State—which shares the policy responsibility of occupation—both Departments realize that for political stability to continue and for free government to succeed in the future, there must be a sound and self-supporting economy, and General MacArthur in command of the occupation can be depended upon to implement these policies.

We also realize that the United States cannot forever continue to pour hundreds of millions of dollars annually into relief funds for occupied areas, and that such contributions can end without disaster only when the occupied countries can pay for their own necessities with their own production and exports.

These factors have resulted in efforts to improve in many fields the economic situation in Japan. And with this increasing economic approach there has arisen an inevitable area of conflict between the original concept of broad demilitarization and the new purpose of building a self-supporting nation.

In the case of agriculture the two purposes do happen to run practically parallel. The breaking down of feudal holdings has ended a war-making influence. At the same time the wider division of lands tends to produce incentive on the part of the larger number of landowners and thereby to increase over-all production.

But it is a different situation with manufacturing. The destruction of synthetic rubber or shipbuilding or chemical or nonferrous metal plants will certainly destroy the war potential of Japan, but such destruction may also adversely affect the peace potential.

The dissolution of the Zaibatsu may present in itself no serious economic problem, but at some stage extreme deconcentration of industry, while further impairing the ability to make war, may at the same time impair manufacturing efficiency and reduce the over-all production and the exportable surplus of Japanese industry—may, therefore, postpone the day when Japan can become self-supporting.

Such is our dilemma. It is clear that Japan cannot support itself as a nation of shopkeepers and craftsmen and small artisans any more than it can exist as a purely agricultural nation. We can expect a continuing economic deficit in Japan unless there is at least some degree of mass industrial production.

Another borderline situation between demilitarization and economic recovery is presented in the case of personnel. The men who were the most active in building up and running Japan's war machine—militarily and industrially—were often the ablest and most successful business leaders of that country, and their services would in many instances contribute to the economic recovery of Japan.

What should we do about them now? We cannot afford to leave the Japanese war system intact nor forget that there is danger in retaining in power leaders whose philosophy helped bring on World War II. On the other hand we cannot afford to sterilize the business ability of Japan.

Nor can we believe without qualification individual Japanese protestations of war innocence or of peacetime reformation. One Senator said to me in Germany shortly after VE-day, "I have inquired everywhere, and I have not yet found a single Nazi in Germany," to which could perhaps now be added, "nor a war lord in Japan."

All these matters present questions of degree, and the decisions are matters of judgment. These decisions are not difficult at a cocktail party or from an easy chair or on a rostrum, if made by those who have no responsibility for the decisions or their results. It is somewhat different when you must live and suffer with any errors that you might make.

The Departments of State and Army are trying to draw the lines in the right place. And in doing so they are giving—and will give—full weight to the changes in political and military and economic considerations which have occurred since the initial days of occupation.

We realize that deconcentration must stop short of the point where it unduly interferes with the efficiency of Japanese industry. Earlier programs are being reexamined—as, for example, the details of the program stated in the paper submitted some months ago to the Far Eastern Commission, and recently given wide publicity as FEC-230.

We are not averse to modifying programs in the interests of our broad objectives. A bill recently submitted to the Japanese Diet setting up procedures for deconcentration of excessive economic power was changed before its final enactment—changed with a view of giving added weight to the economic needs of Japan.

In the case of plant dismantling and reparations—in addition to the matter of disarmament—we are bound by certain agreements with other nations—agreements which must be carried out unless breached by those others or altered by consent. However, since last summer we have had a competent group of industrial engineers in the Pacific selecting the specific plants which, consistent with our obligations, can be dismantled with the minimum of detriment to Japanese economic recovery. The report and recommendations of this committee should reach the Department of the Army during this month.

I would not leave the impression that questions of demilitarization or reparation or deconcentration or disqualification of personnel are the most immediate obstacles to Japanese recovery. The principal difficulties arise from the destruction which war brought to Japan and to the chaotic condition which has existed in the Far East since VJ-day.

The flimsy nature of Japanese construction and the concentrated population centers made these islands most vulnerable targets for our incendiary and other missiles. Even aside from the effects on Hiroshima and Nagasaki of the atomic bombs, many Japanese cities were largely destroyed. I believe that on a percentage basis greater Tokyo—with about 7,000,000 people as of 1940—was as badly damaged as any enemy city in the entire world.

Japan has long been dependent on the rest of Asia not only for foodstuffs but for raw materials needed in their manufacturing and business life, and it has relied largely on general commerce with China and other neighbors. With the war and its aftermath these sources of import and export are largely nonexistent.

Many affirmative steps have been and are being taken to meet these and other difficulties—and to promote recovery and thereby hasten the day when Japan will cease to be a financial burden to the United States. I wish that time permitted me to discuss in detail our activities in many fields, including those of finance and credit and foreign trade.

Some results of our efforts are apparent. Over-all Japanese industrial production has risen from 18 percent of the 1930–34 level in January 1946, to 40 percent in August 1947. In the case of coal—basically needed for business recovery—the present production is 86 percent of the 1930–34 level. Fertilizer has increased fourfold during occupation. One-fourth of the war-destroyed houses in Tokyo and vicinity have been replaced. Six hundred thousand acres of land have been reclaimed for cultivation, and a million more should be added by 1950.

In this whole picture of Japan do not forget that we are supervising an entire Government—and one disorganized by an unsuccessful war. We have all the many normal policy and operating problems of a stable and successful government plus the added ones produced by the unusual and distressing conditions peculiar to present-day Japan.

The differences from our own country are such that we cannot expect to impose on the Japanese people an exact reproduction of American democracy. It follows that often there is no precise precedent for our problems, and the departments must do as our forefathers did in the early days of our own Government, reach the best results we can by trial and error.

The lines to be drawn are, of course, not always easy to draw, and as in the case of all decisions of importance one cannot be too dogmatic. There can be—and are likely to be—differences of opinion among sincere and informed people. Nor do I have any illusion that everything we do will be perfect.

But I can assure you that our decisions will be made with realism and with a firm deter-

mination of doing all possible to prevent Japan from again waging unprovoked and aggressive and cruel war against any other nation. We hold to an equally definite purpose of building in Japan a self-sufficient democracy, strong enough and stable enough to support itself and at the same time to serve as a deterrent against any other totalitarian war threats which might hereafter arise in the Far East.

Republicans Kill 4-Percent GI Real Estate Mortgage Loans

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter that I have written to one of my constituents, Mr. Charles M. Taylor, a veteran and post commander of AMVETS Post, No. 8, Detroit, Mich. I believe that it is the duty and responsibility of the Government to extend long-term loans at low interest rates and small down payments to our veterans. Every veteran should have an opportunity to own his own home. This opportunity should not be stifled by demanding $3,000 and $4,000 as a down payment, and making him meet monthly payments and interest rates so high that he cannot meet them on the wages or salary that he receives.

A home ownership plan for the veterans is desirable and meets with the approval of all of our citizens, I am sure. It is up to the veterans' organizations to inform this Republican Congress that they want this program carried out.

Mr. CHARLES M. TAYLOR,
Post Commander, AMVETS Post, No. 8, Detroit, Mich.

DEAR MR. TAYLOR: With further reference to your letter requesting my support of legislation in Congress authorizing the RFC to purchase GI loans without recourse, I wish to submit the following information:

Senate Joint Resolution 135 was a resolution for the extension of succession and powers of the RFC. This resolution was passed without amendment by the Senate on June 23, 1947 (CONGRESSIONAL RECORD, p. 7551). The House Banking and Currency Committee, under the chairmanship of JESSE P. WOLCOTT, refused to consider Senate Joint Resolution 135, and instead, took up their own bill, H. R. 3916.

This House bill did not continue the authority of the RFC to purchase veterans' loans. On the House floor an amendment was offered to reestablish and extend the powers of the RFC as a secondary market for these veterans' loans. I voted for this amendment, but it was rejected (CONGRESSIONAL RECORD, June 24, 1947, pp. 7631–7634). Later a motion was made to recommit the House bill, with the recommendation that it be reported back with the provision extending the RFC authority included. I voted for this motion to recommit, but by a vote of 154 to 192, the motion to recommit was rejected (CONGRESSIONAL RECORD, June 24, 1947, p. 7634). The conferees agreed substantially with the House language of the bill and it became Public Law 132, thus terminating the authority of the RFC to purchase veterans' loans.

Subsequently, the Senate passed S. 1543, the Sparkman bill, the purpose of which was to give the RFC this continuing power to purchase GI housing loans. The bill was referred to the House Committee on Banking and Currency on July 25, 1947. No further action has been taken by the House committee.

At the time that the RFC was put out of business as a secondary market for these GI mortgage loans I strongly opposed this action, and I stated at that time that the bankers would boycott the purchase of these 4-percent loans to the GI's, and that there would be no outlet for these loans whatsoever, once the bankers succeeded in putting the RFC out of business. This is exactly what has happened.

In the Detroit area a GI must now comply under the FHA in order to obtain a mortgage loan. He has to pay 5 percent interest instead of 4 percent. He will not get a 100-percent commitment on a long-term basis. He must have three or four thousand dollars as a down payment, and his monthly payments on the mortgage loan are nearly doubled.

At the time that the legislation was up for consideration for extending the authority of the RFC, and all of the might and power of the banking interests were mobilized to kill this authority, I must state with regret that the newspapers and radio commentators were all hush-hush when this great slaughter of the GI veterans' loans was being committed in Congress. It is not surprising that it wasn't until months later than the veterans woke up to find out what the Republicans had done to them in Congress. Now, that is not all. Just recently I have been informed by a reputable mortgage man that in the Detroit area it is difficult to even sell 5-percent FHA mortgages. It would appear that the big bankers' plans have materialized. They have put the RFC out of the real-estate mortgage business, and now they have the field all to themselves. It will not be long before they will drive up the interest rates on real-estate mortgages to 6 or 7 percent again, as it used to be in the "good old Republican days" before President Roosevelt was elected and messed up their most lucrative and profitable racket.

I wish that you would bring this letter to the attention of your veterans' organizations.

Sincerely yours,
GEORGE G. SADOWSKI,
Member of Congress.

Politicians

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial from the Daily Tribune, a newspaper published in my home city, Royal Oak, Mich. This editorial on politicians ought to be of interest to every Member of Congress. It presents a common-sense approach and is a complete answer to the criticism which all Members receive. The editor is to be commended for his intelligent analysis of this subject.

PERSONALLY SPEAKING
(By Floyd J. Miller)
THOSE LOUSY POLITICIANS

Everybody is all the time making cracks about politicians, and it isn't right.

When I say everybody, I mean just that. Why, I have even known myself to make disparaging remarks concerning these gents. Only when I did so I actually had in mind only a small fraction of the men engaged in public service—or politics.

But politics is just like any other occupation. It gets sneered at and jeered at and lambasted because of the unsatisfactory performance of only part of those engaged in it.

In the same way we refer critically to "damned capitalists" or "lousy labor leaders"; or even to "dump teachers" and "cheating ministers." It is not that we would condemn any one of these groups, or even a large proportion of it. No; we just get fed up with the stupidity or greed or incompetence of a few and proceed to cuss out the whole class.

Perhaps politicians are assailed more frequently and more violently than any other group because so much of their activity is out where we can see it. A man has to express his opinions where all the world can hear them, as repeated by the press. He is obliged to vote "yes" or "no" on questions that affect closely the welfare and well-being of his fellow citizens.

He has to stick his neck out. And, brother, do the rest of us like to take a whack at it.

When we get down to cases, though, we realize that only through politicians can our democratic form of government be carried on.

Politicians are the men engaged in politics. And politics is carrying on the business and promoting the welfare of the state. The state, that's us—we, the people.

If politics often stinks—and it does—we the citizens are responsible. We can clean it up any time we make up our minds to do so.

Unfortunately, in spite of the critical necessity for the best possible men in public office, the average American is still too busy or too lazy to pay great attention to the matter.

He will kick about what the politician does or fails to do, but forget that he himself failed to vote at the last election. Or if he did vote, it was after a whole 5 minutes discussion of the candidates and issues with some pal who really didn't know much about them himself.

So we get some pretty Sad Sacks in public office. Their ability or lack of it is generally a pretty good reflection of our own individual unwillingness to do anything about it.

The vast majority of men in public office though, are trying to do a good job and are reasonably well equipped to do so. Very few get anywhere near the pay we want them to be worth. Other reasons impel them to vie for whatever honors, prominence, and criticism they receive.

Quite a number like the prominence and publicity. Definitely, too, many seek the jobs so they may promote the interests of particular groups, business, industry, labor, agriculture.

But over and above all such selfish motives there is, I am convinced after many years of close observation, a genuine desire to serve. There is an appreciation of the fact that the American Republic can continue to exist only as long as individuals will contribute something to the good of all.

Or perhaps you prefer to consider the problem from the hard-boiled or realistic angle. Then it becomes just a matter of intelligent protection of your own interests, considered from a long-range view.

In either case, you perceive that the "pressure groups" which exert too great an influence, can make or break our Nation. But perhaps that is getting into too controversial a topic in the space available here. Most of us are members of organizations that can properly be labeled "pressure groups." It depends whose toes are stepped on.

These self-interests, no matter how justifiable they appear to each of us, must be watched carefully. We must avoid getting

tied in with any group whose leaders contend it is always right and never wrong.

The way in which we individually answer all these complicated conundrums will determine what kind of politics we have.

Meanwhile our politicians will be just as good as our politics—and no better.

The Worker and the Marshall Plan

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address entitled "The Worker and the Marshall Plan," by the Assistant Secretary of Labor, Mr. John T. Kmetz, at a dinner meeting by the Wanamaker Post of the American Legion, at Philadelphia, Pa., on Tuesday, December 2, 1947. His analysis of the Marshall plan from the standpoint of the American worker is, I believe, well worth the attention of Members of Congress.

Mr. Kmetz makes a very interesting analogy in describing the wartime devastation of those nations of Europe which we plan to assist back to economic recovery through the Marshall plan. After outlining the destruction of industrial capacity in France, Italy, Greece, England, the loss of manpower through wartime deaths and injuries, the neglect of agriculture, the long history of undernourishment and overwork during the war, and the climax to all of this suffering in the form of floods, Mr. Kmetz says:

> Is it any wonder that men despaired as in their own misery they witnessed the suffering of their wives, their children, their parents? Picture, if you can, similar conditions in our country. Suppose that it was in Pennsylvania, Delaware, New Jersey, and New York that factories with their production lines had been transformed into twisted girders of steel and a mass of concrete rubble. And suppose that as we started to remove the debris the rains came down in torrents and the Lehigh, the Ohio, the Schuylkill, the Delaware, the Susquehanna, and the Mohawk Rivers rose over their banks, drowning the growing crops and the last hopes of men for relief by their own efforts.
>
> Well, gentlemen, that is what happened to Europe during the cruelest war in the history of mankind, and in the years that have intervened since American boys crossed the Rhine.

Those are Mr. Kmetz's words, and I should like to have the entire article inserted in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to be with you tonight, and I wish I could address you as fellow Legionnaires. I envy you that great privilege of telling your grandchildren about your deeds at Chateau Thierry, at Soissons, at Belleau Wood, and I know that among your members there are enough veterans of World War II to keep your stories close to the truth.

It was not so with the grandfather of a friend of mine out in the mountains of western Pennsylvania. His grandfather was a private in the siege and capture of Petersburg, Va., during the Civil War. For several years he told of his part in that battle with becoming modesty. But as the years wore on, his imagination painted the lily. Later he remembered that he had been a sergeant and had assumed command of his company when his captain was killed in action. As time went on he remembered that he was the captain, and that it was his colonel who had been killed, and his battle command had been that of a regiment. The last time he told his grandson the story it was about General Grant and I.

The trade to which I was apprenticed 40 years ago made it impossible for me to wear this country's uniform in World War I. As many of you know, I am a coal miner.

I don't want to compare the war service of you men who faced sudden death or permanent injury and those of us who helped produce the munitions that made victory possible. Rather, I want to talk to you about that great thing American warriors and workers have in common. That is the love we bear our country, the pride we take in our way of life, and our determination that these things shall not disappear from the earth.

When, almost 30 years ago, you took off your uniforms, you had every right to feel proud. You had fought the good fight for democracy. To me your victory was a particular source of pride and thankfulness, because one of the new democracies which your victory made possible was started in Czechoslovakia.

It was the home of my ancestors and the place of my birth.

Maybe because of this fact I have thought more about how wonderful it is to be an American than those of you who always have enjoyed freedom. America, to me, has been more than a land of opportunity. Here I have been allowed to think as I like. I belong to, and work for, my union. I go wherever I please. I read whatever appeals to me, and I speak my thoughts. My children go to school and play without fear. I vote for the person who I think is best for the job. I pick the work I want to do, and I go to it every morning free in mind and spirit, knowing that a miner's pay for his work enables him to enjoy a higher standard of living in America than any coal miner in any other country of the world.

Such things were not possible in many parts of Europe when my father brought me as a child to America. My own people—the Slovaks—were under the rule of the Austro-Hungarian Emperor. They lived under the ever-present fear of the tyrant emperor and later under the dictator tyrant, who imposed their harsh will and inflicted their cruelties in spite of the heroic bravery and sacrifices of the people of Czechoslovakia.

In some respects the people of Czechoslovakia were more fortunate in the condition of their country than other European nations. I do not speak of Lidice, nor of the suffering they underwent in every part of the nation. I refer to the physical condition of their industrial plants. The workers, when they came home from the war, possessed skills; and they knew how to use them in these plants spared much of the destruction visited on the munition plants in other parts of Europe. They went to work. They were not as active in defeating Communist propaganda and infiltration into their unions as we, for instance, have been. That I regret. I do not fear, however, that they will fall victim to the false ideology of Moscow. Despite their predicament I am convinced that the overwhelming sentiment of the people for democracy will prevail.

But the destruction which was spared many industrial plants in Czechoslovakia does not apply to other parts of Europe. In France, in Italy, in Greece, and in England, to mention only a few, many of the factories had been destroyed. Millions of their young men had been killed or maimed. Much of the land which in years past had produced ample foodstuffs had gone to waste through neglect, lack of manpower, and machinery, fertilizer, and transportation. The people had been underfed and overworked through the years of the war. And so it was that from poverty they descended to despair. And then another catastrophe was added to their burden. Last winter was the coldest in western Europe in the memory of many now living. The mines did not produce enough coal to keep the people from the danger line of freezing. Transportation was disrupted. Mills and factories lay idle because there was no fuel. And as they recovered from this blow, floods came which destroyed young crops and delayed the planting of others.

Is it any wonder that men despair as in their own misery they witnessed the suffering of their wives, their children, their parents? Picture, if you can, similar conditions in our country. Suppose that it was in Pennsylvania, Delaware, New Jersey, and New York that factories with their production lines had been transformed into twisted girders of steel and a mass of concrete rubble. And suppose that as we started to remove the debris the rains came down in torrents and the Lehigh, the Ohio, the Schuylkill, the Delaware, the Susquehanna and the Mohawk Rivers rose over their banks, drowning the growing crops and the last hopes of men for relief by their own efforts.

Well, gentlemen, that is what happened to Europe during the cruelest war in the history of mankind, and in the years that have intervened since American boys crossed the Rhine.

What are we going to do about it?

Shall we allow millions of people in Europe to starve? Shall we withhold the food, the fuel, the machinery which will sustain life until they can again take their places among the nations of the world? Shall we, by indifference to their suffering, permit the destruction of those ideals of liberty and freedom upon which our own America was founded and on which it grew to greatness? Shall we ignore reality and permit this to happen, with the inevitable loss of our European markets along with the destruction of our own ideals?

President Truman has answered that question. And leaders of the Republican Party such as Senator VANDENBERG have affirmed his answer. It has been called the Marshall plan. It is part and parcel of the American tradition of generosity to those less fortunate than ourselves. It also might be called enlightened self-interest. For make no mistake about it, if we do not help the nations of Europe to save themselves, then all the things we have, all the things we are or hope to be, are perilously endangered. Today's newspapers verify that fact.

I am not an economist nor a diplomat, so what I have to say about the Marshall plan concerns the way it affects you and me, as men who have lived and worked, and who hope that our sons shall continue to have that privilege under the American way of life. As a coal miner I know that my family would starve if there were no railroads to haul and no factories to consume the products of my pick and shovel. There would be no locomotives to transport our food and clothing and knickknacks, or hairpins and safety razors for all of us if the coal I dig failed to reach the steel mill. Nor would there be refrigerators, radios, textiles, kitchen utensils, or any of the thousands of other things we find in department stores if our basic industries were idle for lack of coal, or transportation, or for any other reason.

There are none of these things in the homes of European workers. Of course, they want them, as do you and I. But they are more concerned with where and with what they will obtain the meager rations which nowhere are sufficient to sustain healthy life.

On next Tuesday a group of State labor officials and representatives of labor and employers meet in Washington for the Secretary of Labor's annual conference on legislation. The committee drawing plans for the conference discussed what kind of banquet should be held during the course of the conference. Someone suggested, in the light of the President's program for the conservation of food, that they be served a meal typical of that now served at similar functions in England. So they called the British Embassy and asked for a typical menu. When they learned that the simplest meal that could be served in Washington would equal in calories an English ration for a week, the idea was abandoned.

It is because of insufficient food, a hopeless outlook, and the sight of their families ill and weakened from malnutrition that the workers of Italy and France and Greece have listened, in their despair, to the siren call of communism. The danger of this false ideology will fade and disappear when the workers know that the proceeds of their labor will provide food, clothing, and shelter for themselves and their families.

The Marshall plan started when our distinguished Secretary of State spoke at Harvard College last June 5. It wasn't really a plan. All he said was that the United States was willing to assist in a workable program for European recovery. Europe, he added, would have to start the ball rolling by drawing up a program. The program, he continued, would receive assistance from the United States only if the European nations affected would cooperate individually and collectively to make it work.

Well, 16 nations grabbed the life-saving rope flung out by Secretary Marshall in that speech. There were some others who wanted to meet with them in Paris when they sat down in July to talk cases. But they recalled their acceptances of the invitation after their government leaders were called suddenly to Moscow.

But the Paris Conference went on without them, even while they looked hungrily in from the outside. A preliminary draft of what is needed was prepared and submitted to the United States Government. The final decision on that, as is entirely proper, will be made by the Congress of the United States. Estimates of the cost to America range from less than twenty to twenty-five billion dollars, to be provided over a period of 4 years.

Now, what are the major elements in a European recovery program?

First, each of the countries that sits in on the deal will have to demonstrate its sincerity. They will have to do that by making a genuine, strong, and determined effort to start production of goods that can be exported; that is, exchanged with other countries for the things they need most.

Each country will have to stop the printing presses which have been turning out paper money by the ton. Each must inaugurate sound money and fiscal policies.

Every nation involved will have to demonstrate a maximum willingness to cooperate with all other nations in the pool.

Each of the countries that is involved in the plan will have to schedule some of its production toward exportable products that will cut down the deficit in the exchange of goods with America. In other words, as in the past, they'll make some of the things Americans want and need. These will be things which they can produce better than we can, because of raw materials, supplies, special skills in workmanship, or because some things grow in their climates that don't grow in ours. Like lead, copper, and zinc, Italian and French wines, or Swiss watches, or Norwegian sardines.

Finally, each nation to which we extend our help must lay down its programs so that they will be making their own way by 1951, on a reasonable standard of living.

The next question is, will it work?

Frankly, success of the program cannot be guaranteed. There are real risks that in at least some of the countries it won't work. But Professor Einstein wasted a lot of paper, and Mr. Edison a lot of sleepless nights, before their ideas began to pay off.

So, in proposing the plan, Secretary Marshall saw that some of the American goods that will go to Europe under the plan, will be gifts. These things are mainly such items as foods, fertilizer, and fuel, and some machinery essential to get the means of production going. In most cases machinery and raw materials will be paid for, however.

The idea behind the plan is to provide the minimum help that will put each of these countries on a self-supporting basis. If that means grants, or gifts, of some goods, why, "we'll cast our bread upon the waters," confident that "it will return after many days."

Secretary Marshall's plan calls for an agreement between the United States and each of the countries which is given assistance. Those agreements will, of course, vary in form, because the problems are not exactly alike in many of them. But there is one provision that is basic to all of them. That is that each country will adopt monetary and fiscal policies which will maintain stability in price and cost structures. The agreements will obligate them to set, and do their dead level best to attain targets of production, particularly, of coal and basic foods. Also each agreement will provide that the country to which it applies will cooperate in reducing barriers to international trade and promote an increasing interchange of goods and services with other countries.

While the first assistance that goes to these European countries will be from the United States Government, private business and finance is not going to be barred from participation. Secretary Marshall told two congressional committee on last November 10: "Every encouragement should be given to early initiation of private financing, so as to eliminate as far as possible the necessity of direct assistance from the United States Government." What this means is that when any of the countries begin to display signs of recovery that will attract private capital, then Uncle Sam will step aside.

A lot of people have asked if the Marshall plan will weaken our own industry, business, and commerce. Well, the so-called committee of 19, headed by Secretary of Commerce W. Averell Harriman, and including leaders of industry, commerce, and labor say it won't. At the present time, for instance, we send about 10 percent of our production out of the country. If Europe were to collapse—that is, if there was no Marshall plan—the biggest part of this market would be lost. But if, on the other hand, Europe gets a good start up again, they'll want more of the goods we produce. It would have a direct effect, for instance, in taking for cash—not as grants, as gifts—the American farm surplus of cotton, tobacco, wheat, flour, corn, hogs, fruit, canned milk, and other farm products. The people of Europe also want more of our automobiles, refrigerators, radios, electrical equipment, and a thousand other things. In return, the United States would benefit by being able, through imports, to obtain the things we need, particularly such things as copper, lead, and zinc, as well as manufactured products.

From what I've said you may have gathered the idea that up to now the people over there have done nothing to spark plug their own recovery. The fact is Europe already has worked hard for its recovery. It is remarkable that so much has been accomplished. Let's look at the record. We'll take production in the year 1937 as equal to 100. Well, Belgium is now approximately at 81 percent of that level. Denmark is at 102, France at 94, Italy approximately 70, The Netherlands 95, Norway 120, and Sweden 109.

Great Britain also has made substantial strides toward recovery. Over-all production is 110 percent of 1938 levels. Using that year as equal to 100, Britain's agricultural production figures show cereals to be 150 percent, potatoes 222, sugar beets 128, vegetables 130, and milk 120. In industrial production in Britain, coal is at 82 percent of 1938, electricity 167, gas 145, steel (ingots and castings) 126, merchant shipbuilding 180, trucks, 175, cotton yarn 55, rayon yarn 55, and merchandise freight traffic 130.

That brings up the question of whether or not the United States program for European recovery means that we will finance socialist governments. Assistant Secretary of State Saltzman answered that when he said:

"We are satisfied that our form of government, for us at least, is best. Whether or not this form of government is best for other nations is not for us to say. Because we have prospered, we hope that a large majority of other peoples of the world will profit by our experience in choosing a democratic form of government. However, it is not our intention to impose our way of life on other nations. That in itself would be undemocratic. Our only purpose is, insofar as possible, to give other nations an opportunity to decide these matters for themselves, free from coercion."

The attitude of President Truman, Secretary Marshall, and just about all of the people in the country is different when we speak of any form of government—Communist or otherwise—which tries to prolong or profit from hunger, disease, and insecurity. The American Government has stated that it will give sympathetic consideration to the needs of any European government which wishes to participate wholeheartedly in a program for the good of all. We shall not help any country which fails to do its part or maneuvers to block the recovery of other countries. Furthermore, should we encounter governments, political parties, or groups which attempt to prolong human misery for political profit they will receive our unqualified opposition.

What I have said concerns the long-range program for the economic rehabilitation of Europe. The $597,000,000 emergency relief program, which President Truman requested, and which now is before Congress, is preliminary in nature, and a gift to France, Italy, and Austria. It will prevent acute suffering from cold and hunger through the winter months and thereby hold off the radicals who would surrender the governments of those countries to communism. The European recovery program, however, includes permanent, long-range help to those countries to permanently remove that danger.

These programs—that for temporary relief and that for long-range economic assistance—are American programs and stem from our traditional willingness to help others in distress, particularly when they are anxious to help themselves. In each of them the aspirations of every individual American are expressed.

What is immediate, important, and urgent is the manner in which each of us carries out our part of the program, by saving food, by supporting our Government, by demonstrating that we accept our responsibilities as citizens of the greatest nation in the history of mankind. Thus will American ideals remain the beacon of human liberty and freedom to all men everywhere.

What the American People Expect of Business and Industry

EXTENSION OF REMARKS
OF

HON. ALBERT W. HAWKES
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. HAWKES. Mr. President, on January 24, 1948, Mr. Frank W. Abrams, chairman of the board of directors of the Standard Oil Co. of New Jersey, addressed the graduating class of Rensselaer Polytechnic Institute, at Troy, N. Y., and received an honorary degree in engineering from that institution.

Mr. Abrams' career in the Standard Oil Co. is one of the finest examples of our American system at work that has ever come to my attention. Over 40 years ago, upon graduating from Syracuse University, Mr. Abrams started his business career with the New Jersey company at less than $30 a month. By hard work and intelligent application of his talents, he has risen to the position of chairman of the board of directors of the company in which he made an humble beginning.

Mr. President, a career like this is only possible in America. In these days, when the American free competitive enterprise system is being subjected to so many pressures, and so many substitutes in the form of an easier way of life are being offered, it would be well for all of us to pause and consider whether or not this great Nation of ours can remain the leader of the world if we stifle the rewards for accomplishment which are inherent in our system.

Mr. President, Mr. Abrams' address at Troy, N. Y., entitled "What the American People Expect of Business and Industry," while directed to a group of young people on the threshold of their business and professional careers, is worthy of the attention of the Senate, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Forty-one years ago I was looking forward to a 4-year visit to RPI and an engineering degree from this institution.

It is strange how the courses of our lives are changed by small incidents. At that time, while I was deep in a fascinating study of the RPI catalog of 1907, I received an invitation to spend a week end at a fraternity house at Syracuse. Partly to please one of my high-school teachers, who had helped me to prepare for my entrance requirements at RPI, I accepted the invitation for a pleasant week end on a neighboring campus.

When I arrived at the Syracuse depot I was met—much to my surprise—by the captain of the football team. My high school football record at Rockville Center, Long Island, did not warrant this attention—nor did my 135 pounds of bone and gristle. Vanity, however, has a great capacity for explaining situations of this kind. I came to the conclusion that I had more social charm than I supposed. Anyway, I went to Syracuse.

I hope this will explain to you why it has taken me 41 years to get a degree from RPI.

An invitation to address a graduating class develops mixed feelings. Honesty asks: "What can you tell these young men that they don't know already?" It is a fair question.

It so happens, however, that there are one or two things which I would like to discuss with you.

It is no idle compliment to say that you will be the leaders of tomorrow. It is just a simple statement of fact.

More specifically, many of you will be part of the leadership of American business and industry—especially of industries like my own which must draw heavily on the supply of technically trained men like the alumni of RPI.

It is very much in the interests of our country and of business and industry that your leadership be sound and good.

I know that you have had technical training of the finest kind. And that is very important in our modern, complex civilization. However, it is only a base on which you will build. Perhaps it would help you if I told you what I think you will need to build on that technical base.

It is quite evident today that the magnificent progress which we in this country have made in developing machinery and mass production techniques has sometimes left out of consideration the effect of what we were doing on the people who were going to run the machines. Today we are bumping our noses hard against the fact that the machine and machine techniques are only part of the equation. They are methods of increasing man's capacity to produce for his own comfort, happiness, and progress—but the most important element in the industrial equation is man himself.

In the past decade or two we have been scrambling to make up for lost time. During the past 35 years—while I have been working in industry—the time which managements have been devoting to problems that have to do with human relations has vastly increased until today the manager is apt to spend more hours on such problems than on any others.

Furthermore, I think that today we are far more conscious in this country of the force of public opinion. Mass production was only one of the great developments of the past 50 or more years which have made our country the strongest nation in the world. We have also had mass education and mass communication—which have made us the most thoroughly informed nation in the world.

There is no doubt that in a democracy like ours the people rule. That doesn't mean that legislation is immediately responsive to changing public attitudes, but there is no question that sooner or later the American people get what they want.

It is for this reason that I think the first thing you ought to examine is what might be called the Climate of Public Opinion in which you will grow to positions of leadership.

I think you cannot begin better than by asking what the American people expect of business and industry.

Let me try to answer that question partly for you—but I would like to urge you to explore it further in your own minds.

My first suggestion would be this: The American people want modern corporations to be good citizens.

Understand that I am not referring here to the private lives of people in corporations, but to our business and industrial companies themselves. They want our corporations to be efficient, productive enterprises—but they want them to be more than that. They want them to be aware of the social problems of our country and of the world, and to take the time and trouble a good citizen should take to help deal with them.

This is an interesting and I think a very sound development of public opinion. The modern corporation "enables men to engage in undertakings too weighty for an individual." It came into being because our expanding society needed some means for organizing the complex operations that were increasing our productivity and raising our standard of living. However, great arguments took place early in the century over the nature of corporations. Was the corporation a kind of legal person or not?

It is my opinion that the American people have now fully accepted the idea that the corporation is in a sense a person. But, with infinite wisdom, they have added the notion that a person—corporate or otherwise—should have not only rights but responsibilities, not only privileges but duties, not only a head but a heart. They have said, in effect: "Go ahead and be a person and enjoy the rights given to free men, but remember, that this means you must also accept the duties of a citizen."

In my opinion, this is a conclusion worthy of Solomon and typical of the long-range decisions made by free people.

And now a related observation: The American people look to the large enterprises of our country especially for examples of good citizenship.

There is a feeling among many men in business and industry that the American people look upon bigness as a bad thing. I dont believe that at all. The American people admire bigness in many forms. They see bigness in business and industry leading to large-scale production and low costs—and they are aware that low costs are the greatest share-the-wealth scheme man has yet devised.

Bigness is often the most efficient way of creating national wealth and providing jobs. But the American people are also aware that bigness has strength and they say: "Strength must have a special sense of responsibility."

They want strength for useful purposes, but they will destroy it if they feel it menaces something more precious than wealth and earnings—namely, individual liberty. They will police bigness if they must—but they would rather see the problem solved by the big enterprises themselves.

Oddly enough, and in spite of all the clamor by free-wheeling critics, the large enterprises of today may seem to the historians of the future to have made a highly important contribution to the morality and ethics of our times. The very fact that they are very much in the public eye makes them especially conscious of public opinion and of their responsibilities.

You may ask: "What exactly do you mean by good citizenship? What problems of our times should American industry and business try to help solve?"

Every business and industry has its own special areas of interest where it can make a special contribution as a citizen. But there is one field of great importance—it seems to me—to all of us: American industry could not exist today in the form which we know if it were not for our educational system.

The wealth and productive capacity of America today do not reside only in its natural resources but in our people. There are many countries which have larger stores of many basic resources than we have. But we have a free, ambitious, educated people. Our wealth and high standard of living have come from the use they have made of their opportunities.

Industry today is a major beneficiary of our educational system. We draw on our educated population for personnel and leadership. Furthermore, a highly educated population such as ours is a better market than any other.

And there are other beneficiaries of education. By increasing his earning power the

individual makes himself more valuable to his fellow citizens. The better trained man is more productive—worth more not only to himself and to industry, but to society.

Industry has a tremendous stake in American education, and I believe that this will be increasingly recognized in the years ahead. I believe you will find business more and more extending its contribution to the support and advancement of education.

Certainly we have not reached the ceiling of capacity of the American people—and certainly education must play a major role in the advance still to be made.

We cannot overlook another factor. Educated men are less extreme in their views, more tolerant. There is a close correlation between education—information—and moderate views. In the world of the future—which must increasingly find roads in human understanding and peace—this is a factor of the greatest importance.

Enlightened industry has long played an important role in supplementing the education of our people by on-the-job training and executive schools. Many modern labor unions have expanded the educational work within industry. Both of these developments are important. But we must keep in mind that a foundation of our success as a Nation is our universal educational system. We have an obligation as citizens to help it to grow in usefulness.

I think my next observation would be this: The American people expect business to solve its own human problems.

It is quite clear, I think, that the American people do not like industrial strife. The average American is not favorably impressed by either management or labor when strikes occur. He gives both sides demerits. He considers strikes an example of bad management on both sides.

This, I think, may be an era in which you fellows can be most constructive and helpful.

I think we are not approaching our human problems often enough in the spirit of the engineer. Agreements and understandings are not engineered often enough—they are often jerry-built structures of compromise that an engineer in any other field would be ashamed to acknowledge.

Perhaps the time which our engineering schools give to studying the stresses and strains of human relations should be greatly increased. Certainly the perfect engineering solution to a construction or a production problem is meaningless unless the human factor was represented in the original equation.

While it is true that we as human beings are extremely complex machines and often give the appearance of being highly unpredictable, we are far more predictable than some of us like to admit. The psychologists are successfully plotting many of our curves.

This field of human relations is one in which you can find great opportunities—especially if you get to know men and what makes them tick. The best way to do this is to work with them on the job. Young engineers who have spent their summers working with men should be especially well equipped.

I believe there is another problem which the American people want American industry and business to tackle. And here again, it seems to me, the hard training of the engineer can be useful: The American people want us to make progress toward steady employment.

You are familiar with this search for security: However, I think the politically minded have twisted the wish of the American people in this regard. I don't, for example, believe that it is well expressed in the phrase, "Guaranteed annual wage." I don't believe that the American people think that a guaranty is any better than the ability of a company to pay while meeting all of its many other obligations.

But I believe the people of this country do think that progress can be made toward security, especially in certain industries and under certain conditions. The company I work for has actually reached the stage where 90 percent of its domestic employees have been continuously employed since they came to work with us. This achievement is partly due to the relative stability of our industry and our company—but it is not due only to relative stability. A great part of our success in this direction is due to an intention to achieve such security for our employees.

So, study this challenge as you move into industry and business and begin to advance up the ladder. Keep your eyes open, and one of these days you may make a major contribution to the development of an answer to this problem.

My last observation is a very simple one: The American people want American business and industry to make a profit.

Perhaps there is no doubt in your own mind about this question, and you may wonder why I speak of it at all. The reason is that a great many businessmen have become browbeaten into thinking that profit is something like original sin, and that a profitable enterprise should be slightly ashamed of itself. Some of the businessmen I know have reached the point where they are trying to think of some new name for profit.

In my opinion, such timidity is based upon a mistaken notion that the American people do not understand capitalism, democracy, freedom of enterprise and opportunity. It is akin to the notion that the American people need to be sold—or resold—the American system.

I don't believe that at all. The American people have a profound faith in freedom, individual initiative, and the kind of people's capitalism that we have in this country.

The simple fact is that a company which does not make a profit is not living within its income. It is eating itself out of house and home. It isn't accumulating savings. It can't provide security for the people who work for it. It can't grow. If it borrows money to expand, it can't pay off its debts.

A man who spends less than he earns and puts something by for a rainy day is considered an admirable character. He is a good and valuable citizen. The same thing is true of an organization of people such as a corporation. My point is that the American people know that.

As a matter of fact, public opinion surveys show that they believe the average corporation should make 10 percent profit. This is generous because all corporations in this country combined never earned as much as 6 percent in the 15 years 1926 to 1940. Latest estimates indicate they earned about 5.8 percent on gross income in the first half of 1947. In the recent past they haven't been able to retain and reinvest the funds necessary to keep their productive plant in step with the growing needs of the Nation.

So American corporations do not make as much as the American people believe they are entitled to make. It is a little like the story of the farmer who saw a sign on a bridge, "Speed limit 15 miles an hour." Whipping his horse to a gallop, he muttered: "I don't know whether we can go that fast or not."

Perhaps, as you think about these questions, you will make important additions to my basic list. I hope you do. The most important thing is that you study the problems of leadership.

Now, let me summarize very briefly what I have wanted to say to you today:

1. Have great faith in the American people. They are sound. They are wise. Especially give the horse laugh to anyone who talks of the American people in terms of "the masses." We are a Nation of 140,000,000 individuals.

2. Look upon the field of human relations as an area of great importance. Bring your scientific training to the problems in this area. A great deal can be done to measure the stresses and strains of human relations and to plot the curves of human reactions.

3. As you grow in capacity and responsibility, bring to your job a realization that the American people are not soft-headed theorists. They expect you to operate in the black. But they are counting on you to do better than that. They want the enterprises you run to be good citizens—contributing to the social progress of our times.

The world is full of problems and the future is always uncertain, but there is great work to be done and with your help we will keep on moving toward a finer, sounder, better America as the keystone of a better world.

Special Session of Congress

EXTENSION OF REMARKS
OF
HON. W. LEE O'DANIEL
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. O'DANIEL. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement I made in Fort Worth, Tex., on November 10, 1947, relating to the special session of Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

At last the political advisers in Washington, who sit back behind the scenes and run the executive department of Government, have decided that the psychological time has arrived for them to get Congress back in Washington in order that they may regain some of the power which they lost when the people went to the polls in November 1946 and turned out a bunch of New Deal Democrats and substituted for them Republicans.

Now, of course, there is one thing the people ought to understand and that is, the Congress of the United States, in the House and in the Senate, is no longer divided between Democrats and Republicans; in fact, the division is between Democratic and Republican New Dealers, and the very few anti-New Dealers who are still living; it is between left-wingers and right-wingers. But these communistically inclined New Deal Democrats who for the past 10 or 15 years have hovered around the Capitol in Washington together with their more recently recruited New Deal Republican fellow travelers believe they see an opening that will allow them to get the American people by the throat again with price control and rationing and allocation of materials.

The President has called Congress to come back to Washington on the 17th of November. I don't think anyone who heard the President thought that he was actually expressing his own sentiment when he was on the radio. I think most folks realized he was simply delivering the speech he was told to deliver, and in this speech he spent much time trying to put all the blame on the businessmen of this Nation for the fact that prices have gone up. He spent a great deal

of time quoting a lot of percentages to show how much prices had gone up since OPA control went off.

Well, of course, the truth of the business is that the figures he quoted did not mean anything whatever because the OPA price ceilings long before they were taken off did not mean a thing in the world because there was only one place you could buy many of the scarce articles and that was in the black market and in comparison with black-market prices, prices have actually gone down and not up since OPA controls were lifted.

Now, of course, these political wizards in Washington are not going to be dumb enough to ask Congress to reestablish the OPA; they will give it a new name. It will be some kind of a fancy name designed to mislead the people, because there is one thing you can be certain of—we have in Washington now a government that specializes in misleading the people rather than in telling the people the truth.

You, of course, noticed that in the call for this special session it was announced that one of the purposes was to get Congress to authorize the sending of some money to Europe. Now the joke about this situation is that two weeks before this call was made the President had announced very definitely that a means had been found whereby they could get the money without having a session of Congress. The truth of the whole business is that the political ringmasters decided they had a good chance to play up to this left-wing gang of Communists and radicals by calling a special session of Congress and making it appear the Democratic Party was a great representative of the mass of the people and that the Democratic Party was fighting the battle of the common man to hold prices down—and that, my friends, is the reason why this special session of Congress was called.

Now, of course, the truth of the business is that either by purpose and design or through sheer dumbness the leadership of the Democratic Party has been responsible for starting the spiral of high prices right after the war was over. This came about when they got all their big guns together and laid down a barrage against business which virtually ordered business to increase everybody's wages 30 percent and not increase prices.

Now it did not take this long to wear itself out and the wave of price increases started, and my opinion is that it won't be long until there will be another wave of wage increases and then another wave of price increases. The thing that is doing more than anything else to inflate prices in this country is something that this bunch of New Deal politicians in Washington completely ignore. Prices are high because of the fact that the demand for goods is very great and the production is low. We have high wages and low production, which means we have high purchasing power with a shortage of the things we want to purchase. This, of course, always results in increased prices and that is what it has resulted in at this time.

There is another thing they completely ignore, and that is the fact that whenever you undertake to finance a world-wide WPA in Europe and whenever you undertake to satisfy everybody on the other side of the Atlantic, of course you are going to run the prices of those commodities up here at home—that is just common ordinary horse sense.

Here is another matter that is a big factor in promoting inflation in this country and that is the policy which is being followed by the Government to continue spending on almost a wartime basis. There has been no serious attempt on the part of the administration in Washington to cut down Government expense. They want to keep all the bureaucrats and all the stooges on the pay roll because they are going to need their votes in 1948. And in doing this, they certainly are doing something that leads to inflation. This vast horde of civil Federal employees are consumers, and are not producers, consequently the millions of dollars they receive as wages goes into purchasing scarce goods and services, and thus runs prices up.

The whole trouble with the situation of our Government in Washington is that we are long on politics, but short on integrity. We have a government in Washington that is run and controlled by organized minorities and the most influential organized minority in Washington is, of course, that of the fellow travelers, because they have been there longest and they are on the inside. Now we have another organized minority in Washington and in that minority we have a fair sprinkling of big businessmen, men who are perfectly willing to run with the Reds, accept their philosophy, and play their game if in their opinion they themselves can declare a dividend on what they are doing.

You know all throughout the days of the New Deal, and I see it is continuing, the strategy of the New Dealers was always if they had a piece of dirty work they wanted done, to appoint on the committee to do the job two or three men who would work full time and see that the proper left-wing conclusion was reached and then they would put on these committees for decoration only, some big businessmen and usually they got some big businessmen on these committees who had some favors they wanted out of the Government so the New Dealers always figured they could in the final analysis make a trade with them—and I see that policy is still being continued under the Truman administration.

I guess everybody who is listening to me read the newspaper account of the President's Committee on Civil Rights. This report was a great document. The only thing is that the title of the report should have been "A report designed to stir up strife and hatred and trouble throughout the South." That would have been an accurate title for it because the whole report was directed toward the South.

To begin with the suggestions which they try to cover in what they call a fair employment bill are all subjects that Congress has no business whatever legislating on. Now there is another thing about it, this committee said that we ought to have a permanent fair employment law and this law ought to prevent any employer from using his judgment in selecting his employees.

I don't think anybody who knows me believes that I have now or have ever had in my mind any prejudice whatever against the Negroes here in Texas or anywhere else. I have always believed that they should be treated fair and right. I think most people believe that. But if a man wants to employ a stenographer, I say to you that if he has one white stenographer and he doesn't want to employ a Negro stenographer to work with her, that it becomes his business and it is not the proper task of government nor of any of the New Deal left-wingers to attempt to tell him how to select the people that will work for him.

Now, if Mr. Truman and his left-wing committee want to spend their efforts along the line indicated, directed solely toward employment by the Federal Government, that is another matter. But I say to you that it is none of their business how the employers down here in Texas select their employees, and if we down in this section of the country believe that the whites and the Negroes will both get along better if there is segregation in their employment, it certainly is a matter that employers in this section should determine for themselves and they don't need this left-wing committee of Brother Truman and they don't need any big businessmen who might have been on that committee who are trying to curry special governmental favors, to advise them. You know it is strange to me how every now and then some big businessman who heads some organization that is noted for doing everything it can to operate as a trust and put all competitors out of business, it is always interesting to me to watch them sometimes as they snuggle up to these left-wingers who hold Government jobs and begin to agree with them 100 percent. The next question that comes to me always when I see that is, I wonder what he is after?

Now, there is another thing they had in this famous report which the President's committee turned out and that is they want to get a Federal law passed that will authorize the Federal Government to step in and stop brutality when exercised by city police. My friends, that is really a good one. Think about that gang of Communists and fellow travelers up in Washington, picking out a nice board of investigators to send down here to some town in Texas to start investigating the police force to see whether or not perchance some policeman who arrested a drunk handled him just as he should have been handled.

Of course, the "colored chile in the wood pile" in this recommendation is that they want to be certain they get Federal control over the police so that when these reds come down to Texas and start labor trouble and the police obey the law and undertake to stop them, the Federal Government can come in and investigate the police force to see if they cannot reach agreement with them that they won't hit any of these reds with anything except powder puffs.

Now, folks, as I discuss this these things may sound unreasonable to you, but they are in the report. You read it in the newspapers. Now the only reason that self-respecting folks turn out a report like that is they are just campaigning for some more Red votes with the hope of maintaining the New Deal in power in Washington.

But I have yet to tell you all about this report. You know they recommended that this was going to be the method by which they were going to enforce their social standards on the South. They proposed in their report that the law provide that if any city or town adopted any segregation whatever of the races that this city or town would not be eligible for any Federal aid on any project. Of course, they would continue to tax us to raise the money, but if we had any segregation then we would not be eligible to receive any of the money in return.

But that is not all. They wanted it applied to the schools, as the Federal Government has been granting aid to the public schools to furnish lunches. Now, if you let this gang of Reds have their way, the only way the schools down here in Texas could get any part of that money would be, when lunch time came around, have all the Negro children and all the white children eat from the same table because if they had any segregation, then the school would not get any aid.

Well, of course, you know that under the Smith-Lever Act, A. and M. College, and under the Smith-Hughes Act, other colleges in Texas receive Federal aid. If the report of this committee were carried out, it would mean that you would have to open the door of A. and M. College to the Negroes or give up Federal aid for the operation of this and all other land-grant colleges.

Now I want to make this very positive statement. I have never thought much of the New Deal gang in Washington. I have never thought much of the political stooges that hang around the throne in Washington. I have never thought much of some of these big businessmen who will crawl around with these Reds in order to curry some Government favor they want further down the line. But I brand this present set-up in Washing-

ton as the low low when viewed from every standpoint by which you can judge any public institution. If the people of Texas are not disgusted with that bunch now, I wonder what it will take to get them to wake up.

There is another matter I want to call to your attention and it is this—the only hope in the world for the Democratic Party to get back in power in 1948 is for them to carry this Red vote in the big cities and they know it, and the whole gang in Washington right now are joining together in an effort to try to ration and control the prices of agricultural commodities throughout the country in order that they can bring the price of food down low enough to satisfy these Reds whose votes they must have in these big cities. The rest of this Nation is being literally filled with stories telling what a vast sum of money the farmers and ranchmen have made and are making. They are filling the country with a regular barrage of literature designed to portray the farmer as a great profiteer. They are ready to reestablish rationing, price control, subsidies, allocation of material, and everything else if they can just choke the farmer to death and satisfy the Red votes in the big cities that they must have to win the next election.

Under present prices, according to the Department of Agriculture, the income of the average man working on the farm in the United States has increased until he is now making on the average only about half as much as those employed in manufacturing plants in our cities. Well, these New Deal politicians say that is too much. They want to take part of that away from them and give it to their good Red brethren and put him back in his place where the average farmer will have an income of about one-fourth of the income of the man who is employed in our manufacturing industries in our cities.

I am wondering if you people noticed in the press the account of the meeting of the National Executive Committee of the Democratic Party. If you did, I am sure you were impressed with the fact, just as I was, that the South not only did not get anything out of that meeting, but the committee was so thoroughly under the control of the Reds and the left-wingers that our representatives down here in the South were even afraid to ask for anything. The time was, of course, before the days of the New Deal, when it took a two-third majority to nominate a man for President of the United States on the Democratic ticket. Under that rule the South had the veto power, the South had some standing in the convention, but under the regime of the New Deal they got rid of that rule and now the nomination is made by a mere majority. So they don't need the votes of the South any more. They know the people down here in the South are going to vote the Democratic ticket regardless of who is on the ticket, so they feel free to give the boys down here in the South a kick in the pants whenever they get ready.

Discrimination Against Egg Producers

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. DAVIS of Wisconsin. Mr. Speaker, the willful discrimination against the poultry and egg producers of this country by the Department of Agriculture and this administration is indeed cause for righteous indignation.

Our colleague, Mr. MURRAY, of my State, has repeatedly called this situation to the attention of the Department of Agriculture, and still this deliberate neglect continues. Mr. Speaker, why does one of the departments of this Government deliberately refuse to implement the law?

Under permission to extend my remarks, I include the following copy of a letter from one of my constituents:

RIO, WIS., *January 22, 1948.*

Hon. GLENN R. DAVIS,
House of Representatives,
Washington, D. C.

DEAR SIR: In behalf of my neighbors, friends, enemies, and myself, I am writing you in regard to the marketing situation here at home. As you know, we in the Second Congressional District of Wisconsin represent one of the best egg- and poultry-producing areas in the United States. Our problems are many and varied—you are our mouthpiece and we expect you to help us, if possible.

To state our difficulties would require pages and pages of correspondence we know you can't take time out to read. Therefore, briefly I will try to outline our problems:

Today egg prices are steadily declining; feed prices are steadily advancing. We ask: How come?

The consumer in Madison, Milwaukee, and neighboring towns is paying from 30 to 45 cents per dozen above the price paid to the producer. Feed prices are at a standard level throughout this district. Therefore, we, as producers feel that you, our Representative in Congress, could bring some pressure to bear on the proper committees to give us some help in this problem. We don't need help in producing any more—we need help in selling our products at a profit. You know as well as I do: Take away the farmer's profit and you take away 55 percent of the Nation's spending power.

Today, our Government is stressing more production; we know the world needs it, but must we produce at a loss?

Producers here are on the verge of selling producing livestock, due to low price of eggs and high cost of feed. We have no quarrel with anyone; we want cost of production plus a fair profit, namely, 10 percent on our investment. Can the United States of America deny us that and cast a wayward eye at the people dealing in the products we produce?

Will you, as our Representative, give this your immediate attention? Our need is imperative; our request, just. Help us if possible.

Respectfully,

CHAUNCEY M. DEPUY.

Salary Increase for Postal Employees

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. JOHNSON of Texas. Mr. Speaker, I am convinced that the postal employees are entitled to a substantial salary increase. I know from the increase in my own living expenses that the dollar today will not buy anything like as much as it did 12 months ago.

It is my considered judgment that we should pass legislation at once granting cost-of-living increases to not only postal employees but to all Federal employees.

I have received a number of excellent letters attesting to the serious need for such legislation and I have selected some of the best of these for inclusion in the CONGRESSIONAL RECORD. They are as follows:

AUSTIN, TEX., *January 28, 1948.*

Hon. LYNDON B. JOHNSON,
House Office Building,
Washington, D. C.

DEAR MR. JOHNSON: Enclosed is a comparative cost of living between June 1946 and the present time. Almost all of the prices shown for June 1946 are taken from the advertisements of the leading merchants of Austin as they appeared in the Austin American.

We hope that this will aid you in giving your support to a salary increase for postal employees.

Sincerely yours,

H. J. DAHLSTROM, Jr.

AUSTIN, TEX., *January 23, 1948.*

Hon. LYNDON B. JOHNSON,
House Office Building,
Washington, D. C.

DEAR SIR: As a clerk in the post office at Austin, I am writing to ask your support of legislation granting postal employees a salary increase.

The rapidly rising cost of living is putting an ever-increasing strain upon our salary check. Speaking from the standpoint of my own family, we are feeling the pinch much worse now than at any time since prewar days.

I wish to assure you that any effort on your part toward securing passage of this legislation will be sincerely appreciated by me and my family.

Respectfully yours,

O. W. PROFFITT.

UNITED NATIONAL ASSOCIATION OF
POST OFFICE CLERKS,
Austin, Tex., January 23, 1948.

Hon. LYNDON B. JOHNSON,
House Office Building,
Washington, D. C.

DEAR SIR: During our last labor-management meeting of the Austin post office, Mr. R. L. Phinney passed on to us your request for some data concerning the comparative cost of living between 1945 and the present time.

At our organizational monthly meeting, January 15, it was suggested that two or three

of our number should compile a list of items showing the cost of the commodity in January or July of 1946, and alongside with it, the cost today.

Enclosed is the compiliation of Mr. and Mrs. L. B. Council. You will receive a comparative list also, from Mr. and Mrs. H. L. McClintock, and Mr. and Mrs. H. J. Dahlstrom.

We trust that this will be of some benefit to you in giving your support to a wage adjustment or salary increase. There is a difference in a statistical report from the Department of Agriculture relative to the country as a whole, and an itemized actual cost per item as reflected in the Austin, Tex., stores.

Sincerely yours,

RODNEY MONTAGUE,
President.

Comparison of living costs for 1946 and 1947, submitted by Mr. and Mrs. L. B. Council

	July 1946	December 1947
Cheese	$0.35	$0.60
Lunch meat	.45	.85
Sugar (10 pounds)	.69	.95
Cereals	.11	.15
Apples (pound)	.10	.15
Oleo	.30	.45
Butter	.65	.90
Flour (5 pounds)	.39	.53
Shortening (3 pounds)	.90	1.27
Coffee	.45	.53
Lima beans	.25	.35
Bacon	.65	.85
Bread	.15	.20
Milk	.15	.22
Eggs	.40	.75
Car insurance	26.00	37.00
Bus transportation	.06	.08½
Newspaper	1.00	1.25
Haircut	.50	.75
Union dues	.55	.75

UNIVERSITY STATION,
Austin, Tex., January 26, 1948.

Hon. LYNDON JOHNSON,
Representative, Washington, D. C.

DEAR SIR: We of the University Station post office of Austin, Tex., urge you to give faithful consideration to a salary increase bill for the postal personnel.

Some instances of increased cost of living during the past 18 months are: gasoline increased 4 cents per gallon, motor oils increased 5 cents per quart, coffee increased 20 cents per pound, potatoes increased 2 cents per pound, dry beans increased 8 cents per pound, flour increased $1 per 25-pound sack, steaks increased 25 cents per pound, corn meal increased 9 cents per pound, butter increased 35 cents per pound, eggs increased 40 cents per dozen, fresh milk increased 7 cents per quart, sugar increased 3 cents per pound, haircuts increased 40 cents, men's dress shirts increased 100 percent, men's suits increased 50 percent, daily newspaper rates increased 25 percent, rents increased 15 percent, as well as higher taxes and many other everyday necessities.

Your favorable consideration will be appreciated.

Respectfully,

A. H. BENNEY, H. E. GRUMBLES, T. W. NABORS, E. L. DAVIS, Jr., GEORGE D. TAYLOR, H. L. MCCLINTOCK, ALFRED CRIDER, E. H. PESCHKA.

AUSTIN, TEX., *January 20, 1948.*

Congressman LYNDON B. JOHNSON,
House Office Building,
Washington, D. C.

DEAR FRIEND: I have been asked to submit a list of the items which have increased our cost of living since our last pay raise which you requested from our local branch United National Association of Post Office Clerks. In response to that request I respectively submit the following which I have compiled mostly from the Austin American from January 1946 and January 1948.

	1946	1948
Food:		
Canned corn	$0.13	$0.19
Coffee	.31	.51
Flour (25 pounds)	1.29	2.15
Potatoes (5 pounds)	.21	[1].61
Round steak	.40	.67
Pinto beans (2 pounds)	.20	.36
Soap flakes	.23	.29
Canned milk	.09	.12
Clorox (quart)	.14	.21
Corn meal	.09	.18
Bread	.10	.20
Toilet soap (3 bars)	.20	[2].29
Onions (2 pounds)	.15	.29
Butter	.68	.85
Eggs	.45	.70
Fresh milk	.16	.22
Dry cereals	.13	.16
Sugar (5 pounds)	.31	.44
Miscellaneous items:		
Regular gasoline	.19	.23½
Haircut	.50	1.00
Hydro gas	.10	.16
City taxes (revalued)	----	[3]
Newspaper	1.00	1.25
Cigarettes (carton)	1.39	1.69
Ladies' shoes	4.95	[4]7.95
Men's dress shirts	2.50	4.95
Ice (50 pounds)	.20	.30
Man's business suit	40.00	[5]60.00
Rent (in some cases)	----	[6]

[1] 10 pounds. [2] 2 bars. [3] 25 percent. [4] Same shoe. [5] Same suit. [6] 15 percent.

Of course this is only a small list and almost all living expenses have raised accordingly. Incidentally, my wife spent $23.30 for groceries last Saturday, January 17, for a family of four for 1 week, and she is a very conservative buyer. I would like to urge that you support the pay raise that we so badly need at this time.

Yours for a better postal service.

Sincerely,

HERBERT L. MCCLINTOCK.

AUSTIN, TEX., *December 27, 1947.*

Hon. LYNDON B. JOHNSON,
United States Congressman From Texas,
Washington, D. C.

MY DEAR CONGRESSMAN: Senators CHAVEZ and WILLIAM LANGER have introduced a bill (S. 1849) in the Senate which would provide a thousand dollar per annum salary increase for all employees in the post office field service.

I solicit your support of this bill as introduced to be effective January 1, 1948.

As you probably already know, Government statistics show that our buying power has decreased one-half since 1939 due to the high cost of living. Our salaries have increased from $2,100 per annum to $3,100 per annum (for top grade clerks); this is not twice the salary in 1939. Following this line of reasoning, a top grade clerk should be paid $4,200 per annum to maintain the same standard of living he was afforded in 1939.

Now let's look at the new clerk just entering the service. He gets only $2,100 a year as entrance salary on which he can scarcely exist and support a family.

The situation is acute. Clerks are getting deeper and deeper in debt, striving to provide for their families. Several have been forced to leave for they have been unable to get along on the salary they are receiving at the post office.

I do not feel that a $1,000 increase would be out of line at all. I, as well as thousands of others, will appreciate your support when the opportunity comes.

I certainly have felt the departure of Mr. Ray E. Lee here, and feel happy for him in getting something bigger and better. His friendship meant a great deal to me, and we here at the Austin post office have been very fortunate in having him here as long as we did. We really miss him. In your selection for replacement of Mr. Lee, in Mr. Bob Phinney, in my opinion could not have been better. I have known Mr. Phinney a number of years and already we have begun to love him as our postmaster. But as I have always said, leave it to Mr. JOHNSON, he always does it right and at the right time.

Yours truly,

GLYNN W. HOPKINS.

Control of Atomic Energy

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop:

LET'S FACE IT

(By Frank C. Waldrop)

One of the most expensive and cruel frauds ever put over on the American people has at last been admitted officially in Congress.

That fraud was the pretense of the one worlders, the scientists and the New Dealers that in a short time the atom bomb would be converted to peacetime uses—operating power plants, enriching agriculture, and enlarging medical knowledge.

It was all a fake, all the time. There never was any basis for making any such claims. No evidence supported it. No scientists dared offer any specific proofs.

But many millions of good United States taxpayers' dollars were milked out of the Treasury from 1945 through 1947 to support scientific boondoggles that were supposed to convert atomic energy to peacetime uses.

Now comes the official announcement of the Joint Congressional Committee on Atomic Energy declaring that the production of bombs rather than work on peacetime applications are the first order of business for the Atomic Energy Commission.

It has taken two expensive and important years to get that through the heads of the men who snatched the bomb away from the United States Army and put it in the hands of David Lilienthal and his claque of promisers on the Atomic Energy Commission.

Two years that rightfully belonged to the security and national defense of the American people have been wasted on the vanities and delusions of grandeur that afflict scientists and politicians at least as much as any other class of people.

Two years that some day may turn out to have been the two crucial lost years of United States history.

Who are some of the men who helped waste those years? First and foremost, Senator BRIEN MCMAHON, Democrat, of Connecticut. He was chairman of the congressional committee of the Seventy-ninth Congress that wrote the first Atomic Energy Act.

Senator MCMAHON'S oratory promising that civilian hands would guide the atom from war to international control and peaceful plenty is all embalmed in the CONGRESSIONAL RECORD now where it can't be denied.

Have a look at it and see what he promised. See how he roared against the brass hats and the military minds. Yet now, after two of his kind of years, here we find that his judgment is reversed by events.

The next of the misguided to recall is Senator EOURKE B. HICKENLOOPER, Republican, of Iowa, the present chairman of the Joint Committee on Atomic Energy. Where Senator MCMAHON left off he began with more of the same.

Then there is David Lilienthal, Chairman of the AEC. And, just for comedy, let's remember Harold Stassen, the mighty thinker from Minnesota.

Stassen's great contribution, announced in a full page of text in the New York Herald Tribune, was a plan for international ownership of the bomb. Remember it? He was for an international air force made up of fliers from five nations, commanded by an international headquarters located somewhere.

Flyers from each of the five nations would be spotted strategically around the globe so that if one bombed another's country, the retaliations could set in at once.

Goofy? Yes, of course. Hard to believe now in the hard light of full day that anybody could be so silly in that so-called dawn of the atomic era. Yet, there it was. Stassen wanted to give the bomb not only to Russia but to all the others hungry for our national wealth.

In those days the main idea was that at any cost the United States Army must be forced to wait outside like everybody else for word from the Atomic Energy Commission as to what the great minds of science were learning about the atom.

The very crucial heart and center of the Atomic Energy Act master-minded by McMAHON was its clause which forbid the Army to have even a single seat on the inside where decisions were to be made.

It was not to know anything until voluntarily told by the Commission which Lilienthal heads. It could not originate any research. It could not check up. It could only accept whatever was given it. And all the emphasis was turned to peacetime applications.

How many millions went into those? What came of them?

It's time some truth were told the taxpayers about those things, especially considering all the implications behind the joint committee's declaration of Friday that:

"Until such time as an effective, enforceable and reliable program for the international control of atomic energy is in successful operation, the most vital business of the Atomic Energy Commission must be the meeting of the atomic requirements of national defense."

Well, of course, that's the hard and obvious truth. But why all of a sudden, after all this time? What has happened to knock that much sense into the heads of the men who had been aiming the opposite direction?

In a few days you will see. Already the Senate Committee on Military Affairs has been given some facts in confidence to explain why the fighting arms want a $20,000,000,000 budget.

Tomorrow and for several days thereafter news about that will come out. The sum of it all is that the nitwit ideas of "international control" are at last admitted to be as dead in theory as they always were in fact.

We have got to get ready for atomic war. Two years late. Congress owes the country a fuller explanation than just a mere announcement by the joint committee. Let's see if it can be extracted.

Is the Army Budget Irreducible?

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. ENGEL of Michigan. Mr. Speaker, is the Army budget irreducible? The following was taken from the monthly information letter issued for January 1948 entitled "Know Your Navy":

ARE NAVAL OFFICERS HEALTHIER?

Congressional committees investigating disability pensions being paid to retired military officers have found that a much higher proportion of retired Army officers have applied for and are receiving disability pensions than have Navy officers of comparable rank. Data collected for the Secretary of Defense reveals that 87.4 percent of Army officers holding rank of major and above who were discharged since 1940 are receiving disability pensions whereas only 63.4 percent of naval officers of comparable rank who were retired during about the same period claimed disability. The difference was much more marked in the lower grades. Only 75 percent of Navy commanders are receiving disability pensions whereas 99 percent of Army majors are so listed. Are Navy officers just healthier?

Reception to Senator Baldwin, of Connecticut, and to Mayor Rokach, of Tel Aviv

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. HAWKES. Mr. President, on January 15, 1948, it was my pleasure to give a luncheon in the family dining room of the Senate restaurant to Col. Julius Klein, of Chicago, national commander of the Jewish War Veterans of the United States of America, who had as his guests of honor the Senator from Connecticut [Mr. BALDWIN], and Mayor and Mrs. Israel Rokach, of Tel Aviv, Palestine.

This luncheon was attended by several Members of the Senate and House of Representatives, officials of the executive branch of the Government, high-ranking officers of our armed services, and other distinguished guests—in all, a group of about 80 people.

The purpose of the luncheon was the presentation to the Senator from Connecticut, by members of the Jewish War Veterans of the United States of America, of that organization's Award of Merit.

The Jewish War Veterans of the United States of America was founded in 1896 by Civil War veterans of the Jewish faith. With the exception of the Grand Army of the Republic, it is the oldest active veterans' organization in the country. Its present membership is in excess of 100,000. Its organization consists of 610 posts in 40 States, and it has a ladies auxiliary, the membership of which exceeds 40,000.

I am advised that the Jewish War Veterans of the United States of America maintains a veterans' service program, staffed by professional counselors and guidance specialists, and that the organization is accredited by the Veterans' Administration to represent veterans and veterans' dependents of all faiths and races in dealings with Federal agencies.

The luncheon was a most pleasurable and interesting experience for me. In addition to Mayor Rokach, the group was addressed by the President pro tempore, the Senator from Michigan [Mr. VANDENBERG], the Senator from Illinois [Mr. BROOKS], the Senator from Connecticut [Mr. BALDWIN], and Colonel Klein, and the presentation of the Award of Merit resolution to the Senator from Connecticut was made by Mr. Albert Reich, of Hartford, Conn., past national vice commander of the Jewish War Veterans.

Since the General Assembly of the United Nations cast its historic vote on November 29, 1947, establishing Jewish Palestine, the eyes of the world have been directed to this tiny spot on our globe, for it exists as a symbol of hope for all, regardless of race, creed, or color, who seek greater understanding for humanity's sake.

Mr. President, I believe that Members of the Senate will be interested in the remarks of the several speakers at this luncheon, and I ask unanimous consent that a stenographic transcript of the luncheon proceedings be inserted in the Appendix of the RECORD.

I have consulted the Government Printing Office, and it is estimated the matter will make four and one-half pages of the RECORD, at a cost of $319.50.

Mr. President, I ask unanimous consent to have the transcripts printed in the Appendix of the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

LUNCHEON PROCEEDINGS

Senator HAWKES (introducing Senator VANDENBERG). I am going to interrupt this luncheon at this moment, even though some of our guests have not finished dessert. Senator VANDENBERG must leave us very shortly; he has official duties to which he must attend. This meeting would not be complete without my presenting to you the man in the Senate who serves as President pro tempore and who is chairman of the Senate's Foreign Relations Committee. He has done, in my opinion, as much, if not more, than any one man in the world for the United Nations and for the peoples of the world. I introduce to you Senator VANDENBERG, President of the Senate, and ask if he would say a few words to you before he goes.

Senator VANDENBERG. Senator HAWKES, ladies and gentlemen, I always dislike being introduced as President pro "temporary" of the Senate. I am the only officer, out of several million, who has pro "temporary" attached to his title. All the others have jobs as pro "temporary" as mine, only they aren't constantly reminded of it. Perhaps it would be better for the country if they were. I am very happy to be here, and delighted to pay my respects to the Mayor and Mrs. Rokach, to the Jewish War Veterans' organization, and to their national commander, Col. Julius Klein. Organized some 50 years ago by Civil War veterans of the Jewish faith, they have added more than 100,000 members from the ranks of their 900,000 compatriots who fought with valor in each of our wars since—alongside of Americans of all faiths and races. They typify, perhaps, as no other single organization of the land, the cosmopolitan character of our population and the patriotism in America. Not only on the basis of their contribution but on the basis of the fundamental freedoms to which the United Nations is dedicating its efforts, we are now going forward, at long last with the substantial hope for the establishment of the long-promised Jewish state in Palestine, so richly deserved by these citizens

who have given their time, money, and services to this cause.

I am particularly glad to be here to honor my dear friend from Connecticut. No man of finer character, finer public spirit, and of finer potentiality for future public service has come before my view than my friend Senator BALDWIN of Connecticut. I regret the necessity of my leaving at this time.

Senator HAWKES. Ladies and gentlemen, time is always of the essence in the Capitol, and I know it is with you. I am honored to express my very deep satisfaction in having the mayor of Tel Aviv and his fine wife here on this occasion of honoring Senator BALDWIN, of Connecticut. I want to introduce to you now a man who does not need introduction in the Senate, who has represented for 7 years the State in which I was born. When I first came to the Senate, I asked this distinguished gentleman for a photograph—he gave it to me and wrote thereon that he was proud to represent the State where I was born and worked for a number of years. Senator BROOKS is a rugged American, who believes much as I believe. I would like to say that the greatest impression I get from the United States Senate, even though living a long life before I came here, is that we do not all agree nor do we all have the same opinions. If we did not have a difference of opinion in this world we would not need government at all, nor law-enforcement agencies. The important thing in our Nation is to have faith in our representatives, to guard those things in which we believe and to encourage in the other fellow ideals—and not expect everyone to be perfect or to agree on all subjects. I always think of a Senator and a Congressman much as I regarded my children when I sent them to school. I did not expect them to get 100 percent, nor 90 percent, I felt that if they frequently got an average of 80 percent they were doing a good job. If you condemn me, or anyone else for irregularity—if you do not rally and support your representatives—then we will not have the fine functioning Nation we all want to have.

I have the honor to introduce Senator BROOKS of Illinois and to ask if he will be kind enough to introduce to you the commander of the Jewish War Veterans, Mr. Julius Klein. Colonel Klein has proved himself a fighting American and a fighting Jew in the two World Wars. In the one recently concluded, he saw active service in the South Pacific and in the Philippines where he won many decorations. At war's end, he was called to Washington to do special work under Secretary of War Patterson. A further tribute has come to him in his election as national commander of the Jewish War Veterans, an organization made up of American patriots of the Jewish faith.

Senator BROOKS. Senator HAWKES, our distinguished guests, Senator BALDWIN, His Honor the Mayor of Tel Aviv, his gracious lady, my colleagues and friends:

It is indeed a rare privilege and honor to be a participant in this unusual and most significant meeting. It is a high honor for any man to be privileged to represent his State in the Senate of the United States. This in turn affords me additional pleasant experiences, especially when one is privileged to participate in a meeting as significant as this one is today.

First, it is a great honor to welcome the mayor from Tel Aviv and his gracious lady. It is equally a great honor to participate when the Jewish War Veterans of the United States of America officially award the plaque for unusual and outstanding humanitarian achievements to our colleague, Senator RAYMOND BALDWIN, of Connecticut. There is still another honor that I proudly enjoy today.

It is the fact that this splendid organization of veterans has chosen from the State I have the honor to represent Col. Julius Klein as its national commander. I have known Colonel Klein for many years. He has a distinguished record in two world wars. He has in his personal possession testimonials unusual in character from the Secretary of War and General MacArthur, as well as many other awards and expressions of high esteem for his service. Colonel Klein has never lost his interest in civic affairs, but in addition he has always been a devoted member of the National Guard, in which he commands today a regiment of Illinois citizens.

It is a rare privilege to extend our greetings to our visiting guests from Tel Aviv and a great honor to present to you my personal friend, Col. Julius Klein, of Chicago.

Col. JULIUS KLEIN. My good friend, Senator HAWKES, distinguished Members of our Senate and Congress, our guests, Mayor and Mrs. Rokach, I am delighted and honored to be here today representing the Jewish War Veterans of the United States. I appreciate the gracious kindness of Senator HAWKES, acting as host to our organization and to me personally and enabling us to pay tribute to a great Senator, Mr. BALDWIN, of Connecticut, and to the mayor of Tel Aviv and his gracious lady.

I am deeply moved that my old friend, the Senator from Illinois, Mr. BROOKS, has been selected by the chairman of this splendid gathering to introduce me to you. I did not dream 25 years ago when I was a cub reporter in Chicago, covering the news of a courageous young prosecutor in the old Chicago Criminal Court Building, that one day we would meet in the United States Senate—he as the Senator from my State and I as the national commander of the Jewish War Veterans of the United States. Many things have happened since those days in Illinois. My thoughts of Senator BROOKS are always very pleasant—"Curly" as we call him will always be one of the old gang. He is not only a strong supporter of and champion for all veterans, but has always fought in the old American tradition for the rights of so-called minority groups. At all times he has given a true demonstration of real Americanism. Illinois, and especially we veterans, are very proud of our buddy—the fighting marine—"Curly" BROOKS.

Today we are going to honor Senator BALDWIN, but before we continue with our brief program I would like to take this opportunity to express to you my appreciation for your presence here today. I am especially delighted to see General Vaughn, aide to the President, here. Our people feel a deep gratitude to President Truman for the part he played in the important decision in the United Nations on the question of the partition of Palestine. The names of many Senators and other friends will never be forgotten by our people.

We all realize that the struggle has just started—and we are a long way off from the final goal of a free republic of Palestine—but the present stage would never have been reached if we did not have loyal, true, and courageous men in the Senate. During those historical days, it was my privilege to serve as a sentry here in Washington. I therefore feel that I speak from personal knowledge and experience when I state we will never forget the debt we owe these Members of Congress who stood loyally by us for a just cause. The distinguished chairman of the Foreign Relations Committee, Senator VANDENBERG, who sits on my left, deserves all the praise and gratitude of our people. We will always remember the champions of our cause in the Halls of Congress headed by Senators like our friend in need, ROBERT A. TAFT, of Ohio; the ever-watchful Senator from Maine, Mr. OWEN D. BREWSTER; the distinguished Senator from Rhode Island, Mr. J. HOWARD MCGRATH; his colleagues, Senator BRIEN MCMAHON, from Connecticut, who hails from the State of our guest of honor; our distinguished host, Senator HAWKES; Senator O'MAHONEY, of Wyoming; Senator THOMAS of Utah; Senator BARKLEY, of Kentucky; and so many others too numerous to mention here.

I do want to express at this time the views of the Jewish War Veterans of the United States on the Palestine issue, prompted by the stirring brief words of Senator VANDENBERG a few minutes ago.

We are not a Zionist organization. In our ranks are Zionists, non-Zionists, and even anti-Zionists. But since we are, before anything else, an organization of American veterans of the Jewish faith, we unite all these elements on the basic principle of obtaining just treatment for the legitimate aspirations of those of the Jewish faith who desire to establish a home in Palestine. To this cause—because our basic purposes are those of an American veterans' organization—we have been able to give great help because our fundamental motives are crystal clear in the area in which we function; the area populated by our 18,000,000 fellow veterans of all faiths and racial and ethnic origins. It is, therefore, of the first significance that the initial response to our open letter to the Secretary of State came from non-Jewish veterans. The first two, of Catholic faith, wrote that they were appalled by the British treatment of Jews in Palestine. They thought our proposal temperate and practical and they said that if our country and the United Nations should see fit to adopt it, they would volunteer for the international police force we suggested. The third was from a former department commander of the Veterans of Foreign Wars. His letter contained a copy of a note he had sent to his successor in office, commending our proposal and suggesting that the department introduce it as a resolution at a forthcoming regional meeting of the VFW. These instances emphasize the unique role JWV plays in the total effort to attain a just settlement for Jewry in Palestine, just as we have been and must be unique in our approach to every other problem of concern to Jewry as a whole.

The JWV at its fifty-second annual encampment, last October, fully endorsed the recommendation for an international constabulary and urged that, pending the establishment of peace machinery, the Jewish Agency for Palestine be recognized as an interim governing body for the Jewish state during the period of formation of partitioned areas.

On December 1, 1947, the distinguished Senator from Maine [Mr. BREWSTER], one of the original champions of our cause, in dealing with the problem of Palestine, said, and I quote: "The United Nations has not only given birth to a new nation, but must see to it that this infant shall be properly nursed and developed." He added, "We also remind ourselves that the United States Government, as one of the chief sponsoring powers, has assumed a considerable measure of responsibility."

Senator BREWSTER'S reminder was almost prophetic. This new nation in Palestine is being threatened today with an outburst of passion which may destroy it by means of organized massacre. It is obvious to any student of the situation that the Arabs have an abundance of arms with which to attack this young nation. At the same time all access to weapons with which the Hebrews have a right to defend themselves has been cut off.

A little more than a century and a half ago another nation came into being, one which grew into the torchbearer of freedom—the United States. As we in 1776 required tender nursing, so will this nation, which has just been born on the shores of Galilee, require tender care until it, too, shall develop into a self-reliant and responsible member of the family of nations.

The new state in Palestine asks only for that consideration to which it has a justi-

fiable claim and expects no unusual privileges. It does, however, consider it mankind's duty to give it a fair chance of survival, to achieve a historical place, and to assume those duties under the protection of its sister nations until that day when security shall be guaranteed by reason. This is one responsibility which must be assumed by the most enlightened and most powerful Nation on earth, the United States.

In the words of Winston Churchill, when Great Britain, too, felt the impact of insecurity, Palestine asks only of its neighbors in the family of nations: "Give us the tools and we will do the job." When they say, "Give us the tools and we will do the job alone, we are ready to do the job alone," the people of Palestine, the descendants of Maccabi, mean just that.

I do not speak for any organization in America when I voice this plea, but I do feel if the Jewish people of the Holy Land could speak right here and now, they would make this plea.

We would not like to see—and now I speak for our organization—American troops called and sent to Palestine—we do not want to see this country involved in an armed struggle for Palestine—there is no need for that. All we seek from the United Nations and Great Britain is that they keep their promises to the people of Palestine and to the nations of the world—a promise that has not been kept thus far.

The JWV in the United States is an organization which for five decades has played an important part in the American scene. As American veterans we have contributed and will continue to do our share to help make this country great. We are honored to be an inseparable part of this great American country. And now a few personal remarks.

I am pleased to see my old wartime Gen. Nick Ruffner in the audience. I could not let this moment pass without saluting General Ruffner. We both had the honor to serve in the Pacific under the great General MacArthur and General Richardson.

I am pleased and honored to greet the mayor and his lady from Tel Aviv.

We, JWV, of the United States stand ready to do our share for good government. That is one of the reasons why the Senator from Connecticut has been selected—he ranks along with Bernard Baruch—among America's great—who were so honored by us.

(Colonel Klein turned to Senator HAWKES.)

Senator HAWKES. Will General Vaughn, aide to the President, please stand up and take a bow.

My distinguished guests, time is short, but I am going to take a moment to say a few words to the mayor of Tel Aviv. I have told him that the day after VE-day I flew across the ocean and that when we had gone through England, France, Germany, and Austria, we headed for Palestine and landed in Tel Aviv, so I have a picture in my mind, as good a one as one of these Americans seeing the world in 24 hours ever can get in his mind, of a great city. What has been done there, the development of the land, the progress, is amazing. It is an amazing city reported to have 250,000 people. Is that correct, mayor? (The mayor named the figure 300,000.) That means that since I was there you have had 50,000 more people added. It shows very clearly what the Jewish people can do when they are given an opportunity and freedom from restriction.

I would like to say that my attitude toward the Jewish people has always been the same as I have tried to have toward each and every group making up the United States of America and the world. None of us comes into this world by consent or request, nor have we to say where we come into it. The only test amounting to anything in this world is: What has a man, or woman, done with what God gave him and has he played his part in society right and fairly. I have always taken the position that equity is not a one-way street, but a two-way street. Equity and justice cannot exist if they flow one way; they must flow out as well as in.

Guests and friends, it is my pleasure to present to you the Honorable Israel Rokach, the mayor of the all-Jewish city of Tel Aviv, one of the most outstanding personalities of Jewish Palestine today.

A lot of people today are asking, "Will it work"—the new Jewish state? The fact that the United Nations has established this state seems to me that it must be made to work. Unless we mean to keep our agreements there is no hope of establishing harmony and peace in this world. Those who only keep agreements when they work favorably, and violate them when they do not, are not making any contribution to humanity. This state must be made to work. It is one of the first great tests of the United Nations.

I think we are most fortunate to have the mayor and his wife here. I am going to ask Mrs. Rokach to stand up for a bow. [Greetings and applause.] We are particularly fortunate that they happen to be here today when we are honoring the Senator from Connecticut, Mr. BALDWIN, for whom I have a great respect.

I understand the mayor has recently had his fiftieth birthday. I congratulate him. You will be interested to know that his arrest by the British administration in the beginning of August 1947 and his retention in the Latrun concentration camp for several months evoked world-wide interest and protest. His retention at Latrun, where he refused to be interrogated by British officials until formal charges were brought against him, ended abruptly.

When he and the mayor of Ramath Gan were released on September 14, 1947—coinciding with the eve of Rosh Hashana, the Jewish New Year—the event was widely acclaimed in Palestine and throughout the world.

Israel Rokach is the scion of a pioneer family which settled in Palestine more than 100 years ago. He was born December 31, 1896, at Nveh Zedek, then a suburb of Jaffa, now a part of Greater Tel Aviv, over which he presides as mayor. Mayor Rokach is an electrical engineer by education.

During the 25 years of Mayor Rokach's service to and leadership of the Municipal Government of Tel Aviv, the all-Jewish city became the most outstanding urban center in the Middle East—a center of industry, commerce, communication, education, culture, order, and security.

Its population now comprises more than 300,000 and its annual budget amounts to over £3,000,000. In a true sense, Mayor Rokach's administration of Tel Aviv has served as a concrete example of Jewish self-government and has created a pattern for the Jewish state, for the establishment of which the General Assembly of the United Nations cast its historic vote on November 29, 1947.

His great achievements in the field of developing Jewish municipal government in Palestine were acknowledged and widely acclaimed on the recent celebration of his fiftieth birthday.

Mayor Rokach, who came to the United States at the invitation of the Jewish National Fund of America, is entrusted with the task of presenting to American Jewry the land acquisition program for the implementation of the United Nations' decision to establish the Jewish state in 1948.

I am proud to present to you this man who has made such a distinguished record in the interest of his people and humanity throughout the world.

Mayor ISRAEL ROKACH. Senator HAWKES, ladies, and gentlemen, I regret that I cannot address you in the old Hebrew language because, while you would not understand me very well, I would be able in that language, which is my mother tongue, to express better my feelings and how grateful I am for this gathering and just what I feel toward the United States as a Nation. Unfortunately, I understand it will be of no use; that time is short, too short to talk to you in Hebrew and have it translated. We are all busy. I shall try to be short.

When I came to the United States by plane, a few days ago, LaGuardia Field was banned to me by snow. I understand you fear snow here. I was told I would be flown to either Philadelphia or Washington where the runways were clear. We were all very interested to have a chance to see Washington, but finally word came that we would land in Philadelphia. My first impression when we flew over New York and came down close to the Statue of Liberty which everyone who thinks of liberty—all civilization has heard of it—the Palestinians have heard of this famous Statue of Liberty in the harbor of New York, it was a very fine day and clear in the air (even though Mayor O'Dwyer was having troubles down below in the streets) the far view of the city, its beautiful buildings, recalled to my mind the dream of Pharaoh—I am looking for a Joseph to interpret my own dream which I have day and night since I came here.

There is just one thing that has me worried, and perhaps a bit jealous—everywhere, everyone we meet speaks of my wife, is so gracious to her, tells me what a fine lady she is—they never say "this fine man."

Senator HAWKES. But, my friend, we called you the distinguished gentleman.

Mayor ROKACH. We want to thank the Jewish War Veterans' Association, Col. Klein, and the American Army. The Army came to Palestine, established headquarters almost overnight—the American way, very quickly—the boys used to come to Tel Aviv, to the Hotel Palatine, and everyone did their best to make them feel at home. We could not do much, but we did our best. A few days ago I had a thrilling experience. I was talking to a gentleman in New York, an American in civilian clothes greeted me and asked how I was and recalled to me that he had been a colonel in the Army and had been in Palestine. He was visiting from the West and had not forgotten my name, although it was 5 years since he had seen me. Mine is not a simple name and I was amazed. The brother of the "fine lady," my wife, was a student here in New York and volunteered and was in the American Army. He is now honorably discharged, but we did see him in his American uniform. That is one of the reasons why so many are in love with her.

We know that the Americans have been donors of blood to save the world. In the First World War you gave freely of the blood of your youth to help the cause of freedom. In World War II you gave so much. We all hope these wars will bring liberty to all peoples of the world. I am not complimenting—in Tel Aviv I am not the complimenting type; I have the reputation of being a hard worker—but you have found it to be your duty to be the donor of blood for the liberty of the world.

What I am dreaming of is that once we are established we shall send our people here to learn from you. I have sent many here, boys, girls, nurses, doctors, educational and engineering methods, not to have our men and women learn the sciences, they are universal and are everywhere, but it is the spirit of the Americans that cannot be found anywhere in the world. We want to send our people here to be injected with that spirit and to learn about freedom as it can only be learned in America.

I am not going to go into politics, that would be unfair since I am your guest—but I want to refer only to the United States.

It is as your host, Senator HAWKES, said—Tel Aviv is a foundation stone, it was founded only about 38 years ago, built up with our own skilled labor, hard labor.

You will see this new State, Palestine, a little place smaller than most of your own States—but I hope you will not regret the help you will extend to us—for we will create a focus in the Near East where we will be teaching and living in liberty as you know it here in the United States. All eyes are turned (not only Jewish but others) to Palestine (not to be compared in size with Great Britain or the United States) which gave birth to the morality of humanity—against the immorality of paganism and bad tradition

I think we can build up in this new Jewish state the spirit of the prophets, equality, freedom of thought and speech. If we do this I think we will have done a good thing. We crave only the small support of your great Nation, as you have given it in the past—not only the Senate in proposing to accept the partition, establishing this Jewish state—but all along in history—we had protectors in the United States of America, President Taft's action when Russia was not ready to accept them—I do not know whether you know that—from then on between the Congress and Senate we have had the protection of your Nation. We hope to be able to start a new life of peace, equality, and justice.

It is a great day for me to be received in this hall of the famous Senate of the United States of which we hear so much. We know many names and there are many men of the Congress who are popular, regardless of which party they belong to, also your fine Presidents. You do not say "Left" or "Right" here, but sit together, Republicans and Democrats. When it comes to freedom, justice, and equality we can all unite.

Accept the prayers of my town and nation for the welfare and happiness of this great Nation—the United States of America.

Colonel KLEIN. I want to express my appreciation of the inspiring remarks of Mayor Rokach. I am grateful to Senator HAWKES for his invitation to the Mayor and Mrs. Mayor. I am grateful you are so patient and I know we are all enriched by this inspiring message.

I want to introduce Mr. Albert Reich, of Hartford, past national vice commander of the Jewish War Veterans, and an old friend of Senator BALDWIN. He will read the Award of Merit voted by the Jewish War Veterans.

Mr. ALBERT A. REICH. It is a privilege to be here today, representing the forty-sixth—in size—State. We of Connecticut are proud of RAYMOND BALDWIN, our Senator—we love and honor him and I feel honored to be here paying my respect and the respect of our State to him.

I am privileged to read to you on behalf of the national organization of the Jewish War Veterans the citation of the Award of Merit of the Jewish War Veterans of the United States of America:

"Whereas the public service of the Honorable RAYMOND E. BALDWIN, Senator of the State of Connecticut, has been consistently marked by human endeavors in furtherance of the civil and economic rights of all elements of the American population; and

"Whereas in the employment of his public office as an instrumentality for the advancement of understanding and cooperation among citizens of all racial, religious, social, and economic strata of American life, he has contributed materially to the structure of our Nation's security: Now, therefore, be it

"Resolved by the Jewish War Veterans of the United States of America, through the unanimous recommendation of its national executive committee, as approved wholeheartedly by its total membership, That the Award of Merit of the Jewish War Veterans of the United States of America be conferred on the Honorable RAYMOND E. BALDWIN, Senator of the State of Connecticut."

I present to Col. Julius Klein, the national commander of the Jewish War Veterans of the United States of America, the plaque which is the Award of Merit—he will make the presentation on behalf of our organization. Colonel Klein.

Colonel KLEIN. I am confident that the Members of the Senate present will appreciate that this veterans' organization is not dedicated solely to Jewish problems. On the contrary, Jewish problems, while important and dear to us, are only among the many with which we concern ourselves. Our chief aim is and has been to represent and build true Americanism. We are marching side by side with the other veteran organizations to assure enactment of sound local, national, and foreign policy legislation to insure a free and strong America for the coming generation so that the sacrifices of those who served, fought, bled, and died shall not have been in vain.

We urge support of universal military training, and a program which will assure a strong Army, Navy, and Air Corps. We need the strongest kind of defense organization. It goes without saying that we demand fair treatment for veterans. Senator BALDWIN is only one of the strong champions for these programs in the Senate and in the Government. Many messages have reached us congratulating our organization on having selected Senator BALDWIN for this honor. Governor Green, of Illinois, telegraphed Senator HAWKES saying how happy he is to hear the Senator is receiving the award.

We are grateful to Senator HAWKES for the meeting today enabling us to present this award in the name of the Jewish War Veterans of the United States. As spokesman for 850,000 Jewish War Veterans of the United States, I am honored to present this plaque to you, Senator BALDWIN. You have well deserved it. Congratulations to you from all of us and may our Nation continue to have the benefit of your great service.

(Colonel Klein hands award-memorial to Senator BALDWIN.)

Senator BALDWIN. Colonel Klein, Senator Hawkes, His Honor the Mayor of Tel Aviv and his gracious lady, colleagues, and friends, to you, Colonel Klein, and the members of your great veterans' organization I extend my heartfelt thanks for this award. This award is one of the finest things that has ever come to me in my lifetime, and I am grateful beyond the power of words to adequately express that gratitude.

One may wonder why he should be rewarded for doing the things which his own heart and conscience dictate as the right and true things to do. The fact that you recognize them in this manner is most generous, kind, and thoughtful, and fills me with the most sincere feeling of thankfulness.

I have long known of the Jewish War Veterans. We have in our own State of Connecticut an excellent department of your great national organization. Many of the men who have led it through the years have been my warm personal friends. Your great veterans' organization, organized primarily in the interest of those in the Jewish faith who are bound together by a common faith and by a common experience in the war years, has been a great protagonist for all veterans whether of Jewish faith or not. Your organization has made a great contribution to the public welfare. It is known for its high spirit of patriotism and public service in advancing the cause of our country.

I am particularly happy and proud, Colonel Klein, that you have acted in behalf of the Jewish War Veterans in presenting this award to me. I have known you for many years now as a courageous, forthright American—a great soldier and great citizen, and I am proud indeed to have your friendship for you are widely known as a leader among Americans.

We are a Nation of minority groups. Some of our enemies think of this as a weakness. As a matter of fact, it is one of the sources of our great strength for everyone in this country belongs to one minority group or another. No single one has predominance. This fact is everlastingly true. All of these groups are bound together with the common love of freedom and an earnest and heartfelt desire to advance that cause of human freedom and justice in our own country and throughout the world. That common love and respect makes us one people. That common love and respect will continue to crown our efforts with outstanding success.

I am thankful to you, Senator HAWKES, as our host at this luncheon. This is a generous and kindly thing for you to do for a colleague. You have long known of my high regard and deep admiration for you as a friend and a citizen.

It is a happy thing for me to have the honor of the presence of the mayor of Tel Aviv and his gracious lady at this gathering. This day would have been memorable for me in any event. Their presence makes it even more so. The mayor said one thing which I would like to comment upon for a moment because I think it is of great importance. It is something that we do not often think about, all of us as Americans. He said that his country—Palestine—had been a great contributor to the morality of mankind. That is strikingly true. No other nation down through the centuries has made the contributions to the thinking of man on his own welfare, his moral worth, the quality of his soul, that have been made by the prophets and teachers of your little country. Jews and Christians alike read a Bible which records the thoughts and teachings of great leaders of the Jewish faith. And Christians accept as their Prophet and Savior a man of Palestine. We can say, very sincerely and truthfully, that out of your land in the Middle East, so well and ably represented here today by these two fine citizens of the world, have come the greatest contributions to human welfare that the world has ever known.

I think, sir [turning to the mayor of Tel Aviv], that it is a remarkable thing, and surely an extremely happy omen, that, when your plane could not land in New York, it came to Philadelphia. In the then little city of Philadelphia, more than 150 years ago, was born the United States of America. And here you are today representing a newly born state, on your first journey to this land of America, and fate lands you in the city which was the birthplace of the United States. I believe that the world will say, and, of course, we Americans believe sincerely, that we have made a fair degree of success as a nation and have endeavored to make generous contributions to all mankind, not only of our material wealth, but of our spirit of enterprise and our love of freedom and justice. May your forced landing in Philadelphia be an omen that your plans for your country will succeed and that your new nation born in the Middle East may likewise continue to make great contributions to man's happiness and welfare the world around.

We, as Americans, cherish the traditions of liberty, freedom, and justice. We remember also that in our own history success did not come by our single efforts alone. And so this new nation of yours must have friends. Your leaders speak with remarkable courage and conviction when they say that they can win and will win "on their own." That is a splendid spirit. But they will need help—our help, not only with encouragement and example, but in material things as well. We Americans, who cherish liberty and freedom, know well the feelings and great hopes of mankind that this spirit of liberty and free-

dom and justice be spread around the world in order that every man may have a fair opportunity in life, may live in health and security and reasonable comfort—may have an opportunity to advance his own ideas and his own cause.

We Americans have been richly blessed. Because of our favored position we must take a leadership in seeing to it that good, and not evil, possesses the world. It is of great significance that the United Nations has by its own action and with our support created this new state. But it is not the work of the United Nations alone nor our support that has brought it about. It is the toil and sacrifice of many men and women down through the years, men and women of the Jewish faith who have labored and died for this great cause. Your people will continue to need help. I am sure, believing as we do, and living as we strive to live, we will give that help in the manner and form best calculated to support this new nation and to advance the welfare of the people who live there now and who may come to live there in the future.

Again, Colonel Klein—Commander Klein, I thank you from the bottom of my heart for this generous recognition of your organization. I shall treasure it so long as life lasts.

Senator HAWKES [turning to Senator BALDWIN]. I have here a telegram from the Governor of Illinois which congratulates you and says that you are deserving of this honor. Governor Green's telegram says:

SPRINGFIELD, ILL., *January 14, 1948.*

Hon. RAYMOND E. BALDWIN,
Senate Office Building,
Washington, D. C.

Have just been advised by our mutual friend, Col. Julius Klein, that you are to be the recipient tomorrow of an award of merit from the Jewish War Veterans of the United States. Permit me to extend my hearty congratulations upon this well-deserved honor. Kindest personal regards.

DWIGHT H. GREEN, *Governor.*

In closing I would like the mayor and this gathering to hear this.

It does not make any difference, or much difference, what your faith is. Your faith is a thing that, to a certain extent, comes to you—comes to you in early infancy—from your parents, family, or perhaps from the place in which you were born—but it does made a tremendous difference whether you keep faith with your faith, if you have a belief in your heart and mind and soul. All may not agree with it, or like it, but if each of you keep faith with his own faith you will respect yourself and no one in the world will be justified in criticizing you for it—if you keep faith with what you believe—and in your God.

I would like to recite a piece I love:

"When you get what you want in your struggle for self
And the world makes you king for a day,
Just go to a mirror and look at yourself,
And see what that man has to say.

"For it isn't your father or mother or wife,
Whose judgment upon you must pass,
The fellow whose verdict counts most in your life
Is the one staring back from the glass.

"You may be like Jack Horner and chisel a plum
And think you're a wonderful guy,
But the man in the glass says you're only a bum
If you can't look him straight in the eye.

"He's the fellow to please—never mind all the rest,
For he's with you clear to the end,
And you've passed your most dangerous, difficult test
If the man in the glass is your friend.

"You may fool the whole world down the pathway of years
And get pats on the back as you pass,
But your final reward will be heartache and tears
If you've cheated the man in the glass."

Guests at the luncheon were the following:

Senator BRIEN MCMAHON, Democrat, of Connecticut.

Senator OWEN BREWSTER, Republican, of Maine.

Senator HARLAN J. BUSHFIELD, Republican, of South Dakota.

Senator EDWIN C. JOHNSON, Democrat, of Colorado.

Senator CHAN GURNEY, Republican, of South Dakota.

Senator STYLES BRIDGES, Republican, of New Hampshire.

Senator CARL A. HATCH, Democrat, of New Mexico.

Senator LISTER HILL, Democrat, of Alabama.

Senator ELBERT D. THOMAS, Republican, of Utah.

Senator ALEXANDER WILEY, Republican, of Wisconsin.

Senator ARTHUR H. VANDENBERG, Republican, of Michigan.

Senator J. HOWARD MCGRATH, Democrat, of Rhode Island.

Senator C. WAYLAND BROOKS, Democrat, of Illinois.

Senator JOSEPH C. O'MAHONEY, Democrat, of Wyoming.

Senator WILLIAM F. KNOWLAND, Republican, of California.

Senator DENNIS CHAVEZ, Democrat, of New Mexico.

Representative HORACE SEELY-BROWN, JR., Republican, of Connecticut.

Representative JOHN DAVIS LODGE, Republican, of Connecticut.

Representative THOMAS L. OWENS, Republican, of Illinois.

Representative WILLIAM G. STRATTON, Republican, of Illinois.

Representative JACOB K. JAVITS, Republican, of New York.

Representative EMANUEL CELLER, Democrat, of New York.

Representative ROBERT J. TWYMAN, Republican, of Illinois.

Other guests were:

Mr. Gerard A. Robichaud, Chicago Sun.
Mr. Paul Leach, Chicago News.
Mr. Bob Burns, Hartford Courant.
Mr. Ben Connor, Associated Press.
Mr. Jack Steele, New York Herald Tribune.
Mr. David Block, chief of staff to Colonel Klein.
Capt. Sanford H. Winston, Infantry Journal.
Col. Charles I. Schottland, national executive director of Jewish War Veterans, New York.
Mr. Omar Ketchum, Veterans of Foreign Wars.
Mr. Charles E. Foster, assistant national director of the Disabled American Veterans.
Mr. Jack Morris, New York Times.
Mr. Ray Sawyer, Director of AMVETS.
Capt. Lyle O. Armel, Navy Department.
Capt. Winston Falk, Navy Department.
Mr. Newman Wright, Passaic Herald News.
Mr. Burt Kemmerer, Camden Courier.
Mr. George Donaldson, Newark Star.
A representative of Life magazine.
A representative of Time magazine.
Mr. Bernard Weitzer, Jewish War Veterans.
Mr. Philip Davis.
Mr. Bernard S. Bercovici.
Mr. Joseph Cherner.
Mr. Hyman Goldman, Standard Cigar & Tobacco Co.
Mr. Carl Loeffler, Secretary of the Senate.
Mr. Leslie L. Biffle, secretary to the minority.
Mr. Sam Rose, Veterans' Administration.
Lt. Col. Elliott Niles, War Department.
Mr. Joseph Deare, Jersey Journal.
Mr. Joseph Barr, Veterans' Administration.
Gen. Bonner Fellers, former military secretary to General MacArthur.
Gen. Clark L. Ruffner, War Department.
Mr. Tyrell Krum, Times-Herald.
Mr. Roger Doolan, representing Mr. Sam Pryor, of Connecticut.
General Kramer, National Guard.
Gen. Wilton B. Persons, War Department.
Mr. Paul Richman, director, Antidefamation League of the B'nai B'rith.
Mr. Abraham Kaplan, B'nai B'rith.
Gen. Harry Vaughan, aide to President Truman.
Mr. Oscar Brown, judge of the probate court of Philadelphia.

Congress Should Adopt the VFW Uniform Pension Plan for Veterans of World War I and World War II

REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. VAN ZANDT. Mr. Speaker, on January 30, 1948, I introduced H. R. 5213 to establish, as a matter of national policy, a system of uniform service pensions.

The immediate objective of this bill is to extend to veterans of World War I the traditional service pension which this Nation, in the past, has accorded its aging and disabled veterans. The operation of this traditional service pension has provided benefits in their declining years to veterans of the Revolutionary War, War of 1812, Mexican War, Civil War, Indian wars, Spanish-American War, and lesser campaigns and expeditions. These pensions have covered the period from 1818 to the present time and range in payment from $6 monthly to $120, now being paid to a Spanish-American veteran in need of an attendant.

It is an historical fact that George Washington, as President of the United States and speaking for a grateful Nation, launched the traditional policy of recognizing one's service to his country in time of war as a duty above and beyond that of ordinary citizenship. Our first President laid the foundation for the traditional pension policy for this Nation when he provided bounties in the form of parcels of land for his victorious soldiers. Subsequently, the Congress of the United States, in the furtherance of this principle, and as an expression of gratitude of the Republic they served so well, provided monetary pensions in the declining years of these soldiers of the Revolution.

The Congress then decreed, as it subsequently did after wars that followed, that as a matter of national policy, men, who in their youth fought to defend the United States from its enemies on world battlefields, ought never to live out their remaining years in want and privation. In my opinion, it is one of the glorious

chapters in our history that today every living veteran of the Indian wars, Civil War, and Spanish-American War is facing the twilight of life with the knowledge that the Nation he served so faithfully has provided for his security in the form of a service pension.

It is highly significant, and a significance which this Congress must recognize, that all the service pensions previously granted to veterans of past wars have occurred approximately 25 years after the termination of each of these wars.

For example, the first service-pension law for veterans of the Revolutionary War was enacted in 1818; the Civil War in 1890; the Indian wars of 1892; and the Spanish-American War in 1920. Now, almost 30 years after the termination of World War I, the veterans of that war stand out as the only living group of veterans who have been denied participation in this traditional policy of service pensions based on age and non-service-connected disabilities.

Here are some pertinent facts concerning World War I veterans. According to the Veterans' Administration, of the 4,750,000 men who served in World War I, 3,700,000 are alive today. Their average age is 54 years and they are dying at the rate of 60,000 annually. While the average age of the World War I veteran is 54 years, it is interesting to learn that in 1948, 76,324 of them will reach the age of 65.

The Congress, in past years, has attempted a half-way approach in applying the service pension policy to World War I veterans. The approach limits pensions only to those who are permanently and totally disabled. As a result, thousands of World War I veterans who are unemployable due to permanent disabilities less than total, are languishing on the human scrap pile without even the means of acquiring minimum security in their late years.

Under the provisions of H. R. 5213, a World War I veteran who reaches the age of 62 will be given a pension of $43.20, and, upon reaching the age of 65, he will be presumed to be permanently and totally disabled and will receive a pension of $90 monthly, which, incidentally, is the pension payable to Spanish-American War veterans who have attained the age of 65.

For those partially disabled veterans of World War I who have not reached the age of 62 and who are not permanently and totally disabled, the following pension plan is provided for varying degrees of disability regardless of age:

25 percent disability	$32
50 percent disability	50
75 percent disability	72
100 percent disability	90

Veterans who are totally disabled and who require regular aid and attendance shall be paid a pension of $120 monthly.

In setting forth the schedule of benefits under H. R. 5213, I want to point out that any pension benefits now received by a veteran of World War I will not be jeopardized in any way. Should the veteran be eligible for benefits under H. R. 5213, and at the same time eligible for benefits under any other law, he may elect to accept the larger of the two amounts.

One of the real purposes of this legislation is that for the first time in the history of veterans benefits it establishes a uniform system of service pensions. The hodgepodge and piece-meal efforts that Congress has followed in the past will be eliminated. New demands for better veteran benefits will be unnecessary since the provisions of H. R. 5213 will be applicable to World War II veterans when they establish eligibility through age or disability. Should our country become involved in another war, Congress will not be called upon to experience the difficulty that has followed past wars in meeting the needs of the veteran population for pension benefits. This legislation will simplify the problem of administering the affairs of the veteran and reduce the cost of processing veterans' claims.

Today, there are alive about 3,700,000 veterans of World War I. It cannot be said that every one of these veterans will receive benefits under this bill. I mentioned that the average age of the World War I veteran is 54 years and that they are dying at the rate of 60,000 annually. By comparison, it is interesting to observe that, according to the Veterans' Administration, there were 2,213,000 persons who served in the Civil War; yet the greatest number ever to receive pensions was in 1908 when 478,941 were on the pension rolls. In the case of the Spanish-American War veteran, of the 392,000 who served, the greatest number to receive benefits was 196,382 in 1932.

In 1959 the Veterans' Administration estimates that 2,900,000 veterans of World War I will be alive with an average age of 65 years. Considering the experience of the Veterans' Administration with the Spanish-American War veterans, of whom approximately only half are receiving pension benefits, a similar experience in regard to World War I veterans is possible. This would mean that it is possible that only half of those eligible will be on the pension rolls at that time.

While we are considering the possible cost of this bill, let us remember that we have sent billions of dollars to foreign countries and are still being asked to continue these international hand-outs, conscious of the fact that not a single dime will ever be repaid. Our foreign-aid program has been sold to us on the basis that we should rehabilitate foreign nations and bring peace and contentment to the citizens of these foreign countries.

In our frenzy to aid every foreign nation, we should pause a moment to consider that American lives, blood, and dollars have made possible the continued existence of these countries after the most devastating war in history.

Let us remember that the benefactors of H. R. 5213 will be the American men and women who in their youth fought wars on the soil of the very countries we are now aiding with money, material, and foodstuffs. While it is true that these wars were fought to protect this Nation from its enemies, we entered World War I and World War II, playing the role as world savior. We all recall the wartime slogans, "save the world for democracy," "to fight a war to end all wars." What greater expression of gratitude can this Nation offer to its defenders than that of providing an adequate and uniform service pension for its aging and disabled veterans.

Mr. Speaker, I am proud to have introduced this legislation at the request of the Veterans of Foreign Wars of the United States, and at this point, I want to quote from a letter received from Mr. Omar B. Ketchum, director, National Legislative Service of that organization:

> I want you to know that the Veterans of Foreign Wars of the United States strongly favors a uniform pension system and we will be pleased to endorse and support such a bill if you decide to introduce it. Such a proposal is completely in accord with the program of the Veterans of Foreign Wars approved by the national encampment and the national legislative committee.

Mr. Speaker, it is my sincere hope that H. R. 5213 will receive immediate consideration by the House Committee on Veterans Affairs, and that it will be reported favorably to Congress at the earliest possible date.

An Appropriate GOP Slogan

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Appropriate GOP Slogan," from the Anniston (Ala.) Star of January 11, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN APPROPRIATE GOP SLOGAN

According to a dispatch from Washington, the high command of the Republican Party, which had as its slogan in 1946 the two words, "Had Enough," has decided to wage the 1948 campaign under the rallying cry, "Save What's Left," and according to our humble opinion nothing could be more appropriately applied to the Grand Old Party.

The first objective of the Democrats in the campaign now under way should be to save what is left of the Bill of Rights. Because if we give the GOP undisputed control of the Government again, the Thomas committee may abolish freedom of speech, the right of assembly, and the American jury system. And some people fear we will even be told from Washington just how we will be able to worship our God.

Let's also try to save what's left of the Clayton Antitrust Act. For if we have a return to McKinleyism, as is indicated now under the rule of Taft, the railroads will be exempt from public control and the sky will be the limit as to what we can be charged to ride the trains and ship our goods to market.

We also shall need to save what's left of the Federal Trade Commission, because the

Thomases have become so absorbed with the idea of investigating our personal lives that free enterprise is about to pass from the American scene under the resurgence of monopoly, which increases the cost of living of every American citizen.

The private utility lobbies also are on the march again and we are having to struggle to save what's left of the TVA and other public power projects, with floods wreaking damage that runs into millions of dollars every year while a do-nothing Republican Congress sits idly by in blissful unconcern.

Roosevelt's soil conservation projects also have been pauperized, with dust bowls hovering ominously in the background once more; and in spite of the recurrent pleas of Mr. Truman for continued aid to agriculture, we had the fight of our lives in the last Congress to save what was left of the farmers' gains.

We also remember how we all told the soldier boys when they went off to war that nothing would be too good for them when they returned. But now those soldiers, turned veterans, are having the fight of their lives to save what is left of the leaky roofs over their heads, and a GOP Congress turns deaf ears to their cries.

The GOP back in McKinley and Mark Hanna days used to hold out the promise of a full dinner pail to the men and women who toiled in our mines and factories; but labor now is wearing a GOP strait-jacket, and with economic controls removed under the leadership of TAFT the workman's pail gets emptier and emptier every day as food prices rise higher and higher.

Moreover, with the greatest peril we have ever faced being posed against us by a relentless foreign power, our Army has been converted into a mere caricature of its former self, due to penurious appropriations, our Navy is disintegrating and little is left of what was yesterday's greatest air force any nation ever assembled. And we shall have to struggle to save what is left of that also.

Americans everywhere are struggling to save what is left of a once proud public-school system, with our teachers being lured away from the schools by higher pay in industry and commerce; but while the GOP has millions to hand out in tax relief and other special favors to the coupon clippers that pay the campaign expenses, they have nothing for the one institution upon which the future of democracy itself depends.

Hence, we now are willing to adopt the 1946 GOP slogan. We have had enough of special privilege—a system that makes the rich richer and the poor poorer, and are everlastingly tired of the attempt to save what's left of the great America that Wilson and Roosevelt handed down to us from the wrecking crews of Republican ineptitude. We hope to return, therefore, to the party of our fathers come next November—and our name is legion.

The St. Lawrence Waterway

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Waterway Fight On," from the Plain Speaker, of Hazleton, Pa., an editorial in opposition to the St. Lawrence seaway. I also ask unanimous consent to have printed in the RECORD an editorial entitled "The St. Lawrence Seaway," from the Pittsburgh Post-Gazette, in which this paper, although advocating the seaway, states that its construction should be postponed and the whole subject postponed at this time.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Hazleton (Pa.) Plain Speaker of January 27, 1948]

WATERWAY FIGHT ON

The fight for the St. Lawrence waterway is on in the United States Senate.

President Truman, who has been an advocate of it, yesterday sent a letter to Senator VANDENBERG, presiding officer of the Senate, and Speaker MARTIN, of the House, urging passage of the pending bill that would authorize the project.

The President comes from the West and it is there where sentiment seems to be the strongest for the plan, which would involve the expenditure of a vast sum of money that the country can ill afford just now.

When the proposal first came to public attention during the early days of the Roosevelt administration it didn't get very far because of the pressure of many other matters. It had the full support of the late President Roosevelt. The same reasons he advanced in favor of it are among those cited by Mr. Truman.

The President, no doubt, is sincere in his attitude but we believe he is mistaken. The waterway is intended to help shipping from the Great Lakes area to the Atlantic but it must be remembered that the Lakes and the St. Lawrence are not navigable for about 4 months or more during the year.

Opening of this waterway to deep-sea shipping would not be of great help to the section it is supposed to benefit. It is claimed it would be useful for defense in case of war. Exactly the opposite is true. Instead of an asset it would be a great liability. Several heavy bombings could put it out of business and bottle up whatever ships were in the channel.

The waterway would be a practical death blow to the harbors of New York, Philadelphia, Boston, and Baltimore. Why destroy the commerce of these ports for the sake of so-called aid for the Great Lakes States?

They are the center of a vast industrial empire which needs no outside support.

Establishment of a giant power plant in the State of New York is contemplated under the plan. Why should the United States Government spend millions for this when New York itself can handle it if need is established for its construction?

The railroads and the unions which operate them are against the scheme. The mine workers of the hard and soft coal fields are opposed to it. The railroads would be bankrupted through its creation and thousands of workers would be thrown out of jobs.

Why not let good enough alone, especially at a time like the present when billions are to be appropriated for the recovery of Europe?

It is hoped that members of Congress from the Pennsylvania coal fields and our two United States Senators will not go along with the proposition.

[From the Pittsburgh Post-Gazette]

THE ST. LAWRENCE SEAWAY

The Senate has turned its attention to that hardy perennial topic, the St. Lawrence seaway. For more than 40 years the Governments of this country and Canada have been talking about it, and in recent times two Presidents, Mr. Roosevelt and Mr. Truman, have strongly urged its construction.

The project would be of immense value to this Nation, both in the increased trade and commerce it would foster and in the huge supply of electrical power it would add to our natural resources. Through the St. Lawrence seaway, the industrial and agricultural products of some 60,000,000 Americans would find cheap outlet to the world. Likewise, through the seaway could come the raw materials and goods which America needs. Pittsburgh especially, which depends so on a fast-dwindling supply of ore in Minnesota, would benefit by this ready access to the untapped mineral wealth of Labrador.

Of course, many narrow interests in the country are against the proposal and can be counted on to do their utmost to kill it now or at any time in the future.

Knowing the partisan motives of most of those who oppose the seaway and having no sympathy with men who would sell out the national good for their own immediate gain, it is difficult for the Post-Gazette not to call for congressional approval of the project at once. And yet, questions arise as to whether the Nation should not delay the undertaking.

In the first place, is the expenditure justified at this time? When measure is taken of all the vital commitments this Congress should meet—and especially of an effective European recovery program—this answer, we think, is no. When current inflated building costs and the effect which a public work of well over half a billion dollars would have on our present economy are reckoned, the answer is even more emphatically "no."

Further, a question of priority comes up—not only as regards foreign aid but other public construction programs. For example, is the seaway of more pressing importance now—or even in the future—than a sea-level canal at Panama or Nicaragua? Or than a Missouri Valley Authority? Certainly we cannot do all of these things at the same time, and it's the administration's duty to list some order of importance for considering them.

As matters stand, however, prudence counsels delay. Much as Pittsburgh and the rest of the country need it, Congress should now postpone the St. Lawrence seaway, but with a firm intent to take it up when Europe's recovery is a certainty.

The St. Lawrence Project

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The St. Lawrence Project," appearing in the Rutland Herald of February 2.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ST. LAWRENCE PROJECT

The St. Lawrence seaway, long a controversial project, is now one of the hottest issues before Congress and the American people. Senator AIKEN told the Senate that the action taken on this proposal by the Senate might conceivably determine the outcome of the Presidential election.

The foes of the seaway, like its supporters, are marshalling all their arguments in an effort to sway public opinion and influence Congress. The seaway has been debated and discussed at Vermont forums; it is a lively subject in many cities throughout the Nation. Boston seethed with opposition and

New York City's Mayor O'Dwyer declared the project would be a defense "burden" and would damage east-coast industries.

Some interesting comments on the program were made in a letter from Herbert S. Myers, Ogdensburg, N. Y., to the Wall Street Journal. That paper had printed an editorial on the seaway and Myers took issue with the views expressed and some of the arguments advanced.

"Russia considered one of her first moves would be to rebuild the Dneiper Dam," Myers wrote. "Just think, during our last war, what a saving there would have been on coal, railroad box cars, fuel oil, etc., if we had only had this 2,150,000 horsepower from water without making it with coal or fuel oil.

"Now, about the river being blacked out 6 months in the year on account of ice and fog. I also disagree with that statement. I was born along the banks of the St. Lawrence and have lived here all my life. Canals open officially each year about April 15, and stay open until December 8. Quite a few ferryboats run longer. Our local St. Lawrence ferryboat runs every hour on the hour every day in the year, even through this ice and so-called fog. If you are acquainted with this vicinity, you know, of course, that we have very little fog."

Myers said he had stood and watched large freight boats enter and leave the present canal system many times and that he had been informed that they average one an hour for the full navigation season. He added: "Check on the barge canal, the Mississippi River, and the Panama Canal on freight and you will have a surprise when you compare these to the present poor system we have on the St. Lawrence which we are trying to improve."

One of the weakest arguments offered by seaway opponents is that the waterway would be closed several months of the year, because of snow, ice, and fog. The Great Lakes system is also closed for several winter months, but during navigation season it is one of the Nation's busiest waterways, making possible shipment of millions of tons of goods and raw materials.

The importance of letters like the one written by Myers was brought out recently by Senator AIKEN. He told of organized opposition to the project on the part of one city, although a poll of business firms in that municipality indicated that 72 percent of them favored the seaway.

"The only way you can get around such misrepresentation," said AIKEN, "is for the people themselves to write and wire and speak to their Congressmen and Senators. Otherwise, minority interests will try to give a wrong impression of public opinion."

A good many people, whether for or against the seaway, agree with AIKEN and are speaking their minds.

Effect of India and Palestine Problems on the United Nations

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "India and Palestine Have Put Our Faith in the United Nations to Test," written by Lowell Mellett, and published in the Washington Evening Star of February 3, 1948.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE OTHER HAND—INDIA AND PALESTINE HAVE PUT OUR FAITH IN UNITED NATIONS TO TEST

(By Lowell Mellett)

The western world, stunned by the murder of great-souled Gandhi, appears to stand helpless in the face of the carnage and chaos it expects to follow. It knows of no way in which it can intervene effectively between the rival hatreds of the Hindus and the Moslems. In all the new machinery of civilization there has been developed no force for peace equal to the spiritual power of this one man. Or, so it seems.

Need this be so? Not if we truly understand the basis of the Mahatma's power. On what did it rest? It rested on the utter completeness of his belief. So complete was his belief that he was willing always to put it to the test, as he did again, again, and again, offering his life in forfeit each time. Had he ever wavered India would not now be free.

The power of belief served the western world when it set itself against a return to the law of the jungle, as represented by German, Italian, and Japanese fascism. It has begun to serve again through the creation of a new world organization, dedicated to the democratic rights of all people. How well it will serve depends on how deeply the men undertaking this great advance in human relations believe in their own mission. These are the men who have set up the structure of the United Nations and have accepted the responsibility for its functioning—or failing.

MUST BE MADE TO WORK

The United Nations Organization must be made to work. The power given into its hands by the people of the world must be used to enforce peace in India. If this is not done faith in the United Nations will die and all hope of avoiding the great and final war, the war between the east and west, will likewise die and that final war will come.

As a quick warning to India of its purpose and ability to act, the United Nations Organization should enforce its decision concerning Palestine. Abetted by the British, the Arab countries are making clear their intention to flout the will of the rest of the world, as represented by the United Nations.

There is one member of the United Nations that can bring the British and the Arabs into line and that Nation is the United States.

But the United States, as represented by our Government, shows no determination to act. Instead, every excuse for not acting is given. As the Arab troops, bearing arms sold them by the British, move implacably in on the beleaguered Jewish community from all sides, our Government wrings its hands and closes its eyes to the horrors soon to be enacted. Americans, caught within the fighting zone, are forbidden to aid the Jews. American firms may not sell the new nation the arms and material with which to defend itself.

UN-AMERICAN POLICY

There should be a quick reversal of this un-American policy. Our Government should insist on the dispatch by the Security Council of an international fighting force to Palestine. This could be done. The one nation that has been charged—and in most instances fairly charged—with preventing effective action by the Security Council in the past, has given every indication of a readiness to cooperate. The nation, of course, is Russia.

But our Government has more fear, apparently, of the consequences of allowing Russia to help prevent the massacre of the Jewish nation, than it has of the consequences of the massacre itself. The military minds in Washington whisper that if Russian troops go in along with ours and others representing the United Nations, they will not come out again. These policy makers seem to feel that by forestalling Russian participation in the enforcement of peace, they somehow outmaneuver the Russians.

The answer to this thinking was given by former Under Secretary of State Sumner Welles a few days ago when he said, "If large-scale hostilities break out in the eastern Mediterranean, which enable the Kremlin legitimately to claim that Russia must take armed action to safeguard her vital interests by restoring peace in a region adjacent to her frontiers, is it likely that our policy will be successful?"

The Arab nations, although taken into membership, frankly do not believe in the United Nations. We either do believe in it or we do not. If we do, the time has come to put our belief to the test.

Can We Afford a Decent World?

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have inserted in the RECORD an article which I have written entitled "Can We Afford a Decent World?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN WE AFFORD A DECENT WORLD?

(By Senator FRANCIS J. MYERS, of Pennsylvania, written for the 1947 Labor Day edition of the Trade Union Courier)

More and more often in the months ahead we are going to be asking ourselves whether we can "afford" some of the programs we recognize to be important to, perhaps necessary to, the establishment of a decent world, a world in which a free America can survive.

There will be many voices to tell us we cannot afford to do our part. Their arguments are rather compelling: that we have a huge national debt; that our own citizens are still deprived of many of the comforts of life; that taxes are onerous; that we may have a recession or even a depression and will need all of our resources for ourselves and will have nothing to share with others; that we have already done much for other peoples and for the cause of world peace and that we can't go on forever "carrying the rest of the world on our shoulders."

There is a certain amount of truth in all these arguments. They are not new arguments, nor is the truth in them some sudden revelation brought about by recent events. By and large, to the extent they are still true, they were also true in 1939 and 1940, in 1944 and 1945 and last year, and they will be true to the same extent next year and for some years thereafter.

But insistent as these voices are, compelling as they are with their arguments that we cannot "afford" the commitments we have made or are making in world affairs, the fact remains that we do not have much choice in the matter.

A mother with a sick infant does not reckon, before taking her child to the doctor, whether she could buy herself a fur neckpiece or a new dress with the money the

doctor will cost. Similarly, the efforts to set a budget, put a ceiling price, on the cost of our foreign policy, ignores the realities of crisis diplomacy in an atomic era.

The big question, the one question, which America and all Americans must answer is not how much it will cost or whether we can "afford" the cost of achieving a real peace, but rather: What must we do to achieve it?

I don't think there is much argument over the need for making peace an enduring reality. Even though our country physically was unscathed in the past war, every American knows now, either through personal experience and observation or through the medium of the newspapers, magazines, and motion pictures, what hell modern war has been even before the birth of atomic destruction.

Though some may doubt we can "afford" the cost of achieving an enduring peace, no one can dispute that we cannot "afford" another war. Our country, the richest and most powerful in the world, cannot "afford" a war like the last one, and if we cannot "afford" it, then no country, not even the whole world, can "afford" it.

So all our thinking must come back to the one essential point: What must we do to prevent war and achieve a firm and lasting peace?

The problem, as I see it, resolves itself into two parts, the immediate and the long range. There is some overlapping and a great deal of interrelationship of our obligation in both phases, and, as a result, there has been a certain amount of confusion and perhaps even of contradiction in our approaches to them.

The immediate needs, being visible and somewhat dramatic, are fairly easy to assay, and reviving isolationism among some elements in this country has made little headway in blocking our course in meeting some of these needs, although, in the last session of Congress, we received several temporary set-backs and a number of uncomfortable scares. By and large, however, America stood united on these issues and isolationist-minded Congressmen who teamed up with the "ultra economizers" in Congress in a joint attempt to undermine America's foreign policy failed in their effort.

The immediate needs, the ones which we are not only convinced of the necessity of our Nation to meet but on which we have made some good progress, are, as I said, somewhat dramatic and easily visible.

They include problems of feeding the hungry and the starving, of clothing the destitute, of finding haven and shelter for the homeless and the stateless victims of Nazi and Fascist aggression. They include the problems of stabilizing economies in friendly nations which are on the brink of disaster—stabilizing them at least sufficiently so that chaos on a mass scale can be averted. They include the problems of restoring enemy and occupied nations to the point where they can be least begin to meet some of their own requirements. They include political problems, such as stamping out the vestiges of nazism and fascism in those lands. They include the problems of protecting smaller nations from lusts and greeds still widespread in the world and in giving the peoples of those nations, insofar as we are able to, a measure of security in working out their own destinies.

The Truman doctrine for the aid of Greece and Turkey comes under several of these categories. So does the post-UNRRA relief phase of our foreign policy. So, too, do our programs for occupation of enemy nations and for care of displaced persons. These are the programs on which we are spending a major share of our foreign-policy budget. These programs successfully got through Congress this year without substantial hindrance because, despite a variety of opposition, there was no alternative to them. These are the immediate problems, problems which we can see and evaluate easily.

Much more difficult to translate into easily visible terms are our long-range problems of making the peace endure. Being long range and not susceptible to immediate alleviation, they are not as dramatic as a picture of a starving child whose misery can be relieved with food. Once having fed the child and restored his health, however, we will find the vacant stare, or the apparent misery, still showing in that child's face, unless we can breathe into him some hope in his future, some sense of security against a repetition of the disaster which struck him and millions like him into conditions scarcely above animal level.

Since we all know, in an atomic era, that no nation—not even rich and powerful and heavily armed America—can be safe from atomic destruction unless all nations are safe, our primary long-range job is to make the United Nations equal to the task of confronting the atomic menace.

We all know, too, that in this era of rapid communication and of the resultant acute proximity of nations and of clashing political and economic theories, we cannot have any one nation—even rich and powerful America—living for long in its own self-sufficient luxury while all other nations exist precariously on the brink of misery and bankruptcy. That does not mean that America must sink to the economic level of these less-fortunate nations in order to dispel the jealousies and the hatreds arising from glaring contrasts in well-being, but rather that America, as the richest and most fortunate Nation, must take the lead in helping to raise the economic levels in other countries to bring them more in line with our own. This is the substance of the Marshall plan, and it is also the keystone of the United Nations social and economic program. Here, again, the cooperation of that one other nation necessary to make these programs effective—the Soviet Union—has not been forthcoming.

The apparent unwillingness of the Soviet Union to join with us and with other nations in the United Nations in finding common ground on which to meet and solve these vital long-range issues involved in the restoration of a decent world of free peoples has been one of the greatest aids to the isolationist cause in America. We are being told by these strident voices which seek to lure America back to isolationism that since our noble dreams of 2 years ago of a world of nations cooperating through the United Nations for enduring world peace have, in many cases, been dissipated by the practical realities of power politics and nationalist incentives, we should give up our efforts and retreat, that we should rush back to the mental comforts of isolationism and let the world find its own salvation.

What the world would find under those circumstances, far from salvation, would be chaos on a scale so vast as to suck us, in a few short years, into the very same abyss from which we have just emerged at a cost of hundreds of thousands of lives, more than a million casualties, more than two hundred billions of dollars, and untold suffering, dislocation and anguish for millions of our people.

When we total up these costs, can we ever again say we cannot afford the efforts and the expense of making this present, nervous, indecisive peace secure?

America's obligations in that direction involve much more than merely money sent abroad. They include the urgent necessity for America herself to prove to the world that this economy of ours, which other nations consider the bedrock of world stability, remains, in fact, stable. That means that just as we cannot afford wars, we can no less afford depressions. Their domestic effects, as we have known them, are, in themselves, tragic, but at this stage in world affairs, an American depression would be an international disaster from which free enterprise anywhere in the world would be hard put to emerge.

The past to which reaction would beckon us is a lost past which America can never recover. It is a past we should have no desire to regain. We have our chance now, despite many significant obstacles, to achieve a better world, a decent world.

Do we dare fail?

The United Nations Edict on Partition of Palestine Must Be Implemented

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. HOLIFIELD. Mr. Speaker, it is now more than 2 months since the UN in a historic decision climaxing 2,000 years of injustice, on November 29 voted for the partition of Palestine into separate Jewish and Arab states. For the record, it should be said clearly that rarely has any international decision had more heart searching, more exhaustive study of the problem, and more sustained analysis of possible repercussions. Partition was voted upon the majority recommendation of an 11-man international committee which studied the problem in Palestine, in the Arab states, and the DP camps of Europe. This committee was the twentieth to examine this question over the course of the last 25 years. It had before it everything that had been written on the subject, and the voluminous data, the charges and countercharges that had been produced in the course of a quarter of a century.

The decision was made, and no one would dare say that the decision was not made with a sense of responsibility and a very lively understanding of the situation. In this decision the United States took a major role, as befitted the most powerful nation in the UN. For this I am proud. By the part it played the United States not only strengthened the position of the UN, but placed our country clearly again in the main stream of traditional American foreign policy in support of independence for small peoples.

But what has taken place since November 29? The situation in Palestine has shamefully deteriorated. Arabs, apparently with the tacit approval of many British officials—or at least without their active disapproval—attack and kill Jews. Jewish forces seek to retaliate. Their arms are seized by the British, and they are rendered helpless. This extraordinary policy the Britsh try to pass under the name of neutrality. What is even more shameful is the fact that no voice has been raised against this outrageous state of affairs. I turn to my own Government: What role is the United States playing in this miserable conspiracy of silence? What has happened? Why

has not the United States, who was active and eloquent in championing partition because it was after all the majority recommendation of a neutral UN Commission, why has not the United States used her tremendous moral authority to cry "Stop!" Why has she not conveyed to Great Britain the tremendous indignation the people of the United States feel toward this flouting of a UN decision? Why has she not lifted her voice to warn the Arab States, who are themselves members of the UN, that the world will not stand aside while a small group of willful men deliberately sabotage the first great decision of the UN?

The UN is only as strong as its members are strong. It carries with it only as much authority as its members carry.

If the UN decision on Palestine can be voided by violence, then the UN is doomed by default.

I, for one, cannot remain silent. We face a situation which far eclipses either the Jews or the Arabs. The UN itself is at stake. Our Government is committed to the implementation of partition. That is part of American foreign policy. It is part of UN policy.

I warn this administration that if it does not whole-heartedly uphold the UN in this decision, it will be too late to back up the UN in other decisions to come.

The UN is the last hope of the world for peace. If the UN in these next weeks and months expires, then the only other methods remaining to solve international problems are the methods which the Arab States now invoke before our very eyes: murder, massacre, war.

I include an article by Lowell Mellett:

ON THE OTHER HAND—INDIA AND PALESTINE HAVE PUT OUR FAITH IN UNITED NATIONS TO TEST

(By Lowell Mellett)

The western world, stunned by the murder of great-souled Gandhi, appears to stand helpless in the face of the carnage and chaos it expects to follow. It knows of no way in which it can intervene effectively between the rival hatreds of the Hindus and the Moslems. In all the new machinery of civilization there has been developed no force for peace equal to the spiritual power of this one man. Or, so it seems.

Need this be so? Not if we truly understand the basis of the Mahatma's power. On what did it rest? It rested on the utter completeness of his belief. So complete was his belief that he was willing always to put it to the test, as he did again, again, and again, offering his life in forfeit each time. Had he ever wavered, India would not now be free.

The power of belief served the western world when it set itself against a return to the law of the jungle, as represented by German, Italian, and Japanese fascism. It has begun to serve again through the creation of a new world organization, dedicated to the democratic rights of all people. How well it will serve depends on how deeply the men undertaking this great advance in human relations believe in their own mission. These are the men who have set up the structure of the United Nations and have accepted the responsibility for its functioning—or failing.

MUST BE MADE TO WORK

The United Nations Organization must be made to work. The power given into its hands by the people of the world must be used to enforce peace in India. If this is not done, faith in the United Nations will die and all hope of avoiding the great and final war, the war between the east and the west, will likewise die and that final war will come.

As a quick warning to India of its purpose and ability to act, the United Nations Organization should enforce its decision concerning Palestine. Abetted by the British, the Arab countries are making clear their intention to flout the will of the rest of the world, as represented by the United Nations.

There is one member of the United Nations that can bring the British and the Arabs into line, and that nation is the United States.

But the United States, as represented by our Government, shows no determination to act. Instead, every excuse for not acting is given. As the Arab troops, bearing arms sold them by the British, move implacably in on the beleaguered Jewish community from all sides, our Government wrings its hands and closes its eyes to the horrors soon to be enacted. Americans, caught within the fighting zone, are forbidden to aid the Jews. American firms may not sell the new nation the arms and matériel with which to defend itself.

UN-AMERICAN POLICY

There should be a quick reversal of this un-American policy. Our Government should insist on the dispatch by the Security Council of an international fighting force to Palestine. This could be done. The one nation that has been charged—and in most instances fairly charged—with preventing effective action by the Security Council in the past has given every indication of a readiness to cooperate. The nation, of course, is Russia.

But our Government has more fear, apparently, of the consequences of allowing Russia to help prevent the massacre of the Jewish nation than it has of the consequences of the massacre itself. The military minds in Washington whisper that if Russian troops go in along with ours and others representing the United Nations, they will not come out again. These policy-makers seem to feel that by forestalling Russian participation in the enforcement of peace, they somehow outmaneuver the Russians.

The answer to this thinking was given by former Under Secretary of State Sumner Welles a few days ago, when he said: "If large-scale hostilities break out in the eastern Mediterranean, which enable the Kremlin legitimately to claim that Russia must take armed action to safeguard her vital interests by restoring peace in a region adjacent to her frontiers, is it likely that our policy will be successful?"

The Arab nations, although taken into membership, frankly do not believe in the United Nations. We either do believe in it or we do not. If we do, the time has come to put our belief to the test.

Repeal the Margarine Tax

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Christian Science Monitor, Boston, Mass., on Monday, February 2, 1948.

REPEAL THE MARGARINE TAX

It is seldom that the effect of a tax is felt primarily in the kitchen and on the dinner table. Most governments are reluctant to tax food. The United States Government tax on colored margarine is an exception, and one that weighs heavily on family budgets in these days of high food costs.

The collections from the margarine excise for 1946 were just under $5,000,000—not a major item in a $39,000,000,000 budget but a consequential one in many household allowances.

Several bills are pending in Congress to repeal this discriminatory tax. Some are sure to be pressed strongly.

Even favorable action by Congress would not assure housewives of free access to colored margarine in their stores in all States of the Union. In fact, the laws of 23 States still require margarine to be bleached white.

Legislatures of four of the States which bar colored margarine now are in session. In Massachusetts proposals are pending to repeal this prohibition. It is likely that similar bills will be considered in the other three—New York, New Jersey, and California.

There is another Federal margarine tax which could well be overhauled. This is the annual license fee for manufacturers (so-called) of margarine, which has been so construed that any hotel, restaurant, boarding house, private hospital, orphanage, or old folks' home that mixes color into margarine for its tables must pay $600 a year.

Even Federal legislation cannot remove all the discriminations which deny consumers an unhampered choice between margarine and butter. But repeal of the Federal tax on colored margarine would be a long step in the right direction and an encouraging example to the States.

GI Subsistence

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mrs. SMITH of Maine. Mr. Speaker, as an ardent advocate of increasing GI subsistence allowance, I believe that the Lewiston Evening Journal editorial of January 22 makes good common sense as it urges concentration of such help for those who are seriously studying practical pursuits and the avoidance of indiscriminating assistance for merely hobby education.

GI SUBSISTENCE

The GI bill of rights was passed by Congress in the heat of gratitude for the men and women in the armed forces who won the fighting war. Among the educational provision was monthly subsistence allowances for GI's taking training or going to college—$65 for single veterans and $90 for married. This figure was arrived at in terms of the cost of living 3 years ago. Since the bill became a law, prices have risen to the point that the original allowances are inadequate.

The educational opportunities offered in the bill were all to the good and for the good of the count y. It was little enough to offer to a veteran whose youth was interrupted, education delayed, and whose normal development was shut off. If it was a good thing then it is now—but allowances should be increased to meet the higher costs. The married veteran, many of whom are fathers, is hard put to stay in college or continue training, especially if there are children. Many veterans' wives are working to eke out the living costs.

Bills of veteran benefits should be trimmed in favor of assisting those who are fitting themselves for life work. The scholastic record of the veteran is in the high upper levels. Such projects as flight-training, dancing, and others in the hobby category should be eliminated and the funds diverted to increase allowances of those preparing for life careers.

This can only be done by an act of Congress. Congress should act quickly.

Tax Relief for the Wealthy

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. BLATNIK. Mr. Speaker, I rise to speak against H. R. 4790—this tax-reduction bill which is designed to shift a greater percentage of the tax burden from the wealthy income groups to the small taxpayer. Its effect is to break down the progressive nature of our existing tax structure, which is based on the ability to pay, in order to grant huge tax hand-outs to those who have been making enormous incomes during this period of inflation.

This bill makes four important changes in the present tax laws. The first major change in the increase in personal and dependency exemptions from $500 to $600 per person. The second is the provision which permits married couples to split their incomes in making tax returns. A third change is the reduction in the rate of taxation by 30 percent on the very smallest incomes, by 20 percent for the incomes below $4,000, and by 10 percent on the larger incomes. The fourth major change is the reduction in estate and gift taxes by 50 percent.

FOR THE GREEDY, NOT THE NEEDY

This measure has been cleverly drafted by the majority party tax planners to deceive the people, and to mislead them into believing that real tax relief is being given. But its effect is just the opposite. The people who need tax relief—the low-income groups—will get only a token reduction. The wealthy person will, on the other hand, be given a bonanza. Those provisions which provide for a $100 increase in per capita exemptions, and the 30 percent cut in the smallest incomes, will not give the substantial tax relief that the small taxpayer needs for protection of his living standard. These features are only the sugar-coating which have been added to make this "rich man's" tax bill more savory to the public, and to detract attention from the gross inequities of the bill.

A careful examination of this measure will reveal its inequities, and prove it to be a masterful piece of Republican duplicity. The 30–20–10 percent tax reduction provision is most unfair to the average citizen. For example, a married man with two children receiving an annual income of $3,000 would get only $110 in tax reduction. On the other hand, a family of four with $100,000 per year income would obtain an $18,000 tax cut. The tax cut on a $500,000 income would be $63,000, and would amount to $106,000 on a $1,000,000 income.

The provisions which allow for income-splitting are also deceptive and unfair, as the bill is written this feature will benefit only the wealthy. It has been estimated that 97 percent of the benefits under the income-splitting provision will go to those with incomes above $5,000. The 50-percent reduction in the gift and estate taxes will also benefit only the families of great wealth.

The facts which I have mentioned relating to the effects of this bill permit only one conclusion. This measure will reduce Federal revenues by $7,100,000,000, and most of that amount will go into the bank accounts of the upper income groups.

It is difficult to understand why the upper income groups are in need of such generous tax reductions. Statistics from the Federal Reserve Board show that accumulated savings in this country at the end of 1948 amounted to $140,000,000,000. These savings include bank deposits, Government bonds, and cash. But to whom do these enormous reserves belong?

WHOSE SAVINGS?

An examination of the savings picture will reveal that most of the reserves are in the hands of the wealthy—the people to whom my Republican colleagues now want to give tax relief. According to the TNEC report, the wealthiest 10 percent of our population is responsible for 86 percent of total savings; the next wealthiest 10 percent accounts for another 12 percent of all savings; and the remaining 80 percent of our people acquire only 2 percent of total savings. In other words, most of the $140,000,000,000 in savings are concentrated in the hands of 10 percent of the people who have the highest incomes.

Now, we are discussing a tax measure which will make these same people the chief beneficiaries. The Knutson tax-reduction bill would give over one-third of the total tax reduction of $7,100,000,000 to 7 percent of the taxpayers in the upper-income group. The remaining 60 percent of the tax relief would go to the other 93 percent of the taxpayers, with a bulk of it going to the higher brackets of this group. Little real relief will be given to the majority of the people—the people who make less than $2,300 per year, and who need tax reduction most.

Such an arrangement may appear fair and equitable to my Republican colleagues, but to any reasonable person it seems to be a sell-out of the millions of wage earners and salaried people in favor of the wealthy taxpayer. It represents a repudiation of the universally accepted principle that simple tax justice requires that the tax burden should be so distributed as to bear most heavily on those who are best able to pay.

CONTRIBUTES TO DEPRESSION

I object to this measure not only because it violates the principle of ability to pay but also because it is by its very nature a depression-breeding policy. Business prosperity and full employment depend upon the maintenance of adequate purchasing power in the hands of the great majority of consumers. Yet, as the President's Economic Report shows, the inflationary rise in the cost of living is steadily depleting mass-purchasing power, and is forcing consumers to resort to credit buying and the use of savings to purchase the necessities of life. This economic situation is serious, and contains the seeds of depression.

An intelligent tax policy would contribute toward the reversal of this trend by granting substantial tax relief to low-income groups, and thus increasing their spendable income for consumer purchases. But this tax bill does just the opposite. It ignores the need for maintaining the purchasing power of the low-income brackets as a bulwark against depression—only the wealthy will benefit from its provisions. Such a short-sighted policy will increase the chances of economic collapse in the near future.

REAL TAX RELIEF NECESSARY

Mr. Speaker, there is a real need for tax relief, but this relief should be given to those who can least afford to pay taxes. This could be accomplished by retaining the present income-tax rate, while raising the per capital exemptions. Another approach would be to adopt the Dingell bill which would grant a $40 cost-of-living tax credit to each taxpayer. I regret that the House Ways and Means Committee has not seen fit to report out such a measure for debate. I have always favored real tax relief for the people, and have stood ready to give my support to any measure which would grant such relief.

However, I must go on record as being opposed to the unsound and inequitable Knutson tax bill. It is a rich man's tax measure which will favor the wealthy at the expense of the average taxpayer. It fails to recognize the need to conserve the people's purchasing power, and is therefore a depression-causing proposal. I have no choice but to vote against it.

Warning to Women

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mrs. ST. GEORGE. Under unanimous consent to revise and extend my remarks in the RECORD, I include a news letter of Samuel Pettengill:

WARNING TO WOMEN

Ladies, take notice! If you go to Florida this winter, don't give your mother, sister, or daughter a hair-do, shampoo, or manicure. You have got to have such work done in a registered beauty shop. It makes no difference if you shampoo mama for free. There is a law "agin" making people pretty at home. The fine is $500 and/or 6 months in the hoosegow. This is on the authority

of a newspaper dispatch in the Tallahassee News-Democrat of December 7.

The professional beauticians of Florida are alarmed at the damage you might do to a dear one through love and ignorance. So, with no thought for self, these noble souls have lobbied a bill through the legislature to protect your mother from you, and you from her.

When I think of the sacrifice of time and effort these splendid uplifters made in your behalf, I am lost in admiration. It's hard work buttonholing legislators in the vast corridors of some State capitol.

It is apparently still legal in Florida to clip your own hangnails, or wash your own hair. But think of the greater danger when you do these chores on yourself. The law will no doubt be strengthened to prohibit self-beautification and send you to Ye Beauty Shoppe at so much per.

Why, this opens a whole new field for public service. Think of taking a bath alone. And stepping on the soap without a beautiful beautician and public cleaner to grab you and save you from yourself. More people fall in bathtubs than in battle. I know. I cracked three ribs once in a Texas bathtub. No one should be allowed to take a bath in his own home. It's too risky. The only place to take a bath is in a licensed, registered, and inspected Cleanie Bathee operated by licensed, registered, and inspected professional public cleaners. We should go to the cleaners.

And shaving! When I count the times I have cut myself with safety razors, I marvel I'm alive. Think of my hair-breadth escapes from barbers' itch and sudden death. I should never have trusted me to I. I demand protection. I shall write my Congressman. We've got to have a Bureau of Bristles in the Department of the Exterior.

And then think of the terrible risks young husbands take with Honey Bun's biscuits. The broken teeth, the ruined stomachs, the awful language! No; we must save husbands from their wives. Too long have we neglected our plain duty to these helpless ones. We need a secretary of biscuits and salaratus with a salaried staff of inspectors of young wives—one for every kitchen.

And when I see the figures on divorce, it is plain that love-making is extremely dangerous. No job for amateurs. As Harry Lauder said, "Love is a disease." It's very contagious, too. The public needs protection. No one should be allowed to make love until he has passed a civil-service examination on Ye Art of Love, the Right Phase of Ye Moon, and How to Choose a Wife. Why, we have had bureaus of animal inspection for years. Will you be so bold as to tell me that prospective brides need less inspection than animals? We must have registered, licensed, and inspected inspectors of love's young dreamers. We've got to pass a law. Florida, lead the way.

SAMUEL B. PETTENGILL.

The Jewish State Is in Danger

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. BLATNIK. Mr. Speaker, the General Assembly of the United Nations voted on November 29, 1947, to create an independent Jewish state in Palestine. Today, that decision is being nullified by armed Arab bands who are carrying on open warfare against the unarmed Jewish population. Under leave to extend my remarks in the RECORD, I include an article entitled "Conspiracy Against Partition" by Lillie Shultz which appeared in the January 31 issue of the Nation, and one which will throw considerable light upon the issues in Palestine:

CONSPIRACY AGAINST PARTITION

(By Lillie Shultz)

No more cynical veto was ever applied by a major power to a United Nations decision than Great Britain's refusal to comply with the recommendation of the General Assembly on November 20 that "an area situated in the territory of the Jewish state, including a seaport and hinterland adequate to provide facilities for substantial immigration, shall be evacuated at the earliest possible date and in any event not later than February 1, 1948."

The reason given by Sir Alexander Cadogan for this refusal was that his government was unwilling to jeopardize an already delicate situation and create new troubles for its security forces in the Holy Land. Sir Alexander repeated on January 21 what had become the standard British response to all inquiries about cooperation during the UN deliberations—namely, that so long as the mandatory regime is maintained it must retain undivided control over the whole of Palestine. He added: "For this reason it is not possible for my government to comply with the recommendations concerning evacuation of a Jewish port and hinterland so long as the mandate continues." Sir Alexander had apparently forgotten that Britain had also undertaken to maintain peace and security in the Holy Land until its withdrawal.

With British troops numbering 80,000 to 100,000 in Palestine, a modern army with modern equipment, it is nonetheless a fact that since November 30, 1947, there has been raging in that small country fierce warfare, initiated by the Mufti and the Arab Higher Committee, carried out in the first instance by Arabs of Palestine, and supported by the surrounding Arab states and bands infiltrating from these states. Is this a war of such proportions that it could not have been nipped in the bud by the mandatory power? And if it is, why has it not been brought to the Security Council?

When partition was voted, several facts encouraged the belief there would be a minimum of violence, at least until the independence of the two states was established: (1) The presence of large British forces and the declared intention of the mandatory power to maintain security; (2) the existence of the Haganah, and its ability to keep order provided it were recognized—as the UN clearly intended it should be—as the armed militia of the Jewish state and promptly supplied with arms; (3) the absence of any important Arab military force inside Palestine and the inability of the Arabs to wage an armed struggle unless supplied and directed from the outside; (4) the assumption that open flouting of a UN decision would evoke prompt action.

But neither the presence of the British military forces, nor a police department responsible to them, nor 165 emergency-defense regulations—which before partition were applied almost exclusively to the Jews—prevented Arab excesses. In many instances British troops have been passive spectators of attacks on the Jews, and in some, accessories. The British authorities have permitted a band of the Mufti's henchmen, calling itself the Arab National Guard, to besiege the old city of Jerusalem while holding 1,700 Jews as hostages, and have even concluded an agreement with this band permitting British troops to enter the old city to distribute food and other necessary supplies. Though the Mufti's organization, the Arab Higher Committee, is directing the whole operation, not one of its leaders has been arrested. In fact, the Palestine Government itself is distributing rifles to Arabs in the villages, ostensibly to enable them to defend themselves. Members of the Haganah, on the other hand, are being systematically disarmed. Recently the British withdrew from Jaffa and Tel Aviv, leaving their protection to Jews and Arabs under British command. The Arabs were armed by the British; the Jews were not, on the excuse that they had stores of arms.

Regular incursions into Palestine of Arabs from Syria and Lebanon and other Arab states for the purpose of attacking Jews are openly tolerated.

Far from permitting the Haganah to act as a militia to help maintain order and carry out the UN directive, British authorities are treating it as a terrorist agency. Meanwhile the Arab Legion operates in the key Jewish sections of Palestine, and Palestine Arabs are equipped with arms sent in by the Arab states or turned over to them by Arab members of the British police.

Without doubt this reign of terror could be ended without great loss of life and without additional military force. Its continuance is to be attributed directly to British policy, which has countenanced the war in Palestine as a form of political blackmail whose immediate objective is to defeat the partition plan and consolidate the British position in the Middle East. The long-range objective of this policy is to pave the way for the extension of the Truman doctrine to the whole Middle East. To that extent at least, our State Department is implicated.

Why are the British conspiring with the Arabs to carry out their armed revolt against the Jews? The reasons are simple:

1. Bevin and some of his Foreign Office colleagues are not averse to a little bloodletting—particularly of Jewish blood.

2. Britain intends to remain in Palestine. It is therefore ready to help along a situation which will prove the partition plan to be unworkable and open the way for some form of the Bevin federation plan as a substitute. As the mandatory power with large forces on the spot, Britain could then be persuaded to handle the carrying out the scheme as agent of the United Nations.

3. Should this fail, the British have another plan. At the appropriate moment, if nothing disturbs the stage as it is now being set, they will permit Emir Abdullah, of Transjordan, to overrun the whole of Palestine with troops of the Arab Legion—British trained, officered, and equipped. As a result (a) Abdullah will give up his ambition to annex Syria and Lebanon; (b) the British will be assured of the Negev, bordering on Egypt, of Haifa with its pipe-line terminus and port facilities, and of the port of Aqaba, giving access to the Red Sea; (c) the states of the Arab League will be rid of the Mufti and his rabble-rousing potential which the governing hierarchy in each state fears; (d) the Jews will be herded into a kind of ghetto in a restricted area with limited autonomy, and Britain, in the role of protector, will endeavor to reconcile them to this fate. Thus the primary aim of the Arab revolt—an Arab Palestine—will have been achieved. And Britain will have won.

This is no pipe dream. It is the reserve plan, approved in London and worked out by Brigadier Clayton, British military expert in Egypt, with leaders of the Arab League. And the Arab League is still the creature of the British, with Brigadier Clayton the only non-Moslem regularly permitted to attend its meetings. Key officials in the United States Defense and State Departments are familiar with the plan.

The prime object of Bevin's foreign policy is to assure the continuance of old conces-

sions or their extension—military, political, and economic—in order, on the one hand, to protect Britain's oil empire and, on the other, to advance the plans of the Anglo-American alliance for containing the Soviet Union. For this purpose bases are needed on both sides of the Mediterranean. These the Arabs could well afford to give in return for being allowed to carry through their revolt.

The first results of this British strategy became evident on January 15 with the signing of the new Anglo-Iraqi military treaty. This was a renewal of the 1932 treaty whereby Britain obtained air bases, facilities for moving troops and equipment, the right to supply military and civilian advisers and technicians, joint control of the British-built railways and the port of Basra, and the right to move in troops if war threatened.

To be sure, under the new treaty Iraq is granted complete territorial independence and with it the air bases of Habbaniya and Shaibah. But Britain retains the right to use these bases until peace treaties have entered into force with all former enemy countries. Britain also continues to sell arms to Iraq. And an annex to the treaty states: "In the event of either high contracting party becoming involved in war or a menace of hostilities, His Majesty the King of Iraq will invite His Britannic Majesty to bring immediately to Iraq the necessary forces of all arms and will furnish to His Britannic Majesty on Iraqi territory all the facilities and assistance in his power." This prize may yet escape the British. Iraqi nationalists are protesting against the terms of the treaty, but this may turn out to be only a maneuver to gain further concessions.

Another treaty which has just come up for renewal is that with Transjordan. Under the present treaty Transjordan is nothing but a British base. The British are not only authorized to station, maintain, and transfer troops and ammunition to Transjordan, but also to train such armed forces as the Emir is assumed to require, with the British undertaking to defray all costs.

Other negotiations are under way with Egypt, Saudi Arabia, and both Syria and Lebanon.

The stakes for which the British are playing in Iran, Iraq, and Kuwait include an oil reserve of something over 15,000,000,000 barrels. The exclusive rights to the oil deposits of Iran and Kuwait are held by the Anglo-Iranian Oil Co. The British Government owns 50 percent of the shares of that company.

British and American oil interests mesh throughout the Middle East, and with them military interests as well. The Gulf Oil Co. of the United States owns 50 percent of the Kuwait concession. Socony-Vacuum and Standard Oil of New Jersey own approximately 25 percent of the Iraq Petroleum Co. and all its interests. The largest oil concession—that in Saudi Arabi—is owned exclusively by American interests. It has a reserve of 5,000,000,000 barrels, will run until the year 2005, and last year paid $17,000,000 in royalties to King Ibn Saud.

If Britain has bases in Iraq and Transjordan, the United States now has a base in Dhahran, where our Air Force operates a field built during the war. A deep-water port is being constructed near Damman, 11 miles from Dhahran. A pipe line being laid through Transjordan and Syria to Port Sidon in the Lebanon is expected to be completed in 1950. It will be capable of delivering 300,000 barrels of oil daily at the Mediterranean port. Last week the United States announced the reopening of a wartime airport at Mellaha near Tripoli in Libya, where the British still maintain control. This, coupled with Britain's announcement that it plans to use Cyprus as a military base and with the Greek vote against partition at the UN, gives a clear indication of Anglo-American plans and illuminates some of the reasons why the State Department seems to be conniving at the defeat of the United Nations plan for Palestine.

Since the disorders began, the United States has given no indication that it intends to take action to implement partition, either by helping to bring about British compliance with the UN decision or by securing the protection of the UN commission and the Jews of Palestine through an international police force. All signs point in the opposite direction.

According to the decision of the General Assembly, the commission is responsible to the Security Council. When the report of the Assembly's action was brought to the Security Council, the Arab attacks had already started. But the United States took the position that there should be no discussion of the question then.

The representatives of the United States, it should be underscored, take their instructions directly from the State Department and not from the President. When some weeks ago Secretary-General Trygve Lie sent out a questionnaire to the Big Five and other important states, asking about their attitude toward an international police force in view of the occurrences in Palestine, the United States failed to make any reply. Earlier the United States had favored a volunteer force.

But the positive acts of the United States are even more disturbing. At the General Assembly, when the protection of the Jewish community was discussed, the American representatives in closed meetings and press conferences and in personal conversations among members of the delegation and the press, took the position that the Haganah would be recognized, without question, as the Jewish militia and would speedily be provided with sufficient arms to carry out its functions.

On December 6, just a week after partition was voted by the Assembly, the State Department announced an embargo on arms to the Middle Eastern countries.

What is the effect of this unilateral act? First, obviously, it prevents the arming of the Haganah. Second, the seven Arab states are in a position to buy arms from all other member states and turn them over to the Mufti and his cohorts. That is precisely what is happening. Britain has announced that it will not impose an embargo and will honor its commitments to send military supplies to the Arab state. This means that the United States is accessory to a maneuver by which the Jews of Palestine are being exposed to annihilation, for it is impossible for the Jewish Agency to purchase arms in the legal market as long as the Jewish state is not recognized. It means further that American lend-lease and surplus military supplies in many countries are being used to defeat partition and wipe out the Jews of Palestine.

Before the crucial vote in the UN was taken, Loy Henderson and his colleagues in the division of near eastern and African affairs told President Truman that any further pressure on the Arabs would jeopardize the defense program. After the vote Herschel Johnson, United States representative on the Palestine committee, was reprimanded by Loy Henderson for carrying out too energetically the President's order to support the resolution. More recently the State Department has told the President we have done more than was necessary, and that our role now should be to wait and listen.

Apparently the Arab states are not afraid of UN reprisals, for the Governments of Syria and Lebanon are openly flouting the partition plan while Syria sits as a member of the Security Council. The Premiers and the Defense Ministers of both countries are responsible for the collection of funds, the registration and training of volunteers, and the assembling of arms to be sent into Palestine. This was reported to the Lebanese Parliament on January 15 by the Minister of Defense.

On January 14 the Arab paper Al Masri quoted the Syrian Defense Minister as saying that the training and arming of volunteers in Syria was progressing satisfactorily and an all-out attack against the Jewish community of Palestine could be expected within a month.

At Secretary Marshall's press conference on January 21 a representative of the Nation asked whether in his belief the invasion of Palestine by Syrian troops constituted a threat to peace and security which the United States might take up with the Security Council. Secretary Marshal brushed the question aside with the comment, "I don't want to talk about it at this time."

From another source the Nation has learned that the United States has no intention of sending American troops to Palestine or of initiating any action leading to an international police force in which Americans would participate. Secretary of Defense Forrestal has privately threatened to resign and denounce the administration should it contribute American troops to an international force or give impetus to the formation of such a force. Nor do we intend to lift the arms embargo.

The United Nations Commission on Palestine will by February 1 make its first report to the Security Council. The report must, of course, cover (1) the refusal of the British to comply with the terms of the resolution; (2) a description of the disorder in Palestine and its sources. A special report will deal with the desire of the Commission itself to be protected in Palestine by armed force as well as the United Nations flag.

Which country will take the initiative in suggesting action to restore order becomes the crucial question. Were the Russians to do so, they would play directly into the hands of the British, who would like nothing better than proof of the Soviet desire to gain a foothold in the Middle East. France, beset by its internal difficulties and the special problems of its Moroccan empire, can be counted out. So can China, now in the midst of the most delicate negotiations with the State Department. The two countries which remain are Great Britain and the United States. What will the United States do? Will President Truman be bullied by the State and Defense Departments into believing that further action by the United States would jeopardize the defense program? Or will he refuse to be swayed by the spurious arguments of Loy Henderson, Secretary Forrestal, and Admiral Leahy?

The United States could do a number of things which in no way involve American troop movements or our so-called defense program. We can face the issue of British recalcitrance and insist that it be ended. We can tell the Arab states that we recognize their complicity and will not tolerate it, and we can back that statement by the following specific acts:

1. Expose the Mufti as a war criminal through the publication of the secret files which were seized by the American occupation forces in Germany.

2. Insist upon the arrest, indictment, and trial of the Mufti as a war criminal.

3. Demand the extradition and trial of Kauwkji, now in Syria, the actual field commander of the Arab forces being siphoned into Palestine.

4. Take the initiative in demanding that all members of the United Nations place an embargo on arms shipments to the Arab League states.

5. Demand the immediate recognition of the Haganah as the defense force of the Jewish people of Palestine and its proper equipment for defense purposes by member nations of the UN.

6. Urge the establishment of an international police force with all possible speed—this force to comprise contingents of small powers to maintain internal order, but to be assured of big-power support in the event of external aggression.

The Arab world is incapable of a sustained revolt without the active support of the western nations, including moral encouragement, military supplies, and the training of troops.

As I have shown, the present disturbances can be laid to British connivance. As long as the United States fails to take appropriate action, the inference must be that the State Department, in agreement with the British, is deliberately undermining the pledges of the President of the United States. For this reason, if for no other, Mr. Truman himself should investigate the efforts to defeat his directive on Palestine. What is involved here is not simply the honor of the United States. Peace and security are at stake. Only the naive will believe that alliance with Arab feudal overlords, most of whom were yesterday in the camp of the enemy, constitutes a first line of defense in any war, cold or hot.

Will United States Government Uphold Monopoly?

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. BARTLETT. Mr. Speaker, I am glad to note that Alaska has a good friend in the St. Louis Post-Dispatch. We need friends in these days, when the imminence of statehood has made almost frantic those absentee interests who have so long controlled the Territory and who now seek to make their position forever secure before the people of Alaska create a State government. The St. Louis Post-Dispatch hit the nail on the head in an editorial which appeared January 7:

What is the mission of the examiners for the Maritime Commission in the investigation of Alaskan freight rates? Are they disinterested searchers for the facts or are they apologists for the shipping monopolies?

Two months ago the case against the monopolies of Gilbert W. Skinner of Seattle was fully documented at a Federal hearing. It was shown that his shipping companies are authorized to charge rates twice those to Honolulu although the distance from Seattle to Honolulu and from Seattle to Nome are the same.

Governor Gruening, of Alaska, put it this way:

Alaska is handicapped by excessive maritime transportation rates—the highest in the world in fact, imposed by what has become virtually a one-man-owned absentee shipping monopoly, a monopoly fostered by unseen men in distant Federal agencies.

In the face of facts and statements such as these, the Federal examiners have again called on the Maritime Commission to uphold the rates of the Skinner monopolies. No wonder Philip Eden, CIO economist, says that Skinner has more influence than 90,000 residents of Alaska.

The Maritime Commission should reject the recommendation of its examiners. If necessary, it should conduct its own investigation. When other applicants are asking the opportunity to engage in shipping at lower rates, the Commission cannot justify the preservation of the Skinner monopolies at excessive rates.

Here is another argument for statehood for Alaska. So long as Alaska is a Territory, without Senators and Representatives to look out for its interests, greedy men will seek to victimize the helpless residents.

Our Final Choice

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include an article entitled "Our Final Choice," by W. T. Holliday, president, Standard Oil Co. (Ohio), which appeared in the Reader's Digest, January 1948 issue:

OUR FINAL CHOICE

(By W. T. Holliday, president, Standard Oil Co. (Ohio))

I am one of those terrible people, a munitions-maker. As chief executive of an oil company, my business is just as essential to war as tanks or planes. So I am supposed to welcome war as a fine thing for my business.

But the next war will not be a fine thing for my business—nor for any business. It will simply be the dead end of all our business—and of a good many other things as well. Man, at long last, has developed the instruments with which he can destroy his world—and will destroy it, unless the power to do so is taken from h' n.

So I put this to your common sense: If you know that down cellar in your house there is a hundred pounds of dynamite, with a fuse of a certain length attached and lit, is it your main job to see that the beds are made and the cupboard is filled?

Let us wake up. The first job of all of us today is to secure world peace. Our only alternative is World War III. The horror behind those cool words is beyond imagination. Already the scientists, in the merest babyhood of atomic power, are talking about bombs a hundred times more powerful than the Hiroshima type, which could blast New York off the earth and kill 6,000,000 people. Just as appalling, the scientists tell us, are developments in warfare by deadly bacteria.

Whenever a civilization is faced with a new and fundamental challenge, there is only one thing that can save it from decline and fall: Its men and women must change their habits of thought to meet the challenge. Either they meet their new world with new thinking, or they go under.

Do all of us realize that our present and normal state of world affairs is nothing but raw anarchy? We are living under a world condition of lawless chaos that we could not tolerate for an instant in our immediate lives.

Scholars talk about international law, but the plain truth is that there is no such thing. Law means enforced law. To enforce law, it takes a government. And where is their international government?

Well, you say, Don't we have the United Nations?

We do—for what it is. But at present the United Nations is not constructed to do the job that needs doing; let us recognize its shortcomings and try to correct them while there is still time.

The United Nations cannot maintain world peace for the simple reason that the United Nations is not a government. It has no world laws and no power to enforce them if they existed. The United Nations is nothing but a league, a many-sided treaty signed by 57 separate nations—each of which keeps all its independent power of deciding at any moment whether it will make war.

History is full of such agreements, from the leagues of ancient Greece down to the League of Nations. Every one has proposed to abolish war and every one has ended in war. If the league theory were all that history had to tell us about maintaining peace, the human race might as well shut up shop.

Under our noses, however, is a different fact of history that is equally well proved; it constitutes the only hope by which imperfect men in an imperfect world can live in peace together.

THE PROMISE OF FEDERATION

What is the real meaning behind the symbol of the policeman? If you look closely at the public peace in your city, you will be reminded that you and your fellow townsmen would be completely incapable of maintaining the peace by yourselves as individuals. The policeman represents public force, wished-for order and agreed-upon laws. Most important, he represents the unseen fact that you and your fellow citizens have given up your primitive, independent right to settle your own dispute with your own force, and have assigned him the power to handle something which you are individually powerless to handle. In a word, you and your fellow citizens have federated.

The essentials of federalism are all within the policeman. He does not tell you when to get up in the morning or what to eat for supper—his powers are his assigned powers, and no more. But when you have trouble within the scope of his duties and powers, he takes charge. And it works.

It is one thing to say that a federal world government would have supreme jurisdiction in maintaining the peace. But how would it enforce this peace? Right here is where you and I must change our habits of thought. It is hard for us to think of armies and navies not belonging to separate nations but to the world as a whole. Yet it is a condition of world government that all the great weapons of mass destruction must be given up by the nations and handed over to the world government. Theoretically, the world government would have the power to make overwhelming war upon any nation that threatened world peace.

I say theoretically because the real nub of enforcing world peace would be something quite different. Otherwise we are back at the impossible paradox of making war upon a nation for the sake of preventing war. How do we get around that contradiction?

The writers of our Constitution were puzzled by exactly the same point. They wanted the Federal laws to be obeyed in the States. But they knew the Union could not merely ask the States to enforce Federal laws. And they knew that for the Union to proceed by force against a State as a whole, for the sake of punishing a few lawbreakers, would be like burning down the barn to get rid of the rats.

They solved the problem by giving the Federal Government the power to go straight to the individual citizen, within any State, and punish him for his violation of Federal law.

And that is how Federal world government would enforce world peace. Just as you and I, whether we live in Oregon or Ohio, are punished if we break the Federal laws against counterfeiting, any national citizen under world government would be punished if he broke world laws against fomenting international war. If this seems an extreme break with our old habits of nationalistic thought, the fact is that the world is already moving in this direction. The principle of individual guilt for fomenting war is simply setting up Nuremberg trials before the event.

The shape of this world government is clear in outline. At the top is a world constitution. Under this, world government is embodied in a world legislature for enacting the laws to maintain peace, world courts to interpret those laws and decide disputes, a world executive body to execute the laws, and a world police to enforce them.

ARGUMENTS AGAINST WORLD GOVERNMENT

The objections to world government are numerous, but I have never once seen the statement disputed that it is the only final answer to world war. In sum the critics more or less tacitly concede world government to be necessary—and loudly declare it to be impossible. They list a variety of obstacles.

I was invited not long ago to take the side of world federation in a debate against a well-known commentator. I replied that I would be happy to debate with him, provided he would really take the other side. He must do more than point out the problems and difficulties on my side—he must argue against world federation itself as a solution for war. The gentleman declined. He said there wasn't any debate.

Some declare, for example, that national sovereignty prevents world federation, because no nation would diminish its sovereignty enough to join. Let us see what this can mean.

Outside a nation's own borders, there is no such thing as national sovereignty—meaning inherent supremacy. Within its borders, the Nation is of course supreme among its subdivisions and citizens. The only touching of this aspect of sovereignty by limited world government is its power to punish national citizens for fomenting international war. In this matter, world government has the supremacy. Yet I hardly see how this takes any supremacy away from the Nation, because so far as I know, in the matter of fomenting international war, no nation now exercises any rule at all over its citizens. If the nations really want war prevented under world federation, the sole sovereignty they would have to renounce would be the power of the nation itself to decide to wage war.

Others argue against a world government to prevent war on the grounds that it would be a negative and repressive government, a mere police state. To go a little deeper is to see that the only repression is of disorder, and that the law and order upheld by government is the necessary foundation for everything positive in social living.

Again, it is widely asserted that the world is not yet ready for world government, even of a limited sort. The critics on this score tell us we must first have long practice in international cooperation through such agencies as a world bank, a world food authority, and so forth. We need such agencies. But they would be no more capable of upholding the peace than the Universal Postal Union, a thoroughly successful example of world-wide cooperation, has been able to uphold the peace since it was founded in 1878. You cannot maintain the peace with a postman, banker, or grocer. It takes a policeman.

Last are the critics who declare that human nature itself is not spiritually ready, has not yet reached the state of perfection necessary for world federation. I am inclined to agree. Yet was human nature any nearer perfection in 1787, when our Constitution was written; will it be any nearer in 1987? The atomic bomb is not waiting for us to perfect human nature!

PROGRAM FOR ORGANIZATION

With all its shortcomings, the United Nations provides the framework for the working world federation we need. Let us see how the job could be done.

The first step is for some nation to introduce in the General Assembly a motion that the United Nations shall call a world convention to draft a world constitution. Article 109 of the charter provides that "a general conference of the members for reviewing the present Charter" can be called by two-thirds of the General Assembly and 7 out of 11 of the Security Council. That "conference" would be the constitutional convention—and no single nation can veto it.

At that conference "any alteration of the present Charter" can be recommended by two-thirds of the nations represented. That alteration would be a federal constitution for the world—and no single nation can veto a line of it.

Now comes the rub. The next step is to submit that constitution to the nations themselves for ratification. Again under article 109, the alteration shall take effect when it has been ratified by two-thirds of the nations, including all the permanent members of the Security Council. In other words, one nation can stop the rest from having constitutional government.

Now that is neither reasonable nor tolerable. It is a curious fact of history that our Thirteen Original States, as they approached federation, were restrained by exactly the same rule of all or none. The Articles of Confederation, under which the Constitutional Convention of 1787 was called, said that any amendment adopted must be ratified by all 13 States. How did our infant Constitution manage to come into effect under conditions so stringent?

It didn't. By a bold and wise stroke the drafters of our Constitution ignored the Articles of Confederation and wrote the provision into the new instrument that it should be established among the ratifying States when 9 out of 13 had ratified.

The delegates to a world constitutional convention would be just as bold, and just as wise, if they ignored the Charter of the United Nations and provided in the new instrument for its own ratification on more moderate terms. If two-thirds of the nations can write a constitution, it would seem reasonable that two-thirds of the nations could establish it among themselves.

Once this federation is established among a reasonable proportion of the world's nations, it forms an open and easily expansible system. For any nation that did not want to come in at first, there would always be a vacant chair.

FACING THE FACTS

Which brings us to today's constant question: What about Russia?

But that isn't the real question. The first question we must answer is this: What about the people of the United States?

We ourselves are the crux of the problem. Do we want world federation? Will we work for it? Will we lead the way? We had better know for sure what we will do, before we try guessing what somebody else will do.

The Russians are realists. And the only way to deal with realists is to give them something real to chew on. This world has no chance of abiding peace until we Americans see to it that our Government takes the lead in establishing a world order of greater and deeper realism than anything the Russians have to offer.

The Russians too are seeking an enlarging order, perhaps a world order. They call it liberation, but the order they apparently want is an order of sheer Russian rule. In one word: empire. But an empire of force is no longer genuinely workable, as the Russians themselves prove by the suppressive measures they find necessary to take among every people they have "liberated."

Federalism is not empire. Under a world federation the rule would be world rule, the law world law, arrived at by the voluntary cooperation of all the member nations. Which is exactly the reason for the much greater and more lasting workability—and hence superior realism—of federalism over empire.

We Americans must lead the way to federalism. If our Government spoke up firmly and clearly for an immediate world federation limited to the prevention of war, I am convinced that a huge majority of the world's nations would join us at once, and gladly.

I myself believe Russia would join. You may believe differently. Should Russia delay in joining, it is entirely possible to create a working and all-but-world-wide federation out of the United Nations without her help.

No one pretends that this would be an adequate solution. It would, for one thing, mean two worlds. Yet I wonder if two plainly defined worlds might not be preferable to the multiple, chaotic world we have today. At least the issue would be out in the open. And it would be a clear issue, instead of the myriad of small, sordid issues the world now finds insoluble without that clarity. And the issue would no longer lie between Russia and America, on a plane of dog-eat-dog rivalry, but between Russia with only nine percent of the world's people on one side and a federation of most, or very possibly all, the rest.

If we Americans really want an enduring peace for the world, we must make this effort toward the only true source of public peace that has ever existed: justice under law and government. We must speak up for it so that our representatives will hear and will act. One by one, whoever and wherever we are, we must stand up and be counted.

The alternative is the catastrophic destruction of our civilization.

It is better to stand up and be counted than be counted while laid out in rows.

New York State Liberal Party Supports European Recovery Program

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. JAVITS. Mr. Speaker, support for the European recovery program is widespread, from political, economic, professional, and religious groups. These join in the conviction that it offers "the only reasonable hope of avoiding war and of saving millions of lives from misery and despair." Typical of this position is the following statement in support of the European recovery program, of the Liberal Party of the State of New York, which joined in nominating me in the last congressional election:

STATEMENT OF THE LIBERAL PARTY OF NEW YORK ON THE ENACTMENT OF LEGISLATION TO MAKE EFFECTIVE THE EUROPEAN RECOVERY PROGRAM

The State committee of the Liberal Party believes it is the duty of every patriotic American to demand that the Congress promptly pass the bill proposed by Secretary Marshall which will make effective the ERP. We are convinced that such action offers the only reasonable hope of avoiding war and of saving millions of lives from misery and despair.

In these circumstances, it is irresponsible folly to try to cripple the ERP legislation with amendments, or to cut down the size of the indicated appropriation. The job of European reconstruction cannot be half done. It is all or none. We recognize the inevitable element of risk and we are quite aware of the sacrifices involved in the full measure of the ERP. But we believe that the risks and sacrifices are less if the plan is fully adopted

and vigorously carried out than if we drift further towards chaos. Even were this not so, adoption of the ERP is a moral imperative. It is accordingly

Resolved, That the Liberal Party communicate with all Congressmen and Senators insisting that they support the full measure of the ERP legislation, opposing all crippling amendments, and voting against any attempts to cut down the measure of the program proposed by President Truman and Secretary Marshall.

Reserve Components of Our Armed Services

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. TEAGUE. Mr. Speaker, there has been much interest expressed in behalf of our Reserve components of the armed services by Members of Congress in an effort to obtain a better Reserve training program. I believe it will be of interest to our Reserve components to know of the action being taken to provide legislation which will encourage more active participation in the program.

Two bills are now pending in Congress which deserve favorable consideration. H. R. 2744 provides for nondisability retirement pay for our Reserve components and H. R. 3227 provides for inactive-duty pay for the Reserves. The benefits of this legislation, together with a better training program provided by the armed services, will result in a large, well-trained Reserve force.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter written to the Secretary of National Defense, Mr. James Forrestal, and the replies received by me from Mr. Forrestal and General Spaatz, Chief of Staff, United States Air Force:

DECEMBER 17, 1947.

Hon. JAMES FORRESTAL,
Secretary of National Defense,
Washington, D. C.

DEAR SECRETARY FORRESTAL: I have been a Reserve officer since 1932 and have been interested in Reserve work. During the war I was an infantry battalion commander in the Seventy-ninth Division, and it is my belief that one of the primary missions of the Departments of the Army and the Air Force in peacetime is the training of the Reserves.

During trips into my district in Texas last summer, I heard severe criticism of the Army and Air Force Reserve program. This caused me to wonder if this were true generally throughout the United States, or if this situation existed only in Texas. In order to obtain this information, I wrote to the department presidents of the Reserve Officers Association in each of the States of the United States and found that the situation was general. Letters received from these State departments of ROA are on file in this office, if you care to use them.

Those parts of the Reserve program that require corrective action, as revealed by these replies, are as follows:

1. Seventy-one percent of the departments emphasized the need for the passage of legislation allowing the Army and Air Force Reserves to receive inactive duty training pay. A bill covering this subject was introduced in both the House and the Senate during the first session of the Eightieth Congress. The Senate bill (S. 1174) was passed. The House bill (H. R. 3227) was reported out favorably by the House Armed Services Committee but did not reach a vote in the first session.

2. Forty-one percent of the departments stressed the fact that universal military training was a necessity. Hearings on the UMT bill in the House (H. R. 4278) were held during the first session of the Eightieth Congress and the bill was favorably reported out by the Armed Services Committee. Hearings have not been held in the Senate on UMT.

3. Thirty-eight percent of the departments gave priority to legislation covering the retirement for civilian component officers and men. Bills were introduced in the first session of the Eightieth Congress covering this subject. In the House (H. R. 2744), the bill was reported out favorably by the House Armed Services Committee but went over without prejudice on the Consent Calendar. The companion bill in the Senate (S. 1958) has not yet been heard.

4. Twenty-six percent of the departments claimed that the principal need was adequate appropriations for Reserve training.

5. Ninety-one percent of the departments claimed that the difficulty with the Organized Reserve Corps of the Army and Air services involved either a poorly conceived and executed Reserve program; insufficient Reserve units, both as to number and as to type; lack of proper facilities; or inadequate training equipment.

Of the 91 percent of the departments claiming that the failure of the Reserve program was due to these causes, their comments were further broken down as follows: 65 percent stated that the difficulty was due to a poorly conceived and executed program; 38 percent stated that there had not been authorized a sufficient number of table of organization units and that therefore there were not enough vacancies to which officers might be assigned, or that composite-type units had been created and officers have been assigned to these unsatisfactory organizations without regard to branch of service; 29 percent stated that the trouble consisted of lack of proper training, meeting, and storage facilities; 29 percent claimed that there was inadequate training equipment.

6. Thirty-five percent of the departments indicated that one of the troubles was the continued failure of the Department of the Army and Department of the Air Force for a period of 2½ years following VJ-day to indicate the requirements for Reserve officers to maintain their commissions and also what was necessary for them to do to qualify for promotion.

7. Eighteen percent of the departments indicated that there was a failure on the part of the Army and Air Force to include the Reserve enlisted men in the program.

Mr. Secretary, it is my opinion that the Congress of the United States, the Department of the Army, and the Department of Air have failed in our responsibility to our Reserve officers. It is apparent from the above summary that the Reserve officers of this Nation believe that there has been a complete failure of the Army and Air Reserve program. Likewise it appears that there is the need for definite remedial legislation.

In these times of international unrest the national security should be one of paramount consideration by the Congress of the United States. The civilian components composed 98 percent of our armed forces in time of war and the maintenance and training of these forces is imperative in time of peace if we are to have them ready for another emergency.

If there is any way that I can be of service to you in strengthening the national defense of this great country of ours, please call upon me.

Sincerely,

OLIN E. TEAGUE,
Congressman, Sixth Texas District.

THE SECRETARY OF DEFENSE,
Washington, December 18, 1947.

Hon. OLIN E. TEAGUE,
House of Representatives,
Washington, D. C.

DEAR MR. TEAGUE: You letter of December 17, relative to the problems of the civilian components of the armed services, has been received.

As you undoubtedly are aware, I have recently appointed a committee consisting of the Honorable Gordon Gray, Assistant Secretary of the Army, as senior member, and representatives from the Navy and the Air Force as additional members, to go into the whole problem of civilian components of the armed services.

This committee will make a detailed study of all the problems pertaining to the civilian reserve components and will include in their recommendations to me their opinions and recommendations as to the pay, training, facilities, promotions, equipment, etc., which they consider necessary to support vigorous civilian Reserve components for the Army, Navy, and Air Force, and their recommendations as to the legislation necessary to put these recommendations into effect.

I note that you have given a great deal of time and effort in compiling the information contained in your letter, and in order that Mr. Gray's committee may have the benefit of the work that you have done, I am forwarding your letter to him for his information and with the suggestion that he contact you for such additional thoughts that you may have on these important problems.

Your courtesy in writing to me about this matter and your continuing interest in the civilian Reserve components of the armed services is appreciated.

Sincerely yours,

JAMES FORRESTAL.

DEPARTMENT OF THE AIR FORCE,
Washington, D. C., January 15, 1948.

Hon. OLIN E. TEAGUE,
House of Representatives.

DEAR MR. TEAGUE: Thank you for your letter of December 20, 1947, attaching a copy of your letter of December 17, 1947, to Mr. Forrestal. We fully concur with your statement that some phases of the Air Reserve program require changes, and my staff is constantly reviewing and studying the present Air Force Reserve program with a view to continuous improvement within United States Air Force capabilities.

The extent to which Air Reserve training can be conducted is determined first by the requirement for augmentation of the Regular establishment and secondly by the fiscal support made available to the program. Since initiation of the Air Force Reserve program we have been limited by both appropriations and personnel allocations in the accomplishment of the mission. In addition, considerable difficulty has been encountered in inducing nonrated officer personnel and enlisted Air Reservists to participate in inactive-duty training. In this connection, Mr. Symington has written to Mr. W. G. Andrews, chairman of the House Armed Services Committee, to the effect that bills to provide for inactive-duty pay (S. 1174 and H. R. 3227), retirement pay for civilian components (H. R. 2744) and for universal military training (H. R. 4278) are considered by the United States Air Force as urgent pending legislation. It is believed

that through the enactment of this legislation sufficient inducement will result to assure active participation in training by adequate numbers of Air Reservists.

The Air Staff now has under consideration an Air Reserve promotion policy which will establish requirements for retention of commissions and a credit system upon which promotion will be based. It is believed that this policy will be published in the near future.

Your most thorough coverage of the Reserve training program and your kindness in submitting this study to us is greatly appreciated. A copy of your letter together with this reply will be forwarded to Mr. Stuart Symington, Secretary of the Air Force.

Sincerely yours,

CARL SPAATZ,
Chief of Staff, United States Air Force.

Impasse in Palestine

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the New York Herald Tribune of February 1, 1948, entitled "Impasse in Palestine":

IMPASSE IN PALESTINE

The British program for withdrawal from Palestine, as explicitly stated by Sir Alexander Cadogan, is calculated to permit Britain to abandon her costly and troublesome mandate with a minimum of risk. But in the process it will turn the United Nations plan for partition of the Holy Land into a tragic farce, unless the UN is able and willing to send adequate forces into Palestine on a split-second schedule, timed to the British abandonment of sovereignty.

The moral weakness in the UN's position is that it has never faced up to the problem of implementing its decrees, but has counted on the active or passive assistance of Great Britain, despite that country's plain warning that it would not enforce a settlement which had not been agreed upon by Jews and Arabs. That the British position was unrealistic, except in the narrowest sense, does not obscure the fact that the UN supporters of partition have thus far been equally unwilling to face the responsibilities which the hard facts of the situation impose upon them.

As matters now stand, the British refuse to guarantee protection to the United Nations Palestine Commission in the Holy Land for more than 2 weeks before the surrender of the mandate—which means, of course, that whatever moral authority the Commission might be able to invoke to limit the present clashes is largely wasted. It also means that the complicated business of drawing boundaries, organizing governments, and so on will be carried on under a tremendous handicap.

What is even more important, the British refuse to permit the open organization of armed militias in Palestine, although in practice they appear to have been making use of illegal organizations along these lines in the maintenance of such order as prevails in their mandate. The worst sufferers from this policy are the Jews, since the Arab strength will be largely supplied by formations from the countries bordering on Palestine. Here bands can be freely trained and equipped for the task of preventing partition, while the Jews have to depend on their own strength and the underground organizations they have developed. Unless this barrier to the creation of a trained and well-equipped Jewish defense force is raised, the UN will have to be prepared to send immediate armed relief to the Jewish state on the withdrawal of British troops or find its solemn decisions go up in the flames of a general conflagration.

It is still possible for the Security Council to propose some plan for United Nations action in Palestine which will fill the vacuum caused by the British departure. To be sure, the British will have the power to veto such a plan, but if it is fair and if it does not require them to assume, single-handedly, the onus of enforcing decisions repugnant to the Arab world, the British would not be likely to defy majority opinion. In any case, the Security Council could lay an international foundation for action in defense of the Assembly's decision at the earliest possible moment. And such action must be taken or there will be a tragedy in Palestine that will form an irreparable blow to UN's prestige and a scandal to humanity.

Mr. Speaker, my colleagues would be horrified if someone had the audacity to introduce a bill disbanding the police force of the District of Columbia. Anyone so rash would at once become a fit subject for psychiatric examination.

There is no place in this world that attempts to enforce law and order without a well-trained and fully armed police force.

Yet we now behold the spectacle of the creation of a new state, accompanied by a warning that the present police force thereof will be withdrawn very shortly and, instead of those who claim to be desirous of setting up this new state, giving it the wherewithal to enforce law and order, we find the greatest country in the world, on the one hand, preventing the establishment of such a police force by an embargo against arms, while, on the other hand, sitting complacently by and watching another great power supply arms and encouragement to the brigands who would pillage and ravage the new state even before it is created.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. WIRT COURTNEY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I include certain resolutions recently passed by a very active post of the American Legion at Dickson, Tenn., Post, No. 115, on the subject of universal military training:

RESOLUTIONS

Whereas it is prevalent that there is unrest among many of the nations of the world and that war among some of the far eastern group now looms as inevitable and necessarily could threaten our own Nation; and

Whereas the United States of America has a past history in wars gone before of its undue lack of preparedness in meeting the challenge flung at it by aggressor nations; and

Whereas there has been devised a suggested plan of universal military training as an instrument, if put into force, to assure the United States a stronger foundation for preparedness in case of attack and to establish a firmer bulwark toward the world peace which we are striving for, realizing that preparedness is our strongest weapon for permanent peace: Therefore be it

Resolved by American Legion Post 115, Dickson, Tenn., in regular stated meeting assembled on this the 22d day of January 1948, That it go on record as wholeheartedly favoring the measure now before Congress that, if enacted into law, would establish a program of universal military training in the United States, and that the Post's more than 600 members urge the enactment of this legislation into law at this session of Congress and hereby petition our United States Senators and Congressmen to lend their wholehearted support to the measure from its formal introduction until the bill's final disposition; be it further

Resolved, That a copy of this resolution be entered in the Post's minutes and a copy forwarded to each of our United States Senators and Congressmen from Tennessee.

GEORGE O. HOOPER,
Chairman.
DORRIS HARRIS,
W. A. MCINTIRE,
Resolution Committee.

Approved this, the 22d day of January 1948.
ROBERT L. NICKS, *Commander.*

The Fight Against Inflation

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following account of the remarks I made before the Fraternal Order of Eagles at Gardner, Mass., January 25, 1948:

Addressing the Eagles at an initiation class at Gardner yesterday, Congressman PHILIP J. PHILBIN lauded the part played by that organization in developing a wholesome spirit of patriotism and civic loyalty which he said was a significant force in counteracting radical movements and stabilizing social and economic conditions. The Congressman called upon Government, labor, and management to make a real determined effort to solve inflation and high prices which he declared was our most critical domestic problem.

His remarks follow in part: "Citizens of Gardner best know the splendid contributions of this organization to the well-being and civic integrity of the community. It is obvious that great fraternal organizations like the Eagles, which are based on sound fundamental American doctrines and which teach patriotic ideals and religious precepts, are an effective deterrent to radical movements of the present day. There is no communism in this organization because its members are true to the principles of the American Constitution and their respective religious faiths which they know communism aims to destroy.

"Unquestionably Communist agitations intensified during the war and postwar period have been responsible for a great deal of the social unrest that exists throughout the

world. The international situation presents the gravest of problems. Our domestic economy is also beset by trying difficulties. The inflationary spiral in our own country has raised prices in the case of many commodities to an unprecedented level and the ordinary family is extremely pressed to purchase food, clothing, and other necessities of life. With such prices it is difficult indeed for the ordinary workingman and his family to make both ends meet. This is a very serious condition and cannot further be tolerated. No action to check inflation can be effective in the long run that does not deal with and recognize basic economic law. It is clear that one of the strongest weapons available to us in the fight against inflation is the productive energy and capacity of the unexcelled American economic system—our workers and managers. To be sure, the Government must take the leadership in the fight to check inflation, but if private enterprise and freedom of the individual are to be upheld, labor and management also must move to the solution of this most serious problem. If agreements could be reached between our faithful workers and our progressive managers on a voluntary basis which would permit of greater production and output of all kinds of goods and commodities a decisive blow would be struck at the enemy of inflation, and the Nation would be in a stronger position to meet its obligations at home and abroad.

"But the situation admittedly does not lend itself to easy solution. America must not only produce for its own people but in view of the conditions confronting us abroad must produce to some extent at least, for other democratic nations not only to alleviate hunger and distress, but to strengthen the democracies in the conflict against communism.

"To what extent we can continue to produce for other nations without wrecking our own industrial and productive system is a question which the Congress will have to determine. It is clear, above all, that we must not permit anything to impair the fundamental integrity of our own social, economic, and political institutions which have been and will be the greatest guarantee of future stability and happiness for all our people, and perhaps for the whole democratic world."

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ROBERT N. McGARVEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. McGARVEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of January 27, 1948:

SEAWAY THROAT CUTTING

Senator WILEY, at the opening of debate on the St. Lawrence seaway, accused opponents of the measure of seeking to cut the economic throat of the Midwest. It apparently is all right in Senator WILEY'S book for him and other proponents of the seaway to cut the economic throat of the East, including the Atlantic ports, the anthracite industry, and the railroads. The Senator is inconsistent.

The gentleman from Wisconsin attacked, among others, John L. Lewis, president of the United Mine Workers of America. Mr. Lewis naturally wants no part of the seaway because it would injure the coal industry and jeopardize the jobs of members of his union. Apparently, Mr. Lewis should not look after the interests of the men whose spokesman he is, but it is perfectly proper for Senator WILEY to look after the interests of his constituents. Consistency is no jewel obviously in the State of Wisconsin.

As for designs on the Midwest throat, it seems to us that section of the country has been doing unusually well for itself under the present set-up. We wish all parts of the United States were as prosperous as this area which Senator WILEY indicates is so downtrodden because of the wicked easterners.

On the other hand, if the St. Lawrence seaway should be authorized by Congress, there is no question about what the effect will be on New York and other seaports, on the coal industry, and on the railroads. They not only will suffer, but they face ruin with attendant loss of jobs by workers, capital by investors and income by the Government. Why should this be when the present arrangement works no hardship and is so well balanced?

This, of course, is only one of many arguments against the seaway. The whole project is a fraud on the American people. It not only is unsound, but it has been misrepresented.

Only yesterday President Truman advocated the seaway on the ground it is necessary to the Nation's peacetime economy and to its security in time of war. Nothing could be further from the truth. Actually, it will injure America's peacetime economy, and it will not be of any help in the event of emergency. Mr. Truman's predecessor tried the same strategy during the recent conflict, but he failed to convince his countrymen. And we did a pretty fair job of licking the Germans and the Japs without the seaway, although to date we have not won the peace.

The St. Lawrence seaway will do more harm than good. It will add to the burden of United States taxpayers at a time when they are staggering under the weight of other obligations. The bill should be defeated, interred, and forgotten.

Oil Shortage To Worsen

EXTENSION OF REMARKS

OF

HON. EDWARD J. DEVITT

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. DEVITT. Mr. Speaker, we in the Midwest are very much concerned about the oil shortage. This problem will be with us for some time to come. It is a basic problem, and must be solved on a national basis. Involved in that solution is the adoption of the proper national policy toward oil.

A sane and sound analysis of the oil problem nationally is presented in an article recently written by Gustaf A. Nordin, the Washington representative for the St. Paul Pioneer Press. This article appeared in that newspaper on Sunday, February 1. I include it as part of my remarks:

OIL SHORTAGE TO WORSEN; STEEL BLAMED

(By Gustaf A. Nordin)

WASHINGTON.—The oil crisis which is very real in the Midwest and along the New England coast at this moment is nothing in comparison to the trouble just ahead.

The full impact of the serious fuel-oil shortage has not struck home, except in communities where the supply has dwindled to a dangerously low level, threatening to leave many American homes without the vital fuel.

A thousand rumors have sprung up as a result, stretching from Washington to the oil fields of Texas to the consumers in the North country and in the East. Some blame the oil companies. Some cuss the Government for shortsightedness. Some accuse the industry of creating artificial shortages to raise prices and profiteer. Some say it is because this country is exporting too much fuel oil.

But the answer cannot be found in any of the rumors.

Experts in the business who know, say that the trouble begins with steel and ends with steel. If steel could be made available in sufficient quantity it would mean more well-drilling equipment, it would help provide new refineries, tank cars and tankers, and it would make it possible to lay new pipe lines into the Middle West.

The industry is not at fault unless it is lack of foresight and oversalesmanship. The Government is not at fault unless it again can be attributed to the inability of Government experts to peer into the future to see danger signs ahead. What then is the matter? Why are we in this serious situation?

It must first be realized that the shortage of oil is world-wide. It is not a United States headache alone. This country actually imports a good deal more crude oil than we export in oil products. So exports cannot be blamed and it would be dangerous to cut off exports as has been proposed. The result would simply be a greater demand for oil outside the United States—in places where this country now buys a large amount of crude oil.

The refineries in the United States are running beyond their original capacity. So the industry cannot be charged with creating artificial shortages. Oilmen are so desperate to cling to their trade and weather the crisis that they have resorted to the transportation of oil by rail from west Texas. That is expensive and is one reason why the price of oil has increased.

If the United States oil industry had been able to function on a normal basis since 1941—barring a war and the postwar restrictions—it would have sunk 70,000 new wells in this country. The lack of those wells today, coupled with too great a demand for fuel oil which once was just a byproduct of the gasoline industry, reduces the amount of oil which can flow into the homes and factories of the Nation.

Economists and accountants for both the Federal Government and the oil industry last spring miscalculated demand badly. Because the demand this winter had been misjudged, the industry held off buying tankers from the Maritime Commission and the Government didn't slap on export controls until June 30. At that time exports were a factor.

It is debatable whether the shipment of oil well drilling equipment to Russia and other countries would have changed the picture if it had been kept in this country. It would have developed more wells here and consequently more oil, but it would have reduced production in other countries—and oil today flows on a world pool basis.

The trouble ahead, however, is more to be worried about unless means can be found to voluntarily curb the use of oil, gasoline, and all other fuels. Men in the know believe these things will happen:

1. Crude and lubricating oils soon will go under strict controls.

2. When 1,000,000 farm tractors swing into action, they will receive a priority for gasoline and oil. The same priority will go to the fishing industry, chiefly because this country will need fish to substitute for meat.

3. Because so much emphasis has been placed on manufacturing fuel oil, the gasoline supplies will be less during the coming months. Some type of gasoline rationing this summer is seen. (Much more gasoline would be extracted from the crude oil if the remainder was not to be used as a fuel.)

4. The squeeze on fuel oil will continue next winter, even if transportation facilities improve, because it takes 18 months to build a new refinery and because of shortages of such materials as steel.

5. It looks like the rationing of fuel oil next winter is a good possibility.

6. Reconversion from coal to oil will slow down until the industry can catch up with demand.

Cost of the Marshall Plan to Each Resident of a Typical County in Missouri

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks, I take pleasure in including an editorial from the Bowling Green Times, Bowling Green, Mo., an independent Democratic newspaper published in the home town of our former Speaker of the House, Champ Clark:

Senator JAMES P. KEM, the junior Senator from Missouri in an address upon the floor of the United States Senate has released figures which may be startling to a number of our citizens who are prone to let George do their thinking for them.

The figures are concerned with the cost of foreign aid since VJ-day or since the shooting war actually stopped.

Senator KEM, stating his figures were gathered from authentic sources, asserted that from July 1, 1940, through June 30, 1947, the United States Government had disbursed in loans, credits, relief grants, etc., to foreign countries, the sum of $73,092,058,013.

He also stated funds appropriated prior to July 1, 1945, were considered to be war expenditures, but since VJ-day more than $24,000,000,000 have been provided for foreign aid.

These figures are almost beyond human comprehension because we have gotten so used to speaking in billions of dollars that we rarely stop to realize their significance any more but $24,000,000,000 is a lot of money. So large, in fact, that a statistician, not one of Senator KEM'S, has figured out if 24 men started counting this many silver dollars at the birth of Christ, they would still be counting, if alive, and their job would not be completed.

But Senator KEM has brought the idea a little closer home by giving figures which pertain to residents of Pike County alone with these statistics:

"The residents of Pike County, since VJ-day, have paid a total of $3,353,841 for foreign aid; the Marshall plan will cost them $2,675,742 more. The total county tax bill for 1 year amounts to $231,052.68.

"In other words, since the end of the war, foreign aid has cost each resident of Pike County more money than they have paid in county taxes for the last 14 years. The Marshall plan will cost them as much as their county taxes for the next 11 years."

Of course, these are Republican figures and in a Democratic community, no doubt many will desire to ignore them, but we publish them in this column because we believe our readers have a right to consider both sides of questions which are of vital concern to us all.

One thing of which we are all sure is that the cost of government is, and has been, out of all proportion to the benefits which we have received and that pay day is just about to befall us in the months ahead.

As we have stated in this column upon numerous occasions, we need more statesmen in our Government and fewer politicians, but so long as we refuse to think for ourselves, we will be misled by those political officeholders who are influenced more by votes than by concern for the best interests of this Nation and we, ourselves, are to blame because we refuse to support those who speak plainly and truthfully, and these are few.

Thus Senator KEM'S figures may be assailed by his political opponents as inaccurate, yet if they are in error by as much as 50 percent, the reveal an excessively large levy by a Government upon a county of 18,327 people by any terms in which they are figured.

China

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. LARCADE. Mr. Speaker, under previous leave to extend my remarks in the RECORD and include a newspaper article, I beg to submit an article obtained by the Scripps-Howard newspapers from former Maj. Gen. C. L. Chennault, of Louisiana, and published in the Washington Daily News, Washington, D. C., on February 2, 1948, as follows:

UNITED STATES CAN STAMP OUT THE THREAT OF WAR

(When the first of Staff Writer Clyde Farnsworth's Mukden dispatches on the Battle of Manchuria was received last week, the Scripps-Howard newspapers, by cable to Shanghai, invited Gen. Claire L. Chennault to give his size-up of that conflict and of the American diplomatic and strategic interests involved. General Chennault, now head of the Chinese Relief Administration Air Transport Service, made his great reputation in China in his spectacular leadership of the famous Flying Tigers, a group of volunteer American airmen who were fighting the Japanese over China long before Pearl Harbor.)

(By Maj. Gen. C. L. Chennault (retired))

SHANGHAI, February 2.—The time fuse of world war III is burning now in Manchuria.

The United States owes it to China and to herself to stamp out this evil threat if possible. I believe it is possible.

If the United States does not help China and herself in this way we shall have facilitated—nay, assured—triumph in Manchuria of Russian-inspired, Russian-armed, Russian-manipulated rebellion within and against a nation friendly to us. We shall have abandoned the initiative we now possess for keeping what remains of world peace.

Something must be done because the only conceivable strategic motivation for this cat's-paw game, which Russia is playing in Manchuria, is to insure her eastern flank for freedom of action in the west—that is, Europe.

Russia will not take the big plunge in the west until she is secure in the east. That security is what she is seeking now—at China's expense.

Much of the dreaded pattern of Japan's first move for conquest of Asia is being repeated now in Manchuria. World War II dated from, and in great measure stemmed from, Japan's unchecked aggression there beginning in 1931.

While Russia's present maneuvers are perforce not as open as were Japan's, they are nonetheless clear in their implications. The aggressive motivation is essentially the same, and if unchecked will bring the same result.

Through creation of a Soviet sphere of influence, for which the United States was the careless or unwitting sponsor at Yalta, the Soviet Union intends not only to supplant Japan in Manchuria and Korea. It also seeks to enlarge that sphere into domination of Chinese borderlands from the Yellow Sea to the innermost recesses of Asia—a sweep of more than 2,000 miles.

Manchuria, with Korea, is the eastern anchor of that vast belt of strategic territory which Russia must control in Asia before she can act with a free hand in Europe, with her eastern flank secure from retaliatory assault.

To prevent consolidation of that eastern bulwark of communism is the cheapest and easiest insurance we can have against World War III.

Russia will not dare attack in the west until she is reasonably assured that her industrial regions and vital communications east of the Urals are secure from assault by air from bases within effective range—bases within northern and northwestern borderlands of China.

That is the broad strategic frame within which the present conflict in China, especially in Manchuria, bulks so large. But this strategic position is only the primary Russian objective. Manchuria is a rich prize in natural resources. It is so rich that China cannot achieve full stature as a nation without Manchuria, which even Russia recognizes—on paper—as under Chinese sovereignty.

A communized Manchuria probably would entail eventual disappearance of China, as well as other Asiatic countries, from the community of free nations. Communism cannot stand still for long and survive. It will not stop at international frontiers unless it is opposed.

We cannot afford, therefore, to let Manchuria go under unless we are prepared to surrender the world, ourselves included, to totalitarian authority.

If Manchuria is to be saved and the present deadly train of events averted, the United States must act decisively. That means soon. We can still act within the latitude of unwarlike cooperation with our former ally, whose sovereignty is recognized not only by the United States but also, ostensibly, by Russia.

If our cooperation with China is to be construed by Russia as war provocation we may be sadly assured thereby that Russia's inclination toward war was inexorable in any event. Actually, however, there is every reason to believe that firm aid to the Chinese Government would serve as a warning that the United States is fully committed to the support of China against communism, and that communism will not be permitted to encircle China with its iron curtain.

As urgently required as it is, American intervention on China's invitation in Manchuria need not be of a combatant nature. China does not need American soldiers or airmen directly in combat against Communist rebellion. China already has resources of manpower needed for victory.

Her only shortcoming—and this is a very great one—lies in her inability to train, arm, and supply that manpower, and bring it to bear to best advantage upon the inferior numbers of armed rebels. She has failed in this in the past for a variety of causes, for which the United States is not entirely blameless.

The most important of these causes was American capitulation to Russia at the Yalta conference. There, in the mistaken belief that Soviet intervention was necessary for the defeat of Japan, the United States virtually invited the Soviet Union to move into the Japanese sphere on the Asiatic continent. Russia was invited to invade Manchuria.

This invitation was extended on advice of our military experts who could not foresee the inevitable collapse of Japan 90 days before it actually happened. Some of these experts are still directing our China policy today, and are just as blind to the actual situation and its dangerous implications as they were to Japan's true situation in May 1945.

Russia used her invasion of Manchuria to lay the foundations of a Communist regime where no Communists had been before. During the period when the United States, still misguided, futilely sought to enforce a coalition between the Chinese Government and Chinese Communists, the Reds massed in Manchuria and were armed by Russia with weapons surrendered by the Japanese Kwantung army.

Russia's manipulation of the Chinese Communists and her strategic motivation, requires no further proof than this. Without loss of a single soldier she would thus attain the vital objective of securing her continental eastern flank.

By her action in Manchuria, Russia tipped the scales against China in such a way as to prevent reassertion of Chinese sovereignty there. Russia put that sovereignty to the test of bitter civil war—Chinese against Chinese.

Already disorganized and weakened by 8 years of war and 6 years of almost untested Japanese aggression prior to that, China needed and deserved American assistance from the very outset for recovery of Manchuria after Japan's defeat.

This was forthcoming. On the contrary China was obstructed by the United States through one-sided enforcement of a 1-year truce, sadly calculated to bring about coalition between a constituted government and rebels against it.

The Communist used this heaven-sent or was it made in America—respite to organize and train tens of thousands of new troops in Manchuria. During that period, when conceivably China might have overpowered communism there, the United States was withholding arms from China lest our "peace negotiations" be embarrassed.

Thus, it seems to me, our obligation to help China now is clear. Morally, it is something we ought to do. It is something which we, in realistic appreciation of the danger to our world, must do. There should be no difficulty in making these decisions. There remains only the question of what we can do.

Time is short and the need is great. But it is neither too late nor too great a task for American ingenuity to perform.

China's most crying need in Manchuria, the principal zone of decision, is for American military advice and such direction as she can accept without sacrifice of national sovereignty. Concurrently with this advice and direction, which must be rendered on an emergency basis, the United States must set in motion vast replenishment of Chinese arms and military supplies.

We must strike a proportion between land power and air power in China so that the latter, the only weapon missing from the Communist arsenal now, may be exploited properly and to full measure for swift victory.

No emergency measure within our power could serve China more than assignment, at China's invitation, of such a man as General Wedemeyer to a position such as he held in 1945 under Generalissimo Chiang Kai-shek. For prosecution of aerial warfare the United States should furnish, again at China's invitation, the best available American tactician.

Both of these men should be supported with increments of hand-picked specialists and technicians sufficient in number so that this partnership of advice and direction would be carried down as far as company organizations in the Chinese Army and flight organizations of the Chinese Air Force.

If this can be done quickly I believe it will assure victory in Manchuria. Victory in Manchuria will assure victory in China, and consolidation and recovery of a great nation which could be the eastern bastion of the only kind of world we want to live in.

Decentralization of Government

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 3 (legislative day of Monday, February 2), 1948

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article which I have prepared on the subject of decentralization. The article appears in the February 1948 issue of the magazine, the Reserve Officer, and discusses a matter which I regard as of crucial importance to the Nation, and on which I have submitted suggestions since my coming to the Senate 9 years ago.

I respectfully submit that this article is particularly appropriate in view of National Security Week, February 12 through 22. I ask unanimous consent that the text of my article be reprinted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE MUST DECENTRALIZE

(By Hon. ALEXANDER WILEY, United States Senator from Wisconsin, chairman of the Senate Judiciary Committee and member of the Foreign Relations Committee)

"Comrade Americans, attention! This is the first broadcast by the liberating air armies which have freed you from the yoke of capitalist bondage. One hour ago, the treaty of unconditional surrender of the United States was signed by a brigadier general, your ranking military commander, who had directed the only few divisions and squadrons that were able to offer even the feeblest resistance to our victorious legions. The lightning war which commenced yesterday afternoon and which had been precipitated by years and years of capitalist provocation and plans of aggression, thus came to a decisive end.

"Guerrilla tactics are futile and will be speedily suppressed by mass executions and/or by atomic leveling of towns. Political commissars have now taken charge of each of the 48 States and of your National Government, which has been temporarily relocated in Kansas. This relocation is necessary because of the atomic radiation which still prevails in your former Capital, which now lies in dust, its inhabitants exterminated.

"We regret the necessity of destruction of your National Capital, of most of your State capitals, and your principal cities. It has been estimated that your dead may number, unfortunately, as high as 30,000,000. We are endeavoring to insure adequate medical care for your wounded, poisoned, and diseased populace. Our own liberating country is fortunately unscathed. All of your principal rocket-launching sites had been demolished and/or sabotaged by our friends within minutes after our initial atomic attack on your 50 principal centers of population.

"You will await further orders from us. Your Department of National Defense, Reserve Corps, ROTC, and all other branches of service have been dissolved. Your capitalist Constitution has been abrogated—your courts, your legislatures, etc. Your police forces and Federal Bureau of Investigation are now under direct control of our own secret police. The next broadcast will come to you 30 minutes from now."

Does the fictitious broadcast of a foreign military commissar sound too fantastic, too Buck Rogerish? Does it sound like an article in one of the Amazing Science pulp magazines or like the sort of fantastic things that you have read now and then in the press or heard in weird programs over the radio?

Probably it does not to the Reserve officers who read these lines. To them, it may seem, and I believe it will seem, like a grim possibility. To our general public, it may, however, seem like the most idle fantasy.

PREDICTIONS OF FUTURE WAR

Recently, nevertheless, the leading military and scientific authorities of the United States have spoken again and again along these lines. The points on which they agree with virtually absolute unanimity are these:

1. The next war could last a matter of minutes or hours.

2. It could feature all of the atomic and bacteriological weapons that the twisted scientific genius of man can produce.

3. The principal targets of attack would be Washington, D. C., and our other leading centers of population and industry.

4. America is almost completely unprepared against such an attack.

The purpose of this article is to alert the American people to the awful danger of such attack, and particularly to the danger of an attack on the Nation's Capital. One atomic bomb on Washington, D. C., could, in effect, end the war because it would wipe out the coordinating center of American offense and defense. All the principal military and civilian officers of the United States, the most important military and industrial records could be blasted into rubble. One atomic bomb could wipe out the one-quarter million of Government workers in the Nation's Capital. In one building alone, the Pentagon in Arlington, Va., there could be destroyed the very nerve center of American military leadership. The jam-packed center of Washington, D. C., would be a death trap not only to approximately a million people but a death trap for American liberty—for our constitutional republic of checks and balances, for every freedom for which Americans have fought since Valley Forge.

We must take steps against that possibility. We must decentralize or risk a destiny of national extinction.

TODAY'S FOOL'S PARADISE

We are now living in a fool's paradise of apathy and inertia, as well as in a crazily suicidal over-centralized condition.

If we see a picture in the paper of a single new jet-propelled plane or a new rocket missile or a report of a new scientific discovery

of use for war, we sometimes automatically think that we have sufficient supplies of each of these items when, as a matter of fact, we may only have one experimental model. In addition, our military leadership gives disturbing evidence of the fact that it may be preparing for the last war—not the next war—that it may be building Maginot lines for the future—mass armies trained in "squads right" tactics.

I do not mean to imply that we have not made any progress whatsoever along the line of adequate security plans for our country. We know, for example, of the formation of the powerful National Security Resources Board under the Armed Services Unification Act. We know of studies for decentralization and for underground factory operations; we have evidences of intensified atomic and bacteriological research; we have evidences of advanced thinking by certain officials for intercontinental air striking forces. But what evidences do we have of the plans for decentralization without which we will be ripe for a solar plexus blow by an aggressor?

We realize, of course, that our military officials cannot tip their hands by revealing all of their plans, and we would not for one moment want to breach security regulations. But decentralization cannot be achieved under wraps. It is a long, arduous process. And what have you personally read or heard about actual plans for it? The answer is: Very little, if anything. On the contrary, pick up any Washington newspaper any day, and you will read reports of more and more formerly decentralized agencies streaming back into town.

WASHINGTON VULNERABILITY

According to the 1940 census, Washington ranked eleventh in city population. The population density of the Washington metropolitan district on April 1, 1940 was 1,745.8 persons per square mile. The corresponding figure for the entire group of 124 metropolitan areas in the United States was 1,411 persons per square mile. In 1940, there were 10 metropolitan areas in the United States of 1,000,000 population or more, containing a total of 32,644,000 people. Washington has been growing faster than the average of these areas. It has become an ever bigger possible death trap.

NEED FOR REALISM

This is a time for straight talk rather than double talk, for hard and fast steps rather than pussyfooting. There is one and only one important potential menace to the United States in the world today, and that obviously is the Soviet Union. They know it and we know it. There is one relatively short channel of attack from Russia to the United States and vice versa, and that is via the Polar Cap. There is one principal type of warfare calculated to insure speedy success, if war came (and God forbid that it does) rather than a long stalemate, and that is through a lightninglike attack on the enemy's principal centers. Yet the Russians are decentralized to a far greater degree than is the United States. The Soviet Union is sprawled over one-sixth of the earth's surface, although, of a necessity, because she is a dictatorship, she is somewhat centralized. Still, it is evident that her military arm is being decentralized just as her industry has been throughout Siberia.

Let me, however, make it clear at the start that I do not believe that conflict with Russia is inevitable or that it is imminent, and I certainly don't believe that it is desirable. The possibility of a Third World War is almost too horrible to contemplate, the prospective loss in human life too staggering, the possible net constructive results so few, that it seems sheer folly to even turn our minds to this subject. Yet we have learned that "eternal vigilance is the price of liberty." We dare not, therefore, forget this possibility and turn our backs to it simply because it is so gruesome.

COOPERATION WITH RUSSIA

I believe that we must and should and will cooperate with the Russians to the maximum possible extent through the United Nations. I believe that we have made substantial progress in working out reasonable cooperation with the Russians. I believe that we can make still more progress, particularly if we show the Russians that we are aware of the very danger that they present. A Government based on violence and force such as theirs respects only the threat of violence or force. Weakness invites contempt and aggression. I do not believe in swaggering around with a chip on our shoulders, but I do believe in keeping our powder dry and letting the Russians know that our powder is dry.

America wants peace; she has always wanted peace; she has always hated war. The Russian leaders know this, even though they may have blinded the Russian peoples about these facts.

America does not like alarmists or so-called war mongers, but she hates Pollyannas even more—people who look through rose-colored glasses. Our veterans' hospitals are jammed full of the victims of pollyannaism and of our rose-colored-glass leadership. The cemeteries abroad and at home have hundreds of thousands of white crosses because we committed the errors of weakness and lack of realism and preparation. George Washington's words "To be prepared for war is the best means of safe-guarding the peace," are truer today than ever before.

POINTS TO CONSIDER

Please don't misunderstand me on any of the following points:

1. The fact that I am recommending decentralization does not indicate any lack of appreciation of the Capital of the United States. On the contrary, I will never cease being inspired by the beauties and traditions of this great city on the Potomac. Recently I have been in correspondence with the Washington Board of Trade on the matter of stimulating visits to the Capital by school youngsters from all over the country. I want them to be able to see the White House, the Capitol, the Supreme Court, Lincoln's and Jefferson's Memorials, the Washington Monument, and so on. We are not, however, going to move these great edifices from here but simply make provision so that in the event that all of these magnificent institutions are one day unfortunately blasted into rubble, the Nation can go on in its vital work. There is no reason why the Capital of the Nation has to be a swarming metropolis with its arteries of communication choked with traffic and vulnerable on a dozen other counts because too many vital functions are centralized here.

2. Decentralization will not of itself assure completely adequate American offense and defense. Obviously, it will not be an active element in offense but it will be a vital element in defense. It would be folly to decentralize and at the same time lack sufficient air power, ground power and sea power of the most modern sort with which to carry on the possible warfare of the future.

3. This proposal for decentralization should be considered on a nonpartisan basis. Party politics mean absolutely nothing when the security and the very life of our Nation are in danger.

Although my main objective in encouraging decentralization is national security, there are other important, albeit, lesser objectives which may be simultaneously served, such as (a) social values by ending over-concentration and congestion in swarming cities (like Washington) with all the attendant evils; (b) bringing the Government closer to the people by having Government offices located in the grass roots rather than in Washington, D. C.; and (c) enriching the economic bloodstream of countless smaller communities by new industrial and Federal pay rolls, if only to a small extent. But security ranks first.

4. Decentralization can't be done overnight. It takes intelligent administration, close cooperation by Federal agencies and with State government and localities. Yes; it takes money, too, but that is no reason why we shouldn't do it, and, in fact, why we shouldn't have started years ago. Decentralization requires retraining of personnel, with vastly new procedures and delegations of authority. But it can and it must be done.

Decentralization is a relative thing, of course. It has been variously defined as the dispersion of a given function to the smallest possible level at which that function can adequately be done. Decentralizing a blast furnace may mean a far different thing than decentralizing activities within the Pentagon Building, in Arlington, Va.

5. I do not presume to pose as a military expert. The Reserve officers who are kind enough to read this article possess far more insight into the military aspects of the problem than I do, I am sure. As a civilian, however, I do believe that the proposition of decentralization is sound and imperative, and that is why I presume to respectfully urge military authorities to take the necessary action.

If I may be permitted a further personal reference, in February 1941, I asked publicly in the Senate if our naval and air arms at Pearl Harbor were in the same position as the Russian Fleet was at Port Arthur in 1905, that is, if they were laying themselves up open to a blitz attack. My question went unanswered. I asked the Secretary of State to report to the full Senate in executive session on the conditions of far-eastern defense. My bill was pigeonholed, and my request went unfulfilled.

The months from February to December slipped by and on the 7th day of the 12th month of that year, we suffered the horrible losses at Pearl Harbor that might have been prevented so easily. I recommended stock piling of zinc and hemp, mass building of corvette boats to safeguard against the submarine menace, but these suggestions too went unheeded. I am not trying to prove any particular personal prescience. Actually, many other authorities, if not in the Senate, had indicated the possibility of a catastrophe similar to Pearl Harbor and had urged defense measures. It matters not one bit who made the predictions then or who is making the predictions now, so long as the individual has or had fair qualities of competence. What does matter and what did matter is that these predictions which are and were soundly based, are being and have been given a brush-off, with the result that our dear land is endangered.

6. I don't believe that our military leaders should be condemned or abused simply because they are high brass. I have the deepest respect for our present military leaders as I did for those who commanded our forces during the war. I do, however, believe that even military geniuses can and do make mistakes, and the record confirms this again and again. As a United States Senator and as an individual citizen, I believe that I have the right, as does every one of my readers, to submit suggestions and to ask that those suggestions be given the most careful consideration, and then be enacted, if found sound.

FOES OF DECENTRALIZATION

What are the arguments against decentralization? Some say it will "cost too much money." But I ask who can evaluate the cost to the Nation if we lose the next war, which we certainly might if Washington were smashed by an atom bomb.

Some say it can't be done because it is too "complex" a job. That is not an argument but an admission of incompetence. We

might remember the words of Napoleon: The word "impossible," he said, is not in the French dictionary. Nor for that matter, is it in the United States dictionary, as you men of Iwo Jima, of Normandy, of Anzio, of the Argonne Forest, of Chateau Thierry, know so well. The word American still ends in "I can."

There are those who say that the trend toward centralization will automatically check itself and has already done so because of transportation difficulties in the big cities, parking problems, high rental rates, taxes, and so forth. But were we to simply allow the natural process to take effect, is there any telling how long we would have to wait before there was any substantial improvement over present over-centralized conditions? And whoever heard of preparing against the possibility of war by hoping and waiting for long term trends to take effect?

Some say why decentralize in view of the fact that the next war will be a bacteriological war as well as an atomic war, meaning that entire regions of our country will be simply obliterated with all life erased by toxic agents in the air, in water, in crops, in livestock. If you carry that argument to its logical conclusion, you might just as well say "why build any war plants, any tanks, or any war implements because after all, everyone is going to be killed by germ warfare or atomic radiation?"

Then there is the related argument that since there is no defense against the atomic bomb or germ warfare, only some such stratagem as world government and the complete outlawry of war will work. There are any number of answers to that argument, but perhaps the best one is: "Tell it to the Russians." Obviously, neither the Russians nor a good many other peoples have indicated the slightest willingness to get even within yelling distance of world government. As a matter of fact, even if they were, would the simple declaration of a world government erase from the Russian mind the centuries of fear and hatred of the outside world? Would a simple declaration change the Marxist philosophy of conflict between capitalism and communism? Would it change Communist plotting substantially and do anything but make it easier? Would it, for that matter, change anything in the world and result in anything but a mere mechanical shell, a bare international skeleton of interest only to ivy-towered professors and hopeless idealists, but absolutely meaningless in terms of international political dynamics? If we can't, at this stage, make the United Nations entirely succeed, how could we make world government a success?

The world is still groping its way from a dreadful war. The peoples of the world still live at different levels—economically, politically, socially, religiously—some literally in the Dark Ages, others more enlightened, some respecting spoken or written pledges or contracts, others considering a pact (Kellogg-Briand, League of Nations, United Nations, or what have you) merely as a temporary expedient to be broken at one nation's convenience. These are not accusations; these are merely harsh, blunt facts.

MUCH TALK—LITTLE ACTION

The big trouble about this issue as with so many other issues is that we have had a superabundance of talk on it with little, if any, action. I personally have sought to secure the necessary action although I can't claim any notable success, nor am I satisfied with my own efforts along this line. Let me, however, cite these items:

1. I have written to Secretary of Defense Forrestal, urging him to influence his colleagues in the Cabinet to make the necessary plans for decentralization for purposes of national security. Secretary Forrestal responded by stating: "I heartily agree with you that decentralization of Federal activities is advantageous from the viewpoint of national defense." He added that he has given considerable thought to this question and has discussed it on numerous occasions with various advisers. He then went on to say that: "For the past 15 months the Joint Chiefs of Staff have been studying the dispersion and protection of military facilities and other national agencies, contributing to our national defense in the light of new developments in weapons and operational techniques." Secretary Forrestal stated further that he has appointed Secretary of the Air Force Symington as chairman of a small committee to work with the Joint Chiefs of Staff and with the National Security Resources Board on the broader aspects of the problem. The Secretary went on to add that he was forwarding copies of my letter to various interested officials, particularly to the National Resources Board, which he indicated had final responsibility for the broader phases of this subject.

I might note in this connection that I had previously written to Director Webb, of the Bureau of the Budget, along this line. His reply was, however, confined particularly to the administrative difficulties involved in the process of decentralizing.

2. In 1947, the Presidential succession bill, making the Speaker of the House next in line to the Presidency after the Vice President, was up for consideration. At that time I introduced an amendment to the effect that if the entire specified line of succession was exhausted because an atomic bomb might erase all of the principal civilian officers mentioned in the bill, the highest ranking military officer in the United States would assume the duties of the Presidency until such time as a civilian officer for this post could be elected by the Congress. My amendment was defeated on a voice vote.

3. Obviously, if there were an atomic attack on the United States, the people of Wisconsin and the people of any other State in the Union could not possibly assemble to hold an election lest they invite their mass extermination. Suppose, then, there were vacancies in Congress to fill because a bomb had obliterated Washington and most Members of Congress? The State Law Section of the Library of Congress has reported to me that Wisconsin is the only State in the Union which does not have at present provision in its laws for filling a vacancy in the Senate by interim appointment by the Governor pending the holding of a general election. I have, accordingly, written to Governor Rennebohm, respectfully asking his consideration of initiating a change in our Wisconsin statutes.

4. I have introduced an amendment to the Constitution providing that the executive authority of each State shall issue writs of election to fill vacancies in the House of Representatives providing (and this is the new proposal) that the legislature of any State "may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the legislature may direct." At present, article 1, section (2), of the Constitution provides only for an election in the event of vacancies in the House of Representatives, and grants no power to the legislatures to delegate the power of temporary appointments or even mentions such a power.

5. I have contacted business leaders throughout the Nation for the purpose of encouraging them to decentralize their industrial operations to the maximum extent possible.

Government decentralization without industrial decentralization would be meaningless.

Enlightened business leaders have found that industrial decentralization pays off in countless ways—in better employee relations, for instance. At the same time, the question of whether or not it may be economical to decentralize a given function must be examined not only against the economic interests of a given industry, but against the over-all public interest. The public welfare is at stake—the welfare of 144,000,000 American people and of future generations.

6. I have written to the Director of the Federal Works Agency, General Fleming, asking for a thorough review of the entire transportation network from and to Washington. I mentioned specifically that I believed we should have a link with the Pennsylvania Turnpike directly to the Capital both for peacetime and wartime use. I have not, as yet, heard from General Fleming.

I will continue my efforts along these lines.

WHAT ARE WE GOING TO DO ABOUT IT?

The big question, the only question right now is, What are we going to do about all this? Are we going to "beat the winds" with a lot more talk and no action? Are we going to confer at round tables for the next 10 years, so that perhaps in 1960 we may have achieved a fair degree of decentralization? Or are we going to set the wheels rolling right now on a prompt military-type schedule? Are we going to act as if we were in a military crisis (as we are), as if we were faced with the possibility of invasion (as we are), as if we did not have time for a lot of foolish jawing (as we do not have time)?

I believe that every one of my readers in their own spheres can think decentralization, talk decentralization, and urge decentralization among their friends, their associates, their elected representatives, and the executive branch of the Government.

I believe that:

1. There should be immediately constituted a Government council on decentralization to consist of representatives of the principal departments and agencies of Government and whose primary unit would be a military committee on decentralization. This committee should formulate the basic plans and schedule and then should consult with the over-all council on speedy decentralization so that within a relatively short time, Washington, for example, would have no more than, let us say, one-third the present number of her Government workers.

When I say that the Federal Government must decentralize, I do not only mean that it must disperse its offices to smaller communities. I mean that it should get rid of some functions altogether. This, however, does not mean that it must give to the States or the localities vital defense functions or other functions which it alone can handle. At the same time, Uncle Sam must seek the active cooperation of the States and localities to take over a lot of the workload that should not be a Federal responsibility and that can best be handled at the State and local levels anyway.

2. I believe that the President's Commission on Reorganization of the Executive Branch, headed by our distinguished former President, the Honorable Herbert Hoover, should in the course of its work, consider this problem and coordinate its work with the Council on Decentralization.

3. I believe that every committee of the Congress should work with the representatives of the Government department and agency within its jurisdiction, e. g. the Interstate and Foreign Commerce with the Commerce Department, to help lay plans, i. e. budgetary allocations, etc. to speed decentralization.

4. I believe that the Congress should take the lead in planning for decentralization of the legislative branch of the Government. A joint committee of the Senate and House should plan to decentralize the legis-

lative process, that is, to make plans, for example, for legislation by television so that, for instance, Senators and Congressmen from 30 or 40 points in the country might be able through the medium of television, to pass the necessary laws in the event of attack. This example of the Congress should be duplicated, I believe, by the Supreme Court.

We must have checks and balances available in this country against the possibility of dictatorship and ready to operate instantaneously in the event of attack. That is why, for example, I suggest that the Congress get busy pronto to decentralize itself so that it will continue as a vital force rather than as a pile of rubble.

5. I believe that such organizations as the Council of State Governments, the Association of County Officials, and so on, should be invited to submit their plans and to provide their cooperation in decentralization of the Government.

6. Simultaneously, the United States should consider all of the other necessary military items, e. g. appropriations, etc., for a United States offensive establishment second to none.

7. I believe that every citizen should be spiritually vigilant for the preservation of our Republic from attack from without and/or from attack from within.

CONCLUSION

Once there was a Wisconsin man named Billy Mitchell, who broke his heart and gave his life trying to awaken his countrymen to the danger they faced from the Pacific; the danger in the air; the danger to Alaska. May the warnings of our present danger meet with speedier response than did his warnings of the danger of the past.

America prays for peace, hopes for peace, strives for peace. She hates militarism; she wants to produce for peace; for an ever higher standard of living for her own people and all the peoples of the world. But she has no alternative but to prepare adequately against whatever the future may bring.

We have not since the War of 1812 fought a war with a foreign enemy on our own soil. The next war, if it comes, may be fought and will be fought in your city and mine; in Milwaukee, Madison, New York, Chicago, Philadelphia, San Francisco, St. Louis, Baltimore, Cleveland, and yes, principally in Washington, D. C.

What are we going to do about it?

Share Croppers

EXTENSION OF REMARKS
OF
HON. WILLIAM M. WHITTINGTON
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. WHITTINGTON. Mr. Speaker, one of the most successful cotton growers in the South is my neighbor, Mr. Oscar F. Bledsoe, III, of Greenwood, Miss., who operates a plantation that has been in cultivation for 98 years. He has just completed his fiftieth crop. The following statement by Mr. Bledsoe was carried in the January 1948 Staple Cotton Cooperative Review, published by the Staple Cotton Cooperative Association at Greenwood, Miss. The accuracy of his statements will do much to dispel the prejudice, ignorance and misunderstanding growing out of the share cropper system in the Cotton Belt.

Under leave to extend my remarks, I include the said statement as follows:

STRICTLY PERSONAL

(By Oscar F. Bledsoe III)

There is so much misinformation about the share cropper that I had my auditor give me a simple financial statement of my tenants' income and expenses.

My plantation is 98 years old, and this is my fiftieth crop. There are some grandchildren and great-grandchildren of my father's slaves included in this statement.

The cotton crop this year is below the average yield, but the prices are above parity which will make a fair offset.

The tenant's income per acre was $101.70. His account (living expenses and doctor's bill) was $57.45 per acre, which left a savings of $44.25 per acre, or 43 percent of his earnings. Does the city white-collar worker save this much out of his earnings? Outside of his own crop, the tenant worked in plantation crops and earned approximately $10 per tenant cotton acre.

In 1849 my grandfather paid 25 cents per acre for this woodland. After the Civil War, my father paid from $5 to $10 per acre for partly cleared land, and, at the beginning of World War I, I paid $40 per acre for nearly all cleared land. All land purchases were made during low-priced cotton, and bought for cash.

This year the tenants cleared above all living expenses considerably more than the highest price I paid for the land. There are very few Negro landowners in the Delta, yet if their race were thrifty they would easily own the Delta. Based on the amount of money I have paid them above their living expenses during the last 50 years, they could have bought the plantation nearly five times, based on the value of land at the time of the earnings. This period covers cotton prices from 5 cents to 86 cents per pound. Nevertheless, the Negro is the happiest, most carefree, and has the best disposition of any race in the world.

For the younger folks, this is a historical record that I hope will be of some benefit to them, especially during this period of inflation.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. HAND. Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared in the Millville Daily Republican. This is an intelligent examination of the European program, which I submit for the information of the House:

If the United States is to do all of the things for others it is expected to do, it will be necessary to send out an emergency call for several miracle men. Walter Winchell contends that the reason vaudeville has been discontinued in the theaters of the Nation is because theater managers realize that they cannot compete with the comedy in Washington. Daily it becomes more evident that Mr. Winchell is not kidding.

America, it would seem, is expected to feed the entire world. Yet this Nation produces only 12 percent of the world's food supply. There are 140,000,000 mouths to feed in the United States. There are three hundred and fifty million in Europe and four hundred and fifty million in China. The answer is obvious. Efforts on the part of this Nation to feed Europe and China mean shortages here, and shortages here mean only one thing—increased prices.

The average American is a generous soul. He will share his last loaf of bread with a needy neighbor, providing the neighbor is making an effort to help himself. The average American is, at the same time, an industrious and energetic individual. He is a go-getter and anything less than an honest effort by the fellow next door is usually viewed with disapproval.

We know Europe is hungry and most of us are willing to extend the hand of fellowship. But we expect our hand to be grasped by one that is calloused and streaked with the honest grime of labor.

Restoration of production in Europe is being hamstrung on every side. The Russians are looting, farms are being broken up, and excessive controls are being imposed by governments. Money, no matter in what quantity, will not correct this. Food is an excellent idea providing it reaches those who need it most. Aid sent to Greece is still standing idle in storage, according to reliable reports from that country.

Using Yugoslavia as an example, there are those who insist that unless food is sent to the Yugoslav Government its people will starve. Yet Yugoslavia conscripts an enormous standing army from men who would otherwise work on farms. The result is that Yugoslavia's food problem is solved by outside gifts while its manpower and financial resources are used to maintain a strong military.

The following statement was made nearly 30 years ago, in 1919 to be exact, but it is just as opportune today:

"The United States is disinclined to entangle herself further (after recent experiences) in the affairs of Europe. There is no guarantee that Europe will put financial assistance to proper use, or that she will not squander it and be in just as bad a case 2 or 3 years hence as she is now. In short, America would have postponed her own capital development and raised her own cost of living in order that Europe might continue for another year or two the practices, the policy, and the men of the past 9 months.

"If I had influence at the United States Treasury, I would not lend a penny to a single one of the present governments of Europe."

The above is not the statement of an American isolationist. It is that of the most influential British economist of the last generation—John Maynard Keynes.

Should We Outlaw the Communist Party?

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. NIXON. Mr. Speaker, on Thursday of this week the Subcommittee on Legislation of the House Un-American Activities Committee will begin public hearings on various bills which have been introduced in the House and are designed to curb or outlaw the Communist Party in the United States. The subcommittee consists of the gentleman from Illinois [Mr. VAIL], the gentleman from Florida [Mr. PETERSON], the gentleman from Louisiana [Mr. HÉBERT], and myself as chairman. I should like to discuss some of the problems which

the subcommittee faces in considering this proposed legislation.

It is the function of our subcommittee to conduct hearings on this subject, to make a thorough study of all the issues involved, and then to determine what, if any, legislative proposals should be reported to the full membership of the House for consideration. In making a decision we believe it is necessary to seek the answers to three basic questions: First, do American Communists constitute a real and present danger to our constitutional Government? Second, are our present laws adequate to cope with that danger, and if not, what new laws are needed which would meet the danger? And third, in enacting laws to curb communism, do we run too great a risk of weakening our own constitutional guarantees of freedom?

Our committee believes that the first question has already been conclusively answered. Last year the Committee on Un-American Activities, after a thorough investigation of the extent and character of Communist Party activities in the United States, filed a unanimous report in which we declared that, based upon the evidence, the Communist Party in the United States is the agent of a foreign government. The Communists of the United States owe their first and last loyalty to the Soviet Union. Their every act and every line is dictated by Moscow.

Today practically the whole world is engaged in a great epochal struggle between two systems of life, government, and economics—a struggle between our free democratic system and the system of totalitarian communism. As a member of the Select Committee on Foreign Aid, last year I traveled through France, Italy, Greece, Germany, and other countries. There I observed first-hand the action of the Communist Party in those countries. I talked with the Communist leaders and their spoken words and actions, just like those of the Communists in the United States, reflect a puppetlike obedience to the string-pulling from Moscow. They have gained power in eastern European countries and seek to gain it in other countries by any means. If the expedient calls for violence, sabotage, guerrilla warfare, or whatever is necessary, they will resort to it if it will aid their cause. Democratic methods are employed by the Communists only when it serves them best.

To coconspirator of world-wide communism in America operates under the alias of the Communist Party of the United States. Unfortunately, a lot of confusion comes from the fact that we call it a party. Many people think that the Communist Party is a political party like the Republican or Democratic Party, but in fact it is not a party at all and has no resemblance to a political party. It is, indeed, a revolutionary conspiracy, Moscow-inspired and Miscow-directed. It is conspiring with the Communist parties of every country in the world to overthrow the Government of the United States, the Government of France, the Government of Italy or, indeed, any government which is not already communistic.

We must keep in mind that the Communist Party of the United States is no different from the Communist Party of Greece or France, and if the time ever arrives when they feel reasonably certain of success, they will resort to the same tactics here that they are now resorting to in those countries. Of course, it would be ridiculous for the Communists to attempt at this time to start a guerrilla war in the United States or to engage in open sabotage, but they have maintained and kept intact for 26 years in this country what J. Edgar Hoover has described as the most highly organized and disciplined fifth column in America, a fifth column which would be ready to go to work against us in the event of conflict with the Soviet Union. During these 26 years they have not stood as an isolated group to be pointed up for what they are—foreign agents and conspirators—but they have very cleverly integrated themselves into the political and industrial scene and today exert influence far beyond their mere numerical strength. They operate secretly and deviously. They camouflage their activites. They exploit our traditional American freedoms—freedoms which were intended to protect the citizens of this country, but not to shield the subverter. Recently, you have heard them speak a lot about freedom of speech. Freedom of speech is one thing and freedom of revolution is another. Freedom of speech to the Communists means freedom to destroy the freedom of others.

I think that we can say then that the Communists do constitute a real and present danger to our constitutional government. While no one would contend that they have the power to overthrow our Government at this time, we must remember that in the event of conflict with Communist Russia, American Communists will be enemies in our midst. They are right now doing everything possible to disrupt our economy, to create hatred and ill-will among our people, and to sabotage our foreign policy whenever it conflicts with that of Soviet Russia. At a time when Americans are making sacrifices to feed the hungry people of Europe the Communists in our midst are calling our aid program a Wall Street plot to dominate the world. They are doing this because they know that communism thrives and feeds on the misery, hunger, and desperation of the people, and that their only chance for success in enslaving the still free countries of Europe is to create and maintain confusion and chaos.

Going now to the second question: Are our present laws adequate to cope with the Communist danger, and if not, what new laws should be adopted?

There are a substantial number of people of unquestioned patriotism who believe that our present laws are adequate and that no laws directed against Communists, as such, should be adopted because of the possible threat to constitutional liberties involved in any legislation of this type. The committee will hear from witnesses who support that point of view, including, for example, Mr. Arthur Garfield Hayes, chief counsel for the American Civil Liberties Union.

There are, on the other hand, others who believe our present laws are not adequate. The American Legion, the Veterans of Foreign Wars, and other organizations have long advocated outlawing the Communist Party. A recent Gallup poll reports that over 70 percent of the American people are in favor of such action. Yet we have had the testimony of experts, including that of Mr. J. Edgar Hoover, who feel that this would be legislation which would do more harm than good, in that it would drive the Communist Party underground. Others say that the Communists are already underground and have been for years.

In considering the effectiveness of legislation which would outlaw the Communist Party, it is significant to note that when the Communist Party with only 300,000 members seized control of the Russian Government in 1917, it was a completely illegal party in Russia. In fact, those countries like Russia and Yugoslavia in which communism was once most ruthlessly suppressed are now the very countries in which the Communists have set up their strongest totalitarian governments. This would seem to indicate that outlawing the party is not the complete answer to the Communist question. The actual mechanics of outlawing a party is a very difficult one and the effectiveness of such legislation is considered very doubtful by many competent authorities on this question.

Another objection which has been raised to this approach to the problem is that we enhance their power by making martyrs of them if we outlaw the party. Still another objection is that if we follow this course we will be guilty of the same fault for which we criticize the Communist government of Russia. In other words, it is contended we cannot criticize Russia for not allowing democratic opposition parties to exist in their country if we will not allow the Communist Party to exist in our own.

I mention these arguments against outlawing the party, not because the subcommittee is committed in advance against such a program, but because I believe it is essential for the American people to realize that the problem is not as simple as it would appear on the surface, and that just passing a law against Communists may not be the complete answer to the question.

A second approach to the problem is contained in a bill which has been introduced in the House by our colleague the gentleman from Minnesota, KARL MUNDT, a member of the Un-American Activities Committee. This bill would require Communists to register as agents of a foreign principal.

Before and during the war, American Nazis were prosecuted under the McCormick Registration Act of 1938 which required registration of all agents of foreign governments. For some reason Communists have enjoyed immunity from the provisions of this act. Certainly if an American Nazi was an agent of a foreign government, an American Communist should be so classified. Congress-

man MUNDT's bill specifically designates Communists as agents of a foreign government, and requires all of them to register with the Department of Justice. If they do not, they are subject to a penalty of fine and imprisonment. The purpose behind this approach to the problem is to expose the Communists for what they are—to get them and their front organizations out in the open, label them as Communists, and let the good sense of our people take care of them. The fact that Communists act under aliases and object to disclosing that they are members of the party when questioned, for example, by congressional committees, indicates that secrecy and conspiracy is essential to their success. By denying them this cloak of protection we might be able to combat them more effectively than by outlawing the party.

In this connection, it is well to note that the Communists have gained their greatest power through their so-called front organizations. A front organization is one which to outward appearances is not Communist-controlled and which pretends to serve some worthy humanitarian purpose. Actually, the organization is controlled by the Communist Party, was originally financed by it, consistently follows the Communist Party line and does the party's work. Through such front organizations the Communists have been able to enlist the support of thousands of Americans who would not think of supporting an organization if they knew that it was controlled by the Communits Party. By exposing these front organizations for what they are through requiring their Communist leaders to register as agents of a foreign government, we might be able to cut away from the party the support of thousands of people who are now doing the party's work unknowingly. It can be seen, therefore, that exposure by the procedure set forth in the Mundt bill or in some other manner might prove to be an effective curb on Communists in the United States.

The final question we must consider is as important as the other two. Do we run the risk in adopting legislation against the Communists of impairing our constitutional guaranties of freedom? By removing the diseased fungus, communism, from the tree of democracy we must not permanently injure the tree itself. We cannot run the risk of destroying the rights and liberties we hold fundamental in America. By the same token, however, we must realize that the democratic governments of the world must act and act now if they are to avoid the tragedy of Communist domination which has engulfed so many European countries. Certainly it is a recognized fact in political philosophy that a government has the right to defend itself against revolution and it does not have to wait until the last minute to do so. It is wise to take precautionary measures, and therefore, I think that we here in the United States with the fresh memory of what has occurred in Europe the past 2 years, are justified in giving serious consideration to ways and means of fortifying ourselves against the world-wide conspiracy of communism. Whatever we do we want to strike at the very heart of this menace, but we want it to be in the democratic tradition, we want it to be clear-cut, and we want it to be effective.

In order that the subcommitee may consider these questions carefully and judiciously, we have invited some of the outstanding legal authorities in the country to advise us and to make recommendations as to what action should be taken. For example, Tom Clark, the Attorney General of the Un'ted States, will be the first witness and will testify particularly concerning the adequacy of our present laws to combat communism.

Among the other prominent lawyers who will appear are Robert R. Milan, the chairman of the Committee on the Bill of Rights of the American Bar Association; Donald Richberg; Louis Waldman; Morris Ernst; and Dr. Charles Collier, professor of constitutional law at George Washington University. These and other witnesses will appear before the committee to give us the benefit of their considered judgment as to the constitutional aspects of the specific legislation before us, as well as their opinion on the effectiveness of such legislative proposals in the event that they become law.

In order to explore every aspect of this question, we have also invited such prominent diplomats and political observers as Admiral William H. Standley, our former Ambassador to Russia; Adolph Berle, former Assistant Secretary of State; Raymond Moley; Dorothy Thompson; James Burnham; and Dr. William Elliott, professor at Harvard University and special consultant to the Select Committee on Foreign Aid. Representatives of the American Legion, the Veterans of Foreign Wars, and the American Federation of Labor will also appear and present their views. Ferenc Nagy, the former Premier of Hungary, will give the committee a first-hand picture of how communism engulfed his own country and will indicate what steps he thinks might have been taken to avoid that catastrophe.

From the foregoing discussion I think that it is clear that our committee intends to go to the root of the Communist problem in the United States from a legislative standpoint. We are going to hear witnesses who are for legislation of various types and those who are opposed to any legislation. We intend to make a calm, judicial determination of the issues involved because we realize that we are confronted by an unscrupulous, insidious enemy against whom ordinary measures will prove ineffective. While realizing that the danger is serious, we also recognize that it is a danger which must be met within the framework of our free democratic system of government. We know that the Communists would like nothing better than to be able to claim that legislation directed against them impaired the rights of innocent non-Communists.

I should like to emphasize that the committee will welcome an expression from any of the Members as to your views on this issue. This is a problem which affects our very security as a Nation and its solution must represent the best thinking of all our people.

The Late Archibald Johnston

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

ARCHIBALD JOHNSTON: SYMBOL OF A GROWING CITY

In the death of Archibald Johnston, Bethlehem loses a man whose life was woven deep into the industrial and civic fabric of the community. For Archibald Johnston helped build the city's greatest industry, helped build the corporate city itself, and helped give the community a blueprint for the expanding future.

Archibald Johnston, in many ways, was a symbol of growing Bethlehem, just as he was a symbol of the best in the American free-enterprise system.

He worked his way to the top in a tough, demanding industry, in a day when hours were long and mechanical and electrical aids few. Muscle and sweat were the main ingredients in refining steel from ores and other materials when Archibald Johnston made iron and steel his life's work. He saw the old Bethlehem Iron Co. become the giant Bethlehem Steel Co. and help win two modern wars.

With it all, he was a warm, interested friend, a friend of rich and poor, high and low, throughout the wide sweep of his acquaintanceship. In his latter years, he liked few things more than a visit from old friends. He was partial to those men of an earlier generation who worked with him and for him in building an industry.

An impression of him will linger long. It was the warm gleam which lighted his eyes as a gnarled, bent workman of an earlier day passed him on main street several years ago. "Hi, Tom," said Mr. Johnston. "Hi, Arch," came the response. Then a hearty handclasp and 5 minutes of eager conversation.

It was on the same occasion that Mr. Johnston had a short obituary item from the newspaper pinned to one of his vest pockets. Pinned there, we are sure, so that he wouldn't forget to send flowers or other expression of his loss at the passing of an acquaintance or friend.

As the first mayor of the newly incorporated city just 30 years ago, Archibald Johnston made a great contribution. Until that time, he had been primarily concerned with production and jobs for the people who lived here. Now he became concerned with living conditions and services for the people, through their infant municipality.

He envisioned a beautiful, safe, healthful, and happy community. He wanted Bethlehem to be a better city in which to live and work.

In his inaugural address in January 1918, after his election had been prompted by petition of the people, he set forth his dreams: a system of parks, a good water supply, a sewage disposal plant, improved streets, health measures, and others. He wanted efficiency in government, too, and good men in office. And he served 4 years as mayor, without salary.

Mr. Johnston was energetic, hard-working, a man of action. He lived to see some of his dreams for Bethlehem come true. He lived to see the old Bethlehem Iron Co. become the hub of America's second largest steel producer. He lived to see the city become a better place in which to live and work. He

was a warm friend; a generous benefactor in a quiet, unostentatious way; a keenly interested citizen of the city and the world; and a symbol of his times.

Bethlehem will miss Arch Johnston.

Congressional Action on Displaced Persons Must Not Be Delayed

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. JAVITS. Mr. Speaker, since the report of the Special Committee on the International Refugee Organization and Displaced Persons of the House Foreign Affairs Committee there has been a crystallization of sentiment in the country in favor of emergency legislation to admit a fair share of the DP's outside the nationality quotas. Much tragedy is being caused by our delay in enacting a measure of elementary justice. Endorsement by the A. F. of L., CIO and American Legion has now invalidated the arguments about jobs and housing made against legislation to admit DP's. The Stratton bill, although extensive hearings have been held on it, has not been reported out. A piece of evidence showing the urgency of action is the following story from the Washington Post, of February 1, 1948:

THE RED TAPE MURDER OF A DP'S SOUL

(By Fred Hechinger)

PLAINVIEW, TEX., January 31.—This is a report of one single European tragedy, but the reader may multiply it many thousand times.

What makes this case so poignant and close to the home of American consciences is that it happened way out here in Texas—and in Munich, Germany. It involves the murder of a hopeful boy, and the killer is red tape.

It is a particularly horrid murder because the victim is still alive and may remain alive for a long time (or perhaps just a few days), but his soul and his hope are dead.

Here are the records of the case.

The first witness is William Marshall, president of Wayland College at Plainview. Last year he authorized the selection of a talented displaced person of college age to be brought to Wayland for free education at the Baptist school.

The second witness reported a few weeks ago. He is Capt. Jack Moses, Baptist chaplain of the American air base at Munich. He picked young Visvaldis Paukulis, parentless and displaced native of Latvia, for the scholarship. The consulate promised to proceed without delay.

Visvaldis went to the Munich immigration center, stayed for several weeks, completed his processing for travel. The American boys at the air base responded with typical generosity, collected the money for his passage. Everything was set.

VANISHED HOMELAND

Then young Visvaldis was called to the United States consulate. He was informed that he would not be able to go, "because all who went to the States as students must have a country to return to." This boy has lost his country. It is now part of Russia. One of the witnesses asked whether Visvaldis' (and all the others') passport some 30 years from now would list "displaced" as his nationality.

The Air Force boys "appealed." They took the case to the Military Government, but received the same answer. The best they could get was the promise that the case would be reopened in 6 months. It was hoped that the policy regarding DP's might have changed by that time. "Policy" is a cruel word.

This correspondent regrets to add to the testimony that the same office which first assured Visvaldis that he could go to the United States finally turned down his application. There is no malice in this report, for it is obvious that a kind and reasonable official heart has reluctantly been conquered by the rule book.

A RARE OBITUARY

This case is peculiar in that the victim issued a statement after his soul was killed. It is in a letter of December 3, 1947, from Paukulis in Munich to President Marshall. It is a rare document and should be read into the CONGRESSIONAL RECORD.

"My joy and happiness was undescribable," the boy wrote. "The letters were to open the door to my future; satisfy my longings for knowledge and education; bring me out of this war-torn Europe, where famine, disease, and death have made themselves the rulers; give me home and chance to live.

"But look what happened! Very seldom was I so near the fulfilment of my dreams. I didn't know and couldn't even imagine that someone is already waiting there to say just a plain 'No.'

"At the first moment I didn't believe my own ears, but when the explanation followed I felt like a man being pushed down from the cliff into the sea. Fifteen minutes later I was in the street again, disappointed, confused, and hardly able to stop the tears into my eyes. * * * Why? Just because there was a law. A law just as cold as it could be killing. * * * Because I happened to be a displaced person without a home or place to live. Because I am unfortunately a Latvian nationality. * * * This law doesn't know grace. It ties the hands of those people who would sincerely like to help me. It doesn't feel."

COMFORTING BARRICADE

"Man made this law with purpose to feel comfortable and undisturbed behind its walls and I feel sorry for myself that it took me such a long time to realize the existence and thickness of these unbreakable strongholds. * * *

"There would be a reason and a goal. Now I am sitting alone at the seashore giving the last farewells to those who were luckier than I. Two years I waited. Two of my best years for education have gone into salvage. Time which will never return * * *

"My heart has to be brought into the country of freedom and liberty. As long as I physically shall exist, the fight will never cease, for I know the sun is there! It may take me years and years to break the clouds. * * *

"I owe you much gratitude for your kind letter and interest you showed in my case. I am very thankful, too, to our chaplain, Jack Moses, who is doing his best to help me to get to the States and preparing me for the studies in your college. Let us hope that Congress will improve the immigration law in this session and fulfil the dreeams of many young ambitious men, who'd like to become valuable citizens of the United States of America."

EIGHTY THOUSAND SIGNATURES

The letter is signed "V. Paukulis"; but there are some 80,000 invisible signatures below. They belong to "unaccompanied, displaced children." They implore; they hope; they wait; and they die—spiritually and morally. In time many will really be dead.

The case of Paukulis versus The Rule is neither new nor unique. But it shows one single victim, and the specific instance has more meaning than the plight of anonymous masses.

Visvaldis Paukulis is a distinct person, although "displaced" and of no country. He is not a statistic. Perhaps I know him. He may be one of thousands whom I recently visited in their hopeless asylums in Germany. He may be one of those who have been haunting me.

I release his letter, his case, his file, his legal murder—to haunt Congress.

Must We Have Fuel Oil and Gasoline Shortages?

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. CLASON. Mr. Speaker, last summer the Oil and Gas Division of the Department of the Interior had knowledge of the impending shortage of fuel oil this winter. Director Max W. Ball has recently testified that the American people may expect like fuel oil shortages during the next four or five winters. What did Secretary Krug or Director Ball do to prevent the present shortage? What are they going to do about those they prophecy for the next 4 years? We know what they did not do. They did not prevent the sale of 80 or more government-owned tankers to foreign interests last summer. If 10 of them had been available for use on the Atlantic Seaboard since early December, much of the present trouble caused by lack of transportation would have been overcome. Congress authorized by law the sale of these tankers but had every right to expect that any sales would be made subject to the needs of our people. The Maritime Commission was ordered by the administration to sell them against their better judgment. I would suggest that the Secretary of the Interior and the Director of the Oil and Gas Division check periodically on the availability of fuel oil transportation in order that this phase of the present oil shortage will not plague us next winter.

We are told that control of the oil industry in the United States is concentrated in 17 major oil companies, and that these companies have entered into a voluntary agreement to act jointly in providing fuel oil and kerosene for individual hardship cases and for independent dealers whose sources of supply have dried up. This agreement was unlawful until at the recent special session of the Eightieth Congress we passed a law which permits such voluntary agreements with the approval of the President. Until Congress provided this means of granting relief in the oil shortage, the companies were barred from concerted action because of the Sherman Antitrust Act and kindred laws. If Secretary Krug believes such an agreement would be helpful next winter, he might bring the matter to the attention of the oil companies now.

A committee of Congress has also suggested that exports of petroleum prod-

ucts from the United States be restricted to such an extent that our own people shall not face a scarcity for domestic consumption. A law has been on the statute books for some time giving such control through issue of export permits. Perhaps the proper and judicious exercise of its lawful control over permits for oil exports by the Department of Commerce would have prevented our shortage of fuel oil this winter and the threatened shortage of gasoline next summer. If the Secretary of Commerce fails to protect the American people after all the hardship he has helped to cause this winter, the present administration cannot avoid responsibility for such a shortage. Canada recently has cut its oil requirements from the United States voluntarily—some evidence that such large exports should not have been permitted. The American people now know too well about the causes contributing to shortages.

Today we find the major oil companies rearranging the percentage of oil products from the crude oil which they refine in order to obtain more fuel oil and less gasoline. If this step had been taken by all of them when the shortage became apparent, perhaps we would have had no fuel-oil shortage at all. They are rushing ahead with such a program today and doing a good job of it—for which President Rathbone of Standard Oil of New Jersey deserves full credit. But the major oil companies knew, not only what commitments each of them must meet to supply their fuel-oil customers this winter, but that they were the real source of supply for all fuel-oil users in the United States, including those who receive their household supplies from independent retailers. Unless independent dealers are to be forced out of business, the major oil companies must provide for their needs the next four winters. If the companies need help in determining how much oil will be needed, Director Ball or some other Government official should furnish the statistics and other information. Each company plans to make money for its operations, but when a great segment of the national economy is controlled by only 17 companies—not only the oil industry, but the automobile industry and the house-heating industry, to cite two examples—it is up to those 17 companies to provide properly for the needs of all consumers of oil products. The 17 companies must not concentrate on the best paying products. Each company must carry its share of the less profitable oil products. If the companies cannot figure out a system which will prevent shortages, the American people may ask for some further supervision from Congress.

The oil companies need steel to expand. I think the steel companies should provide the amount to which they are entitled after considering the demands of others. We hope to have atomic power and heat in 20 years, not during the next four winters. Secretary Krug has suggested the investment of $9,000,000,000 for making oil products from shales and coal. That suggestion may be sound, but it is not going to furnish an alibi either for this year's shortage or those of the next 4 years. Let us have a proper, fair, and efficient management of our present oil industry and see if these present and future oil product shortages cannot be eliminated.

And while we are about it let us check on the prices of oil products. With capacity business, no sales resistance to overcome, even in a period of inflation, are the recent price increases for fuel oil and gasoline justified? Why are the prices of so many companies always the same? Is there need for a price-fixing body?

I think the American people who support this great industry are entitled to answers to the above questions from the Government and oil company officials who have permitted the present fuel-oil shortage to occur. Let us have an accounting now and not after the next and the next and the next shortage.

May I add that Americans are thoroughly aroused over the present crisis and are raising some interesting questions. The following editorial is from the Springfield (Mass.) Daily News of January 28, 1948:

PLENTY OF GAS, LITTLE OIL

Just so long as officials of the major oil companies remain silent and conceal the real reasons why a fuel-oil shortage has been foisted upon New England and many other sections of the country this winter there is nothing left for the public to do but conjecture—and that is just what they are doing.

If the oil men should start talking, they will have a difficult time trying to reconcile the plentiful supplies of gasoline with diminishing supplies of fuel and range oil, as retail dealers struggle to keep their customers satisfied—and warm.

A householder who has gone modern by installing an oil-heating unit in his basement or a burner in his kitchen range is finding it next to impossible to obtain the quantity of oil he needs in order to keep his home comfortably warm. He has been told that he must curtail his usual consumption by at least 15 percent because the supplies are 15 percent below normal.

It is reasonable to assume that virtually every householder who has oil heat also owns an automobile. Does he have trouble getting his gasoline tank refilled when he is in need of fuel to keep his car in operation? Of course not! He can drive up to any filling station in the city, or in the area, whether he is a regular customer or not, and get as much gasoline pumped into his fuel tank as he wants and is able to pay for. He isn't asked to cut down his consumption of motor fuel. In other words, he finds that in petroleum circles there isn't even the remotest suggestion of a gasoline shortage. Why, then, must he shiver at home, he wants to know, when he can drive his car as much as he pleases and whenever he desires for pleasure purposes. It doesn't make sense.

He also knows that most of the gasoline filling stations are owned or controlled, or operated indirectly, by the major oil companies. He wonders, too, why they keep their filling stations brightly illuminated, many of them until midnight, when brown-out conditions should prevail, if the fuel conservation program is to be effective.

It apparently simmers down to a question of plenty of gasoline for pleasure driving, but a lack of fuel oil for heating purposes. Why? The obvious answer is that the margin of profit from manufacture and sale of gasoline is greater than from fuel oil, and the oilmen apparently are more interested in profits than they are in the welfare and comfort of their customers.

It is highly encouraging to note, in dispatches from Washington, that an immediate ban on all exports of petroleum products has been recommended to the House Interstate Commerce Committee, and that Secretary of the Interior Krug has asked Congress to set machinery in operation to build an American synthetic-oil industry so that ultimately it will not be necessary for the country to be placed at the mercy of the monopolistic oil interests.

The trouble is, however, that the Federal Government is a little tardy in initiating these moves. As a result, little, if any, relief can be expected this winter when fuel oil is badly needed to keep homes properly heated. Foresight on the part of our leaders could have prevented the present mess.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith remarks made on the Marshall plan in a radio broadcast over Mutual Station WOL, Washington, D. C., on Friday morning, January 30, 1948, by George E. Reedy, a distinguished news commentator.

Mr. Reedy's remarks follow:

President Truman has laid it on the line in no unmistakable terms. He has made it clear that he will accept no compromise on the Marshall plan. He wants all or nothing, and is not interested in splitting the difference.

In a sense it is well that the President has stuck his chin out in this manner. For whatever may be said about his attitude, it will at least clarify the issues. They are issues that badly need clarification.

The Marshall plan involves drastic changes in American policy—changes even more basic than those proposed by the late President Roosevelt with his Lend-Lease Act. The measure, if approved, will set America firmly in a path it has never trod before.

We have lost sight of that fact in the type of debate that is now waging around the proposal. Instead of fighting over the basic issues of the plan, we have talked only about the amount of money that will be appropriated.

The President has asked for $6,800,000,000 for a 15-month period. The opponents seem to have agreed to a figure of around $4,000,000,000 for a shorter period. Most of the arguments revolve around the nearly $3,000,000,000 difference.

Ordinarily, that is a sensible approach to legislation. The usual pattern is for the administration to ask for more than it actually wants. Congress usually counters by proposing less than it is prepared to give.

After a prolonged period of public debate a compromise is reached. As a rule it is not a bad compromise. It maintains legislative integrity and, by and large, reflects the real wishes of the people.

In the case of the Marshall plan, however, the administration is talking about one kind of a bill and Congress another. The figures, instead of reflecting different ideas of how much is necessary, reflect opposing ideas toward the legislation.

The administration wants the authority to intervene in Europe to try and buttress its governments against communism. In other

words, it is asking for final and complete abandonment of traditional American isolationism.

That is a project that will take money, and plenty of it. If it is worth doing at all, it is worth doing thoroughly. There is no conceivable way of cutting down the expense. It will require the mobilization of all American resources.

Those who are proposing a $4,000,000,000 measure are talking about something else altogether. Their project is designed to prevent starvation in Europe. Therefore, a searching scrutiny to hold expenses to the bone is possible.

The two groups involved in this debate have no common meeting ground, and should say so, once and for all. Anything less than that would be a fraud upon the public. It cannot help but have unhappy consequences.

There are two possible dangers inherent in the situation. One is that the administration would pass the Marshall plan under the label of a relief bill. The other is that the opponents would pass a relief bill under the label of the Marshall plan.

President Truman has rejected the first course. It is now up to the opponents to reject the second. On an issue so basic there should be no false labels. The Nation is entitled to a clear-cut "Yes" or "No" stand on the Marshall plan.

Price Control and Rationing

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, recently much publicity was given the testimony of a soup factory worker and his wife, Mr. and Mrs. Cyrus J. Waud of Camden, N. J., who appeared before the Banking Committee of the Senate at a hearing on the return of price control and rationing, representing the CIO in its plea for the return of these controls. Mr. and Mrs. Cyrus Waud told of the hardship of the average factory worker in attempting to get along on $2,500 a year. In this morning's mail I received a letter from a typical above-average farm family, Mr. and Mrs. Forest L. Clough, Rural Route No. 1, Marshall, Mo., in opposition to price control and rationing, telling their story of the limitations and deprivations of the farmer and their fear of the return of controls with its uncertainty and impossibility of planning for the future. I quote:

MARSHALL, MO., *January 28, 1948.*

DEAR SIR: I noticed that a Cyrus J. Waud and family testified before the Senate Banking Committee on the high cost of living. Naturally, they will be high as long as the unions continue to demand and receive increased prices.

Poor Mr. Waud stated that he hadn't had a new suit in 4 years. Oh, dear. My husband has had only two new suits in the 20 years we have been married, a summer suit in 1932 and a winter suit in 1941, and one new overcoat—all that he has bought since 1928. Our son is 15 years old and he has never had a suit. Our two daughters wear made-overs, hand-me-downs, and sometimes we strike a sale and can buy them something. And I sometimes manage a new dress during the year. Cost—about $5. I wear my dresses for years, and love them. Right now I am wearing one that is over 15 years old.

But we do not want rationing. At least, we can save and buy an article of food, and during rationing the counters were bare.

We are farmers doing about as well as most of them, which is not so well financially, for our expenses are terrific. Everything we need is out of price because of the unions and strikes and wages. For instance:

1. Our machinery is old. We and most of our neighbors need new machinery, but it is out of price, if available and hasn't been sent overseas.

2. We are trying to save our land by soil-conservation methods, which are terribly expensive. Fertilizer, lime, etc, are expensive.

3. Our house is old and needs many repairs, but the price of lumber and everything needed, including labor, is out of price. Unions have put the price up.

4. Our youngest daughter has to fight off TB. We need a better heating system than two coal stoves, which halfway heat our house for over $150 a year. Price of coal? Unions demand and get more money.

5. We have three children to put through college—and education is going out of sight, but America needs educated people. How can they afford it?

6. We are still paying on the home we bought in 1924.

7. We have insurance policies to keep up, our car is 7 years old, our truck of 1929 vintage, our tractor 1936, etc. Expenses face us every way we turn.

Personal note: We won the balanced farming award in the county given by the Kansas City Chamber of Commerce in 1946. My husband was president of the county farm bureau of 1944–45. I have been president of the county council PTA units for the past 2 years. My husband and I have college degrees.

Oh, yes; like the Waud family, we don't drink, smoke, and rarely get to the movies. Our milk, too, is terribly high, for our cows cost money to buy and to feed and care for. We do usually have meat once a day—meat that could be sold. Right now oranges are 2 dozen for 39 cents, nice ones, but why not feed Lois Waud home-canned tomato juice, it has the same vitamins. Canned orange juice isn't so expensive; the 46-ounce cans (23 cents quoted this week).

No; we don't want rationing. Just let wages come down and everything else will automatically adjust themselves. Farm prices are always the first to come down or be hit, and the last to go up.

Sincerely,

VIRGINIA N. CLOUGH.
(Mrs. Forest L. Clough.)

Mutual Understanding Essential to Success of UN

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of January 20, 1948:

HOW THEY GET THAT WAY

In a recent letter to this paper, Representative MARGARET CHASE SMITH, of Maine, stated that the important thing among people and nations is not to agree but to understand. For whereas it is utopian to hope for complete agreement, there is no reason why we cannot and should not learn more about what our world neighbors are thinking and why they are thinking that way, thus providing the climate for peace.

This is so elementary a truth that it is almost platitudinous, yet so infrequent a practice that it is almost revolutionary.

There are 57 members of the United Nations today, and that too often means 57 varieties of thinking based on the supposed primary interests of 57 nation-states. Yet the real primary interest of all of them is peace. Secretary General Trygve Lie has declared forcefully that the individual can help to attain this goal through his understanding not only of the world organization but of the other member nations.

With this simple fact in mind, and without waiting for one's neighbor to do the same, the individual can make a conscious, determined, unremitting effort to learn how his world neighbors get that way—and how, for that matter, he gets that way himself.

Wanted: A Leader

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article by Robert M. Grannis, which appeared in the Brooklyn (N. Y.) Eagle of February 1, 1948, entitled "We Need a Leader With Gandhi's Courage":

WE NEED A LEADER WITH GANDHI'S COURAGE—HE HAS TO BE BIGGER THAN HIS PARTY AND RISK BEING A MAGNIFICENT FAILURE

(By Robert M. Grannis)

Gandhi was unconventional, unafraid. He had the courage of his convictions to such an extent that he refused to be moved from his selected path in life by the great possibility that one day he might be listed as one of the world's colossal failures.

We could use a few men like Gandhi in the United States. But, unfortunately, by our so-called civilized and ultramodern standards here anyone in public life who conducted himself like Gandhi would be considered a fool and a crackpot.

Our system—our lack of the spiritual approach to issues that confront us—does not encourage the development of leaders who hew to a line come what may. As a result, the era of great men in America is on the decline and our Nation is less strong in a moral sense than it should be.

The modern leader in political life in the United States believes that in order to survive he must travel in many directions at the same time. Sometimes his dashes down side roads become so frantic he makes himself ridiculous. Gandhi was never frantic or ridiculous. He cloaked himself in the dignity of his beliefs and looked all men in the face.

We haven't had a man like that since Lincoln. If there is another on the horizon, he is as yet invisible. I think that if Gandhi had lived and worked in the United States, we would have seen only that he was an eccentric, that he wore a strange garb, and that perhaps there was something wrong with him mentally. Quite probably he would have been investigated by Congress, because he

was against so many things that make for chaos in a man's life.

Today the world's top help-wanted advertisement calls for a man who will dare to be a magnificent failure. The job appropriately should fall to an American, because Europe and Asia are much more tired and bewildered than we are. The man to fill the bill has got to be bigger than the party behind him and he's got to be strong enough to act today for the benefit of the people of the future.

The job is a killing one. He won't get much help at first because he, too, will be considered a fanatic, perhaps a dreamer. Facing him is a United Nations just born and almost ready for the grave because there is no one with enough courage to say that it can and must be made to live and work.

It is so much easier and so much more in keeping with the times to fall back on the obvious—unilateral force, which in world history is the nearest thing to perpetual motion man has ever discovered.

The United States was instrumental in setting up the United Nations. It came into being at a time when people were so war weary that it was easy to sell despite the dismal failure of the last attempt which was called the League of Nations.

But somewhere along the way leaders became appalled by their own idealism and reached the conclusion that the world wasn't ready for anything so moral as permanent peace plans participated in and upheld by all nations. They let the veto power stand and stood idly by while UN degenerated into a brawl more fitting to the back room of an old-time saloon.

UN is just a name now for lack of a fighter who won't give ground. This man we need doesn't have to forego the common-sense necessity of keeping America strong for the battle against communism. He doesn't have to give away anything we should keep for ourselves.

But he has got to risk being a colossal failure in the belief that nations can line up for peace as well as for war. Is there such a man in America?

Mr. Speaker, this is but one more well-reasoned warning that the Charter of the United Nations must be strengthened and implemented if it is to become a world-wide force for peace.

Surely, somewhere in this great land of ours there must be someone who can rally popular opinion to this cause.

The Wright Brothers

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. HARVEY. Mr. Speaker, under permission of the House, I insert in the RECORD a brief reference to the late Orville Wright. He, with his brother, Wilbur, spent boyhood days on a farm in Henry County, Ind.

The recent death of Orville Wright, co-inventor of the airplane, stirs poignant memories for many an older resident of Henry County, Ind. It was there, on a farm near New Castle, that Wilbur Wright was born, and with his late brother spent several years of childhood. It was there, too, that as youngsters they conceived the dream of building a flying machine for men—a dream kindled by the gift of a propelled toy from their father. Not until a later day, when the Wright family had moved to Dayton, Ohio, were the brothers in position to demonstrate their inventive daring in a practical way, but to the lasting credit of Henry County, it was there that their idea was born, and it is there today that a modest monument stands in loving memory of their great contribution to the progress of civilization.

Problems of the Veteran

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement pertaining to an address made by me to the American Legion, Clinton, Mass., January 24, 1948:

Speaking at the past commanders dinner of the American Legion in Clinton last night Congressman PHILIP J. PHILBIN deplored conditions in the Veterans' Administration which are hampering efficient attention to the problems of the veteran. PHILBIN also touched upon and praised the Legion's aggressive campaign against communism and subversive activities. Demanding a strong impregnable national defense the Clinton Congressman declared that we should not adopt a defeatist attitude toward the achievement of an enduring peace which he stated the Nation should be prepared to work for unceasingly in spite of current discouragements.

PHILBIN said in part:

"It is fitting that we should pay our tribute to all the past commanders of Clinton Post, American Legion for the faithful, effective service which they rendered to the great American causes for which the Legion has stood throughout the years and at present. It is gratifying to note that their good work is being ably and forcefully continued by the present commander. I am proud to extend my congratulations, felicitations and best wishes for the future.

"Traditionally the Legion has been the staunch friend of all the veterans and the protector of their rights. That is why we must view with hearty approval the most recent efforts of the State Department in conjunction with other service groups to adjust the affairs of the Boston offices of the Veterans' Administration. We all readily agree that there is no more sacred trust that any of us have than the proper and adequate care of our disabled and wounded heroes. Hospitalization and skillful medical and nursing care must be provided to these veterans with a minimum of delay and without governmental red tape. There is no valid reason why all matters affecting the rights, benefits, and privileges of our veterans should not be handled with efficiency, because the Federal Government provides billions of dollars annually for these purposes. Petty differences and contention between Government officials should not and must not be permitted to interfere with the prompt handling of veterans' claims on a humane and generous basis. I pledge my continued cooperation and efforts to the adjustment of the present difficulties which have impeded prompt consideration, adjudication, settlement, and payment of veterans' claims. We must have effective administration of all these matters.

"Let me allude briefly to the Legion's campaign against communism. Nothing is more important to the country at present than that all Americans interested in the preservation of our institutions should join with the Legion, other service organizations, and groups to break the influence of Communists in our governmental and civilian life, and banish this cancerous plague from our land.

"If we keep our Nation strong and impregnable, if we are prepared to meet any contingencies that arise abroad which may threaten our own security, we will command the respect of all nations in world councils, and we can move to check communism at home and abroad with greater confidence.

"While the world situation is steadily growing less favorable, because of the activities of organized communism, we cannot afford to be defeatists about the prospects for ultimate peace. Despite difficulties, obstacles, and set-backs, let us move with determination and persistence toward the goal of the enduring peace. Neither world communism nor any other force can be allowed to destroy the aspirations and ideals of peace, democracy, and freedom hallowed by the great sacrifices of your comrades."

Tax Revision

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following account of the remarks I made at the National Association of Letter Carriers banquet at Fitchburg, Mass., on January 31, 1948:

Speaking before the National Association of Letter Carriers, Branch No. 16, in Fitchburg last night, Congressman PHILIP J. PHILBIN praised the employees of the Federal postal service and stated that they are an outstanding group of Government workers devoted to serving the public in an important role which touches directly practically every person in the country.

Congressman PHILBIN, who returned from Washington over the week end especially for the carriers banquet, referred to the current debate on the tax bill which is taking place in the House of Representatives. He expressed the hope, for the sake of the people, that a satisfactory tax bill would be passed and signed by the President.

"I think it was former Chief Justice Holmes of the United States Supreme Court who said that 'taxes were the price of civilization.' That is undoubtedly true in a sense, but we must not forget that the power to tax is the power to destroy. Taxes alone do not make a civilization. The spirit and genius of the people and sound progressive leadership are necessary factors. It is utterly impossible to justify high wartime taxation of American working men and women and businessmen in time of peace. Our tax structure is based on the principle of ability to pay but in these days of high prices, I need not remind you that there are a great many of our humble citizens who do not possess the ability to pay such substantial sums out of their weekly pay envelope to the Federal Government without feeling a real pinch. These people, most of whom have families to support, are entitled to prompt relief.

"Our business groups are also entitled to consideration. Present tax rates are so high that many businesses after taxes do not have adequate funds for reconstruction, repair, renovation, or expansion. These burdens fall especially heavily on small growing business. Because of the vitality of American business in general and because of the fact that the Government financed so much industrial construction during the war, this burden and handicap has not as yet been too manifest. But unless we unshackle private enterprise, which in the last analysis is responsible for most of the high-paid, high-standard employment in this country, from oppressive wartime taxation and other unreasonable un-American restrictions and permit it to grow and develop along sound American lines the time will come when incentive will be discouraged, business activity will be stifled, and employment will be greatly curtailed.

"Our economy must expand and develop as a dynamic progressive organism. If we stand still we are in fact slipping back and that we cannot tolerate because the path of America is forward. If we but observe what is transpiring in many foreign nations where initiative has been destroyed, we will recognize the vital importance of keeping open the doors of opportunity to all who aspire to seek advancement in any sphere of American life. I hope that the House will be able after careful deliberation to produce a tax bill which will be satisfactory to the general public and which will be signed by the Executive. Millions of humble Americans are crying out for tax relief and they are entitled to have it."

Congressman PHILBIN assured the postal workers that he would continue to give his most sympathetic attention and support to legislation in which they are interested looking toward equitable adjustment of their pay scales, betterment of the conditions of work and improvement of their retirement system, which, he declared, was a vital part of the national social-security program.

PHILBIN urged his listeners to apply calm, considered judgments to current domestic and international situations. "Let us not lose our sense of balance," he said. "We have worked out great problems before and if we cling to fundamental principles of our Government and way of life, remain vigilant against subversive groups and intent upon keeping the Nation strong against enemies within our gates as well as those which may threaten us from abroad, we will be able to solve the problems of the present and future in a way that will assure to our Nation and all our people the continuance of full employment, high living standards, sound prosperity, and the preservation of cherished civil liberties and freedoms which mean so much to the average American."

Who Is Un-American Now?

EXTENSION OF REMARKS
OF

HON. WILLIAM T. BYRNE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. BYRNE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the American Journal of Public Health for December 1947:

WHO IS UN-AMERICAN NOW?

On July 2 last "The Subcommittee of the Committee on Expenditures in the Executive Departments Authorized To Investigate Publicity and Propaganda of Federal Officials in Formation and Operation of Health Workshops" made a report to the Committee of the Whole House.[1] This report has somewhat serious implications—although these implications may be somewhat different from those which the subcommittee itself had in mind. The fact that the Journal of the American Medical Association has editorially summarized the report in question [2] warrants a study of its content.

There are essentially two sets of facts brought out in this report and used by its framers as the basis for an attack on:

1. The United States Public Health Service.
2. The Children's Bureau.
3. The Office of Education.
4. The United States Employment Service.
5. The Department of Agriculture.
6. The Bureau of Research and Statistics of the Social Security Board.

The first of these facts was that Surgeon General Parran on December 10, 1945, transmitted to all officers of the Public Health Service a copy of House Document No. 380 which was President Truman's message to Congress on a national health program. He said in comment, "Every officer of the Public Health Service will wish to familiarize himself with the President's message and will be guided by its provisions when making any public statement likely to be interpreted as representing the official views of the Public Health Service." Since June of that year (1945) all officers of the Service had been by Executive Order 9575, covered into the armed forces with full military rights and obligations. Even under civilian conditions, however, such a warning as that issued in December 1945 would have been entirely proper. The United States Public Health Service is a branch of the Federal Government, and it would be most unfortunate for any subordinate officer of that Service to make statements likely to be interpreted as representing the official views of the Public Health Service if those views were in opposition to those of the head of the Government, whether acting as Commander in Chief of the Army or in his normal civil capacity.

The official views of the Service on any technical matter must be formulated by the Surgeon General himself. If his views differ from those of his official political superiors, he can only resign. We infer from certain earlier writings of Dr. Parran that he did not feel the President's speech called for any such action. He might have taken much more vigorous steps. It would have been quite within his rights to point out that the need for some form of compulsory prepayment of medical costs is as important for the health of the American people as is the need for vaccination against smallpox. He did not follow any such course; he merely acted to protect the Service against the danger of possible criticism, by members of the Federal family, of the policies advocated by the Chief of State.

The second mare's nest uncovered by the subcommittee is the fact that between November 1945 and November 1946 a series of 26 workshops were held in various parts of the country, under the auspices of the Service, for the discussion of problems relating to medical care. We deplore the word "workshop"; but it has become a routine part of educational lingo. In any case, groups of citizens and experts in various areas of the field were convened and Federal employees participated in the discussion of methods by which the important issues concerned could be brought before interested groups, so as to stimulate thought. The subcommittee concludes that these discussions were planned subtly to generate public sentiment in behalf of what certain witnesses and authors of propaganda refer to as socialized medicine. By and by, the subcommittee is very fond of this phrase that certain witnesses and authors of propaganda refer to as socialized medicine, repeating it half a dozen times. It puzzles us a bit. In the language of bodies like this subcommittee, propaganda usually means the other fellow's argument; and no person well informed enough to discuss health insurance intelligently ever uses this phrase "socialized medicine" which has no intellectual content and is used only to stimulate the endocrines. There seems no valid reason why technical experts in the Government service should not meet with groups of interested persons to discuss pressing public-health problems. It is an important part of their duty to do so. No convincing evidence is adduced of the subtle generation of public sentiment; and whether we like the word or not, the workshop is about as good a medium for democratic discussion as has yet been devised.

All this is pretty small potatoes for the activity of a group of representatives of the American people, convened in a Congress which faces the gravest world problems which have ever confronted the Nation.

Even more serious, however, is the last paragraph of the subcommittee report. "Suffice it at this time for your committee to report its firm conclusion, on the basic evidence at hand, that American communism holds this program as a cardinal point in its objectives; and that, in some instances, known Communists and fellow-travelers within the Federal agencies are at work diligently with Federal funds in furtherance of the Moscow party line in this regard."

As to the Moscow party line, the members of the subcommittee will perhaps be interested to learn that the United States of America and the U. S. S. R. are the only two leading countries of the world which do not have some system of compulsory health insurance. They do not have it in the Soviet Union because they have a system of state medicine (which is radically different). For the United States to adopt such a plan would be to follow London, Paris, and the capitals of Holland and Sweden and Norway and Denmark—in direct opposition to Moscow.

As to the business of fellow-travelers, the actual evidence which the subcommittee has been able to collect is as follows. If it had any better evidence it would, no doubt have welcomed it. The facts submitted were as follows:

(a) An obscure member of the staff of the Social Security Board has been documented by the House Committee on Un-American Activities for almost uninterrupted association, since 1939, with various Communist and fellow-traveler organizations in the United States according to the subcommittee. How far such documentation may be justified we have no means of knowing. There is no evidence that he was ever condemned by any court; and it is easy to accuse.

(b) It was once suggested in an office memorandum of the Security Board that this individual might be sent to New Zealand to study its health-insurance program.

(c) The Social Security Board maintains close contact with movements for compulsory health insurance in other countries.

(d) Another employee of the Social Security Board once assisted Senator WAGNER in drawing up a health-insurance bill.

(e) Therefore, the Social Security Board is a Communist-front organization.

(f) Much of the literature used in the workshops was prepared by the Social Security Board. (This could scarcely help being the case since the studies made by this Board furnish the most authoritative statistical data we have, with respect to medical economics.) Unfortunately for the clarity of the subcommittee's conclusions, neither the suspected Communist nor the head of research and statistics participated in the workshops.

[1] H. Rept. No. 786, 80th Cong., 1st sess., July 2, 1947.

[2] Journal of the American Medical Association 134, 15:1240 (Aug. 9), 1947.

But (g) since the workshops used literature prepared by the Social Security Board (which had a humble employee accused of being a fellow-traveller) the United States Public Health Service which sponsors the workshops must be tainted.

And, finally, (h) since employees of the Children's Bureau, the Office of Education, the United States Employment Service, and the Department of Agriculture sent representatives to the workshops they are probably fellow-travelers, too.

On this house that Jack built (or shall we say that Jerry built?) the subcommittee bases its conclusion that "Known Communists and fellow-travelers with the Federal agencies are at work diligently with Federal funds in furtherance of the Moscow party line." Six bureaus of the Federal Government are pilloried because one employee of one of them has been charged with being a fellow-traveler, and the Attorney General has been officially asked to prosecute offending employees for taking part in workshops mentioned. The true motivation of the subcommittee is, probably, a quite different one. It appears to assume throughout that advocacy of health insurance is ipso facto an evidence of communism. If this be the case, President Truman should be impeached for his message of 1945; and, since the Seventy-ninth Congress did not condemn his address as emanating from Moscow, all its Members must be considered as fellow-travelers. Indeed, the Eightieth Congress might deserve the same designation, since its Members sit in the same Chambers with many who supported the Wagner-Murray-Dingell bill and who must be ipso facto Communists.

The final paragraph of the report of the subcommittee is the text for a shocking circular sent out to all physicians and dentists by the National Physicians Committee. It makes those who respect and love the medical profession somewhat heartsick to see the names of 13 physicians (most of them of outstanding position in the American Medical Association) at the head of this broadside.

We have no sympathy with communism as a political movement. We believe that it is necessary to protect the United States against the influence of such citizens of our country as may hold secret allegiance to any foreign power. The spirit of totalitarianism is, however, even more dangerous than its puny human emissaries. If we adopt the methods of totalitarian ideology we are surrendering to the very worst element which is common to both communism and fascism. That is what is happening when we demand absolute conformity with the social program of one group which happens for the moment to be in power; stifle discussion, call everyone who differs a Communist and everyone who has ever been associated with any organization in which there was ever a Communist member, a fellow-traveler. Such an attitude abandons reason for ideology, and philosophy for perverted semantics. It overwhelms empirical evidence in a flood of catch-words. It enthrones emotion above reason, by discovering un-American art and un-American music and un-American science.

The writer of this editorial has behind him ten generations of New England stock. He learned that the American tradition meant freedom of thought and of speech (up to the limit of legally prosecuted action); that it meant open-mindedness and readiness to try experiments; that it meant initiative in the working out of the problems of society; that it meant experimentation and progress.

The other road—that of rigid conformity with the theory of a temporarily powerful group—of defining not only what a man must do but what he must think and feel—and with whom he may be acquainted—is the road to what is truly un-American. This was the technique of the Hitler regime in Germany and is the technique of the Communist leaders in Russia. Pray God, it may never become the prevailing mood of America.

The Pomona Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. DAWSON of Utah. Mr. Speaker, many plans have been suggested to alleviate world-wide starvation. One of the most unique and constructive plans yet offered is the Pomona plan. This plan has been promulgated by the citizens of Pomona, Calif., and offers a new approach to this great problem.

Under leave to extend my remarks, I include herewith a summary of the Pomona plan:

THE POMONA PLAN

This is a plan that will solve the world food shortage and avoid starvation in European countries, both this summer and also next winter.

Because the world food problem is one of the gravest problems facing the world today, and because the whole world is looking to the United States to help, and because the United States has had plans for the people of the United States to eat less and to observe such days as meatless Tuesday and eggless and poultryless Thursday, which are all of a negative nature and therefore of very questionable success, we have this plan to offer to completely alleviate the critical situation:

The people must eat more—more fruits and vegetables.

The people must raise more fruits and vegetables by planting freedom gardens here in America.

The people must have freedom gardens in Europe, also; and they can have them very easily if we will just send them the seed, fertilizer, and a hand cultivator.

Help them to help themselves—that is different than just doling it out to them. What we save in cereals and meats here by eating and growing our own fruits and vegetables in our own gardens we can send to Europe and supplement their fruits and vegetables that they can grow with the cultivators, seeds, and fertilizers we will send them. Then everyone can have enough to eat and still Americans will not have to do without things on Tuesdays or Thursdays.

So the Pomona plan advocates—

1. Eat more fruits and vegetables.
2. Plant freedom gardens in America.
3. See that the people in Europe have the cultivators, seeds, and fertilizer to plant freedom gardens in Europe.

Resolution on the Pomona Plan

Whereas sufficient food to prevent starvation of millions of people and substandard diets for nearly everyone is one of the gravest problems facing the world today; and

Whereas all eyes are turned to the United States of America to supply food and to prevent starvation and to lead the way back to plenty; and

Whereas plans and ideas have been suggested and put into effect such as the plan for the people of the United States to eat less and to observe such days as meatless Tuesday and eggless and poultryless Thursday; and

Whereas all such plans are of a negative nature and of questionable success; and

Whereas the function and purpose of all such plans are to reduce the consumption of cereals in the United States in order that they may be exported to feed the starving people of the various countries of the world; and

Whereas the members of the Pomona Junior Chamber of Commerce and the people of the City of Pomona, Calif., know that people are best served by helping them to help themselves to help and rehabilitate themselves; and

Whereas it is the desire of the members of the Pomona Junior Chamber of Commerce and of the citizens of the city of Pomona, Calif, to help alleviate world-wide starvation; and

Whereas the Pomona Junior Chamber of Commerce and the city of Pomona, Calif., have developed and organized the Pomona plan, which is a three-point program to induce the citizens of the United States to eat more fruits and vegetables, to plant and grow freedom gardens, and to aid the people in all of the needy countries of the world to plant and grow freedom gardens:

Now, therefore be it

Resolved, That in order to help alleviate world-wide starvation and in order to decrease the consumption of cereals in the United States and increase the exportation of cereals from the United States to the starving countries of the world, and in order to increase the available food supply both within the United States and within all of the needy countries of the world, that a national campaign, known as the Pomona plan, be started and conducted throughout the United States to increase the consumption of fruits and vegetables; that, in order to successfully carry out said campaign, the people of the United States be encouraged to plant and grow freedom gardens; and that in order to aid and encourage the needy peoples of the various countries of the world to plant and grow freedom gardens, the people of the United States prepare and ship to the people of the needy countries unit packages containing desirable vegetable garden seeds and garden cultivators and tools; and be it further

Resolved, That Armistice Day, November 11, 1947, be declared Pomona-plan day and that on said day 25 unit packages containing garden seeds and garden cultivators and tools be shipped to 25 needy cities of Europe; be it further

Resolved, That the citizens of Pomona urge the President of the United States and Congress to seriously consider the Pomona plan for a solution to the food shortage both in the United States and in Europe.

The Place of the United States in World Affairs

EXTENSION OF REMARKS
OF
HON. W. LEE O'DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4 (legislative day of Monday, February 2), 1948

Mr. O'DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on The Place of the United States in World Affairs, by H. R. Cullen, one of the most distinguished citizens of Texas, the address being delivered at a dinner given Mr. and Mrs. Cullen on January 22, 1948, by the Methodists of the city of Houston, Tex.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When Bill Blanton, Walter Coldston, and Hines Baker told me that the Methodists of the city of Houston would like to honor the

Cullens with a dinner on January 22, they told me that I was expected to respond, after being introduced by Bishop Smith.

The first thought that came to my mind was that I wouldn't have to plead with our citizens to help save our present form of government and system of free enterprise, which I have been doing for the past 15 years. I came to this conclusion because not only the voters of the United States have shown that they were turning strongly to the right, but those of England, France, and Italy also have shown they were turning away from radicalism. I decided, therefore, that I would confine my remarks to the early life of Mrs. Cullen and me, which might be of interest.

But something of compelling force has caused me to change my plans and, for the time being, I must forget my memory lane.

Sunday morning, January 4, found us at our ranch. As is the custom, our caretaker on the ranch brought us the Sunday issue of the Houston Post, and I was not only surprised, but startled, to read an article by Marguerite Johnston, entitled "Texas' World Federalists Convene." I say I was startled, for the article gave the names of some of our leading citizens, whom I honor. I could not understand how they could be in sympathy with a movement, which would, beyond doubt, move the control of our country to some place in Europe or Asia.

Naturally, I was very much interested to learn who started the World Federalists, and as luck would have it, I found the answer in the Houston Post of January 21. It stated that Cord Meyer, Jr., of New York City, was president of United World Federalists, and that he was the author of a book entitled "Peace or Anarchy." I learned from his book that he served as aide to Commander Stassen at the convention that formed the United Nations Charter in San Francisco. He being formerly associated with Stassen brought to mind a letter that I wrote to President Truman in 1945, protesting the appointment of Harold E. Stassen as a member of the United Nations Conference, due to his philosophy. Let me read parts of this letter to you, which should convince you that Stassen and this young Cord Meyer have the same philosophy, and are political bedfellows:

"DEAR PRESIDENT TRUMAN: Harold E. Stassen, an appointee of the late President Roosevelt to the San Francisco United Nations Conference, has certainly destroyed his usefulness there by an article he wrote entitled, "The Cost of Lasting Peace", in Collier's Weekly of April 21, 1945.

"The following are excerpts from the abovementioned article:

" 'As I stated in my March 7, 1945, address at the University of Minnesota, I believe one of the seven cardinal points of America's world policy should be: "That we do not subscribe to the extreme view of nationalistic sovereignty; that we realize that neither this Nation nor any other nation can be a law unto itself in the modern world; that we are willing to delegate a limited portion of our national sovereignty to our United Nations Organization, so that it may be effective in the tasks we expect it to accomplish. That we hold that true sovereignty rests in the people, and that there is and must be a law of humanity above and beyond the narrow rule of nationalistic absolute sovereignty. That man is in truth and in fact endowed, not by his nation, but by his Creator with certain inalienable rights.' "

"In the above quotation, Stassen says we should be willing to delegate a limited portion of our sovereignty to some world organization, and he contradicts this statement later by saying that we should all be ruled as subjects of the Creator.

" 'So each nation must so limit its action that it does not injure its neighbors, and must respect and assist in developing laws and courts that are above the nation and draw their power from the people.'

"Even stumbling Henry Wallace, with his fantastic dreams, would not place our welfare in the hands of a foreign court, for it would be a foreign court, because of the fact that we would have less than 5 percent of the vote in such a court, if such vote were based upon the population of the world.

" 'Let me also make it clear that I propose that the agency set up in this particular field will have world-wide jurisdiction, and that no nation shall be permitted to fly a commercial plane in international flight except under the jurisdiction of this agency.'

"If this would be effected, then we would not be permitted to fly a plane to Canada or Mexico without permission of the foreign court.

" 'This approach will also require that we discontinue the notion that our country or any other country can, in a futile attempt to give false prosperity to a particular group within a country, suddenly jump up its tariffs, or devaluate its currency, or install embargoes upon any certain group of products, and thus bring suffering and depressions to other parts of the world.'

"Stassen, in this statement, offers to give the foreign court not only the right to levy all tariffs, but the right to control the monetary system of this country.

" 'We must also recognize our responsibility to furnish a part of the police power of the world and to back up the United Nations organization in a system of justice and law that will be gradually developed.

" 'I believe it would be very desirable if a small portion of our forces were actually assigned to the direct control of the military staff committee of the United Nations. Joining with similar small forces from other major nations, they would constitute a very effective deterrent to the small disorders that break out in the world. These small breaches of world peace are often the forerunners of major wars and do so much to break down the whole moral tone and code of world behavior.

" 'We all recognize that the speed with which one or two squad cars can arrive at the scene of trouble is a greater deterrent to crime than the fact that a large citizens' posse can be organized after considerable delay. So, I believe we should definitely contemplate consigning small, fast, hard-hitting peace forces to the control of the United Nations organization, so that they can be used quickly and decisively for policing action in accordance with general policies which our Congress and our President establish in advance.'

"In this statement, Stassen is willing to create a world police force, resulting, naturally, in a horrible gestapo, subject to the dictation of the foreign court, but this he contradicts later by stating that our participation in such a police force would be in accordance with the general policies which our Congress and our President established in advance. This world police force would have the power to enter the United States at any time and put a stop to strikes, race troubles, or other disturbances subject to police action.

"I have emphasized the words 'foreign court,' for the reason that the foreign court will be created by a majority of the vote of the peoples of this earth, or by a majority of all the nations on the face of this earth, and in either event, the United States is a very small minority, not exceeding 5 percent, so if the 'crackpots', of whom we have so many in public life now, should have their way and create such a foreign court, it is natural to suppose they would demand and receive the greater part of the wealth of this country and if we should refuse their demands, we would naturally have to fight the balance of the world."

Since Stassen is running for nomination for President of the Republican Party, it looks to me like a concerted action on the part of these two men to further Stassen's interests in his political venture.

I will now quote one paragraph from the article about the Texas World Federalists, as appeared in the Post of January 4, spoken of before:

"Their common purpose is to achieve a sound, functioning peace by uniting the nations of the world under a single president and a single republican form of government."

Now since Stassen and Meyer and his United World Federalists are in favor of a world republic form of government, it naturally follows that the people of this earth should have a vote in electing officers to run the world government.

Let us digest this most important matter and try to ascertain what kind of president we would have:

Figures show the total population of the earth to be about 2,300,000,000. Figures also show that this country has a population of about 137,000,000, or only about 5 percent of the total population of the world, so that, naturally, on the first vote we would lose control of our Nation. There is no question but what the Asiatics would govern us, for they have a large majority of the population of the world, and the kind of Asiatics that Wendell Willkie spoke of in his book, One World. He said:

"Finally, everywhere I went in the Middle East, I found a kind of technological backwardness along with poverty and squalor.

"The reason was that they were in truth returning to Biblical times, where little has changed in 2,000 years."

What are these people in the Middle East, who have not changed any in 2,000 years, doing now? In China, atheism—in the name of communism—is fighting a death battle with the ancient religions. In India, the Moslems and Hindus are fighting a religious war. In Palestine, the Jews and the Arabs are also fighting a religious war. In other words, half the people of this world today are fighting each other due to religious superstition.

Now, I ask in all frankness, would you want these Asiatics, that I have just spoken of, as fellow citizens with an equal voice in your Government?

If the time ever arrives when the people of this earth decide to elect a world president, you can rest assured that Joe Stalin, or one of his kind, would be elected, for even if every voter in Italy, France, England, Holland, Denmark, Sweden, Finland, Canada, and all the South and Central American republics would vote with the voters of this country, then we would have only 18 percent of the world vote.

Joe Stalin has so outmaneuvered our New Deal representatives in foreign countries, that I am sure the great majority of the Asiatics are sold on the idea that Joe Stalin is a friend of the poor man. In my opinion, if he is still alive, he would be the first president elected by the World Federalists.

Now I again quote from the article by Miss Johnston, who said:

"By these resolutions, the United Nations would be empowered to enact, to interpret, and to enforce world law."

Now what does this mean? It calls for an army strong enough to defeat any nation, or group of nations, and you may rest assured there would never be any American boys permitted to join this army.

If the time ever arises when we have a world president and a world court, and a world army, the first important business before this court would be the question, "Who owns the wealth of the world?" Well, you may rest assured that the court would order the division of all wealth, including the gold now buried in the mountains of Kentucky. It would assess us millions of bushels of grain, and millions of bales of cotton, in fact, it would finally reduce us to the level of those people in Asia of whom we spoke before.

For the past 16 years the philosophy of the New Dealers has taught and convinced

our good people that it is their duty to attend to everybody else's business, whether they like it or not; that our Nation should meddle and attend to the business of other nations, whether they like it or not, so now, if anyone believes in America and the Monroe Doctrine, as we have always done in the past, we are condemned as isolationists.

It has come to pass that the politicians of many nations of Europe and Asia, regardless of the wishes of the people, have decided to return their countries to the Dark Ages, and no nation or group of nations can stop this tragedy.

I hope no one will accuse me of being selfish, but it is my sincere opinion that sending billions of dollars to Europe or Asia is a great mistake and will do no good—it will only make weaklings of them. The $3,750,000,000 we sent England is now dissipated and apparently drove that Nation deeper into socialism. To substantiate this statement I will read from a letter from Sir Sydney Parkes, a most brilliant Englishman, ex-president of Lloyds Bank of London, now chairman of the board of the Bank of New Zealand, and chairman of the board of Crosse & Blackwell, Ltd., with a factory in Baltimore, Md., who writes me as follows:

"As you know, we are fast getting through our dollar loan and it looks as if we shall have to tighten our belts still further, because this country does not want gifts, nor further loans, which would increase our indebtedness and increase the amount of exports for which we get no imports in return."

Every banker and businessman of this Nation, who has taken time to investigate, will tell you that as long as this country has an indebtedness of some $258,000,000,000, it is not in a secure position, and that the $6,000,000,000 that are now contemplated sending to Europe this year should either go to retiring the Government bonds of this country, or else be put into atomic bombs and long-range airplanes to protect this country.

The course which we are following today is very pleasing to Stalin, for we are proposing to build up the countries in Europe—which Stalin expects to take over—by depleting our own national wealth and resources, which will place us inevitably in the situation of England of today. The time is overripe when the people of the United States should look to and protect in every way the interests of their own country.

I am very sincere in saying that the only hope for this world is for each nation to work out its own salvation, and for this country to withdraw our boys from overseas, develop the atomic weapons, and build airplanes that can carry them to any part of this earth; to return to the principles of Washington, Jefferson, and Lincoln, and, then, with the help of God, with bravery, honesty, and loyalty, we shall be a shining beacon for all the world.

Embargo on Shipment of Arms to Palestine

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, February 4 (legislative day of Monday, February 2), 1948

Mr. MAGNUSON. Mr. President, several days ago I wrote the State Department a letter pertaining to the very important question of the embargo on arms to Palestine, and I have today received an answer from the counselor of the State Department. I ask unanimous consent that my letter to the State Department and the letter from the State Department to me may be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
Washington, D. C., January 16, 1948.

Hon. GEORGE C. MARSHALL,
Secretary of State, Washington, D. C.

DEAR MR. SECRETARY: This is written on a matter of the greatest urgency regarding which the State Department has, I believe, the power to effect swift remedial action.

At the present time approximately one hundred casualties are occurring daily in Palestine, and the death toll—Hebrew, Arab and English—has been averaging about 20 lives daily since the United Nations decision on Palestine. The situation evidently is rapidly deteriorating and may continue until chaos consumes the Holy Land.

Evidence also that this fighting was premeditated to prevent the realization of a Hebrew Palestine—even in its minimum form—is a matter of public record. I am referring to the threats of invasion and bloodshed by official representatives of the Arab League States uttered at Lake Success last fall, and the sanction accorded to this attitude by some British officials.

In view of "the current disorders in the Middle East," the State Department on December 5, 1947, placed an embargo on shipments of arms and ammunition "to the troubled areas" and discontinued the transfer of surplus military equipment outside the United States to designated states. This action applied to seven countries in the Middle East, including Palestine.

Inclusion of Palestine in this embargo was most unfortunate in the light of the actual situation. Regrettably, it appears that since VE-day the United States has transferred over $37,000,000 worth of surplus United States war property to Arab League States, prior to the December 5 embargo. Since that date the British Foreign Secretary has announced that British arms will continue to go to the Arab League States, and on January 12, British diplomatic sources in London confirmed that large military stores, reliably estimated as worth $25,000,000, are being supplied to three states capable of aggression against Palestine—Egypt, Iraq, and the unrecognized state of Trans-Jordan.

Hence it would appear self-evident that the present embargo is unilateral in effect, since it leaves potential victims unarmed and helpless against any carefully prepared and fully armed attack. Additionally, it implies that we will remain inert in the face of intensified attacks against the defenseless men, women, and children of Palestine. Such a stand will only serve to spur the aggressors in their incendiary course.

American public sentiment overwhelmingly favors the Hebrew cause in Palestine, not only for reasons of sympathy and humanity, but also because of the importance to the world of this initial test of a United Nations decision. Certain well intentioned Americans have sought to assist the embattled Hebrews by supplying munitions covertly. Similar sub rosa efforts undoubtedly will continue, unless the Government remedies the situation officially, because American citizens are drawn by tradition to every struggle for freedom and justice.

The Hebrews of Palestine have emphasized that they do not want United States troops or foreign volunteers; that they are quite capable of defending themselves if they are permitted the most elementary rights of self defense and are not cut off from all sources of supply in the face of full-scale military encirclement.

As one who has always advocated the strongest United States support of the United Nations as the proper instrument for settling international disputes, it would seem to me that our country's policy toward the Hebrews of Palestine marks a serious departure from this policy in the first instance where a United Nations decision requires support and cooperation. And for that very reason it appears to be improper for us to continue to enforce a cruel and arbitrary embargo on those who are in grave peril as a direct consequence of a United Nations decision which our Government approved.

I urge that the State Department raise the embargo as applied to the licensing of shipments of arms and the transfer and sale of United States surplus arms and ammunition to the Hebrews of Palestine; through the licensing authority the State Department could insure that only types and quantity commensurate with defense purposes were made available. Delay in taking such action may be measured in human life.

May I again express my deepest esteem for your magnificent statemanship and urge that you give this matter your attention.

Sincerely,

WARREN G. MAGNUSON.

DEPARTMENT OF STATE,
Washington, January 26, 1948.

Hon. WARREN G. MAGNUSON,
United States Senate.

MY DEAR SENATOR MAGNUSON: Acknowledgment is made of the receipt of your letter of January 16, 1948, regarding current developments in Palestine.

Under authority contained in the Neutrality Act of 1939 and the Export Control Act of 1940, the Department decided early last November to refrain from licensing arms shipment to Palestine and neighboring countries. This step was taken because the United States Government believed it judicious to prevent any action likely to increase bloodshed or to make a peaceful settlement more difficult. No change is now contemplated in that policy.

It may be recalled that the General Assembly of the United Nations made detailed recommendations on November 29, 1947, with respect to the future government of Palestine. The United Nations Commission has already commenced its deliberations and it is understood that the general problem of the maintenance of internal law and order in the various areas of Palestine will be one of the first subjects under consideration.

As one of the members of the United Nations the United States Government is following these deliberations as well as current developments in Palestine with close attention and with the hope that the peoples of Palestine will cooperate in the peaceful implementation of the General Assembly's resolution.

For your information there is attached a copy of a statement relating to the general policy of the United States Government regarding Palestine, as well as two official releases on the shipment and transfer of arms to the troubled areas of the Near East.

Sincerely yours,

CHARLES E. BOHLEN,
Counselor
(For the Secretary of State).

America's Obligations in the Partition of Palestine

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, February 4 (legislative day of Monday, February 2), 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted

in the Appendix of the RECORD an article on the subject America's Obligations to the United Nations as a Result of the Action Taken in Regard to the Partition of Palestine, written by me and appearing in the New York Post on January 31, 1948.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

America once more finds herself against herself. This land which has built its talking foreign policy upon the sanctity of treaties and the sacredness of the pledged word now finds her acting policy again turned to thoughtless expediency.

When it was pointed out in the mid-1930's that our Neutrality Act, with its arms embargo provisions, would aid the aggressor and hurt the victim of aggression, we decided to stay with the logic of impartial neutrality instead of with the real facts behind the act.

I introduced amendments making it possible for the United States Government to remove the arms embargo when it acted to the disadvantage of a victim of aggression. The amendment was rejected and Mussolini was not stopped because he could get what arms he wished from the rest of the world but his victim could get none from us.

The American people know that if we are to sustain international law, deliberation before action and respect for promises made and covenants entered into, they must sustain the action of any institution set up to operate in accordance with the theories of a peaceful process.

The final analysis of a peaceful process always results in a compromise on the theory that compromise is better than the alternative. This still leaves room for future struggle for right and change. But to let opportunity after opportunity go by, to make strong the deliberative action, is a mistake.

The United Nations has acted in regard to the Palestinian question. Their action was, of course, a compromise. Neither side had its absolute way. But it did afford a new start for peaceful institutional building and the age-old striving for a national home for the Jews again saw the light. All of the forces the United States has should now be used to unite with all of the nations that supported it in the United Nations' decision to maintain that decision for the sake of a future world organization.

It is not a question any longer of a national home for the Jews. It is a question of respect for the pledged word of the majority of the nationals represented in the United Nations.

A Jewish national state is an insignificant thing, indeed, compared to the proper functioning of a world organization. To go back on the Jewish national state merely retards for the time being the inevitable. But to turn our backs on world-wide action and the pledged word of the nations of the earth in formal deliberation may destroy all the progress we have made toward world organization and the peaceful settlement of disputes for generations. If man loses faith, now, in nations' ability to cooperate with each other to make decisions and to stand by those decisions, when will we have a chance again to move forward toward what has been the desire not only of nations but the prayer of the people of the world since the concept of progress dawned on man?

America must marshal those nations which voted to support the United Nations decisions. There is no retreating from that stand. We cannot afford in this generation a Corfu affair which destroyed the hopes of the last generation.

We hear echoed on all sides that if we do not give aid to Europe democracy is at stake. I say, if America and the nations of the world do not stand by their pledged word, world organization is at stake. And without world organization democracy ultimately may fail because democracy rests upon the peaceful process and so does world organization.

Spiritual Surgery

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4 (legislative day of Monday, February 2), 1948

Mr. ROBERTSON of Virginia. Mr. President, Monday the Chaplain of the Senate, Dr. Peter Marshall, addressed an audience of more than 3,500 people in the Mosque at Richmond, Va. In the gathering were many of the leading business and professional men of Richmond, who went to hear the message of one of the great spiritual leaders and teachers of our day and time. A summary of what Dr. Marshall said to that group was published yesterday afternoon in the Richmond News-Leader. The address contains some truths which are so fundamental and so vital to us in the present crisis that I ask unanimous consent to have the article from the Richmond News-Leader printed in the Appendix of the RECORD, in the hope that every Member of the Congress will find time to read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"ALTERED IDEAS NEEDED," SAYS DR. MARSHALL—"SPIRITUAL SURGERY" ASKED AT MISSION

"Spiritual surgery" to cut out stubborn pride and give a new life under God's management was recommended by Dr. Peter Marshall, of the New York Avenue Presbyterian Church, Washington, last night at the preaching mission in the mosque.

"Goodness lies not in keeping laws but in character and disposition," Dr. Marshall declared. "It is the fruit of a new spirit, a new birth, a complete change in life under new management.

"Christ can do little for us save as we let him change us inside."

Speaking to a crowd estimated at approximately 3,500 persons, Dr. Marshall added:

GOD A THEORY

"Many of us need to have our ideas of God changed. God for most of us is just a theory—a colossal ideal—not a friend, not a reality.

"Take alcohol, as so many of you do," he added. "It's not much to ask Christ to help you when the craving remains. Only Christ can remove the craving and set you free. To do that you must surrender to Him.

"Secretly we all want to be dictators and bullies. There are many embryo dictators in Washington, and I doubt not you have yours here. Christ can remove that spirit.

"We get worked up over the world situation and forget that slums exist because slums are in us.

"Many slums are owned by 'big shots' in the church. The world outside is merely a reflection of the world inside you and me."

HAS TO CHANGE HEARTS

"Perhaps we want power," he added. Think of spiritual power, like electricity. God does not grant such power indiscriminately.

"God has to change our hearts, and when we get them changed we won't want to use the power for our own ends.

"We've got to get a new concept, a new spirit, and a new attitude," he told the audience. "Only God can do that. He changes our spiritual gears. Not until that happens can you even see the kingdom of God."

Clinton's Famous Composers

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an excellent article recently appearing in the celebrated publication, the Clinton (Mass.) Daily Item, containing a very interesting account of the records and achievements of two famous popular musical composers who come from my home town of Clinton.

The article relates to Bill Heagney and John Redmond, both well-known and highly regarded popular composers. Both these famous men were born and raised in Clinton and spent their early years in that community. Both have attained very high rank in their chosen profession. Both are magnetic figures who are beloved by innumerable friends and followers throughout the country.

I have not had the pleasure of personally meeting Bill Heagney for some time past but hope to have the opportunity before long. He is greatly esteemed and particularly well regarded by the people of his home town who, like myself, would like to see him in Clinton more often.

John Redmond, whose real name is John Redmond Lynsky, and whose father was the great and dynamic Irish patriot, Peter Lynsky, is a very close personal friend of mine. I see him frequently. He is one of the ablest, most engaging and talented young men I know. He is held in highest esteem and regard by all his friends. His reputation as one of the most promising young song writers in the country today is rapidly advancing him to a distinguished and prominent place as one of America's best-liked composers. He is growing in stature every day and we may expect still greater things of him.

Clinton proudly hails these famous talented sons and I am happy to greet them and extend my heartiest wishes for their future health, well-being, and success.

CLINTON COMPOSERS RATE HIGH IN NEW BOOK—NOTABLE PROWESS IN THE MUSICAL WORLD OF WILLIAM H. HEAGNEY AND JOHN REDMOND CITED IN VOLUME PUBLISHED BY THE COLONIAL PRESS, INC.

Clintonians will note, with genuine pleasure, that the Colonial Press, Inc., has just issued an attractive volume of 483 pages entitled "The ASCAP Biographical Dictionary of Composers, Authors, and Publishers," car-

rying 2,173 sketches dealing with contributions to the musical life of the Nation and the world that have been made by virtually every important American composer, lyric writer, and music publisher of the current generation.

The volume is of great interest to residents of this town as it includes the biographies of two native sons whose offerings to the musical world have been many and notable and whose future works will serve to add to their Nation-wide fame.

It is most appropriate that the book should be printed and bound in a publishing plant in their home town, to which they have brought great renown.

BILL HEAGNEY

July 11, 1882, William H. Heagney was born in Clinton, and today there are hundreds of men and women still residing here who recall, with a thrill, dancing to the lilting music of Heagney's orchestra when it was recognized as an instrumental organization so talented that it soon became a leading dance-hall attraction throughout New England, filling engagements in all the larger cities and towns at events sponsored by prominent organizations which, at that period, conducted annual balls, always the social events of the winter seasons and at summer resorts where large dance halls catered to the lovers of terpsichore.

Mr. Heagney attended the local public schools and in his early years devoted much of his time to music, in which he self-educated himself.

While still a schoolboy he organized a local fife and drum corps whose services were constantly in demand at local parades and public entertainments.

He early realized that his talents were such that he would meet with success if he extended them beyond the limited range afforded in Clinton and he removed to New York City where he speedily gained renown as a staff composer in several music publishing houses of the metropolis and where he became the musical director, for several seasons, of light opera companies.

His exceptional prowess, as a pianist, later resulted in his becoming the accompanist of several two-men vaudeville acts and he toured the United States with these groups appearing in all the leading theaters.

When the movies invaded the entertainment field and vaudeville declined, Mr. Heagney accepted important professional posts in New York City music publishing houses and later authored two successful musical revenues, produced on the legitimate stage under the titles of "Dilly Daily" and "There You Are."

Every few months he turned out songs that met with wide sales including such lasting favorites as Roll Along, Kentucky Moon; Ev'ry Little While; Belle of Hawaii; Close to Your Heart; Tipperary Rose; The Belle of the Blue Ridge; Shadows in the Cane Brake; Moon Over London; I Envy the Rose; Just an Old Birthday Present, and many others.

In 1926, Mr. Heagney was elected to membership in the American Society of Composers, Authors and Publishers, the Who's Who of the musical world and an organization that has contributed much to the leading place now held by the United States in the musical life of the world.

He resides at Bellaire, Long Island, New York State.

JOHN REDMOND

Twenty-four years after the birth of Bill Heagney there arrived in Clinton, February 25, 1906, an infant christened Patrick Henry Lynsky, destined to carry on, with his local contemporary, a career which has placed him in the front rank of composers, authors, publishers and soloists and whose talents were recognized by the American Society of Composers, Authors and Publishers, just 30 years later when the organization elected him to membership under his pen name of John Redmond.

Following his graduation from Clinton High School he studied voice under famous teachers in Worcester, Boston, and New York City, and frequently contributed his talents to local and vicinity musical programs and became a singer on many radio programs and during World War II at many entertainments staged in Army and Navy centers and later entered the music publishing business, in New York City in which he has gained a prominent place and which he still carries on.

Of his many compositions which have gained world fame are: Sweetheart of Mine, I Let a Song Go Out of My Heart, The Man With the Mandolin, When Paddy McGinty Plays the Harp, Crosstown, Caucho Serenade, Big Apple, You're a Sap Mister Jap, You're Breaking My Heart All Over Again, American Booties on a Musical Cruise, an album of songs; You'll Never Be Blue in a Blue Uniform; The Tune of Luna Park; Dream, Dream, Dream; and Give, Give, Give, which became the official song of the 1947 March of Dimes drive.

Frequently Mr. Redmond visits the scenes of his early years, in Clinton, where members of his family reside and is always welcomed by an army of friends who invariably insist upon his singing many of his favorite compositions.

Hundreds of his disks fill Clinton homes and are daily enjoyed by his admirers.

In his early forties, Mr. Redmond still has before him many years of continued fame in the musical world and is destined to become one of the Nation's leading composers.

He makes his home at 911 Wilson Street, Hackensack, N. J.

To be linked in a volume which includes the names of such prominent living persons as Deems Taylor, Leopold Stokowski, Oscar Levant, Ray Harris, Irving Berlin, Fritz Kreisler, and Duke Ellington, and with the estates of authors and composers whose works are still, in copyright, including Victor Herbert, Edward MacDowell, Gustav Mahler, Henry Hadley, James Whitcomb Riley, George Gershwin, Fats Waller, and scores of others, is, indeed, pleasing to hosts of Clinton friends of Messrs. Heagney and Redmond and a tribute to the town of Clinton where both first saw the light of day.

Wages and Allowances of Veterans Undergoing On-the-Job Training

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. MILLER of Connecticut. Mr. Speaker, I regret that the bill now under consideration, H. R. 246, a bill to "raise the ceilings on wages and allowances payable to veterans undergoing training on the job, and for other purposes," is being considered by the House under suspension of the rules. This procedure which limits debate to 20 minutes on each side and prevents the offering of any amendments seems to me unfortunate.

This bill increases the ceiling on wages and allowances payable to veterans from the present allowance of $200 a month to as high as $350 for a veteran with two dependents. If this bill were considered under a usual rule with ample debate and the opportunity to suggest amendments, I believe that we could amend the GI act in such a way that some of the abuses that have developed under this program could be eliminated.

We could prevent tuition being paid to fly-by-night schools that have been established for no other purpose than to train veterans under the GI program. The other day, for example, I received an advertisement from a flying school in Florida. This school offered prospective GI trainees round-trip transportation, wonderful housing facilities in Florida, including a swimming pool, golf, and so forth. It sounded more like the advertisement of a country club than an aviation school.

If activities of that kind could be eliminated, the funds saved would go a long way toward paying the increased cost of this bill. It was with considerable reluctance that I finally decided to oppose this legislation.

I have frequently assured my constituents that I would do everything possible to reduce the cost of government. I intend to vote against any unnecessary appropriation. If the present GI Training Act was causing undue hardship on any veterans I would be in favor of amending it, even though it meant additional appropriations. I am not, however, aware of any such undue hardships.

Yesterday more than two-thirds of the Members of the House voted to reduce Federal taxes by approximately $7,000,000,000. We were told that if we passed this tax-reduction bill and everything worked out as anticipated, we would have a balance of $500,000,000 at the end of the next fiscal year. Today we are asked to pass this bill and another one which will follow that involve an expenditure of slightly over $500,000,000. Thus, in the passage of these two bills with such limited debate, we wipe out the anticipated surplus referred to in the tax debate.

It is well to bear in mind that the President's $40,000,000,000 budget does not include funds for either of these measures. Instead of reducing the President's budget, as I am pledged to do, this legislation will make a substantial increase in the budget. It is my understanding that immediately after the passage of these two measures we will take up the independent offices appropriation bill. A subcommittee of our Committee on Appropriations has spent weeks and weeks trying to reduce wherever possible the independent offices appropriation. They will recommend a reduction of $59,000,000 below the sum requested by the Budget Bureau. After their weeks of effort it must be discouraging to members of the Appropriations Committee to see their whole saving wiped out several times over.

I cannot agree with the gentleman from Mississippi [Mr. RANKIN], former

chairman of the Committee on World War II Veterans' Affairs, that veterans' bills should be considered under suspension of the rules. He apparently feels that if legislation of this kind was considered under the usual rule, our sympathies would so run away with us that unreasonable amendments would be adopted. I have more confidence in the good judgment of my colleagues than to believe that.

The greatest contribution this Congress can make to the veterans of World Wars I and II is to maintain a sound dollar and a solvent Nation. No group in this country will suffer more from uncontrolled inflation than will the veterans. Most of them are very young. They are just getting started in life. I, for one, do not want to do anything that will make the future any more difficult for them than we know it is bound to be.

The second bill that we will consider this afternoon, H. R. 4212, is a bill "to provide increased subsistence allowances to veterans pursuing certain courses under the Servicemen's Readjustment Act of 1944, and for other purposes." This bill proposes to increase the subsistence allowances paid to veterans who are attending school under the Servicemen's Readjustment Act, or the GI bill as it is better known, from $65 per month if without dependents to $75 per month, and for a veteran with one dependent the subsistence allowance will be increased from $90 to $105 per month. If the veteran has more than one dependent, the subsistence is increased from $90 to $120 per month.

The same reasoning that compels me to vote against the passage of H. R. 246 is equally persuasive when we consider H. R. 4212. The beneficiaries of this second bill in most cases are in college. I am sure that the education they have thus far acquired will lead them to agree with me that the cost of Government must be reduced.

In my opinion it was never the intention of Congress to provide every veteran who desired to go to college a complete college education, including the social life that goes with it, without any effort on their part at all. It was my thought that this bill was passed to give those whose education had been interrupted or delayed by the war an opportunity to complete their education. Very few veterans who receive full tuition, supplies, and a subsistence allowance of $65 a month and who really desire a college education, will leave school if this subsistence is not increased.

I cannot think of anything that could be done by this Congress that would convince the American people that we mean what we say when we tell them we are going to reduce the cost of Government than our refusal to pass these two bills. The defeat of this legislation would be but another step along the painful road to economy and we must travel that road unless we intend to drift into uncontrolled inflation which means ruin and suffering for every citizen.

Clarification of Public Law 270

REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. BREHM. Mr. Speaker, I have today called upon the assistant clerk of the Veterans' Affairs Committee of the House to take up with the chairman, Mrs. ROGERS, one phase of Public Law 270 which passed the first session of the Eightieth Congress as H. R. 3961 and for which I was pleased to vote.

In my opinion clarification of this law is indicated. For instance, the laws referred to in section 1 of the act pertaining to the Spanish-American War are public laws so that there can be no question as to the intent of the committee. However, section 2 reads as follows:

> That all monthly rates of pension payable to veterans of the Civil War and dependents of such veterans which are payable under any laws administered by the Veterans' Administration are hereby increased by 20 percent.

Now, Mr. Speaker, any laws certainly means "any laws" and not necessarily public laws. Under this provision it is quite evident that any veteran of the Civil War or dependents thereof are entitled to this 20-percent increase even though they are receiving their pension under private law.

It is true, Mr. Speaker, that the language "any laws administered by the Veterans' Administration" has been used in the appropriation and other acts as meaning all laws, both public and private. Now, Mr. Speaker, the Committee on Veterans' Affairs, in favorably reporting H. R. 3961, stated in their report:

> The bill proposes * * * to increase by 20 percent service pensions to veterans of the Civil War and the widows and children of such veterans, which are payable under any public laws administered by the Veterans' Administration.

You will note, Mr. Speaker, the discrepancy between this report and the law as actually written. The law as written says "any laws administered, and so forth," while their report adds the word "public."

Now I maintain that a report should in no way supersede the law as it actually appears on the statute books and I also maintain that if and until this law is amended that Civil War veterans and their dependents who are presently receiving a pension under any law, private or public, are definitely entitled to and should receive the 20-percent increase. It is my contention, Mr. Speaker, that the Veterans' Affairs Committee should bring in legislation having as its purpose the amending of the present law to insert the word "public" if that is their intention, so that it can be debated on the floor of Congress in an effort to determine whether or not the full membership will accept that interpretation.

I cannot for the life of me understand why a handicapped recipient of aid as a dependent of a Civil War veteran is not entitled to this 20-percent increase in order to help them meet increased living costs, simply because he or she is receiving their aid under a private bill and not under public law.

I realize that it is customary under generally accepted rules of statutory construction, if the language is not entirely clear to seek recourse in the legislative history. I am in agreement with that procedure, Mr. Speaker, wherein clarification as to the intent of Congress is sought, but in this specific case or in any other similar case I do not believe that this interpretation should be broad enough as for the administrator of a particular law to assume that words may be added to the statute.

I sincerely trust that the Veterans' Affairs Committee will take some action at the earliest possible moment looking toward a clarification of this section, and that the entire membership of the House will be given an opportunity to vote on this subject.

Subsistence Allowance to Veterans Pursuing Certain Courses

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. JUDD. Mr. Speaker, as one who labored long and hard for the educational provisions in the GI bill of rights I have followed with deep gratification the successful development of this largest educational program in history. From the beginning I contended that vocational or college or professional education ought to be made available to all veterans who qualified and desired it, not so much as a reward, but as an investment in the Nation's future—an investment that will pay higher dividends each year for decades to come.

It is clear that the subsistence allowances ought to be increased so as to provide the veterans with substantially the same purchasing power now as the existing allowances represented when originally established. I therefore favor this bill.

Under leave to extend my remarks, I enclose a careful study on the living expenses of veterans now in training in colleges and universities. The study was prepared by Mr. Ralph J. Strom, of the American Council on Education, with funds made available to the council by the Disabled American Veterans.

A REPORT ON THE LIVING EXPENSES OF VETERANS NOW IN TRAINING IN COLLEGES AND UNIVERSITIES

(Prepared by Ralph J. Strom, American Council on Education)

INTRODUCTION

This report is but one section of a much larger report of the results of a Nation-wide

survey of veterans now in training in colleges and universities.

It is based on the responses received from interviews with a scientifically selected sample of veterans attending all types of colleges located in all sections of the country.

This report presents only those phases of the total survey which are concerned with the extent and manner in which veterans in colleges and universities are able to finance their education.

This study, as was the major study from which these data were drawn, was planned by a national advisory committee appointed by the American Council on Education. The membership of this advisory committee is as follows:

Dean E. G. Williamson, chairman, University of Minnesota.

Mr. Curtis Avery, University of Oregon.

President William S. Carlson, University of Delaware.

Dr. John G. Darley, University of Minnesota.

Dean Mitchell Dreese, George Washington University.

Dean D. D. Feder, University of Denver.

Dr. Clements C. Fry, Yale University.

Dean D. H. Gardner, University of Akron.

Dr. Walter C. Hess, Georgetown University.

Dr. Fred McKinney, University of Missouri.

Dr. Carroll L. Shartle, Ohio State University.

Dean Katherine E. Towle, University of California.

Dean Fred H. Turner, University of Illinois.

Mr. John Golob, ex officio, national commander, Disabled American Veterans.

Dean A. J. Brumbaugh, ex officio, American Council on Education.

Consultants: Mr. K. Vernon Banta, United States Employment Service; Mr. Donald Dabelstein, Office of Vocational Rehabilitation; Dr. Ira D. Scott, Veterans' Administration.

Director of study: Mr. Ralph J. Strom, 800 Washington Avenue SE., Minneapolis, Minn.

These studies were made possible by a grant of funds from the Disabled American Veterans to the American Council on Education.

PROCEDURE

Method of selection of veterans to be interviewed: In order to insure the representativeness of the results presented in this report, the following criteria were taken into consideration in the selection of the sample of the veterans to be interviewed:

1. Geographical: The schools at which the veterans were to be interviewed were selected so as to permit representation of the following geographical areas: (a) New England States; (b) Middle Atlantic States; (c) North Central States; (d) Southern States; (e) Northwest States.

2. Type of institution: In each geographical area, an attempt was made to have each of the following types of schools represented: (a) State universities; (b) private men's schools; (c) municipal universities; (d) liberal-arts colleges; (e) junior colleges; (f) teachers' colleges.

3. Type of veterans to be interviewed: Within each institution at which the interviewing was to be done, careful instructions were issued to the interviewer in order that the following types of veterans would be included among those to be interviewed:

(a) Both single and married veterans.

(b) Both disabled and nondisabled veterans.

(c) All levels of scholastic rank (i. e., fresh, soph, junior, senior, etc.).

(d) Within the universities, veterans in the different colleges (Institute of Technology, Business, Agriculture, etc.).

FINDINGS

On the basis of the interviewing of this group of veterans, carried out in the manner outlined on the previous page, the following results were obtained:

TABLE I.—*Monthly expenses of single college veterans*

[This table is based on the responses to a question in which the unmarried veteran was asked to make a careful estimate of his monthly expenses]

Expenses:	Percent
Under $50	2
$50–$59	2
$60–$69	7
$70–$79	7
$80–$89	10
$90–$99	11
$100–$109	18
$110–$119	9
$120–$129	14
$130–$139	4
$140–$149	2
$150–$159	6
$160–$179	4
$180–$199	1
$200 and over	3
Total	100

Median expenses of single veterans interviewed, $106.13

TABLE II.—*Monthly expenses of married college veterans*

[This table is based on the response to a question in which the married veteran was asked to make a careful estimate of his monthly expenses.]

MARRIED—NO CHILDREN

Expenses:	Percent
Under $100	4
$100–$119	5
$120–$139	13
$140–$159	20
$160–$179	11
$180–$199	8
$200–$219	19
$220–$239	8
$240–$259	8
$260–$279	1
$280 and over	3

Median expense, $176.43.

MARRIED—1 CHILD

Expenses:	Percent
Under $100	1
$100–$119	4
$120–$139	15
$140–$159	25
$160–$179	14
$180–$199	8
$200–$219	18
$220–$239	6
$240–259	7
$260–$279	1
$280 and over	1

Median expense, $169.50.

NOTE.—See table III for explanation of reason for lesser expenses of married veteran with one child as compared to living expenses of married veteran without children.

TABLE III.—*Extent of employment of wives of married veterans*

Marital status	Extent of employment			
	Full time	Regular part time	Intermittent	Not employed
	Percent	*Percent*	*Percent*	*Percent*
Married, no children	61.8	11.6	3.8	22.8
Married, 1 child	9.8	7.7	5.5	77.0

TABLE IV.—*Extent to which veterans work to supplement income*

[These tables are based on the responses to a question in which the veteran was asked to give the number of hours which he worked the preceding week in order to supplement his income and the amount of money he earned in such employment]

Hour worked	Married veterans	Single veterans
	Percent	*Percent*
Under 6	4	
6 to 10	7	8
11 to 15	6	6
16 to 20	11	6
21 to 25	6	
26 to 30	5	1
31 to 35	1	
36 to 40	2	1
Over 40	1	1
None	57	70

TABLE IVA.—*Amount of weekly earnings of veterans (see preceding table)*

Amount earned	Married veterans	Single veterans
	Percent	*Percent*
$5 or less	14	25
$10	20	30
$15	12	14
$20	26	15
$25	9	7
$30	6	4
$35	2	2
$40	5	1
$45	1	
$50 and over	5	2

TABLE V.—*Extent of summer employment of veterans in college*

These tables are based on the responses to a question in which the veteran was asked to state whether or not he had worked last summer and, if so, the extent to which he was able to save any of his earnings]

"Did you work last summer?"	Married	Single
	Percent	*Percent*
Yes	62	59
No	38	41

TABLE VA.—*Amount of savings of college veterans who worked last summer*

Amount of savings	Married	Single
	Percent	*Percent*
Nothing	62	37
Under $100	5	6
$100 to $199	9	19
$200 to $299	10	17
$300 to $399	5	11
$400 to $499	3	5
$500 and over	6	5

TABLE VI.—*Total savings available for education*

[This table is based on the responses to a question in which the veteran was asked to state the amount of savings he had available at that time, November 1947 to help pay his way through college]

Total savings available	Married students	Single students
	Percent	*Percent*
Nothing	42	33
Under $250	9	13
$250 to $499	8	10
$500 to $999	15	16
$1,000 to $1,499	9	11
$1,500 to $1,999	5	6
$2,000 to $2,499	6	5
$2,500 to $2,999	1	2
$3,000 to $3,499	2	1
$3,500 to $3,599	3	3
Total	100	100

To Raise the Ceilings and Allowances Payable to Veterans Undergoing Training on the Job

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. BROOKS. Mr. Speaker, I sincerely trust that H. R. 246 and S. 1374 will soon become the law of the land. These bills amend, in effect, the original GI bill of rights by making it easier for the veteran to obtain desired education. To my mind, this is one of the most important features of the GI bill of rights, and the beneficent effects of this provision of the bill of rights is now being felt in every section of this country. It is most timely that we seek by these two bills to add to the aid which we are giving our veterans.

I have had occasion to visit many schools in which veteran student training is being carried on. I have seen how earnestly and conscientiously these people are trying to obtain the training and education which they feel is necessary for the future. They are to be commended for their ambition in desiring education and training. Especially should our commendations be loud and long for these whose educations, because of the war service, has been disrupted and delayed until they are past the customary school age. It seems that the age and the experience which they acquired during the trying days of war have whetted their appetite for learning and has increased their industry in obtaining it.

But, Mr. Speaker, these veterans have been working under most unfortunate circumstances. The subsistence pay which a grateful Government said it would provide has been entirely inadequate. The sum of $65 per month for a single man and $90 per month for a married man is miserable pay to give these people who work, both in the schools and in training, long hours each day. Senate bill 1394 will go far to relieve this injustice. It will cost for the year 1948 the sum of $207,000,000; but it will raise the allowance to the single veteran from $65 to $75; and it will raise the married veteran from $90 to $105 per month. Then, too, this new bill will provide an extra $15 per month for those having children.

H. R. 246 will raise the amount of money which a veteran in occupational training may earn without being denied the subsistence allowance. Since the original bill was written, the cost of living has mounted until I have felt for some time that the present action is most appropriate. I am glad that these two measures will pass the House of Representatives and I hope they both soon become the law of the land.

In fact, Mr. Speaker, I have felt that this Congress should have taken action on these two bills months ago. The delay of this body in taking action has caused many veterans and their families to suffer. The delay has caused some of them to become despondent and drop out of their schools and out of their occupational training. It has been a delay that we cannot well justify. Even now, when action is about to be taken, the increased amounts are small. Neither a single veterans nor a married one can hope to pay their expenses through school or through training, relying entirely upon the subsistence allowances. They must obtain funds from other sources. During my own early school days, I felt the pinch of poverty. I know what it means to be compelled to work to provide funds from outside sources to obtain "this day our daily bread." I do not think we should work out our laws in such a way that men and women who have fought for this Nation, undergoing the trial and hardships of battle and of war, should need another lesson in courage or in deprivation. Let us pay these veterans a proper amount to help them finish their schooling.

B'nai B'rith Commemoration of the One Hundred and Sixtieth Anniversary of the Formation of the Constitution of the United States

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. MILLER of California. Mr. Speaker, on the evening of September 4, 1947, the B'nai B'rith lodges of Alameda County, Calif., commemorated the one hundred and sixtieth anniversary of the formation of the Constitution of the United States, at a dinner in Oakland. The three lodges sponsoring this dinner were those of Berkeley, Eden, and Oakland.

At this dinner citations of merit were awarded to three distinguished Americans for outstanding work in the field of group cooperation. They were Gen. Mark Wayne Clark, United States Army; Dr. Robert Gordon Sproul, president of the University of California; and Chief Justice Phil Sheridan Gibson, of the Supreme Court of the State of California.

Civic leaders, officials of government, educators, and men active in the field of human relations throughout the east bay region were honored to attend this dinner dedicated to the Constitution of our country. They came, too, to pay tribute to the great leaders who B'nai B'rith saw fit to honor.

That the interesting program arranged for this occasion may be preserved that future students of history may have a record of it, I insert in the RECORD extracts from the proceedings on that occasion:

B'NAI B'RITH SUPREME LODGE, FOUNDED 1843

Supreme lodge officers: Frank Goldman, president, Lowell, Mass.; Alfred M. Cohen, honorary president, Cincinnati, Ohio; Benjamin Samuels, vice president, Chicago, Ill.; William Gerber, vice president, Philadelphia, Pa.; Sol Fass, vice president, Portsmouth, Va.; Sidney G. Kusworm, treasurer, Dayton, Ohio; Maurice Bisgyer, secretary, Washington, D. C.

EXECUTIVE COMMITTEE

(Officers as above)

Horace R. Cohen, Montreal, Canada; Benjamin D. Reisman, Buffalo, N. Y.; I. W. Garek, Columbus, Ohio; Judge Samuel A. Weiss, Pittsburgh, Pa.; Harry K. Wolff, San Francisco, Calif.; David Blumberg, Los Angeles, Calif.; Edward Rosenblum, Washington, D. C.; Philip M. Klutznick, Chicago, Ill.; A. B. Freyer, Shreveport, La.; Leo Bearman, Memphis, Tenn.; the presidents of all American districts.

B'NAI B'RITH DISTRICT GRAND LODGE, NO. 4

(Comprising the States of Arizona, California, Idaho, Montana, Nevada, Oregon, Utah, Washington, and the Province of British Columbia)

Officers: Dr. H. M. Ginsburg, president, Fresno, Calif.; Dr. N. M. Zipperman, first vice president, Los Angeles, Calif.; Hy Samuels, second vice president, Portland, Oreg.; Jefferson E. Peyser, past grand president, treasurer, San Francisco, Calif.; Edward A. Zeisler, past grand president, secretary, San Francisco, Calif.

Executive board: I. B. Benjamin, Los Angeles, Calif.; E. A. Brashem, Seattle, Wash.; Louis L. Brounstein, San Francisco, Calif.; D. A. Chertkow, Vancouver, British Columbia; David Goldman, Pasadena, Calif.; Samuel H. Faverman, San Mateo, Calif.; Aaron Gordon, Huntington Park, Calif.; Michael Gordon, Berkeley, Calif.; Herbert A. Leland, San Francisco, Calif.; Eli Levinson, San Diego, Calif.; Sigmund O. Meyer, Butte, Mont.; Elliott Nankin, Oakland, Calif.; J. A. Robinson, San Pedro, Calif.; Edward Schwartz, Los Angeles, Calif.; Dal Siegel, Salt Lake City, Utah; Bernard Silverstein, Oakland, Calif.; Saul Tannenbaum, Los Angeles, Calif.; Arthur Wolpe, Los Angeles, Calif.

Past grand presidents: David Blumberg, Los Angeles, Calif.; David Coleman, Los Angeles, Calif.; Howard H. Desky, Oakland, Calif.; Albert Elkus, Sacramento, Calif.; M. J. Finkenstein, Los Angeles, Calif.; Monroe Friedman, Oakland, Calif.; David Goldman, Oakland, Calif.; Edgar C. Levey, San Francisco, Calif.; Herman Lewkowitz, Phoenix, Ariz.; Jacob J. Lieberman, Los Angeles, Calif.; Rabbi Edgar F. Magnin, Los Angeles, Calif.; Oscar A. Mathews, Sacramento, Calif.; Milton Meyer, San Francisco, Calif.; Maurice L. Rapheld, San Francisco, Calif.; William Meyer, Butte, Mont.; P. Allen Rickles, Seattle, Wash.; David Robinson, Portland, Oreg.; Z. Swett, Portland, Oreg.; Henry Weinberger, San Diego, Calif.; James L. White, Salt Lake City, Utah; Harry K. Wolff, San Francisco, Calif.

B'NAI B'RITH LODGES OF ALAMEDA COUNTY—BERKELEY-EDEN-OAKLAND

General committee: Monroe Friedman, past grand president, chairman; Morris Henerson, secretary.

Edward Brosler, president; Howard H. Desky, past grand president; Arnold Fassler, president; Herman W. Mintz, president; Isidore Schonwald, past president; Rafael Silver, past president.

Reception committee: Abraham Kofman, past president, chairman; Robert G. Gaines, Henry R. Gall, Leonard Lamdan, Dr. Julius Levine, Rubin Lewon, Isaac Schechmeister, Harold L. Strom, Alexander Teplow.

Hosts: Irving Aikus, past president; Lionel B. Benas, past president; Phillip R. Berger, past president; Jack J. Block, past president; Dr. Nat Brodke; Morris K. Cohen; Ike Dresner; Harold Edelstein; R. Robert Fischer; Mendel H. Friedman, past president; Rabbi Joseph Gitin, past president; A. W. Glickman, past president; Kalman Gluck; David

Goldman, past grand president; Michael Gordon, past president; Phillip Grant; Richard Grodin; Max Jaffe, past president; Fred Kahn, Jr.; Irving Kahn; Joseph Kay; Nathan Kessler, past president; Charles Kushins; Jacob Lesser; Prof. Alex Levens; Nat Levy, past president, Leonard Lustig; Irving Malnick; Dr. Henry Mankin, past president; Leonard J. Meltzer, past president; Louis Milenbach; Elliott Nankin, past president; Harry Polse; Jack Posner; Carl R. Riegelman, past president; Col. David Rosen, past president; Dr. Herbert Samuels, past president; Harry Sapper, past president; Louis Scheeline; Max Silver; Bernard Silverstein, past president; Sydney Silverstein, past president; Jesse Smith; Louis Spencer; Dr. Alfred Stern, past president; Rabbi William M. Stern, past president; Lionel Wachs, past president; Matt Wahrhaftig, past president; George J. Weiser, past president; Rabbi John Zucker.

PROGRAM

The Star-Spangled Banner.

Invocation.

Musical selections.

Introduction of distinguished guests by Monroe Friedman, past grand president, toastmaster.

Presentation of citation to Gen. Mark Wayne Clark, United States Army, by Col. David V. Rosen, past president.

Response by General Clark.

Messages from the President of the United States and from the Governor of California.

Presentation of citation to Dr. Robert Gordon Sproul, president of the University of California, by Edgar C. Levey, past grand president.

Response by Dr. Sproul.

Presentation of citation to Chief Justice Phil Sheridan Gibson, Supreme Court of California, by Howard H. Desky, past grand president.

Response by Chief Justice Gibson.

Address by Dr. Monroe E. Deutsch, former vice president and provost, University of California.

God Bless America.

Benediction.

Mr. MONROE FRIEDMAN (the toastmaster). Gentlemen, the Star-Spangled Banner. [All present arose and sang the national anthem.] Please remain standing for the invocation, which will be given by Rabbi William Stern of Temple Sinai.

Rabbi WILLIAM STERN. God of the Universe: With deep gratitude do we offer to Thee words of thanksgiving and praise. We are gathered here this evening in an exalted mood. One hundred and sixty years ago, men of vision and courage affixed their signatures to an immortal document—the Constitution of the United States. We have come here tonight to commemorate this event, to recall the great principles proclaimed therein, and to dedicate ourselves anew to the furtherance of its purposes and ideals. For this consecration, O God, we ask Thy blessing and Thy guidance. We pray that Thou will give us the same insight, wisdom, and understanding that filled the minds and hearts of our founding fathers. Remove from us all selfishness and all meanness that would destroy that which has been builded. Give us that love of country that makes for good citizenship, devotion to democratic ideals, loyalty to our institutions, and trust in our leadership. Bless those we honor tonight, who symbolize for us those virtues that have made our country great. And may this land, that has given freedom and security to all who live within its boundaries, continue to be in the forefront of that great crusade that seeks to bring a peace of justice and righteousness to all mankind. Amen.

(Dinner was served.)

Mr. FRIEDMAN. Now that we have finished our dinner, we will have the pleasure of listening to a group of songs by Mr. Oliver Jones, of the San Francisco Opera Company, accompanied by Mr. Henry Gideon. Mr. Jones will announce his selections. [Mr. Jones sang several songs, which were favorably received.]

B'nai B'rith is very glad to welcome all our guests this evening. I will now present our distinguished guests, but those who will participate in the program will be introduced later. I shall take one table at a time. As your name is called, would you please rise and remain standing until all the guests at your table have been introduced. Please do no applaud until after all the guests at any one table are introduced.

Head table: Mr. Edward Brosler, president, Berkeley Lodge, B'nai B'rith; Mr. Max Jaffe, grand lodge officer, B'nai B'rith; Mr. Elliott Nankin, grand lodge officer, B'nai B'rith; Mr. Arnold Fassler, president, Eden Lodge, B'nai B'rith; Mr. Michael Gordon, grand lodge officer, B'nai B'rith; Mr. Herman Mintz, president, Oakland Lodge, B'nai B'rith; Dr. J. Raymond Cope, minister, First Unitarian Church; Rabbi William Stern, of Temple Sinai; Rt. Rev. Richard H. Hammond, of St. Anthony's Church; Mr. Ingraham Read, publisher of the Post-Enquirer; Mr. Ralph T. Fisher, of the American Trust Co.; Mr. Bruno Forsterer, general manager of the Oakland Tribune and holder of the Congressional Medal of Honor; Hon. Homer R. Spence, associate justice of the Supreme Court of California.

Table No. 1: Dr. Alfred E. Baker, principal of the Castlemont High School; Rev. Calvin Barkow, rector of St. Paul's Episcopal Church; Mr. Thomas Caldecott, of the board of supervisors of the county of Alemeda; Mr. William S. Briscoe, commander, Oakland Post, American Legion; Mr. Fed Cox, president, Hayward Area Chamber of Commerce.

Table No. 2: Mr. George C. Bliss, principal of the San Leandro High School; Rev. Howard C. Busching; Hon. Arthur W. Carlson, chairman of the Republican State Central Committee of the State of California; Hon. Laurence L. Cross, mayor of the city of Berkeley; Hon. Ezra W. Decoto, judge of the superior court.

Table No. 3: Mr. Paul C. Bryan, superintendent of schools of the city of Albany; Mr. Charles Crouch, president of Lucky Stores; Mr. Herbert W. Erskine, who is said to be the only living Democrat in Piedmont; Mr. Erskine, shake hands with Mr. Carlson at table 2. (The two gentlemen shook hands.) Dr. W. F. Fraser, wise master, Rose Croix, Scottish Rite; Mr. Robert H. Fouke, potentate, Aahmes Temple, Ancient Arabic Order Nobles of the Mystic Shrine; Mr. Charles Wade Snook, chairman of the Republican Party of Alameda County; Hon. James G. Quinn, judge of the superior court.

Table No. 4: Hon. O. D. Hamlin, Jr, judge of the superior court; Mr. Harry L. Kingman; Hon. Thomas O. Knick, mayor of the city of San Leandro; Mr. J. Longwell, general manager, East Bay Utilities; Mr. O. B. Paulsen, superintendent of the Hayward Union High School; Mr. Floyd Sparks, publisher of the Hayward Review.

Table No. 9: Mr. Will W. Green, principal of the Technical High School; Mr. J. D. Holstrom, chief of police of the city of Berkeley; Mr. James B. Kaney, of the California State Council of the Knights of Columbus; Hon. Harold Jacoby, judge of the superior court of the county of Contra Costa.

Table No. 10: Hon. Ralph Hoyt, district attorney of the county of Alameda; Mr. Elwin LeTendre, principal of the Berkeley High School; Joseph A. Moore, Jr., president of the Moore Drydock Co.; Mr. G. C. Pettygrove, director of the Berkeley Community Chest; Mr. Clay Meinheit, fire chief of the city of Berkeley.

Table No. 11: Hon. Benjamin C. Jones, judge of the Superior Court of Lake County, now sitting in the county of Alameda; Mr. E. D. Moody, superintendent of the Southern Pacific Co.; Mr. Thomas L. Nelson, superintendent of schools of the city of Berkeley; Mr. Robert R. Porter, of the Berkeley Community Chest; Mr. Sidney Snow, director of the Alameda County Zoological Gardens; Mr. Harold Johnson, principal of the Emeryville High School; Mr. Jim Ritch, publisher of the Hayward Journal.

Table No. 12: Col. A. Hubbard Moffitt, Jr.; Mr. Theo J. Negby, superintendent of schools of the city of San Leandro; Mr. W. H. Park, division manager of the Pacific Gas & Electric Co.; Mr. Herman A. Spindt, director of admissions, University of California; Mr. F. L. Van Fleet, venerable master of the Oakland Scottish Rite; Judge Harry W. Pulcifer.

Table No. 13: Mr. William R. Odell, superintendent of schools of the city of Oakland; Mr. J. Munroe Warner, director of the East Bay Fellowship; Hon. S. Victor Wagler, judge of the Superior Court; Capt. S. J. Michael, United States Navy, Commanding Officer of the Naval Air Station, Alameda; Col. J. Clayton Orr; Hon. Francis Dunn, Jr., a member of the California Legislature.

Table No. 14: Mr. John Soelberg, principal of the McClymonds High School; Mr. C. W. Mangum, of the Western Pacific Railroad Co.; Hon. George P. Miller, Congressman from the Sixth California Congressional District; Mr. Bernard Witkin, reporter of decisions for the California Supreme Court; Mr. William J. McGuinness, president of the Catholic Social Service; Mr. Walter Gordon, of the State Adult Authority; Mr. Lewis Drucker, of the State Adult Authority and past president of Glendale Lodge, B'nai B'rith.

Table No. 16: Col. Raymond R. Ribal, president, East Bay Chapter, Reserve Officers Association of the United States; Mr. H. E. Stone, dean of students, University of California; Mr. Ralph T. Wattenburger, superintendent of the Livermore Union High School District; Col. Stanley Grogan, United States Army, Deputy Chief of Staff, Sixth Army; Col. W. C. McMahon, United States Army, Deputy Chief of Staff, Sixth Army.

Table No. 17: Mr. Paul W. Pinckney, principal of the Oakland High School; Mr. Vernon L. Goodwin; Mr. J. M. Bryan, principal of the Alameda High School; Mr. Clarence Bulwinkle.

Table No. 18: Mr. Emmett Copeland, superintendent, Industrial Activities of the Blind for Northern California.

Mr. FRIEDMAN. Tonight B'nai B'rith is commemorating the one hundred and sixtieth anniversary of the formation of the Constitution of the United States. B'nai B'rith has been called the oldest and largest Jewish service organization in the United States. It is true that B'nai B'rith is 104 years old, but we are not really old, for what is 104 years to a people who have a recorded history of over 3,500 years? With a membership of over 325,000, B'nai B'rith has lodges and chapters in practically every city in the United States. But age and size are not the determining factors in the value of an organization.

B'nai B'rith has long recognized that the destiny of its people is one with those who seek to maintain human freedom. Jewish opposition to dictatorship long antedated Hitler and Mussolini. Centuries before language knew the terms "communism," "fascism," and "nazism," the Jewish people were historically the champions of human liberty. The Maccabees of old were the predecessors of Washington and Bolivar and of many of those great personalities who have produced the American tradition.

We Jews have been in this country a long time, nearly 300 years. You remember that the first organized group of Protestants came over in 1620 under William Bradford, and 14 years later George Calvert, Lord Baltimore, established the first Catholic colony in what is now the State of Maryland. Just a few years later, 1653, the first group of Jews landed on these shores, so that within the short space of one generation all of these various groups became part of our country.

During the next 300 years, wave after wave of Protestants, Catholics, and Jews from all parts of Europe came here and all of them assisted in the building up of our country and the maintaining of our American ideals. It is hardly necessary for me to mention that men of our faith have performed their share of the work. From Asser Levi, the sturdy leader of that first band of Jews in 1653, to Benjamin Cardozo, of the United States Supreme Court; from Haym Salomon, who gave his entire fortune that the cause of the American Revolution should succeed, to Oscar Straus, who was a member of Theodore Roosevelt's Cabinet; from Col. David Salsbury Franks, aide to General Washington, to Commodore Uriah P. Levy, who was instrumental in the abolition of flogging in the United States Navy, to Gen. Maurice Rose, the son of a Denver rabbi, who died in action in the recent World War, men of our faith have participated to the full measure in the life of our country. And what is just as significant is the fact that in every war of the United States, as privates in the ranks of the Army and as seamen on the decks of the Navy and in all branches of civil life as ordinary humble workers, there was always found their proportionate share, bearing their proportionate burden.

Our country means something to all of us. It means, among other things, that our Constitution is big enough and broad enough to protect every man in the right to his faith. If our country is to live—and it will live—then the fountain springs bearing the pure waters of liberty must not be defiled with the poison of hate, must not be covered with the slime of proscription, must not be polluted by any spirit of intolerance. [Applause.]

President's Message of February 2, 1948

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

FEBRUARY 4, 1948.

Hon. J. H. DAVIS,
Governor, State of Louisiana,
Baton Rouge, La.:

The President's message to Congress on February 2 was a shock to every true southerner. It is now time for every true southerner to stand up and be counted and to take whatever steps necessary to defend and protect our southern heritage. The legislation that the President advocates is fast materializing in the South. It is beyond the conversation stage. It is becoming a reality. The southern leaders have been asleep too long. It is now time to wake up and let the President and the Democratic Party know that we southerners have principles that we will not sacrifice nor will we tolerate any further encroachment upon our sacred southern heritage and rights. The point in his message asking for an FEPC law is equally as vicious as the several other points. It would be more honorable for me to resign and forfeit my seat in Congress than to remain dormant on this vital issue and all of us who have been trusted and elected to public office by the people of our respective districts and States should be willing to make any sacrifice necessary to head off what will be a catastrophe never before equaled or surpassed in the South should the President succeed in getting his proposed legislation enacted into law. Won't you get busy, Governor Davis, and lend your best efforts in this great struggle to protect our sacred southern rights and heritage.

OTTO E. PASSMAN,
Member of Congress.

Admission of Displaced Persons to the United States

EXTENSION OF REMARKS
OF
HON. FRANK L. CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

BOSTON, *January 24, 1948.*

DEAR MR. CHELF: I wonder if you still remember me. I was the physician of the Latvian Displaced Persons Camp "Insula," Berchtesgaden, Germany, which you inspected last fall. As you so kindly suggested that I should write to you in case I came to U. S. A., I am taking the liberty to write you now.

I had some hopes then to enter U. S. A. because my parents-in-law were already there, but I had no idea that I would come so soon. I came over last December together with my daughter and my wife who is a physician too. Knowing that Boston is a great university center we decided to come here. We understand that we have to pass the State board examination before we will become physicians here. That is our aim. But meanwhile we are working in a line which needs great help—we are domestic helpers in a family in Boston. We are saving money for the future and working hard on our English.

We are so grateful to America who gave us new hopes, future and hopes. Now we understand why everybody in America is so happy, proud of his country, and contented. After these years of persecution, desperate and hunger, we realize how nice it is to live in a free and rich country.

My sister-in-law, Mrs. Austra Kondrats, who came over 7 months before, is in Boston also. She is a dental surgeon, but to become a dental surgeon here she has to go to dental college for 2 more years, as it is requested by law for all foreign dentists. She is working in a family near Boston, saving money and hoping to enter Tuft's College Dental School next fall. Her husband, Ganis Kondrats, is still waiting for his quota number in the same camp we were in Berchtesgaden and is employed by IRO as a medical assistant. As Austra got her quota number first she had to come over alone for she did not want to lose the opportunity to enter America as soon as possible. Austra is very anxious to have her husband soon with her, but it seems that she will have to wait a long while if the Latvian quota number will not be enlarged.

As Ganis Kondrats is waiting for the possibility to enter U. S. A., so are waiting many thousands of people who are looking toward U. S. A. with big hopes and prayers. They are live people in darkness who are waiting for the sunshine. They have only one prayer, God, do not let the big nations forget that we are people who have only one desire—to live, to work, to fulfill our mission as human beings.

Without any hope, without seeing any future for them, these intelligent people will be lost to mankind. They are waiting with trembling hearts for the Congress session about them. Pray help them.

Yours truly,

BORIS KLASONS.

Segregation of Races in Washington, D. C.

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I herewith include a copy of a resolution passed by a distinguished ladies' organization of the District of Columbia, the District of Columbia Federation of Women's Clubs, which takes issue with the outrageous recommendations of the President's obviously prejudiced Civil Rights Committee:

RESOLUTION OPPOSING THE IMMEDIATE ABROGATION OF SEGREGATION OF WHITES AND NEGROES IN WASHINGTON, D. C.

INTRODUCTION

A careful study of that portion of the report of the President's Committee on Civil Rights, pertaining to the District of Columbia, made by the Department of Legislation of the DCFWC revealed a number of misleading and inaccurate statements, which on the whole give a distorted picture of racial conditions in the District of Columbia.

Samples of these are as follows:

1. In the second paragraph of the Chapter on the District of Columbia, the report states that Washington, D. C., "is the point at which all public transportation into the South becomes 'Jim Crow'." The inference is, by use of the word "becomes" that the city of Washington practices Jim Crowism, whereas the report should state that Washington City is the last station, going from North to South, which does not practice segregation in transportation. (P. 89.)

2. The report states that the Capital Transit Co., during the war would not employ qualified Negroes as operators. Whereas, the truth is that it was the union member employees who refused to train Negro applicants for jobs in the streetcars. (P. 93.)

3. The report states that "Negro schools are inferior to white schools in almost every respect." This is not true. Qualifications and salary scales for teachers are identical; all new construction and equipment are identical in quality; such inadequacies as exist from time to time in plant facilities are common to both white and Negro areas. (P. 90.)

Negro children have increased to 47 percent of the school population since 1940, hence Negro schools are more crowded because the city has been unable to secure the necessary materials for school construction. But recently five white schools have been transferred for the use of Negro children temporarily until new schools can be erected.

4. The report states that "Negroes are increasingly being forced into a few overcrowded slums." This is not true. In fact there is today a larger area of the District of Columbia available to Negroes for housing than ever before. Since 1940 more new housing has been built for Negroes than for

whites, in proportion to their respective population. (P. 91.)

In the last 20 years, moreover, the Negro population has been moving into white areas and have taken over a large portion of the central residential area of the city, such as Logan Circle, Lincoln Park, Bloomingdale, Columbia Heights and the Kalorama area. None of these areas could be classified as slums, when taken over. But the neighborhoods have deteriorated already, since occupied by Negroes, because a low economic level means low maintenance, and overcrowding by large families leads to destruction.

5. The report states that the Negro "is refused service in downtown restaurants, he may not attend a downtown movie or play and he had to go into the poorer section of the city to find a night's lodging." Negroes can find restaurants and movie theaters all along U Street NW., from Eighteenth to Seventh, and down Seventh from U to K Streets. The "downtown" part of the city referred to by the report is made up of white merchants who naturally cater to white customers and who do so because they must secure a return on their investments. There are moreover several Negro hotels operated by Negroes for Negroes. There is neither law nor private covenant to prevent the establishment of any legal business enterprise on a nonsegregated basis anywhere in the commercial areas of the city. The only thing which prevents such establishments is lack of initiative and lack of the possibility of success. (P. 95.)

6. Under health services the report states among other things that "4 of the 12 private hospitals in the city do not admit Negro in-patients," which of course implies that 8 of the 12 hospitals operated by and for whites, at private expense, do maintain accommodation for Negroes. Thus Negroes practically monopolize all public-hospital facilities and also share private facilities maintained at white expense. (P. 93.)

The following resolution was therefore submitted by the Department of Legislation of the DCFWC, for the consideration of its Executive Board, pointing out the discrepancies, and opposing the immediate abolition of segregation of the whites and Negroes in the District of Columbia.

The resolution was duly seconded and carried as amended to provide that a copy be sent to every Member of Congress.

"Whereas most of the criticism, ascribed to the District of Columbia, by the report of the President's Committee on Civil Rights, is laid at the door of segregation;

"Whereas we feel that the report gives an unfair and misleading picture of conditions in the District of Columbia;

"Whereas we oppose the immediate abrogation of segregation of the races in the District of Columbia, as proposed in the report, as unwise. Radical social changes cannot be forced in this way. Such changes come either by revolution or by evolution. The latter is the American way. In the last 80 years since the Negro race was freed from slavery in this country it has made marvelous progress, under the principle of segregation;

"Whereas we feel that such a radical change in the District of Columbia should not be forced upon the citizens here unless national representation, as recommended in the report, and as endorsed by the District of Columbia Federation of Women's Clubs for 20 years, is granted, and the people of the Nation's Capital has elected representatives in the House and Senate to speak for them when legislation affecting their most vital interests is being discussed: Therefore be it

"Resolved, That the District of Columbia Federation of Women's Clubs deeply resents the many misleading and inaccurate statements made in the report and opposes the upsetting of established customs and practices of the District of Columbia, which would be brought about by the immediate abrogation of segregation; and be it further

"Resolved, That a copy of this resolution be sent to the President of the General Federation of Women's Clubs and to the President of the United States and that a copy be sent to every Member of Congress."

Respectfully submitted by Anna Kelton Wiley (Mrs. Harvey Wiley), chairman, department of legislation, District of Columbia Federation of Women's Clubs.

Work Stoppages Under Taft-Hartley Act

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. MADDEN. Mr. Speaker, the National Association of Manufacturers, the godfather of the Taft-Hartley Act, is continuing its sponsorship of misleading propaganda regarding the effectiveness of the Taft-Hartley Act. Numerous pamphlets and endless newspaper and radio propaganda is being sent out in an effort to resell this anti-wage-earner law to the American people.

I have read and listened to a great deal of this misinformation recently and at no time has the NAM informed the public that 85 percent of the major employers in the Nation stampeded to sign new contracts immediately before the Taft-Hartley law went into effect August 22, 1947. When they are reviewing the effectiveness of the Taft-Hartley Act, they must exclude these millions of employees whose unions are already under contract and will not come in contact with this law until their contracts terminate 6 months hence. The Public Affairs Institute—founded by the Brotherhood of Railroad Trainmen—published some interesting information on work stoppages involving noncontract unions during the months since the Taft-Hartley law went into effect. I am hereby submitting this report for the information of the Members of Congress.

WORK STOPPAGES UNDER TAFT-HARTLEY ACT

Between August 22, 1947, the date on which the Taft-Hartley Act became effective, and December 31, there were 645 work stoppages reported to the Department of Labor. In the 8 months preceding August 22, the number of work stoppages totaled 2,955.

Since Taft-Hartley there have thus been 161 work stoppages per month as compared with 369 work stoppages per month in 1947 before Taft-Hartley.

Presto, the arguments of Senators TAFT and BALL in pressing passage of the labor bill were right. Apparently, the Taft-Hartley law reduces the number of work stoppages, thereby proving a great benefit to workers themselves who lose less pay; to consumers who get their output without interruption; to management who have smoother production operations, and to owners who reap bigger profits.

Everybody gains from having the Taft-Hartley Act on the books. But do they? Let's take a good look at the facts and their meaning.

The last 4 months of the year are traditionally a period of fewer work stoppages. With the exception of 1940, this has been true of every year since 1927. That this trend was even more apparent in the year 1947, is due to factors other than Taft-Hartley.

Many unions and employers, fearful that the Taft-Hartley Act would upset satisfactory arrangements which were the results of years of building up mutually good contract conditions, hastened to get contracts signed before the act became effective. The Amalgamated Clothing Workers, for example, entered into a long-term 5-year contract just prior to the passage of the act.

SOME TREAD WATER WARILY

Many other unions and employers are treading water warily watching developments in the early administration of the Taft-Hartley law. This cautiousness is not to be interpreted as a newly achieved high level of labor-management harmony. Rather, it is a feeling-out stage when each side is becoming familiar with the meaning of the act while its administrators lay down the rules under which it will be enforced. During such a period risks are not taken; hence the work-stoppage figures are low.

What the number of stoppages will be after Taft-Hartley has been in operation a longer time no one knows now.

The present period may well be the calm before the storm. For the continued high cost of living has reduced the purchasing power of workers to the point that a new round of wage-increases demands is generally expected when contracts come up for consideration this spring. Then may come the test for Taft-Hartley and its effect on work stoppages.

On the other hand, if industry continues to make tremendous profits, this will probably tend to discourage it from precipitating any conflict. Nor must the effect of this year's Presidential election on the strike picture be overlooked.

It is apparent to any competent observer of labor-management relations that the passage of the Taft-Hartley Act represents an important stage in the continued fight by antiunion employers to liquidate labor's gain of the past quarter century.

A PARALLEL, THE AMERICAN PLAN

A noticeable parallel in the post-World War I period is worth recalling in this connection. In 1920, employers throughout the Nation were actively sponsoring the so-called American plan. This plan under the cloak of abolishing the closed shop had as its real purpose, as did previous open-shop crusades, the destruction of unionism. The American Bankers' Association piously proclaimed the right of every man "to work out his salvation and not be bound by the shackles of organization to his own detriment."

A similar strategy was used by the NAM and other antiunion groups in pressing the passage of the Taft-Hartley Act after World War II. In place of the American plan, wage earners now are provided with a bill of rights specially designed for them as set forth in section 7 of the Taft-Hartley Act guaranteeing their right to refrain from any or all union activities.

The drive to disorganize labor continues unabated. As in the past it operates under the guise of benefiting the worker. And the proof offered is such figures as those showing the reduction in work stoppages cited above. It is important, therefore, to be alert to read between the lines when presented with so-called evidence of benefits under Taft-Hartley.

Low strike figures by themselves are no indication of successful labor-mangement relations. There were extremely low strike figures in Hitler Germany; there are equally low strike figures in Stalin Russia.

Even in free America, it is hoped by its supporters that such measures as the Taft-Hartley Act may so weaken unions by their restrictive conditions and the numerous

costly lawsuits which they involve that they may not be able to resort to work stoppages when that last weapon of a free labor movement should be used to obtain rightful demands.

A decline in the number of strikes is a good sign only when it reflects a situation where conditions permit labor and management to sit down as equals at the bargaining table, there to resolve their differences on terms acceptable to both.

Transfer of Ships

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by joint maritime committee against ship transfers and Marshall plan, presented to Members of the Senate and the House on Tuesday, February 3, by members of the National Maritime Union, CIO, National Union of Marine Cooks and Stewards, CIO, and the Marine Firemen's Union—MFOWW—unaffiliated:

American seamen, backed by the entire labor movement, are unalterably opposed to the transfer of 500 ships to foreign countries under the Marshall plan. Not only will the Marshall plan wipe out 25,000 jobs for unlicensed personnel through these ship transfers but it would create widespread dissension throughout the world by direct interference in the affairs of other countries and thus open wide the road to world war III.

American seamen, together with their brothers in the armed forces, did not fight in the last war to prepare for the destruction of jobs and security and to set the stage for an even more catastrophic war.

The national council of the National Maritime Union adopted a resolution at its last meeting which correctly asserted that "the Truman and Marshall plans are to the unsettled and war-weary peoples of Europe what the Taft-Hartly Act is to the American people." M. C. & S. and M. F. O. W. W. took similar action.

We know that the Taft-Hartley Act is designed to cripple and ultimately destroy organized labor in America.

The bipartisan Marshall plan is designed to Taft-Hartleyize the world.

In the words of the NMU national council, "Food has become a weapon for forcing the hungry people of the world into line with the aims of Wall Street—a la Herbert Hoover."

We agree with Henry Wallace that "Those whom we buy politically with our food will soon desert us; they will pay us in the base coin of gratitude and then turn to hate us because our policies are destroying their freedom."

We are witnessing today in Greece, where the reactionary government has decreed the death sentence for workers who strike for better conditions, the full and shocking meaning of the Marshall plan. This plan ties a lot of political strings around the urgent food and relief needs of our former allies. And in so doing it is bypassing the United Nations and setting up a bloc of western powers that will do the reactionary bidding of American big business.

American seamen will be the first to be hit by the Marshall plan through the transfer of 500 ships. Representative WILLIS R. BRADLEY last month condemned the plan as being "the funeral of an adequate merchant marine." If Congress approves the transfer of these 500 vessels, it will mean the destruction of the American merchant marine. It will mean that the democratic people of Europe will be enslaved in an imperialist yoke in which their democratic rights and aspirations will be ruthlessly crushed.

To date, more than 1,000 ships involving 50,000 jobs have been transferred to foreign flags. The 16 European nations which will participate under the Marshall plan have a greater tonnage of cargo vessels today than before the war. The transfer of an additional 500 vessels would further increase their present tonnage over prewar levels. In effect, the Marshall plan will reduce America to a fifth rate maritime power.

We oppose the sacrifice of our merchant marine on the altar of American imperialism. We favor full relief to the hungry people of Europe without political strings and with relief cargoes carried in American bottoms.

We favor the Wallace plan of a world relief program administered by the United Nations on the basis of human need and not on political considerations.

We demand the elimination of all policies that will lead to war, including the Marshall plan, and the building of greater unity among the United Nations to assure world peace.

Rationing and Price Control

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. LECOMPTE. Mr. Speaker, the Iowa Farm Bureau Federation last week reaffirmed its position on rationing and price control and adopted a resolution which I desire to bring to the attention of the Congress. Under leave to extend my remarks in the RECORD, I include therein the resolution which sets forth the position of the board of directors of the Iowa Farm Bureau Federation:

We, the members of the board of directors of the Iowa Farm Bureau Federation, reaffirm our position and that of the voting delegate body of the Iowa Farm Bureau Federation in regard to rationing and price control.

There has been agitation by certain segments of our society, some Members of Congress, and the administration for price control and rationing of meats and other foods.

The American people partially accepted price control and rationing during wartime as an emergency but rejected it as a peacetime measure as evidenced in the period following the close of the war. Therefore, with the present consumer demand and buying power, the general public will not comply with a peacetime rationing program.

Rationing and price control will disrupt the livestock and food economy, making less meat available over a period of time. It destroys the incentive to produce and causes meat to be channeled through black markets, making it less available through legitimate trade.

It is generally agreed that rationing of any or all essential commodities will not effectively control inflation without adequate controls of credit, wages, and prices in general. Therefore, the attempt to solve our economic problem by the rationing of one commodity, such as meat, is preposterous.

We object to the livestock industry being used as a political football in this election year. The uninterrupted production of food is of prime importance.

A Talk to American Citizens—New and Old

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid talk given recently by the Honorable Charles E. Wyzanski, Jr., of the United States district court in Boston, Mass., to 80 newly naturalized citizens that he recently admitted into citizenship:

A TALK TO AMERICAN CITIZENS (NEW AND OLD)

The COURT. Fellow Americans, by virtue of the authority vested in me under Article III of the United States Constitution and under the Nationality Act of 1940, I hereby declare that each of you who has taken the oath of allegiance has become a citizen of the United States of America.

There is no prouder title in the world than to be a full partner in this great democracy, and I congratulate each one of you on what is one of the most important days in your lives, and an important day for this country.

This country has always known that it owed a great debt to persons born abroad who voluntarily came to the United States and became citizens. Many years ago, in 1789, this country adopted as its motto three Latin words which, when you leave the courtroom, you will find on every coin in your pocket, whether it be a penny, a nickel, a dime, it does not matter. Those three Latin words are E pluribus unum, which translated into English mean "From many one." Originally, the motto stood for the idea that from many separate colonies one American Union was made. But the motto has a deeper meaning today. From many different lands, from people of many different religious faiths and people of many different colors, one American people has been made. And you are now a part of that people.

Did you come from France? Then you may think with pride of Lafayette and Rochambeau, and the host of Frenchmen who helped to make this country free.

Did you come from England? Then you may think with pride that the ancestors of Washington and of Jefferson and of Lincoln came from England.

Did you come from one of the British Dominions or Colonies? Then you may think with pride that the first great Secretary of the Treasury of the United States, Alexander Hamilton, was born in a British colony and came to this land.

Did you come from Switzerland? Then you may think with pride that another great Secretary of the Treasury, Albert Gallatin, was born in Switzerland and came to the United States.

Do you come from Scandinavia? Then you may think with pride that the inventor of the ironclad battleship, John Ericsson, came from Scandinavia, and here invented the instrument which made it possible for the North to prevail and preserve the Union in the great War Between the States from 1861 to 1865.

Do you come from Ireland? Then you may think with pride of John Barry, who came

from Ireland in the eighteenth century and who is called the Father of the American Navy.

Did you come from Italy? Then you may think with pride that the man who was for three terms mayor of the largest city in this country, and head of the United Nations Relief and Rehabilitation Administration, Mayor LaGuardia, came of a father whose home was Italy and a mother whose home had been the Balkans.

Do you come from Poland? Then you may think with pride of General Pulaski, the great hero in whose honor the bridge between New York and New Jersey has been named.

Do you come from Germany? Then you may think with pride of the senior Senator of the State of New York, Senator Wagner, born in Germany and author of some of the most progressive legislation in this country.

Are you a person of the black race? Then you may think with pride of Booker T. Washington, and Frederick Douglass, and George Washington Carver, three men of the black race who stand high on the roll of American educators.

Are you a Jewish refugee from oppression? Then you may think with pride of Albert Einstein, who, like yourself, was naturalized in a United States district court after coming here as refugee from oppression.

It makes no difference from what land you came, nor what church you go to, nor what is the color of your skin; people of your background have helped to make America what it is today. Your neighbor may have come from a different land, and may go to a different church, and may have a different color skin. But remember, people of his background have also helped to make America what it is today. And your first duty as American citizens is to be understanding, and neighborly, and tolerant.

But you have other duties, now that you are American citizens. You will soon have the opportunity to vote in local and State and in national elections. As a judge, it is none of my business for whom you vote, and I am not trying to advise you directly or indirectly for whom you should vote. But I am deeply concerned that when you do go to the polls to vote, you shall know who the candidates are and on what platforms they stand. It is your business to cast an intelligent vote. For remember, you are citizens; your vote is just as important as anyone else's. You are truly a part of a society in which the Government is not only of the people, but by the people and for the people, and you are part of the people by whom this country is now to be governed. You will have a chance not only to vote, but perhaps even to hold office. And even if you do not, perhaps your children and other members of your family will hold office.

Whenever I speak in this particular courtroom at a naturalization session, I am mindful of the board behind me, and the list of names which are on that board. They probably are unfamiliar names to you, but they are a list of the persons who have served on the Supreme Court of the United States and who at the time of their appointment were living in the first circuit, in New England.

The names start with Cushing and Story, on my right, your left, and go all the way down to Holmes and Moody and Brandeis. And yet, the list is not quite complete, for since the time that list was erected, another man living in New England at the time of his appointment was put upon the Supreme Court of the United States. And that appointee is a man who came from Austria when he was a little boy, and when he was 12 years of age his parents were naturalized, just as you have been naturalized, in a United States courtroom. He stands as the symbol of opportunity which opens up before you and your children.

Of course, a democracy is not only a place where one has an opportunity to vote and an opportunity for office. In a democracy the people in their day-to-day efforts contribute to the morale of the country. Upon you rests a great responsibility. Never has it been better phrased than by an ancient Greek, Pericles, speaking more than 2,000 years ago, who said at the conclusion of the first year of the war between ancient Athens and ancient Sparta:

"The secret of happiness is liberty.
And the secret of liberty is courage."

May you have in the day to day affairs of this country the courage which will preserve the liberties which we regard as the secret of our happiness.

Message to Residents of Kassel, Germany

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. O'HARA. Mr. Speaker, Judge Joseph J. Moriarty recently made an extensive trip into Germany and during the course of his visit made a speech at Kassel, Germany, which has received consideration both in the German and American press. His explanation of our American principles of government was undoubtedly an inspiration to those in the troubled country of Germany, who I am sure are also grateful for the message of hope which Judge Moriarty has so capably expressed.

Under the leave to extend my remarks in the RECORD, I include Judge Moriarty's speech and newspaper comment in the Shakopee Valley News, Shakopee, Minn.:

HAIL JUDGE'S KASSEL TALK JANUARY 10—MORIARTY'S SPEECH WIDELY REPRINTED IN GERMAN NEWSPAPERS

A speech given to the citizens of Kassel, Germany, by Judge Joseph J. Moriarty was widely reprinted in the German press, it was learned this week.

Judge Moriarty, traveling in Germany at the present time, addressed a representative group in Kassel on January 10, shortly after his arrival in that country. The complete text of the speech is reprinted on another page of the Valley News.

His words were hailed as giving new courage to the German people as they are faced with the huge rebuilding task in that country.

During his stay in Germany the Shakopee judge has been visiting children's hospitals, boys' clubs, displaced persons camps, and has also addressed many civic and industrial groups.

He was scheduled this week to confer with the head of a German university, which in prewar days was considered one of the largest and most distinguished in Germany.

While in Europe he is visiting his son, Sgt. Pat Moriarty, presently on duty with the military government headquarters there. Judge Moriarty, while traveling as a private citizen with the full sanction of the American Government, is the guest of Gen. Lucius Clay, military governor of Germany.

SPEECH DELIVERED BY JUDGE JOSEPH J. MORIARTY TO THE CITIZENS OF GERMANY AT KASSEL, JANUARY 10, 1948

Acting as one free to act in a free country, I concluded to travel thousands of miles to visit my fellow men in this part of the world, and I assure you that I am pleased to be here so that I may be able to appreciate first-hand your problems. I came from the United States of America with full sanction of my Government for no other purpose than to convey to all the people of Germany, both young and old, the good will of the people at home and to visit my son, Sergeant Pat, on military duty here, and bring to him and all associated with him in the German youth movement the thanks and gratitude of the American people for their most commendable and worthy efforts in behalf of the well-being of the boys and girls of Germany.

I came in the name of liberty and justice, and I bring you nothing more than the earnest prayer of the people of my homeland for your future happiness and prosperity and for strength and courage and divine guidance to enable you and direct you, as a people, to lay wisely the foundations of a new and greater Germany, dedicated to liberty, justice, and the equality of men before law.

Men are born free, and men in every part of the world have an inherent and natural right to be free. Liberty comes from no man and no government. It is God-given. Freemen have a right to form a free nation, and nations have a right to be free. Take from the individual his liberty and rob him of his human dignity, and you reduce him to the station of a slave. Take from a nation its right of independence and freedom, and you reduce it to a vassal state, and you bind its people as the tyrant would bind his slaves.

From the beginning, the liberty for which men fought and died was liberty of thought—liberty of speech—liberty of conscience—liberty of action—liberty of all the human faculties, and from the beginning all reasonable men regarded the security of human freedom and the protection of the rights of men against the wrongs of others as the first concern of organized government.

Human liberty is the precious property of the individual. It is a property which is inalienable. It is a right which no man has the privilege to surrender to any power on earth. Without it, man is reduced to the state of a slave. His talents are useless. His urge to advance into a better and fuller life without hope. He lives, labors, and dies and his life work is simply the gain of his oppressor.

To protect man in the enjoyment of his liberty and to secure to him a proper station in the order of things and to enable him to fulfill the purpose for which he was created, society forms organized government which derives its just powers from the consent of the governed, ever controlled by the will and the dictates of the conscience of the people directly involved. The sole purpose of such a government is the general welfare of all the people and the full security of each. The society acting in such a process is not a select few or an ambitious and cruel leader but the whole collection of men. In such a government, the individual is safe in the full enjoyment of his liberty and the full enjoyment of life and has an equal chance with all other persons to advance to that state of prosperity, happiness, and peace of mind, which is the common birthright of men.

Man was not created to be ruled by the whims and fancies of another man, nor to serve the selfish interests of another individual, nor to be bound by the spoken words of a dictator. Man was created with a free will and a conscience to guide and direct that will, and man has a natural right to have his conscience and will play its proper part in shaping the course of the government which prescribes the standards of his civil conduct. Therefore, one of the functions of government is to carry into practice the dictates of the conscience and will of all the people who compose it, and such form of government is known to the world as a democracy. This is the form of government which I am a part of in America, and this is the form of government which I am ready to defend and protect to the end of my life. This is the form

of government which has the sanction of the conscience of the people of the world, and this form of government is in keeping with the planning of God for the regulation of the lives of men.

I will be among you for some short period of time during which I will visit life in this country as it battles with all the roughness of every environment in every section. I assure you I am an old and tired warrior in this sphere of human experience, for my trail so far in life led over the rocky road of adversity and hard knocks. I chose to travel this course because I found in it the true stimulus to the highest ideals of civilization.

I come from my own country as a messenger of good will and this I now impart to each and all of you with the fervent hope that in the light of this good will the Old and the New Worlds shall find a common ground for an ever-enduring peace.

Peacetime Military Conscription

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks, I submit herewith an editorial from the January 30, 1948, issue of the Pilot, published in Boston, Mass., in the interest of the Catholic Church in the archdiocese.

The editorial follows:

PEACETIME MILITARY CONSCRIPTION

The sponsors of the bill to draft 18-year-old boys for compulsory military service are greatly assisted by American suspicion of Soviet Russia's plans. Soviet Russia, palpably, has already inaugurated a cold war against the United States.

To some minds the conclusion from this is obvious—let us prepare! Remember Pearl Harbor? Well, let's not let that happen again! Let's conscript our youngsters; give them 6 months in an Army camp; then 6 months more in the National Guard, the Organized Reserve, or the Regular Army. Then see if the Russians won't behave more politely.

However, it is a point of those who oppose compulsory military service that the Russians will not be impressed. No one disputes that the value of mass concentration has lessened or disappeared. The emphasis, in the minds of the scientists who know most about the atomic bomb, should be on deconcentration. Better even than that, we should strive earnestly and prayerfully to prevent the possibility of turning either New York or Moscow into another Hiroshima. But, following through with the initial point, would 6 months of squads-right in an Army camp really entitle us to call the country prepared?

The opponents of compulsory military service want to play fair with the argument of those who favor the proposal. A man who knows even a little about the mechanism of the automobile he is driving has an advantage over the driver who knows nothing. It could be granted that compulsory military service would be worth something from the viewpoint of preparedness. But, how much? Enough to justify a revolution in our way of living? Enough to balance the other enormous debits?

Our philosophy as a people is dead against the "theirs-not-to-reason-why" mentality of the soldier. Demanding unity, but not uniformity, we have preserved and enhanced a genius of initiative. In this country, we believe in, to quote from General Eisenhower's magnificent statement, "the subordination of the military to civil power." Having viewed police states ancient and modern, our people feel no urge to copy their systems. And when military mores dominate a country's thinking and practices, emergency becomes permanent, marshal law becomes the routine code and in the name of "efficiency" democracy, even though its trappings and nomenclature have been preserved, becomes a body struck to the heart.

Many of our citizens retain vivid memories of their experience in the late war. They will not be impressed by the preachment that the camp will make a man of your boy. That's not the purpose of the training. The purpose is to produce an efficient killing machine. Traditionally the general really doesn't give a snap of his finger for other values. His job is to win wars, not to build character. Ask the ex-chaplains what they think of the argument that military service will make a man of your boy.

We who oppose peacetime military conscription find ourselves supported by distasteful allies. Our Communist friends are very ardently anticonscription.

But the paradox is simply explained. They see peacetime military conscription as a fist brandished against their first loyalty, Soviet Russia.

But there are enlightened, thoroughly American reasons for refusing Communists a chance to preempt a right position—which they espouse for the wrong reasons. Peacetime military conscription is an expensive, cumbersome method of achieving a purpose which could be better implemented by other methods. It represents an encroachment on our civilian liberties more radical than any attempted since the founding of the Republic—and, as such, is fraught with the menace of other encroachments. Lastly, peacetime military conscription exposes the adolescence of this country to moral hazards which are peculiar to the atmosphere of the camp.

Veterans' Training

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Brighton Blade of January 26, 1948:

MANY VETERANS TAKE TRAINING—ONE VETERAN IN FOUR NOW ENROLLED IN PROGRAM

The number of veterans in institutional and on-the-job training in the VA branch 13 area reached an all-time high at the end of last December, VA reports.

Figures released this week show a total of 61,976 ex-GI's in New Mexico, Colorado, Wyoming, and Utah receiving instructions or training under the provisions of the Servicemen's Readjustment Act (GI bill) and Public Law 16. This number represents 23.7 percent of the estimated War II veteran population of 261,000 in the four-State area, or nearly one veteran in every four.

MOST IN COLLEGE

Most of these veterans are enrolled in colleges and universities, while others are attending business, trade, and commercial schools. In addition, nearly 14,000 are learning a trade or profession in State-approved establishments or receiving practical training on the farm.

For the entire Nation, 19.1 percent of the War II veteran population of 14,625,000, VA said, are receiving educational or training benefits administered by the VA.

TWENTY-SIX AND FOUR-TENTHS PERCENT IN COLORADO

The number of veterans in training on December 31, 1947, by States and the percentage of the estimated War II veteran population for that State follow: Colorado, 31,195 or 26.4 percent; Utah, 17,263 or 25.8 percent; New Mexico, 9,746 to 19.5 percent, and Wyoming, 3,772 or 14.5 percent.

Statement of L. Douglas Meredith

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted me, I am including in the RECORD the testimony of L. Douglas Meredith, executive vice president of the National Life Insurance Co., Montpelier, Vt., before the Joint Committee on Housing on January 15:

STATEMENT OF L. DOUGLAS MEREDITH, EXECUTIVE VICE PRESIDENT, AND CHAIRMAN, COMMITTEE ON FINANCE, NATIONAL LIFE INSURANCE CO., MONTPELIER, VT.

The CHAIRMAN. Mr. Meredith, it is nice of you to make this trip down here. We are very grateful to you, and I know we are going to absorb a lot from your statement, because we have found in going about that you are quite an authority on this subject.

Mr. MEREDITH. My name is L. Douglas Meredith.

I hold the office, Mr. Chairman and gentlemen, of executive vice president, and chairman of the committee on finance, of the National Life Insurance Co., Montpelier, Vt., and I am most appreciative of the invitation to appear here to discuss this matter with you.

While the National Life Insurance Co. is not a large company, we have made over a quarter of a billion of FHA loans and also about 10,600 GI loans of all kinds.

I am also chairman of the subcommittee on postwar housing of the investment research committee, which is a joint committee of the Life Insurance Association of America, and the America Life Convention.

I believe I have close enough contact with the other companies to have a fair consensus of their views on some of these points.

These organizations have a combined United States membership of over 209 companies, with resources approximately $49,000,000,000, held in the interest of 75,000,000 policyholders and their beneficiaries. A recent survey made by the Federal Reserve Board shows that 74 percent of all families with incomes between $2,000 and $3,000 own life insurance. The life-insurance companies, consequently, have a primary interest in the same broad mass of people in which your committee is interested.

The subject your committee is considering has many phases, ranging from the financial to the technical, and because of the limitations of time, much of the emphasis of this presentation will be on the financial aspects.

The legal reserve life insurance companies at the end of 1947 had $8,500,000,000 invested in mortgage loans. In 1947 alone, mortgage loans owned by these companies increased $1,300,000,000, the major portion of which

was for residential purposes, largely for veterans. The life-insurance companies hold $800,000,000 of GI loans and $1,400,000,000 of FHA loans. Some companies have constructed or are constructing large-scale rental housing projects, investment in which on December 31, together with outstanding commitments, was over $300,000,000, providing approximately 40,000 family units. That would house a city about the size of Albany.

These figures should leave no doubt in anyone's mind as to the extent of the interest of the life-insurance companies in housing.

Solution of today's housing problem must begin with analysis of the fundamentals of high prices and the factors which have caused them. The problem of inordinately high prices is one of a scarce supply of goods and services in relation to a strong demand on the part of the general public. This demand is backed by a tremendous volume of purchasing power which, if put into effect, could further increase prices.

The Federal Government has been pursuing a "soft," or "easy," money policy, and this has resulted in a tremendous increase in the country's money supply. Demand deposits and currency in circulation increased more than two and one-half times during the period of war financing.

With your permission, I would like to point to this graph. That is taking into account solely demand deposits and currency in circulation which increased almost three times from 1940 to 1947.

We have plotted on here the Federal Reserve Board industrial production curve, and the spread between those is the inflationary gap which is causing basically high prices.

This money supply increased from less than $40,000,000,000—you will notice that that is a percentage chart and this shows a percentage charge but dollar-wise the increase was from less than $40,000,000,000 in June 1940 to $106,000,000,000 at the end of June 1946.

Savings deposits which in June 1940 were $27,000,000,000 almost doubled in the same period. In addition, the general public, exclusive of financial institutions and Government agencies, accumulated holdings of Government securities in the amount of $100,000,000,000, or nearly seven times as much as the holdings in June 1940. These Government securities in the hands of the public, and particularly the E, F, and G bonds, are about the equivalent of money because they are so readily convertible into cash.

The Board of Governors of the Federal Reserve System estimated that at the end of 1946, individuals and business concerns held about $223,000,000,000 in the form of currency, demand and savings bank deposits, and Government securities, or more than three times the prewar total.

This chart is made the same as the other. This is the percentage scale, and this shows the years 1940 through 1946. This green line shows the liquid assets of individuals and businesses.

That includes only currency, demand, and savings deposits and Government securities.

Mr. SUNDSTROM. All Government securities?

Mr. MEREDITH. All Government securities, all types which individuals might hold.

That does not take into account individual holdings of shares in savings and loan associations, listed securities, stocks, or bonds, and a great many things of that kind.

If you will take this curve you will see the percentage figures there—they were three times the prewar total, a total of $223,000,000,000.

If we take the Federal Reserve Board curve of industrial production again, here is the spread between this large sum of liquid assets held by the public and the goods being produced.

Mr. SUNDSTROM. You were talking about the E, F, and G bonds which are practically the same as cash.

Mr. MEREDITH. Yes.

Mr. SUNDSTROM. Isn't it almost a reality that the Government is allowing these people to invest their funds in call money at better than call-money rates?

Mr. MEREDITH. I think that is a fair statement.

Mr. SUNDSTROM. And it is an inflationary pressure that could be exerted at almost anytime?

Mr. MEREDITH. That is what we are trying to demonstrate with these two charts.

Mr. SUNDSTROM. When the Government is saying it is going to start a further campaign to sell those bonds through pay-roll deductions, isn't it doing something which will increase the inflationary pressure sometime in the future?

Mr. MEREDITH. That is the point.

Mr. SUNDSTROM. If they were sold as bonds to be held until maturity, I can see where they would be deflationary, but when they are allowing them to be turned in at anytime, it seems to me like they are inflationary.

Mr. MEREDITH. They are tantamount to cash in the hands of any of us.

The figure probably rose slightly in 1947. In addition, current national income is at a record level, running at a rate of $200,000,000,000 per year, or 2½ times the 1940 figure.

In the face of the demand growing out of this enormous supply of money, production is at a point beyond which further growth will necessarily be slow. Commissioner Ewan Clague, of the Bureau of Labor Statistics, stated recently that American industry as a whole is producing at about the maximum level and a longer workweek. According to the Board of Governors of the Federal Reserve, the physical volume of construction of all kinds, including residential building, is close to any previous peak, and further expansion is now being retarded by shortages of essential labor and materials.

The facts just stated are the basic causes of the price rise which this country has experienced.

You understand that I might spend much time on that.

Mr. SUNDSTROM. And I might say it is the primary cause for our whole inflation, not only housing.

Mr. MEREDITH. Oh, yes, sir. I repeat that the facts just stated are the basic causes of the price rise which this country has just experienced.

One of the most important facts which emerges is that excessively easy mortgage credit now serves only to accelerate the rise of prices and has been a significant factor in the rise of 25 to 35 percent in the prices of houses during the past 2 years. It is widely agreed that easy mortgage credit, with the resultant rise in housing costs, has aggravated the general spiral of inflation.

Mr. SUNDSTROM. Even though the FHA may have increased production in some cases yet has also added to the inflationary cost?

Mr. MEREDITH. Oh, yes, sir; whether FHA or any type, an uninsured loan, easy credit, has aggravated inflation.

The amount of home-mortgage debt has increased during the past 2 years by more than $9,000,000,000 and the rate of current mortgage lending has risen from about $550,000,000 per month to about $1,000,000,000 per month. Terms of lending have been substantially easier, as compared with the prewar. A large proportion of recent loans has been made on an installment basis at 4-percent interest for periods from 20 to 25 years. The bulk of these loans has been made for a very high percentage of current sale price. As Mr. Marriner Eccles, Chairman of the Board of Governors of the Federal Reserve System, pointed out in a statement on November 25 before the Joint Committee on the Economic Report—

"Since more than half of the current unprecedented volume of mortgage lending is sponsored by the Federal Government under legislation enacted by Congress, the Government must assume much of the responsibility for any harmful effects of this type of lending."

Mr. SUNDTROM. Is it your belief then that the FHA, although it serves a good purpose, should be given very careful consideration as to perhaps making their requirements a little more stringent, for instance, as to the length of the loan, the interest rate, or from the point of view of the down payment?

Mr. MEREDITH. I would say, sir, that at this time all types of mortgage lending might well give thought to the length of the term of the loan, the interest rate, and to the down payment.

And may I say that I think no one is more enthusiastic about FHA as I am. Insofar as some of the loans now being insured by FHA, and we have a lot of them in our portfolio, they have been made on a current cost basis, and I believe, if we could get back near to the basis on which they were insured under title II without doing any harm, it would do a lot of good to the general situation.

Mr. Eccles also stated:

"Easy credit has greatly increased the effective demand for both old and new housing far beyond the supply, and this has greatly inflated prices."

To continue quoting:

"If the easy-credit situation were producing a substantial additional volume of housing at supportable values in the long run, it would be justified, but because of the limitations of labor and materials, it produces, instead, a dangerously inflated market which cannot be sustained for both new and old houses. I believe that by curtailment of credit for housing in closer relationship to the supply of labor and materials the price trend would be reversed and a market for houses assured over a long period of years."

This argument by Mr. Eccles, and his recommendation for tighter housing credit, has been supported by Senator TAFT, the Federal Reserve Advisory Council, the Chairman of the Federal Deposit Insurance Corporation, the Comptroller of the Currency, and others. It has been one of the most generally accepted arguments made in the current congressional discussion of anti-inflationary measures. I believe it merits very serious consideration by your committee.

Mr. SUNDSTROM. Is it your opinion that if credit restrictions are made a little more severe that will stop, perhaps, the acute demand for new houses, and therefore might be instrumental in bringing the price down?

Mr. MEREDITH. I think it can help; yes, sir. At the same time, we must keep in mind the tremendous inflationary potential.

Mr. SUNDSTROM. Which is the primary cause of our inflation?

Mr. MEREDITH. Yes, sir.

With your permission, I would like to say just a few words about interest rates and their relation to this whole problem.

The operation of natural forces or the action of Federal fiscal and monetary authorities, or a combination of both, have resulted in the past 6 months in a sharp up-turn in interest rates. At first glance, coming in the wake of the lowest interest rates in history, this circumstance may seem somewhat alarming. But in reality it means that a brake upon inflation is taking effect. If the monetary authorities continue their recent steps in the direction of contracting the supply of money, or at least preventing further expansion, there is strong reason to believe that the policy will operate to curtail inflation. Similar policies have proved effective in the past. As a matter of fact, a rise in interest rates at the present time has a salutary effect—the point just mentioned—in that it tends to make prospective borrowers more thoughtful about assuming an obligation, particularly one that extends over a long period of years.

Mr. SUNDSTROM. Is it true the rise in interest rates has been practically negligible to date? It has been more a psychological

effect that shows we have turned the corner rather than an actual rise in rates to date?

Mr. MEREDITH. I would say we have had a significant rise in interest rates to date.

Government bonds which sold on a 209 basis are now selling at 248 or 249. And other bonds have come about in proportion into balance.

In the second place, a higher interest rate will tend to bring forth a larger amount of savings which is very desirable under present inflationary conditions.

The rate of interest is significant only when it is applied to the amount of money borrowed. The fiscal policies of the past decade which produced the lowest money rates in history, also have produced higher real-estate prices. It frequently is necessary for a home purchaser to borrow much more money than he would have been obliged to borrow 5 or 6 years ago to buy the same house. Under circumstances of this kind, the borrower would be far better off to pay 5 percent or higher interest on the sum of money required 5 years ago to buy the same house. Under circumstances of this kind, the borrower would be far better off to pay 5 percent or higher interest on the sum of money required 5 years ago, than to be obliged to pay 4 percent or 4½ percent on the money he now will be obliged to borrow. As pointed out in Housing Costs, a study made by the National Housing Agency, a 20-percent reduction in the cost of a house and lot is more than three times as effective in reducing monthly costs than a 20-percent reduction in the rate of interest charged for a loan.

Mr. SUNDSTROM. Depending, of course, on how the features of the loan are.

Mr. MEREDITH. Oh, yes, the same type of loan.

Mortgage-interest rates may seem high to the uninitiated, but we must bear in mind that the net rate of return to a lender is not the contract rate as stipulated.

Out of this return, the investor must deduct his own expenses of buying and handling the loans, must write off any premium paid, pay the expenses of servicing, and must make some allowance for losses which are likely to result no matter how carefully loans may be selected.

At the 1945 meeting of the American Life Convention, representatives of four life-insurance companies presented figures to show the estimated net return on mortgage loans their companies owned.

These estimates showed that, assuming a 4½-percent interest rate on FHA loans, the net return averaged 3.04 percent after deducting the expenses just cited.

We must never forget that interest, while an expense to borrowers, is income to savers.

Our Nation was spending money so rapidly during the war, and it was necessary, of course, so much of this money was borrowed, that emphasis was soley on the cost side, with little thought for the people to whom interest is income.

The life-insurance companies of the country, with approximately 75,000,000 policy holders, afford an excellent illustration of savers who have been severely penalized by the low-interest-rate policy of the Federal Government.

Mr. SUNDSTROM. Mr. Meredith, on that point, I believe I asked a previous witness if he does not feel that interest rates were about as low as they could be for financing loans. How do you feel about it?

Mr. MEREDITH. Very definitely so, sir.

Mr. SUNDSTROM. How do we answer many of the people of this country who have not had much experience with loans and mortgages who seem to think that when they get a mortgage on a 20- or 25- or 30-year period, and when they pay interest that, therefore, they are paying three times as much for interest as they are for the house.

Mr. MEREDITH. Well, unfortunately, of course, that condition does prevail, and I think the lending institutions are aware of it, and we try to explain to them, as I wish to emphasize, if I may, in a moment here, that interest has two sides, one is the cost to the borrower, and the other is income to the saver.

Mr. SUNDSTROM. I am in agreement with you, and I am glad you are going to bring that point out.

Mr. MEREDITH. Mr. Lewis W. Douglas, then president of the Mutual Life Insurance Co. of New York and now Ambassador to the Court of St. James's, appeared before the Senate Committee on Banking and Currency in December 1945 in opposition to the Wagner-Ellender-Taft bill.

Mr. Douglas vigorously emphasized this point, and called attention to the sharp decline in the net earning rate of life-insurance companies from 1930 to 1945, a rate which has declined from 5 percent in 1930 to just over 3 percent in 1945, largely because of the decline in interest rates during this period, and in 1945 the net rate of earnings declined to 2.9 percent.

In 1921, 11 insurance companies, with approximately $10,000,000,000 of insurance and $2,200,000,000 in assets, earned $40,000,000 over and above the minimum amount required to maintain reserves.

This amount is known as excess interest, and with gains from other sources constitutes the sum which may be paid to policyholders in the form of dividends.

In 1944, with about double the volume of insurance in force, and assets over three and a half times as large, the companies had only about $21,000,000 above their requirement, compared with $40,000,000 in 1930.

Low interest rates, when created and maintained by artificial devices employed by the Federal Government, impose a severe hidden tax upon the savers of the Nation, including not only life-insurance policyholders but depositors in savings banks, savings and loan associations, pensioners and annuitants, endowed institutions, and others.

The inflationary situation has obscured the great progress being made in the direction of solution of the housing problem, with several aspects which deserve special mention.

The Bureau of the Census estimates that the number of families in the United States, including those doubled up as well as those living in separate quarters, increased 4,900,000 from the beginning of 1940 to the early part of 1947.

In the same period there was a net increase in the number of dwelling units of 4,400,000 in farm and nonfarm areas, with about 3,500,000 units newly constructed and approximately 1,000,000 added by conversions of existing nonfarm houses or on farms.

In other words, in spite of the war the increase in supply of housing units has very nearly kept pace with the increase in families.

Furthermore, as the census figures indicate, existing houses have, during these years, been brought into more efficient use by major repairs and installation of plumbing equipment.

We have through these means and in the face of very trying conditions, not only been able to augment the supply of housing roughly to correspond with the increase in the number of families, but we have also made substantial betterments in previously existing housing.

Along with this accomplishment and contrary to the general impression, there has occurred a slight reduction in the crowding of houses as is indicated by a decrease in the census estimate of persons per nonfarm dwelling unit from almost 3.2 in 1940 to 3.1 in 1947. That is a slight reduction, but it does indicate a downward trend contrary to the general belief.

The strides thus made both during and after the war are much greater than is frequently recognized. This is even more apparent when the recovery of house building after World War II is compared with World War I.

New housing construction in 1947, the second postwar year, was 120 percent of the volume in 1941, while that of 1920 was only 62 percent of 1916 and 57 percent of 1914.

The postwar housing record also compares favorably with passenger-car production, for example, which in 1947 was only 94 percent of 1941, compared with the housing figure of 120 percent.

It should be plain that a creditable job thus far has been done, in spite of all the difficulties of converting from wartime to peacetime production.

There remains, of course, a great deal yet to be done, and it is, perhaps, fortunate for our general economic welfare that this is so.

If it were possible to produce new houses for everybody who wanted one, and if we were to accomplish this miracle in 1948, we would probably have occasion to regret it later, even though improved housing may be desirable.

Directly and indirectly, residential construction provides a large amount of employment, and it is highly desirable that we should spread this construction over several years.

An excessively large concentration of building in the next year or two will mean a slump later on, in all likelihood, with unemployment for the building trades and suppliers and with a serious danger of dispossessing veterans and other homeowners.

Furthermore, such excessive stimulation of building would add greatly to the inflationary pressures, which we have been talking about earlier, and specifically would cause higher real-estate prices and increase the financial burden on home ownership.

If the present problems of an inflated economy can be satisfactorily overcome, we can look forward to a period of high building activity, accelerated removal of obsolete structures, and constantly improving housing conditions.

We are all impatient to speed up this process. We should all like to see everyone housed to his taste right now.

On the other hand, if we are to bear in mind not only problems of immediate need, but those as well of the long-range stability of our economic system, we must realize that our justifiable impatience requires some tempering.

The problem of housing today is precisely the same as it is in the case of clothing, automobiles, and other goods, namely, how to increase the volume of production, and at the same time, to reduce prices, or at least to hold the line on prices.

It is unlikely that any dramatic method can be found to accomplish this objective.

I should like to consider at this point some of the specific proposals which have been made to increase the supply of housing.

One, a number of steps can be taken to increase productive efficiency in the residential construction industry. Hearings earlier this week have revealed the efforts that builders and materials manufacturers have been making in introducing simplified building methods, in improving building codes, in assisting in apprentice training, and in industry-wide research.

And I hope before your hearings have been completed that you will hear about the engineered housing program, which is a very significant step.

The CHAIRMAN. We had that scheduled for last Monday, sir, and we had so many witnesses that we had to postpone it until next week, next Monday.

Mr. MEREDITH. I believe you will find it very interesting.

The CHAIRMAN. Is that the one with slides, and so forth?

Mr. MEREDITH. The engineered house is the one which uses a standard module of measurement.

The CHAIRMAN. Modular.

Mr. MEREDITH. Yes, modular, 4 inches, 4 feet.

The CHAIRMAN. We are going to have an hour on that.

Mr. MEREDITH. I am glad to hear that, sir.

The Federal Government should aid industry in its cost-reduction program through assistance to technical research, building code improvement, and apprentice training.

Efforts should be made to increase productivity in the building industry, for this is the fundamental way to more and better housing, without incurring inflationary consequences.

2. Consideration might be given to encouragement of construction of rental housing through modification of the corporate income tax, particularly by steps that would permit a more rapid amortization of the investment.

Modification of the corporate income tax would make the construction of housing for rental and investment more attractive than construction of houses for sale.

This would also encourage, in a period of high prices, a greater proportion of equity investment instead of encouraging borrowing as has been the case with many of the measures previously taken by the Government. A program of this kind, of course, also must be considered from the point of view of the over-all tax program.

3. One of the plans designed to increase the supply of housing is the provision for yield insurance, as set forth, for example, in Title V of the Taft-Ellender-Wagner bill.

This plan, which was intended to be especially attractive to life insurance companies, would have the Government guarantee a minimum return to companies making direct investment of their funds in rental projects.

As we have pointed out, some companies are already engaged in this latter form of activity, and plans for its expansion are extensive.

The drawback is not the need for Government protection, but cost, and some companies seem reluctant to proceed under cost conditions that make reliance on the guaranty almost a certainty. There is nothing in the yield insurance plan that can reduce cost.

To my knowledge, no company or group of companies has asked for this type of special protection and, in my opinion, few, if indeed any, of them would use it.

It may be noted that the Dominion of Canada has had in force since 1944, a yield insurance plan much more liberal than any proposed in this country, and as I understand it, without having produced anything but one project of eight-family units thus far.

If a project is sound, it is likely to be undertaken on its own merits, and yield insurance would not be needed; if it is not sound, it is hard to believe that yield insurance would make it so.

4. Various plans involving further direct use of Government funds to provide housing have been put forward. These range from a resumption of the prewar program of public housing under the United States Housing Act, to various plans providing for subsidy payments directly to builders, investors, or purchasers to overcome present costs.

It should be remembered that any subsidy is a cost to the Nation's taxpayers, and a burden on the economy.

Notwithstanding the possible merits of some form of subsidy for the benefit of low-income families as part of a long-range housing program, the effects today would be harmful in some respects.

No matter what form in which it was offered, the subsidy under present inflationary conditions would, by the increased pressure of demand in the housing field, be quickly translated into higher cost. The experience in England after World War I is a spectacular demonstration of this fact.

In the short run, therefore, any form of public housing would serve to promote inflation. If public housing should be undertaken after inflationary pressures subside, there are certain stipulations it should meet.

Mr. SUNDSTROM. What you are saying today is that with such a demand for materials and labor and all the things that go into a house, that Government participation would only add to the demand.

Mr. MEREDITH. Yes, sir.

Mr. SUNDSTROM. And you do not believe that they could do it as efficiently perhaps as private enterprise is doing the job.

Mr. MEREDITH. That is right, sir.

Mr. SUNDSTROM. Secondly, are you intimating that really what is going to make it sound, whether it is the Federal or private or individual funds going into a project, what is really going to make it sound or unsound is the probable original costs.

Mr. MEREDITH. Yes, costs and, of course, the prospect of return, reasonable return, over a long period of time on that cost.

Mr. SUNDSTROM. So, what you are saying is that if the Government is going to do these big projects, and they may have to do some percentage, and there may be some room for Government some time in the future, but you certainly think it ought to be postponed at the present.

Mr. MEREDITH. Yes, sir. In the short run, if public housing should be undertaken after inflationary pressures subside, there are certain stipulations it should meet:

One, the temporary stopgap nature of the program should be clearly stated in whatever legislation was enacted for the purpose.

Two, the housing built should be available only to families of the lowest-income group, who are living in slum conditions.

Three, the housing should provide minimum decent accommodations.

Four, the Government should dispose of the housing at the end of the amortization period, the period over which it is written off.

Five, the housing should be financed to a greater extent than hitherto by local participation.

Six, any subsidy should be readily discernible so that the taxpayers will know the cost.

In summary, there are two cardinal facts in the housing situation in 1948 that should influence our policy for this year.

The first is that the Nation is now involved in a struggle to control inflation. This struggle must be won before we can hope fully to meet our housing objective.

Certainly, such measures as easier mortgage terms, subsidies for housing, restricted interest rates, and similar proposals will not accomplish little toward this end. Except through technological advances, such as are now under way, it is not possible immediately to stimulate production to greater heights, without increasing the inflationary risk.

The second major fact is that we are making marked progress toward the lessening of our housing difficulties. A large volume of residential construction is going forward, and the outlook is favorable for the future, providing costs do not increase sharply.

Ample financing at reasonable rates is available. With a continued high level of national income, and a continued high rate of building along with improvement in productivity, the condition of our housing supply, as a whole, will be steadily bettered.

But we are confronted with a serious choice, lying between more inflation and dramatic attempts to solve quickly the housing problem, or, on the other hand, less inflation and a sober, rational attack upon housing.

As custodians of trust funds owned by a large majority of the American people, the insurance companies, naturally would prefer the second course, and we sincerely commend its merits to the attention of this committee.

The CHAIRMAN. Thank you very much, sir; that is a very able document which the gentleman has presented to us, and it is worthy of much study.

Senator FLANDERS. Mr. Meredith, I was sorry that I could not get here earlier. As I was coming in, I heard you say some things that are unorthodox, so far as other testimony and intimation is concerned. I heard you using, if I understood it, some very large figures, as to the production of dwelling units during the war and since.

Would you mind turning back to that, if you can find the spot?

Mr. MEREDITH. Very easily, Senator. Would you like me to read that paragraph?

Senator FLANDERS. Yes; you just might read that paragraph.

Mr. MEREDITH. The inflationary situation has obscured the great progress being made in the direction of solution of the housing problem. If I may say, Senator, I began the case by demonstrating the inflationary gap.

Senator FLANDERS. Yes.

Mr. MEREDITH. And its effect on the prices of houses and prices generally.

Senator FLANDERS. Yes

Mr. MEREDITH. The inflationary situation has obscured the great progress being made in the direction of solution of the housing problem, several aspects of which deserve special mention.

The Bureau of the Census estimates that the number of families in the United States, including those doubled up as well as those living in separate quarters, increased 4,900,000 from the beginning of 1940 to the early part of 1947.

In the same period there was a net increase in the number of dwelling units of 4,400,000 in farm and nonfarm areas.

Senator FLANDERS. The other was four million how many?

Mr. MEREDITH. Nine hundred.

Senator FLANDERS. And this is four million four.

Mr. MEREDITH. Yes, sir.

In farms and nonfarm areas, with about three and one-half million units newly constructed, and approximately one million added by conversions of existing nonfarm houses or on farms.

Senator FLANDERS. Now, does that include temporary housing?

Mr. MEREDITH. Yes, sir; I believe it does.

Senator FLANDERS. Does it go still further, and include such trailer housing as we had up in our town there in Vermont?

Mr. MEREDITH. I believe it does.

Senator FLANDERS. Yes. So that it is not a net gain; the gain is not necessarily a net, a permanent gain.

Mr. MEREDITH. I have some statisticians with me, and I would like to ask them if they would confirm my opinion. That does include temporary; it includes temporary, but not trailers.

Senator FLANDERS. I was not thinking of the trailer that a man buys or builds, but these somewhat elaborate trailers which were furnished by some branch of the Department of Agriculture; I forget what they called them.

Mr. MEREDITH. I understand not, and if your committee is interested, Senator, in more details, I would be very happy to prepare a memorandum and file it for the record, if you like.

Senator FLANDERS. You see those total figures are a bit astonishing when we think of this past year's effort that is being a very creditable undertaking. What was the number of completions and the number of starts?

Mr. MEREDITH. About 850,000.

Senator FLANDERS. About 850,000, but the average on this basis you have just given is

something like that for the whole period, is it not?

Mr. MEREDITH. No, sir; if we take 4,400,000 from 1940 into part of 1947, that is almost 8 years.

Senator FLANDERS. Yes.

Mr. MEREDITH. And, of course, that includes 1940, which was not a war year, and a reasonably prosperous year, and the war years are in there.

Senator FLANDERS. That would indicate, except for the fact the temporary housing is included, that there was a deficiency over that period of about 500,000 homes.

Mr. MEREDITH. Yes, sir.

Senator FLANDERS. And those 500,000 homes were some net loss, probably of buildings going out of use from decay or whatever.

Mr. MEREDITH. One of my associates has some information here, and with your permission——

Senator FLANDERS. Yes.

Mr. MEREDITH. Yes; these gentlemen tell me that there are 300,000 temporary units approximately in that total.

Senator FLANDERS. Yes. That would seem to indicate that if the new construction is in the right spot, that we would be catching up on the relationship between dwelling units and families coming in.

Mr. MEREDITH. That is the point, Senator, we are making tremendous progress, excellent progress, we believe.

Senator FLANDERS. Even with that 300,000, the chances would seem to be good.

Mr. MEREDITH. It would seem to be excellent; yes, sir.

Senator FLANDERS. Is the rate of production of new families keeping up with the high level of the past 2 or 3 years?

Mr. MEREDITH. I believe and suspect that they are falling off.

Senator FLANDERS. Well, that is extremely interesting, Mr. Meredith, and I thank you for bringing it here, because I believe we are getting from this a bit more optimistic picture than we have been getting previously.

The CHAIRMAN. That is true.

Mr. SUNDSTROM. Mr. Gamble, I know we have other witnesses and I do not want to take too much time, but I was very interested in the statement of Mr. Meredith that the insurance companies had considerable amounts invested in real-estate loans.

Mr. MEREDITH. Yes, sir.

Mr. SUNDSTROM. I assume they still have more money available for that purpose?

Mr. MEREDITH. I believe they have, sir.

Mr. SUNDSTROM. Do you think the supply is going to be adequate to meet the demands?

Mr. MEREDITH. I was very much interested in listening to the testimony of the previous witness.

Mr. SUNDSTROM. That is what I had in mind.

Mr. MEREDITH. When the VA program was first inaugurated it was estimated that at that time there would be about $40,000,000,000 loaned to veterans over the life of that program. To date, there have been roughly about $5,000,000,000 of GI loans made.

I should hesitate at this time to say that there will not be sufficient funds available to take care of that program. Now, what conditions may be like 3 years from now, or 5 years from now, I do not think we can tell.

As you know, that program is spread over a 10-year period, and these loans, many of them are being paid off quite rapidly, so that I should hate to say now that there will not be sufficient funds to take care of them.

Mr. SUNDSTROM. Have you or has your company ever thought of the possibility of Government participation in housing injuring the value of the investments of your company in real-estate mortgages?

Mr. MEREDITH. That is obviously a very difficult question to answer because it would depend on the extent of the participation.

Mr. SUNDSTROM. All I said was, Have you ever considered that possibility, talking about you as an individual or your directors.

Mr. MEREDITH. When you are studying housing problems, you cannot help but give thought to that. It is quite obvious, to go to another extreme, that the Government could put the insurance companies right out of the lending field almost overnight, and if you were to have a tremendous building program, with enormous subsidies back of it, the Government absorbing the loss and operations, why, the value of our underlying securities could be adversely affected.

I will not say at the moment—I know of no one who is worried about it.

Mr. SUNDSTROM. Thank you very much.

The CHAIRMAN. Mr. Meredith, you were speaking of the progress in 1947 when we had starts of 86,000 homes, and during those last few months that was running at the rate of a million dollars a year.

Mr. MEREDITH. Oh, yes.

The CHAIRMAN. And should run into a million in 1948, according to the figures that we have received. Does that coincide with your thoughts on the matter?

Mr. MEREDITH. We have heard all kinds of estimates, we believe, running as high as a million and a quarter. Some of us think that probably between eight and nine hundred thousand units for the year will be a very creditable job.

The CHAIRMAN. We get very fantastic figures. Somebody testified about a million nine hundred thousand. There is not enough material and labor in the country to construct so there is no use talking about it. I think there are an awful lot of people who did not realize what the present rate is, particularly the CIO.

You have one of the thoughts that we have, that is, if we do not look out, housing is going to price itself out of the field.

Senator FLANDERS. I would like to inquire whether you see any evidence as to whether or not the new construction is taking place in the areas in which there is the greatest need for it.

Mr. MEREDITH. Well, off-hand, my answer to that, Senator, would be that it is, because that is where the prices are being paid, and where the demand is expressing itself.

Senator FLANDERS. Would you feel, for instance, that New York City might be an area in which families were more doubled up than they just might be elsewhere, and that possibly construction was not taking care of that situation as rapidly as it might elsewhere?

Mr. MEREDITH. I am not intimately aware of the New York situation because our company has made very few loans in that area, but I have heard comments much along the lines of which you suggest.

Senator FLANDERS. I know in rent hearings that seemed to be a problem area, very much more serious than in any other part of the country.

Mr. MEREDITH. That impression, general impression, is prevalent, although I am not intimately acquainted with it.

Mr. SUNDSTROM. Do you have any more questions?

Senator FLANDERS. No.

Mr. MEREDITH. Thank you, sir.

Mr. SUNDSTROM. Thank you, Mr. Meredith; we were glad to hear from you.

The Papal Prophecy

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. PLUMLEY. Mr. Speaker, under permission granted to extend my remarks, I am inserting a sonnet entitled "The Papal Prophecy," by Glen Levin Swiggett, as follows:

THE PAPAL PROPHECY

"The sinister light of a new conflict
On the horizon flashes already,"
On Christmas Day Pope Pius urgently
Did to an anxious troubled world predict,
That nations recreant and derelict,
Ere 'tis too late, may haste forthwith to see
Their willful, wayward course and errancy,
And to the ways of peace themselves addict.
But if such nations in their eagerness
For war cannot be won for peace through power
Of prayer, the warning of His Holiness
We must at last all heed, and seek with our
United strength to smite aggressiveness
That is preventing world peace at this hour.

Tariff-Making

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. ROBERTSON. Mr. Speaker, American sovereignty in the collection of tariff revenue has now been delegated very largely to 17 foreign nations and among these 17 foreign nations are debtors of the United States. The 17 nations have held a number of meetings, the principal ones being at Geneva and Havana. At Geneva they drew up a document which they called a charter, the effect of which transfers tariff-making from the Congress to this body of debtor nations.

It would seem to me, Mr. Speaker, that this question is one for serious consideration on the part of the Congress of the United States at the present time. For the past 15 years there has been a tendency to circumvent Congress on the part of the administration, particularly the State Department. It is time we call a halt.

Under leave to extend my remarks I include here an article written by George E. Sokolsky taken from the Washington Times-Herald of January 30, 1948:

THESE DAYS

(By George E. Sokolsky)

Since the day of Alexander Hamilton the tariff has been a sovereign activity of the United States, the Congress determining what it should be and in what manner it is to be collected. This phase of American sovereignty has now been delegated to 17 nations, including debtors to the United States.

Apart from the United States, these countries are Great Britain, Canada, India, Austria, Union of South Africa, New Zealand, Belgium-Luxembourg-Netherlands (known as Benelux), Brazil, Chile, China, Cuba, Czechoslovakia, France, Norway, Lebanon. Soviet Russia declined to join.

The 17 nations have held a number of meetings, the principal ones being at Geneva and Havana. At Geneva they drew up a document which they call a charter, the effect of which transfers tariff-making from the Congress of the United States to this body of debtor nations.

Of course, that would be unconstitutional, so the device used is the Trade Agreement Act of 1934, since extended up to June 12, 1948, conferring upon the President the right

to reduce the tariff under certain specific conditions.

The President can proclaim certain tariff changes as though they originated with him. Actually, they are a result of the conferences among these 17 nations and are part of a general agreement reached by the International Trade Organization (ITO) of the United Nations.

The decisions of ITO thus become the law of the land. Congress has thus abrogated an important part of American sovereignty.

The Geneva agreement affects about 3,600 tariff rates. A partial list shows that the following American commodities will be affected:

Shoes, glass, pottery, printing, engraving, stereotyping and electrotyping, bookbinding, cigar making, hats, painting, decorating and paperhanging, carpenters and joiners, breweries, meat cutters and butchers, garment industry, brick and clay, bricklaying, masonry and plastering, marble, slate and stone, wood carving, coopers, paper making, pulp sulphite and paper mills, metal polishers, buffers, platers, lithography, leather, wallpaper, wire weaving, aluminum, cement, lace, distillery products, watches, agricultural products generally, wool, mutton, chemicals, pigments and dry colors, salt, glassware, tile, chinaware, optical instruments, dental and surgical instruments, cutlery, scissors and shears, hardware, tools, saws, etc., electrical appliances, agricultural implements, metal abrasives, cast-iron pipe, firearms and ammunition, wire cloth, textile, shoe, etc., machinery, zinc, lead, copper and brass, nuts, figs, dates, and other specialty crops, textiles: cotton, woolens, and worsteds, papermakers' felts, laces and embroideries, threads, twines and cordage, rayons, velvets, and velveteens, elastic fabrics, wool felt hat bodies, linoleum and felt-base floor coverings, carpets and rugs, leather goods, pencils and pens, toys, bicycles.

The gist of the matter is that a tariff policy is being fixed for the United States by its debtors at a time when no one can correctly determine what the economic situation of the world will be a month hence.

We have just witnessed France's revaluation of her currency by unilateral action.

It so happens that what France did suits the United States, but it upsets Great Britain's economy, which this country has underwritten to the tune of $3,750,000,000, if anybody still remembers.

Who can say what Great Britain will be forced to do? In a word, we fix our tariff at a moment of universal flux.

Clair Wilcox, Director of the Office of International Trade Policy of the State Department, makes this point in a defense of ITO:

"* * * Political cooperation among nations remains in jeopardy so long as individual nations feel free to wage economic warfare with weapons of their own choosing and rules of their own making."

But that does not explain why the creditor country should be so completely at the mercy of its debtors. It is particularly difficult to understand why the United States should have to make all the sacrifices. The other countries made it clear that they could not go along with the ITO program unless we cut our tariff—so we cut our tariff.

Unquestionably the State Department bypassed Congress. The entire subject requires detailed investigation by Congress.

Certainly the trade agreement law, which expires on June 12, 1948, ought not and probably will not be renewed.

Meanwhile, business and labor, which face wild competition from socialized and low-waged countries, ought to consider their interests.

Universal Military Training

EXTENSION OF REMARKS
OF

HON. WILLIAM T. BYRNE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. BYRNE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Evangelist, of Albany, N. Y., issue of January 16, 1948:

UNIVERSAL MILITARY TRAINING SEEN AS HAZARD TO MORALITY

Voicing vigorous opposition to the need of universal peacetime conscription, the Reverend Joseph T. Ryan, former Marine Corps chaplain, appeals to parents to barrage Congress with petitions and letters asking legislation to defeat this un-American scheme.

Father Ryan holds two citations for extraordinary valor during combat duty. A native of Albany, he is a graduate of the Christian Brothers Academy. He is the son of Mrs. Agnes Ryan, of 2 Kent Street, Albany. Since his release from service in June 1946 he has served as assistant pastor at St. Mary's, Hudson.

Father Ryan flirted with death with front-line Marines on Peleliu and Okinawa. He was the recipient of commendations in both operations. He served for 20 months in the south Pacific. Father Ryan's experiences convince him that the dangers to which peacetime conscription would expose American youth actually would jeopardize the security of the Nation.

Father Ryan says:

"It may come as a surprise to some advocates of the universal-military-training plan to know that there are highly trained, intelligent military men in all branches of the service who definitely oppose peacetime training on military grounds. In my opinion the arguments against it far outweigh the arguments for it. This is not merely my own opinion, but the considered opinion of thousands who have not resorted to the high-pressure tactics of some groups of Americans who are for it.

"For these military experts morality does not enter into the discussion. Their interest is primarily a military one. But there is a moral side to the question and there are many who feel that such a program will in the not too distant future bring about a complete break-down of morality in the United States. In my own mind I am convinced that if this legislation goes through and is carried on for two or three generations we shall see (those who are alive) a break-down in morality so complete that our glorious Nation will become, because of rampant immorality, not only one of the lesser world powers, but a beaten subjugated people.

"Who is there, in service in the last war, who does not remember the shock of the first sex hygiene lecture in boot camp? What decent young man now in his middle 20's can forget that to many, new vistas of unlawful pleasures were opened by these pictures and lectures. Their purpose supposedly was to instruct in necessary things about sex. They were instructive all right—instructive as to how to enjoy unlicensed carnal pleasures without disease.

"The tenor of the movies and lectures always was this: Every man must and will have these promiscuous pleasures; there is nothing evil in incontinence—just be careful that you don't get a disease.

"Who could forget the foul language in a barracks or in a tent or in a ship's compartment? The constant drumming of it on the ears, day after day, night after night, made it seem to the decent men as if all sense of purity in thinking and speaking would be lost forever, and lewed and lascivious manner of speech and thought would become a very part of them.

"Who is there, in the service in the last war, who will not admit that the popular belief on any Army post, naval, Coast Guard, or Marine base, on any ship, in any regiment, was: Take anything you could get; clothing, food, supplies of any kind, if you wanted them, take them from any other fellow, or the Quartermaster or ship's stores—they only belonged to the Government and therefore they were yours? And the insidious thing was that for most men there was no feeling of guilt about taking something that did not belong to them."

Father Ryan, who served for 36 months as chaplain in the Marine Corps, says:

"All of you veterans, the fathers of the coming generation, know what the moral dangers of military life are. Recall your own time in the service—recall the instructions you had to read daily on the lavatory walls, recall the nightly topics of conversation in the barracks, the suggestive recordings played before the movies, the remarks during the movies, the teen-agers after the beer issues, some of the USO shows, and the number of other proximate occasions of sin in which you found yourself in your daily life—then ask yourselves, decent, mature men:

"Do I want a son of mine placed in the midst of these temptations, at the age of 18, when our national security can be insured in other ways than by universal military training?

"The plan of training in the bill now before Congress wants to take youths at the most impressionable time in life, take them away from the safeguards of family life, and place them in an atmosphere where incontinence is the order of the day, foul and filthy language ordinary conversation, and stealing considered a sort of dangerous game with the stakes high for those who are clever at it.

"That the future of our country depends upon preparedness is certain, but there are ways of bringing about and remaining in a state of preparedness other than by universal military training. The future of our country also depends upon a generation of men who will know that they were made in the image and likeness of God and who will be imbued with the realization that they must never defile that image. Life in the peacetime service, during a certain part of their formative years, will never inculcate in young boys the lofty ideals of love of God and neighbor on which our Christian way of living and our very civilization is built.

"You veterans of the last war can realize the moral dangers of peacetime training better than any others and as God-fearing men who are or will be the fathers of future 18-year-olds I am sure that you want to protect your sons from these dangers. Your voices should be raised in protest against the plan of peacetime conscription and you should see to it that the bill now before Congress is defeated."

UNIVERSAL MILITARY TRAINING CITED INADEQUATE FOR DEFENSE

An ex-Army chaplain, twice wounded in action in Sicily and Germany, drawing on his experiences during 3 years of service with the armed forces in training camps in the United States and in combat zones in Europe, condemns the proposed peacetime conscription from the angles of inadequacy for defense and as an unwarranted hazard to the morality of the Nation. The Rev. Anthony Sidoti, assistant pastor at St. Mary's Church, Frankfort, says: "I am unalterably opposed to the plan for peacetime conscription as it now stands. Considering it from a military point of view, it is highly improbable that a

young man of 18 or 19 can be taught all that he should know (in the allotted time) about the new type of warfare which could and would be conducted with such instruments of destruction as the atomic bomb, bacteriological weapons, and radioactive gas. Six months of training would provide only a rudimentary knowledge and with progression of science that knowledge would soon be antiquated.

"I feel that a suitable course (similar to the ROTC) could and should be set-up in all of our high schools and colleges. There are many phases of military life which can be and are excellent character builders, e. g., discipline, subjection to properly constituted authority, obedience, self-reliance, perseverance, etc. The various types of weapons and warfare could be properly and thoroughly studied over a period of 4 or 8 years. At the same time the students would be under parental and, in many cases, home influence. Eventually we would have troops with a practical, working knowledge of atomic and advanced scientific methods of warfare."

Father Sidoti was discharged from service in December 1945, with the rank of a major. He served with distinction with the First and Ninetieth Divisions of the Infantry. He is 1 of 11 in the United States Chaplains Corps who have been decorated with the Silver Star with cluster. He also holds the Purple Heart with cluster and a Presidential citation for valor under fire.

Speaking of his experiences during 3 years of service with the armed forces, he says: "During the months of actual combat the average GI was in pretty good spiritual condition. With the cessation of hostilities, and I feel that all chaplains will agree with me, there was a general let-down concerning religious obligations and moral life.

"Peacetime conscription will present a greater moral danger to our young men than that to which they were exposed in training centers during the war. God knows those dangers were enough.

"Statistics prove that in villages, towns or cities proximate to any type of service posts or camps, crime, and vice ran rampant. Why then should we expose our young men, the cream of our manhood to unnecessary dangers to their moral life? We should not! Let the Government assure us that it will not assault the sense of moral decency which has been built up in our young men by their parents and religious teachers. Let the Government assure us of adequate protection of the morals of these youths; let it assure us that they will be, at least, no worse off morally at the end of their period of training than they were when entering it. Certainly it can be said of the rank and file of our young men that they have a true sense of morality and decency. They and we all have the right to expect that when the period of their training has ended they can return unspoiled to their homes."

EXCERPTS FROM A PAMPHLET, CONSCRIPTION IS NOT THE AMERICAN WAY, WHICH EMBODIES THE CONCLUSIONS OF A GROUP OF 11 MEMBERS OF THE FACULTY OF JOHN CARROLL UNIVERSITY

This law, passed by the French National Convention on August 23, 1793, meant the beginning of the era of the nation in arms. For the first time an entire nation was mobilizing every human being and every last resource in a national cause. Total war was to be the contribution of the French Revolution to modern times.

The mass army raised by universal conscription was intended by the French to be a defense for the Republic against its enemies. Napoleon, however, had other plans. While he protested that his rule of France meant peace for Europe, he developed the army to a point where Coignet, one of his officers, could say: "The army was now so numerous and so beautiful that it would have liked to fight all Europe." That was precisely what happened. Drawing upon such masses of men, Napoleon became more and more aggressive and, when war broke out again, he boasted to Metternich: "You cannot beat me; I spend 30,000 men a month."

And what was the effect of this new military policy of France upon that of other countries? Prussia was the state which understood most clearly the implications of the mass army. Gneisenau in 1807 remarked that "the (French) Revolution has mobilized the whole national strength of the French people * * * the rest of the states * * * ought to open up and make use of the same resources." "Get us a national army," begged Blucher of those working out military reforms in Prussia rom 1807 to 1813. "It is not as difficult as one thinks," he continued, "the foot rule must be abandoned; no one in the world must be exempt, and it must become a shame not to have served except in the case of infirmities." Not until 1818, however, was it possible for Prussia to make conscription the law of the land. The cadre system, with a reserve mobilized in time of war and a long-term professional army, was borrowed from Austria and combined with a militia system. By this method reserves, when their training was completed, passed into a kind of local militia under elected officers.

Thus while other countries abandoned universal service after the Napoleonic Wars, Prussia laid the foundations of her future military efficiency upon the cornerstone of universal service and the organization of a fixed number of army corps regularly stationed in the territories from which they drew their reserves. The entire system was coordinated by an efficient general staff. This development, begun by Scharnhorst and perfected by Moltke, paid dividends in the attack upon Austria in 1866. Austria, determined not to be caught again, passed a universal service act in 1868. Defeated by Prussia in 1871, France followed Austria's lead in imitating the Prussian system by passing a universal service act. Again, the idea was not to be caught a second time. Russia acted in like manner in 1874, and Italy in 1875. The race was on. Commenting upon these developments, Bismarck, in a letter to the Russian diplomat, Prince Orlov, in 1879, said: "The great powers of our time are like travelers in a carriage. They watch each other and when one of them puts his hand into his pocket, his neighbor gets ready his own revolver in order to be able to fire the first shot."

As a result of Russia's success, the army was no longer to be considered as a police force to maintain order within the state. It had become the final arbiter in international disputes. The foundations of the "armed peace" had been laid. So convinced have the nations of the world been that a defense system founded upon the principle of universal military service would insure them against attack that, in spite of the experience of the First World War, 36 of 45 have adopted this method of security. Great Britain and the United States alone of the larger powers have refused thus far to follow suit. What everyone has overlooked is that each country's defense had reached a point where it was an offense to its neighbors. Security was always to be determined by the ability to equal or surpass the number of effective troops of the potential enemy.

After 1871 each international crisis resulted in greater absorption by the various countries in preparation for war. It was always done, however, in the name of peace. Such measures as increasing the term of service of the conscripts or changes in army organization in turn led to diplomatic crises, thus completing the vicious circle. The war scare of 1875 is a good case in point. More and more stress was laid upon the training and equipment of troops. Increased attention was given to the drafting of campaign plans "just in case." Rapidity of mobilization became a prime factor. Military plans of all countries came under the influence of the theories of the Prussian General Karl von Clausewitz, who had seen service during the Napoleonic wars. For him war was merely the continuation of state policy. The cost of victory did not matter, for he said that "he who uses forces unsparingly, without reference to the bloodshed involved, must obtain superiority if his adversary uses less vigor in its application." What can happen when two opponents apply equal vigor the modern world can judge.

Is it any wonder that mutual jealousy and suspicion engendered by such thinking should have culminated in the First World War? Nor is it surprising that the alliance system designed by Bismarck to maintain peace after 1871 degenerated into the state of affairs graphically described by Viscount Morely when he said: "Grey has more than once congratulated Europe on the existence of two great confederacies, Triple Alliance and Triple Entente, as healthfully preserving the balance of power. Balance! What a beautiful euphemism for the picture of two giant groups armed to the teeth, each in mortal terror of the other, both of them passing year after year in an incurable fever of jealousy and suspicion."

The prophetic utterance of Taine, the French scholar who wrote in 1891 that conscription "has propagated itself like a contagious disease * * *; it has mastered all Continental Europe and reigns there * * * with what promises of massacre and bankruptcy for the twentieth century, with what exasperation of international ill will and distrust, with what loss of wholesome effort * * * we know all too well," was indeed true. If history has any lessons for us, one of them certainly is that the adoption of universal service by the United States would be merely the signal for other countries to shape their policies accordingly. It would be no deterrent to others; rather it would be a goal to aim at.

Letter From American Relief for Poland, Lynn, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I have received from the secretary of the American Relief for Poland, of Lynn, Mass.:

AMERICAN RELIEF FOR POLAND,
Lynn, Mass., February 2, 1948.

Hon. Congressman THOMAS LANE,
Washington, D. C.

MY DEAR CONGRESSMAN: Please use your influence, if possible, to stop the International Bank from loaning $60,000,000 to the Moscow-imposed Polish Government. It only means America will help to crucify the Polish people. Haven't we done enough? It is a sorry shame, that we who have suffered ourselves for our democracy had any part in the present conditions existing in Poland. American history, when written in the coming generation, will certainly have a black page. What is the matter with our American diplomats? They seem to ignore the right.

I have been in Poland this summer. I know what people say and feel. I know they are afraid to breathe deeply for fear they will be whisked away. They talk in whispers. I have talked with all types of people, religious,

uniformed, educated, and peasants. All in one voice, say "we do not want aid through the Polish Government."

True, there is intense poverty and need, but that can only function fairly through the various humanitarian organizations who are having a very hard time functioning without funds and food and medicine supplies.

May I also add, we are against the Marshall plan unless it is 100 percent handled by Americans, and before our American aid is given any country the wealth of the country should be used first.

We hope your influence in these measures will prove advantageous.

Respectfully,

PELAGIA LUKASZEWSKA,
Secretary.

The German Danger

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the Washington Daily News under date of February 4, 1948:

THE GERMAN DANGER

Yesterday's strike of about a million and a half German workers in British-American occupied Bizonia is just one more proof that the situation there is bad, and in some ways getting worse. Some of the highest German officials are guilty of noncooperation with Allied authorities that amounts almost to political and economic sabotage. The democratization program in German hands has become a dangerous joke, with even religious leaders like Pastor Niemoeller openly advocating defiance of the denazification laws.

Here in America there is a temptation to attribute most if not all of these troubles to Russia and Red plots. There is some justification. Russia, defying the Potsdam pact for unification of Germany, has in effect partitioned the country in such way as to increase chaos. The Communist minority works night and day to multiply strikes and unrest, and to undermine British-American authority.

With Russia plotting to absorb Germany as the biggest prize of all her puppet States, and with Bizonia coal and steel production the key to western European recovery and Marshall plan success, continued Soviet sabotage can be taken for granted.

Nevertheless, the major factors in west Germany for almost 3 years have not been Russian but British-American on one side and German on the other. The failures in large part are either British-American or German.

On the Anglo-American side there has been internal wrangling and indecision, especially on key policy issues such as deindustrialization and socialization. There has been too much delay in recognizing the Soviet split and in setting up Bizonia with the goal of self-support instead of more American subsidies. This has perpetuated economic collapse and encouraged political irresponsibility. Even the belated new Bizonia quasi-government is a timid reform, and continued failure to provide a new currency is inexcusable.

But with full allowance for British-American blunders in a difficult situation made vastly more difficult by Russia, the fact remains that chiefly what is wrong with Germany today is the Germans. The same spirit which welcomed Hitler as its idol, and which now blames him for losing the war but not for starting it, is again dominant. Except for a small minority, the democratic Germans are either dead or too weak to stand against the current revival of the old spirit variously called Prussian or Nazi or totalitarian.

The average German in Bizonia today shows no sense of responsibility for the war or for his own suffering—much less for the suffering in neighboring Allied lands. He curses us for most of his troubles.

In our proper concern about Russia let us not forget we still have a big German problem on our hands. And the biggest problem of all is that the Russian danger and the German danger may some day merge again as they merged in 1939.

Margarine-Tax Repeal

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. DAVIS of Georgia. Mr. Speaker, one of the most costly items of food at the present time is butter. At its present high price, butter is beyond the reach of the average family.

Margarine is a staple article of food in the daily diet of millions of people throughout the United States. It carries an unjust tax—a tax which was imposed at a time when butter was selling at a price in the neighborhood of margarine prices. The tax was imposed for the purpose of bringing the retail price of margarine above the retail price of butter.

Butter has long ago raised itself out of the price class of margarine. The tax has long since ceased to perform the function for which it was imposed, and it now remains simply as a burden upon the consumer, and one more item to add to the high cost of living. As was so truthfully said in the editorial printed herein below:

The tax serves but one purpose—to raise the price of a nutritious product to those unable to afford butter.

There is now pending a bill to remove these unfair taxes on oleomargarine. It is House bill H. R. 2245. This bill ought to have prompt action. There is no good reason why it should not be promptly brought to the floor of the House and passed. There is a petition on the Clerk's desk—petition No. 12—to bring this bill promptly before the House. I have signed it myself, and I earnestly hope that all Members of the House who are interested in taking every reasonable measure to reduce the high cost of living will sign this petition to bring House bill H. R. 2245 on the floor for action. It is true this bill will affect only one item of food. However, it is a staple item, and removal of this tax will mean a substantial reduction in the price of this item.

In the Atlanta Constitution of Friday, January 30, 1948, Doris Lockerman, woman's news editor, wrote an interesting article concerning the margarine tax, which I insert herewith under leave previously granted. Immediately following Mrs. Lockerman's article, I insert, under leave previously granted, a very logical editorial which appeared in the Atlanta Journal, February 2:

[From the Atlanta Constitution of January 30, 1948]

MARGARINE TAX REDUCTION ASKED

(By Doris Lockerman)

How many women would stand still and smile pleasantly if some stranger pushed ahead of them in their grocery line today and swept up a handful of their change with the expanation:

"For the butter people, you know."

It's done every day.

One of the basic foods, margarine, is heavily taxed to shield the dairy interests, and to be sure that a bloc of voters in Washington will be in line on other important issues.

Tariffs and taxes may be protective, but it is a good idea to know whom they protect, and at whose expense.

A bill is pending in Washington asking reduction of the 10-cent tax on colored margarine, reduction of the Federal license fee from $480 to $200 (now paid annually by wholesalers to handle yellow margarine), and from $48 to $6 (now paid by retail grocers). The lower license fees are those now paid by wholesalers and retailers who sell the uncolored product.

The immediate effect of the bill, if passed, will be that all margarine manufacturers (except in States where there are local restrictions) can color margarine when they make it, selling it at the same price now paid for the white, uncolored product.

Margarine is here to stay. More than four out of five families in America use it in their homes, and many city children, 6 years old or younger, have never tasted butter. They like margarine and they thrive on it.

This would be a time for fan mail to your Congressman. The consuming public should make a pretty strong lobby if Congress only thought of it that way.

[From the Atlanta Journal of February 2, 1948]

PRESSURE FOR REPEAL OF MARGARINE TAXES GAINS

The House Agriculture Committee and its chairman, Representative CLIFFORD R. HOPE, face today a special obligation to the American people. For upon that committee depends to a great extent the face of pending bills to end the Federal taxes and license fees which discriminate against margarine. Similar bills in past years have failed of passage. Congress must not lose the present opportunity to end its special-interest protection for butterfat and its denial of a free market for vegetable oils.

The price of butter has risen sharply, carrying it beyond the economic reach of millions of people. Today it is selling for about two and one-half times the price of oleomargarine. Yet, Congress has continued to restrict an essential low-cost food fat importantly needed in the diets of low-income consumers, and it has done so, incredibly, on the theory that this lower cost food might compete with another food two and one-half times as high. This is a flagrant example of artificial interference, of special-privilege interference, with the economy of a balanced production and consumption.

These discriminatory, and even vicious, margarine tax laws have been guarded for many years by the powerful lobby. Bills designed to remove the discrimination have failed to get past the first—and most important—hurdle, the House Agriculture Committee. Yet, in the face of this opposition to repeal unfair taxes, figures clearly

indicate that the dairy industry is producing far less butter than is needed for an adequate diet for the Nation. Butter is not only too high, it is also scarce. The truth of the matter seems to be that the importance of the butter market to the dairy farmers has been considerably exaggerated. Government figures show that for 1946, the dairy farmers' total cash income from the sale of all their dairy products amounted to $3,716,374,000, and only $548,874,999—or 14.7 percent of the total—came from the sale of butterfat and farm butter. Butter production in that same year was sufficient to give only 40,900,000 consumers the 35 pounds each recommended by the Bureau of Home Economics for an "adequate diet at moderate cost."

Demands for removal of the discriminatory taxes probably will be greater this year than at any time in the history of the 60-year-old antimargarine laws. And one of the principal reasons is that so many consumers are not able to pay the current high prices for butter. The tax serves but one purpose—to raise the price of a nutritious product to those unable to afford butter.

There is no excuse for these unreasonable taxes and fees on margarine. They are not only unfair but they are also vicious in principle. While affording special privilege for one group of farmers, they have become a penalty on another group, the producers of cottonseed oil and soybeans.

Proposals for repeal of the taxes deserve a fair hearing before the House Agriculture Committee and they deserve a chance for consideration by the House itself. The people demand it.

Aspects of the Marshall Plan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks and include therein a series of five articles on aspects of the Marshall plan, by E. F. Tompkins, editor of the New York Journal-American, I wish to present the second of the series entitled "Financing Socialism." The article follows:

ASPECTS OF THE MARSHALL PLAN

II. FINANCING SOCIALISM

(By E. F. Tompkins)

There are two ways—and only two—in which the United States can provide for the reconstruction of Europe.

One is for Europe to permit and promote the use of private capital in plant investment and commercial loans.

This is the free-enterprise way, which is anathema in socialist Europe.

The other way is for the United States Government to extend grants or loans; and these can be made only to other governments.

The second method is the Marshall plan process that has been presented to Congress.

The essential difference between the two is that the first is liberal and constructive in its operation, supporting genuinely productive elements, seeking out sound business undertakings, insisting upon competent management and requiring reasonable security as to the safety of investments or the fulfillment of obligations, while the second is political, conferring few of the benefits and entailing none of the guaranties of the first.

Money or credit advanced under the Marshall plan, in other words, will not be utilized by experienced enterprises, but will be dispensed by partisan officeholders.

And, in the prevalent condition of Europe, it will be applied in the service of socialism.

The phenomenon of governmental loans to governments for purposes of this kind is something new in the world.

In previous times, solvent governments—and occasionally insolvent—were financed by private capital, and governmental issues were prime purchases for thrifty individuals and financial institutions.

But the sanctity of governmental credit no longer exists.

It ceased in Europe when Communist Russia introduced the repudiation of public debts and when the currencies were debauched by printing-press inflation; it was vitiated in this country, and its revival was made difficult elsewhere, when the New Deal took the American dollar off the domestic gold standard.

Today, bankers do not lend to governments, except under compulsion to their own; so the United States Government is sending the people's money where bank money will not go.

Obviously, a risk that is hopeless for bankers is no better for the United States Treasury.

And, of course, Marshall plan "loans" to Socialist Europe will not be repaid.

Some international benefit might accrue if Federal donations for the revitalization of foreign economies were to be successful—and if one loan to each country were to be the limit.

But the British loan was neither successful nor sufficient; and the expenditure pattern of the Marshall plan is precisely the same, only on a magnified scale.

Furthermore, the dismal record of the $3,750,000,000 British loan itself makes private capital—the only fluid capital equal to world requirements—unavailable not only to Socialist governments but also to private enterprises in the Socialist countries.

At the very time when the British loan became available, the Labor government was nationalizing the banks and industries of Great Britain.

The pillaging policy continued, and meanwhile the loan was dissipated as a dole to subsidize the Socialist 35-hour week demanded by the Labor politicians' followers.

Now the money is about gone; and the doctrinaire Labor government is back, seeking more money, in a much greater sum, under the Marshall plan.

Thus, not only has it been demonstrated that Marshall-style lending will not reconstitute the economy under a Socialist government, in addition, an effective boycott has been laid against all private financing.

For what free investor would place his savings, or what responsible banker would hazard those of his clients in any business which, next year or the year after, may be confiscated as the coal mines of England or the insurance companies and utilities in France have been?

One remedy, among others, for the plight of the Socialist countries—if they are not to drift the rest of the way into communism—is for them to deliver themselves from socialism.

But the Congress of the United States has been notified that they will not do so, and the administration has acquiesced, so that they are to borrow our money on their terms.

The Committee of European Economic Cooperation said, in its application for Marshall plan grants:

"The various countries handle their economic affairs by diverse means; some work to a long-range plan, others follow relatively unrestricted private enterprise.

"The means of carrying out this program will therefore vary from country to country."

The governments seeking the most aid are the very governments that are most in thrall to long-term socialistic planning, which they plainly assert will continue.

And the United States Government is, in the matter of the Marshall plan, being governed by them in its dispensation of the American people's money.

The report of the Harriman committee has plainly said:

"While this committee firmly believes that the American system of free enterprise is the best method of obtaining high productivity, it does not believe that any foreign-aid program should be used as a means of requiring other countries to adopt it."

In going into the strange business of financing socialism in bankrupt countries, the administration puts America in a ridiculous position—we are going into a business which we know must fail because otherwise European governments may not accept our money.

An international banker who ventured into so chimerical a scheme would inevitably go broke along with his debtors.

So will the United States if we commit ourselves to the Marshall plan as it stands.

But the Harriman committee evidently believes that it is our duty to get rid of our money rather than to make Europe self-supporting.

Jacob Gralla—a Roosevelt Democrat

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. CELLER. Mr. Speaker, I rise to express my deep appreciation of the worth of my valued secretary for 20 years, and leader of the Democratic Party of my district, the Twenty-third Assembly District, Kings County, New York City, the Honorable Jacob Gralla.

A loyal follower of the precepts of Jefferson and Wilson, he ardently fought the good fight for the common man under the leadership of our late beloved leader of democracy, Franklin Delano Roosevelt, and is continuing that fight under President Truman.

When the question of racial discrimination and unfair employment practices came before the House, he ardently and vigorously advocated the establishment of a permanent Fair Employment Practices Committee as recommended by President Roosevelt. In my work for this salutary legislation, Jack Gralla was at my side, rendering invaluable aid. Throughout my local district, he heralded this bill and encouraged a healthy public opinion for it.

When the infamous labor-baiting measure, the Taft-Hartley bill, was before us, he led the fight against it in our district. Jack Gralla has always aided the laboring man. I hope labor will come to his support in his forthcoming leadership fight. I need not dwell upon my prolabor record, but I stress that whatever good I have done for labor, in a measure, is due to the encouragement and painstaking efforts of my secretary, Jack Gralla. No Congressman can accomplish much without a good political secretary, either at home in the district or in Washington. Jack Gralla in at-

tending necessary political chores in the district has made it possible for me to render a genuine service to labor and labor interests.

I hope and ask that the men and women who toil and who are registered Democrats will not forget the devoted services to the cause of labor offered by Jack Gralla.

Certain benighted ones back home aspire to the honor that is Jack Gralla's. They seek to wrest from him the Democratic leadership in the district. I personally ask that Jack Gralla's adversaries be soundly beaten in the Democratic primaries soon to be. I am a candidate as principal delegate to the Democratic National Convention in that same primary. I have no doubts as to the outcome. Both he and I shall be chosen. Select him as you would select me—upon our merits. His case is no more, no less, meritorious than mine. We rise or fall together.

I clasp his hand in a friendship of a quarter of a century. For all these years his loyalty and affection for me has been deep and abiding and they are reciprocated. I would be derelict if I did not ask you, the Democrats of the Twenty-third Assembly District, Brooklyn, to vote for Jack Gralla as leader of the Democratic Party in the district.

I ask his reelection not only because he is my friend, my leader, my secretary, but because he truly represents the Democrats of the district.

Whenever help for the displaced persons of Europe was urged, Jack Gralla was on the job and assisted me in facilitating the immigration of hundreds into our free land. Such a record should not be forgotten nor go unrewarded.

When partition of Palestine and the creation of a free Jewish state was yet a dream, Jacob Gralla conducted mass meetings and memorialized the Congress and our President in its behalf.

I have worked arduously for a Jewish state in Palestine. I have toiled in season and out for this desired end. But throughout I had the assistance and ministrations of Jack Gralla. He was always at my side with words of cheer, with acts of encouragement.

Much work remains to be done before the Jewish state is fully set up. The work did not end with the partition decision of the United Nations. Both the Arabs and the British seek to sabotage this decision. The enemies of the idea of a Jewish state are strong. But they must be worsted. I with Jack Gralla shall fight them tooth and nail. In this struggle Jack Gralla has been and will continue to be my right hand and shield.

Palestine may seem a far cry from Brownsville and the fight for Democratic leadership in the district. It is not. Those who would oust Jack Gralla would oust me. Therefore, if my work for Palestine is worthy of your commendation—and I think it is—I ask you to remember the work of my aide, Jack Gralla, on behalf of the aims and aspirations of the Jews in the Holy Land and his work and my work for the Yishuv. We are inseparable in the campaign to implement the UN partition judgment.

Jack Gralla has gathered around himself a group of strong, loyal, unfailing, stalwart Democrats. Through them he reaches into the four corners of the district and makes democracy living and vibrant there.

A poor family is threatened with eviction, a veteran seeks his due under the GI bill of rights, a husband wants to bring over his wife from Poland, a landlord unjustly refuses heat and services to his tenants, a postal employee seeks a transfer, a Federal employee has unfounded and unfair charges brought against his loyalty, a mother afflicted on a bed of pain and nigh unto death wants to see her soldier son, perhaps for the last time, and he must be brought back from the Pacific, the Red Mogen Dovid seeks to ship blood plasma to Palestine—in all these vital errands of either economic or moral necessity or mercy, Jack Gralla is ever present and helpful. His work is manifold as it is patient and effective. These indicated tasks are performed by him and me together. It is like the reverse and obverse sides of a coin. Despite different sides, the coin is one. He and I are one.

He has agitated for the renewal of the rent-control bill when it expires. He knows it would be unthinkable to have no controls over rents and rental conditions. He is in favor of the Wagner-Ellender-Taft bill and I have offered a companion bill in the House to set up a decent program of national housing. One of the musts of Congress is to provide homes for the homeless. Jack Gralla is a veritable leaders in the movement to enact into legislation the Wagner-Ellender-Taft-Celler bill.

Withal, a kindly group of his constituents help immeasurably in the good Jack Gralla and I bring to the district. They are men like Hon. Albert Martin Cohen, former assemblyman and outstanding lawyer, citizen, and community worker; Harold L. Fisher, chairman of the board of directors of the American Federation of Polish Jews; Assistant District Attorney Samuel Y. Gitlin; Assistant District Attorney Louis Ernst; Benjamin H. Schor, attorney for thousands of tenants, without fee; Arthur Dunaif, deputy commissioner of markets; and Abe Stark, prominent merchant.

Jack Gralla has set up a free legal bureau not only to help the tenants of his district but also to assist all persons in his district who cannot afford legal advice, regardless of race, color, creed, or political persuasion.

He has the warm friendship and admiration of the great mayor of New York City, the Honorable William O'Dwyer, and the beloved borough president of Brooklyn, the Honorable John Cashmore.

Jacob Gralla is a member of and active supporter of every charitable and civic movement in his community, including the Jewish Federation of Philanthropies, United Jewish Appeal, Boy Scouts, Red Cross, Infantile Paralysis Fund, Cancer Fund, Beth El Hospital, Brownsville Boys' Club, Conqueror Lodge, Knights of Pythias, and numerous other worthwhile endeavors. He has assisted organizations representing varying religious and racial groups without exception or favor. His own clubhouse is used as a meeting place for the Sea Scouts and other youth organizations in the battle against juvenile delinquency.

It is therefore just and proper that I should applaud this man's worth and urge that he be continued in office as Democratic leader of the twenty-third assembly district, Kings County. With all the fervor at my command I ask the enrolled and enlightened Democrats of my district to vote for him on primary day, Tuesday, April 6, 1948.

An International Conference a Snare and a Delusion

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. REED of New York. Mr. Speaker, the propaganda machine has been operating overtime to explain the cause of the break-down of the International Conference at London. Why should it evoke any surprise? Even Mr. Walter Lippmann, in the New York Herald Tribune of December 16, 1947, commenting on the set-up and its weakness, had this to say:

> Thus, the Council of Foreign Ministers, which had been a subordinate body, became, as Mr. Byrnes puts it, charged with the responsibility of preparing peace treaties. It has never been equal to the responsibility. For ministers are only ministers, bound by their instructions, uncertain of their tenure, unsure of their authority, and representing in practice not their governments but a department of their governments.
>
> To make matters worse, the Council has had to operate in full public view with every suggestion, remark, and inter-nation broadcast magnified immediately. No diplomat in history could have succeeded under these conditions. As it happened, none of the members of the Council—certainly none of the westerners—had had any previous diplomatic experience. Yet the making of this peace was as difficult a task as diplomats ever had to engage in.

I say that when the United Nations Organization was created it was doomed to failure. It served the purpose of its authors which was to furnish a forum for them to strut and to speak to a world audience. The character of the tirades emanating from the United Nations forum to the world has created more deep-seated hatred and distrust among nations than did the recent World War. The people of the United States are now hated by the people of the nations to which our billions of dollars have been sent.

The present New Deal administration, however, is moving heaven and earth to create in the public mind a war psychology to divert public attention from the major domestic problems, some of which are oppressive taxation and the high cost of living caused by inflation, from which the American people are acutely

suffering. Emergencies have been created, fear has been aroused, wars and rumors of wars are bellowed over the air night and day by the New Deal administration to justify wild and reckless expenditures here and abroad.

When, prior to World War I, has a nation fought a major war and then paid reparations to rehabilitate the defeated enemy? We did that following World War I, and as a consequence had to fight the same enemy again a quarter of a century later. This may be a pleasant diversion for the military and for those groups which profit by war, but for those who pay the cost in lives and in treasure, the result is a national tragedy.

The London Conference which has so completely failed is typical of all conferences used to divert attention from the failures of our administration on the home front. Unfortunately such conferences breed hate and distrust among countries and often make dangerous commitments so far as our experience with international conferences has been.

I recall what happened after World War I. Here is what Frank H. Simonds, an able observer and careful student of international affairs, has to say of these smoke-screen conferences and their unhappy results:

The futility of international conferences has long been recognized, except by those who use them to divert attention from failures in the economic field at home.

The explanation is invariably the same. For presidents and prime ministers alike, there is always a double temptation in the matter of an international conference. Such meetings distract domestic attention from troubles at home. Similarly, they insure a temporary rally of public opinion to the support of an administration actively engaged in foreign negotiations.

Even the most unpopular of governments can calculate upon a truce in parochial political abuse for the duration of a foreign assembly, since it can always appeal for unity at home to promote success abroad. But that appeal is obviously foolish, in itself, because all other governments are making it simultaneously.

There is always, too, the much subtler temptation inherent in the opportunity provided by an international conference for a public man to address a world audience, to play a conspicuous role upon a larger stage, to appear, if only for a brief moment, as the spokesman of a world seeking peace.

Thus international conferences have ended by creating an appetite for publicity, which no postwar statesman * * * has been able completely to resist. Finally, public men always hope that, even if their conferences fail, they may still be praised for their effort, while the blame can be shifted to the representatives of another nation.

Yet it requires no profound examination of the conferences since 1919 to indicate how incalculable has been the harm resulting from the disclosure of international rivalries at a time when the whole world was suffering both materially and psychologically from economic depression and political dispute. Conferences rashly summoned have led only to the exacerbation of national passions and international resentments. This fact explains the Geneva axiom that one disarmament conference is more disastrous for world peace than three battles in actual war. The same thought was disclosed in the prayer of a London clergyman after the Naval Conference: "Give to us peace on our time, O Lord, peace without conference."

Nor is any detail of contemporary conferences more striking than the unfailing attempts of statesmen to conceal from their publics the truth concerning a meeting actually in progress. Their prestige being engaged, because they have prepared these publics for achievement, they are condemned to sustain the illusion of progress, to continue to hold out the promise of success and, in the end, in the face of failure always inevitable, to claim a triumph which is promptly disclosed to have been lacking. Thus that secrecy and inveracity, which were the worst features of an old-fashioned diplomacy, have been adopted and even exaggerated by the new.

There is always, therefore, an element of basic untruth about international conferences. Publics perceive this promptly and have the uneasy feeling of being deceived by their own governments, as they are invariably suspicious of the superior skill of the representatives of other nations. Thus, as a consequence of successive failures they became cynical as to the possibility of an international understanding. As a means of attaining peace, accordingly, conferences have proved no more successful than were the methods of old-fashioned diplomacy in preventing war. And this failure results from the fact that they have been employed almost exclusively to help the political fortunes of administrations on the home front or to promote purely national policies abroad.

The Margarine Tax

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. BROOKS. Mr. Speaker, one of my friends has forwarded me several well-written editorials appearing in different issues of the Shreveport Times, a metropolitan newspaper published in the city of Shreveport, La. The editor of this paper appears to have made a careful study of the equiti underlying the excise tax on oleomargarine. I think all of our Members will be interested in these editorials, and I reproduce them for careful consideration. In these times of extremely high food prices, it is difficult indeed to justify heavy excise taxes on any food products. They follow:

[From the Shreveport Times of December 10, 1947]

REPEAL THE MARGARINE TAX

Some time ago the Times called attention to the fact that newspapers in various parts of the Nation now are taking up the fight for repeal of the Federal tax on margarine—a tax put through Congress by the butter lobby as a means of both protecting high butter prices and stifling competition. Originally margarine was produced chiefly in the South, but now many of the big dairy States also are big margarine producers—or would be if they were not strangled by discriminatory Federal taxation, and in some cases by similar State taxation also.

The Des Moines Register and the New York City Daily News, both nationally known newspapers published in big dairy States, have been demanding repeal of the Federal margarine tax for some time. Now the Washington Post seems to be of the same mind, as indicated in the cartoon from that newspaper reprinted on this page today. And the New York World Telegram, chief link in the Scripps-Howard chain, has this to say editorially under the heading, "One abuse that should end":

"We don't know what measures for controlling the cost of living will be proposed by President Truman or enacted by the special session of Congress.

"But we know one simple measure, long overdue, that woud help materially.

"Repeal of the Federal taxes on margarine. We recently urged repeal of the unjustified State tax on margarine.

"There is no respectable reason for these taxes. Their sole purpose is to protect the butter business—to make margarine cost consumers more than it should and to make its use needlessly inconvenient.

"Many bills to take them off have been introduced in recent sessions of Congress, but blocked by the influence of the butter lobby. The special session offers a grand opportunity to get rid of them."

With support of this type steadily increasing in other parts of the Nation, it should not be difficult for the southern congressional bloc to get action on the obviously needed repeal of the Federal margarine tax.

[From the Shreveport Times of December 11, 1947]

ANOTHER BLOW AT MARGARINE TAX

Senator FULBRIGHT, of Arkansas, in a statement released in Washington a few days ago, joined the fight to bring about repeal of the discriminatory 10 cents a pound Federal tax on colored margarine and the Commercial Appeal of Memphis has joined the fight by editorially calling for full support of Senator FULBRIGHT'S efforts by all southern interests, political or business. The Times, of course, already has made such an appeal, on several occasions, and repeats it now.

Senator FULBRIGHT pointed out in his statement that the first margarine tax (Federal) was imposed in 1886 and that the effect of it simply has been to stifle expansion of margarine production and to add to the cost of living troubles of those of low income brackets. Revenue for the Federal Government has been insignificant. He also brought out the important fact that while most margarine originally was made from fats, 47 percent now is made from cottonseed and 43 percent from soybeans, and soybeans, especially for oil, are grown in many parts of the Nation, not merely in the South. Consequently, removal of the tax would benefit farmers almost everywhere in the Nation, and not merely in one section. In fact, a vast majority of southern soybean production is for green fertilizer and not for bean production.

The Commercial Appeal endorsement of Senator FULBRIGHT'S efforts, in which this newspaper joins, says, in part:

"It has been years since the taxes on oleo owned even the semblance of excuse. In the current era of soaring prices, the imposition of these taxes means entirely unjustified and unnecessary hardship on people in the low income groups. Senator FULBRIGHT'S move is well timed as well as in the public interest.

"It should be understood, however, that Senator FULBRIGHT will need the active backing of those who agree with him in principle. The present state of affairs means economic handicaps for the South's producers that ought to be removed, and can be if the people of this section rally behind their leadership."

[From the Shreveport Times of January 9, 1948]

FACTS ON THE MARGARINE TAX

The Times several times recently has pointed to the need for congressional repeal of Federal taxes on margarine—and State taxes, too—and has emphasized that these taxes were discriminatory not only against the margarine industry but against the food consumers in the lower-income brackets.

The Federal taxes were imposed originally years ago at the behest of dairy interests which sought thus to strangle competition.

All efforts thus far to repeal the taxes have been blocked by the dairy lobby. Now, however, influential newspapers in such big dairy States as Iowa, New York, and Minnesota have taken up the cudgels in behalf of repeal, and if a powerful attack is made from all sectors Congress may act.

Because of these things, the Times believes that the following background data, prepared by Editorial Research Reports, a fact-finding organization in Washington, will be of especial interest in this area where margarine production could become a major industry:

With the retail price of butter a dollar a pound in many places, bills to repeal or reduce the existing Federal taxes on oleomargarine may get more attention in the 1948 session of Congress than in previous sessions. Five such bills were introduced in 1947. They were interred in the House and Senate Agricultural Committees.

As butter prices have risen, more and more margarine has been used. In 1939, only 13 percent as much margarine as butter was consumed in the United States. In 1947 (preliminary estimates) margarine consumption was 40 percent of butter consumption. From 1939 to 1947, the per capita domestic consumption of margarine doubled, that of butter fell by one-third. The retail price of margarine, uncolored, is apt to be less than one-half that of butter.

Thus threatened by margarine competition even under the present taxes on margarine, the dairy industry will fight harder than ever against repealing those taxes. As far back as 1941, the Dairy Record editorialized:

"The dairy industry must set as its goal the complete extermination of oleomargarine. It must never rest until the manufacture and sale of oleomargarine have been outlawed."

At first oleomargarine was called bull butter, because it was made from animal fats. In 1886 Congress passed the first Federal margarine tax (2 cents per pound on manufacturers) and imposed fees on manufacturers, wholesalers, and retailers. Margarine makers claimed that Congress was using its taxing powers to destroy their industry, but in 1897 the Supreme Court held that on its face the law was an act for levying taxes, and, therefore, its primary purpose must be assumed to be the raising of revenue.

In 1902 the Federal law was amended to distinguish between artificially colored margarine (tax, 10 cents per pound) and the uncolored product (tax, one-half cent per pound). White margarine was practically unknown at that time. Margarine makers then developed use of naturally yellow oils; cottonseed and coconut.

In 1931 the Federal law was amended again. Margarine containing yellow or yellow-red shades or tints of more than 1.6 degrees was taxed at the 10-cents-per-pound rate. Naturally yellow cottonseed and soybean oils, which together compose almost 90 percent of all margarine oils, today are bleached to escape that tax.

Butter producers assert that coloring of margarine at its point of origin must be restricted to prevent fraudulent substitution of an inferior product. Margarine makers retort that, fortified by 15,000 units of vitamin A, margarine is an equally nutritious food product, and that butter itself is artificially colored for some 8 months a year, although not so labeled. Federal taxes on margarine are:

	Colored	Uncolored
Excise taxes (per pound)	10 cents	¼ cent.
Manufacturers' license fees (per year).	$600	$600.
Wholesalers' license fees (per year).	$480	$200.
Retailers' license fees (per year).	$48	$6.

Even if the Federal taxes should be modified or repealed, not all housewives would be relieved from the bother of adding yellow dye to white margarine; half the States prohibit the sale of colored margarine, and some others levy high taxes of their own on the sale or use of it. Thus, State as well as Federal action is needed.

Aspects of the Marshall Plan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks and include therein a series of five articles on aspects of the Marshall plan, by E. F. Tompkins, editor of the New York Journal and American, I wish to present the third of the series entitled "Controls and Supercontrols." The article follows:

ASPECTS OF THE MARSHALL PLAN

(By E. F. Tompkins)

III. CONTROLS AND SUPERCONTROLS

Informed predictions have been made that one effect of the Marshal plan for Federal grants and loans to European governments will be the permanent emplacement of state trading in international commerce.

It would be idle for anyone to dispute the forecast.

State trading is a system by which a government conducts, or rigidly controls, the export and import business of its country. Soviet Russia is a complete example of the system.

In the postwar nationalization of industries by the Socialist countries—including the free world cotton market at Liverpool, taken over by the British Labor Government—and in their manipulations of export and import quotas and licenses, the trend toward state trading in western Europe has been ominously evident.

By preventing or limiting international transactions among individuals, the system is in every way inimical to free enterprise and tends to depress standards of living.

Since the Socialist governments have announced that they will not modify or abandon their state socialism in order to participate in the Marshall plan, it necessarily follows that Marshall plan grants or loans will subsidize state trading—in competition with American trade.

Moreover, the Marshall plan will contribute greatly to a socialistic international super-government within which state trading will operate—with politicians instead of merchants making or dominating the deals.

The structure for such a super-government already exists in the United Nations, and has been written into the Marshall plan by the report of the Committee of European Economic Co-Operation.

The European committee pledges its 16 governments to make their currencies convertible in international commerce under the International Monetary Fund, and to adjust their commerce to the decisions of the International Trade Organization.

The joker with regard to money is that the socialist countries are all controlled-currency countries, and that the International Monetary Fund is an elaborate device, financed mainly by the United States, for international control of these controlled currencies.

Under this arrangement, currencies will have no stable or stabilizing values, as they had under the gold standard.

The values are to be fixed from time to time by decrees, making all the currencies mere fiat money.

And fiat money—or controlled currency—is necessary, in Socialist theory, for economic planning—in this country, the New Deal's deficit financing, which was the basic cause of our inflation, became possible only when the domestic gold standard was discarded.

Its use in international state trading against free enterprise is exemplified by the decision of the French Cabinet, on December 31 last, to create an export franc with a fiat exchange rate of 240 to 280 to the dollar.

"The new franc," said a copyrighted dispatch to the New York Herald Tribune, "will enable French exporters to compete more favorably with other exporters in foreign markets, especially the United States."

That kind of export trade is subsidized trade—state trading—in competition with American producers for the American market.

The International Trade Organization has been represented as a plan to eliminate such practices.

But here we lose again; for, under its Reciprocal Trade Agreements Act, and within the International Trade Organization, the New Deal has compacted virtually to abrogate the last few remaining fragments of our historic protective tariff.

It would seem apparent that if the United States is to foster state trading abroad through the Marshall plan, and at the same time open the home market to foreign producers, we will find ourselves compelled to adopt state trading; and indeed a long start has been made in that direction by import-export controls, plus huge Government purchases of meat and wheat for distribution overseas, with severe inflationary impacts upon our own costs of living.

Moreover, as a part of the Marshall plan the New Deal proposes to surrender to foreign flags 500 of our cargo-carrying vessels; and this at a time when the European maritime nations—through their energetic shipbuilding and previous American acquisitions will soon have merchant fleets exceeding their prewar totals.

The National Federation of American shipping has warned that the impending transfer of our 500 ships will deprive 25,000 American seamen of jobs; will again scuttle our merchant marine; will constrict our overseas traffic to the exactions of alien interests; and will deprive our armed forces of the indispensable auxiliaries and transports which we must have in event of a war emergency in the uncertain next 5 years.

All these are disturbing facts for Congress to ponder.

The hidden costs of the Marshall plan may include not only a demoralizing impairment of the American system of free enterprise, but also a wanton sacrifice of our national security.

The Kearney Bill—H. R. 246

EXTENSION OF REMARKS
OF
HON. HAROLD F. YOUNGBLOOD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. YOUNGBLOOD. Mr. Speaker, in the CONGRESSIONAL RECORD of yesterday, Tuesday, February 3, 1948, I made an explanation of my inability to vote on a bill which had just passed the House. In my comments of yesterday, I said that due to unfortunate circumstances I was not present to vote on the bill just

passed. At least that is what the CONGRESSIONAL RECORD shows that I said. However, I had reference to H. R. 246—the Kearney bill—a bill to raise the ceiling of wages and allowances payable to veterans undergoing training on the job.

I should like to have the RECORD definitely show that had I been present I would have voted in favor of the passage of this bill.

Our Foreign Policy Has Been and Is a Failure

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. HOFFMAN. Mr. Speaker, from the Chicago Tribune of February 3, 1948, and, permit me to call attention to the fact that the Tribune is a Republican paper, comes some good advice. It reads as follows:

WHAT'S THE REPUBLICAN PARTY FOR?

During its wanderings in the wilderness the Republican Party has been kept alive by its control of various State and local offices. Even in its darkest hour, the party had a few Governors, and now it has the majority of them. It has controlled legislatures, and it has elected Congressmen and Senators. Above all, it has controlled the courthouses of a vast number of counties in every State outside the solid South. A year ago the Republicans took control of both Houses of Congress after 16 years of Democratic domination.

The Republican Party was not formed to elect sheriffs. It does not fulfill its function unless it offers the Nation leadership on national questions. It cannot hope for national success through its control of local offices, valuable as they may be to political organization. The congressional victory in 1946 was won on national issues of domestic and foreign policy.

In the national election of 1948 the Republicans if they are to win must offer the voters an alternative to the policies of the incumbent Executive. Republican candidates have demonstrated this twice in defeat. Wendell Willkie and Governor Dewey, in successive campaigns, embraced the New Deal, and particularly its foreign policy. All they could offer was a promise to run it better. Not unnaturally, the voters picked the original New Dealer.

If they repeat these tactics this year, the Republicans may be able to go on electing sheriffs for a few years more. They cannot, however, endure as a national party. There will be no reason why they should.

After the Mexican War, the Democratic Party became the party of the extension of slavery. The Whigs tried to compromise on that issue, for fear of losing their southern members. They continued to elect governors and sheriffs, but they became impotent nationally. Lincoln had been a Whig. He had former Whigs in his Cabinet, and in Congress, but they were elected as Republicans. The Whig Party died because it tried to remain half slave and half free. The Republicans are courting the same fate.

The Republican Party cannot endure if it allows renegade Republicans to use it in support of the policy of human slavery in Europe and Asia. It cannot endure if it allows renegade Republicans to range it on the side of the tyranny of rationing and Government controls. It cannot endure if it tolerates "me-to" Republicans such as Dewey and Stassen, who would tax the American people into ruin to enrich further the billionaires who are trying to buy the Republican convention.

The Republican Party can win, and endure as the political mainstay of the Nation, if it says that the Truman-Marshall foreign policy is the bungled folly that the record proves it to be; if it denounces the economic controls and the vote buying by which the New Deal bureaucrats keep themselves in power; if it pledges itself to remove the crushing load of Truman taxes, and to dismiss the wasters of those taxes, military as well as civilian; if it tells the world that American foreign policy will be on the side of freedom and honest workers everywhere, and against slavers and socialist beggars everywhere.

It can win, if it says and does these things, and then chooses a candidate whose honesty is a pledge that he will do what he promises.

Effective Oregon Advertising

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include an editorial of recent date from the Capital Journal, of Salem, Oreg. I call particular attention to the tribute paid therein to Fred H. Kiser who was for many years the leading photographer of our beautiful Pacific Northwest scenery. This tribute is particularly interesting in view of the fact that the Board of Geographic Names has before it for consideration the renaming of one of our mountain glaciers after him.

The editorial follows:

EFFECTIVE OREGON ADVERTISING

The State highway commission, through its travel information department, has prepared a collection of the colored photograph advertisements of Oregon's scenic marvels and recreational areas it has been publishing the past year in the Saturday Evening Post, the National Geographic magazine, and other periodicals of national circulation along with a report presenting statistics revealing the steady increase of traveling interest in the great Northwest country.

These and other advertisements in newspapers and periodicals, supplemented with pamphlets printed in color, such as "Oregon, cool, green vacation land," "Oregon beach resorts and scenery," Oregon State parks and wilderness and mountain attractions, industrial lures, etc., along with highway and tourist maps, reveal what a good job the highway travel information bureau is doing. The illustrations are superb, the informative reading matter condensed and to the point, and as a whole the advertising campaign is the best ever launched in the Northwest.

Many years ago, when the Portland Ad Club was organized, Fred H. Kiser, then the leading outdoor photographer, called attention to Oregon's neglected scenic attractions, remarking:

"Some of us will see the day when the Oregon country will be referred to as the hub of attraction for tourists. This because of its varied and fascinating scenery and its glorious summer climate. Colored reproductions of our natural resources, in magazines and newspapers, will be largely responsible for turning thousands upon thousands of travelers in our direction each summer until the Northwest in general and Oregon in particular becomes known as the most desirable summer playground in the world."

Color photography had not then been invented but Kiser made up by artistic hand painting with oil or water colors the scenery photographed. His colored pictures of Crater Lake were largely responsible for its development as a national park and are still among the best ever made.

Kiser has lived to see his prediction come true after many years. Oregon was then still young and wild and little of its natural beauty had been discovered. There was then little interest in conservation work of any kind and when very little, if any, thought was given to Ruskin's motto: "Color is God's greatest gift to man."

Selling Forestry to the Farmer

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. RAINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I attach herewith the following article which appeared in the January issue of American Forests entitled "Selling Forestry to the Farmer," which I think would be of interest to the Members of Congress:

SELLING FORESTRY TO THE FARMER

(By Chapin Collins)

Down in Alabama something is going on, forest-wise, that may turn out the answers to a lot of questions, which might be summarized in this manner: Are farmers and other landowners interested in good woods management? If not, why not? If they are, why don't they do more about it?

Back of this activity is the Alabama Forestry Council. And the project—"More Trees for Alabama" it is called—is attracting attention, not only on its own account, but because it provides a pattern for similar activities in other States.

The small woodland is now recognized as a primary problem in American forestry. This is so because small woodlands, in total, make up the bulk of all commercial forest lands. This is true, also, because the average small owner is doing less to improve his woodlands, to manage them for continuous production, than any other class of owner.

This being the case, the first query to make is, "Why?" Other types of forest owners have been doing an increasingly better job, and the reason why they have is because they find forest management pays.

Many tracts, booklets, pamphlets, and untold reams of mimeographed bulletins have been produced to tell the farmer and other small owners what they should do about their woodland. Because little has happened, some have concluded that the educational process has failed. Actually, it seems more reasonable to conclude that the methods or types of education have failed.

Take the farmer. His primary business is raising yearly crops from plowed fields or pastures. Usually, he has a woodland, but his energies and interests have been centered on other things. Behind him has been a tradition that the forest was an obstacle, something to be cleared away. And in many parts of the country this idea isn't merely

tradition, but a very present fact of today. His woods, then, have been incidental, whereas, with the large industrial operator, the woods have been paramount.

It would seem that, taking all factors into consideration, many attempts to reach the small owner have omitted an all-important first step—arouse his interest, tell him why and then, how.

After all, this is the basic problem of advertising and merchandising, and the problem of selling good forest practices is no different. You have to make a customer want to buy your product; you never try to cram it down an unwilling throat.

That, at least, has been the reasoning of the Alabama Forestry Council in developing the "More Trees for Alabama" project. And members of the council know the problem if anyone does. Represented in it are the conservation department of the State of Alabama, the Agricultural Extension Service, the Soil Conservation Service, the United States Forest Service, the Tennessee Valley Authority, the State department of education, the State agricultural experiment station, the Alabama State Chamber of Commerce, as well as farmers, landowners, wood-using industries, and others. The American Forest Products Industries, sponsors of the "Trees for America" project, as well as the "tree farm" and "keep green" movements, is sharing in this project.

As these organizations have approved it, the project seeks, first, to ask and answer the question: "Why should I bother with my woods?" Then, and only then, it seeks to answer, 'How?"

So, "More trees for Alabama" falls into two natural divisions. The first phase is promotion—the second, instruction and demonstration.

While the opening guns in this operation will not be fired until January, there first came a long period of preparation, as essential in a program like this as it is in a military campaign.

It was last July that State Forester J. M. Stauffer assigned W. R. Sizemore to direct this project. Bill Sizemore took counsel with his advisory committee, which consists of Mr. Stauffer, John H. Ward (manager of the Alabama State chamber), and Paul A. Swarthout, forest supervisor of the United States Forest Service, and the work began.

The biggest job was one of organization, but when it was done it reached every county in the State. More than 1,000 persons are serving on 67 county committees. These are committees of the public, not restricted to foresters or forest industries. One county chairman is president of a large textile mill, another the head of a coal company, another a county superintendent of education, another a farmer. Several chairmen are judges. There is a bank president, a county sheriff, a number of merchants.

Then came organization of cooperating agencies, particularly with the view of obtaining enough foresters to help with the second phase of the project. So far, 73 foresters have agreed to serve. Twenty-five have been provided by State agencies, 13 by Federal agencies, 17 by the pulp and paper industry, 10 by the lumber industry, and 8 by other industries.

Nearly a thousand Alabama veterans are to receive special training in basic forestry. They are landowners themselves and are expected to become focal points in their many communities for spreading the gospel of better woodland management.

The first short course in woodland management was held in the Little River State Forest from December 7 to 13. The vocational agriculture division of the State department of education, the Alabama agricultural extension service, and forest industries cooperated with the "more trees for Alabama" organization in arranging the week's program. It covered tree and log scaling, fire-control methods, planting, selective cutting practices, timber sales, and other subjects of practical interest to owners of farm woods.

The first on-the-land demonstrations will start in January. Locations for these forest shows are being selected so that ultimately one will be held within 10 miles of the home of every farmer in the State. They will feature selective marking and volume estimation.

Even before the campaign started, more than 125 spontaneous editorials, commenting on the project, appeared in Alabama newspapers. A mass meeting of interested farmers was held in one county. In Choctaw County one man issued a public statement to the effect that he was making more money from his farm woods than from 17 oil wells.

The project itself is starting with a paid advertising program in 140 Alabama newspapers, chiefly those reaching the rural field. These advertisements feature a specially prepared booklet, Cash Crops From Alabama Woodlands, of which 175,000 copies will be distributed by county agents, forest rangers, and others. A 2-minute movie short, also featuring this booklet, is running in most of the theaters of the State. Several hundred prints of a new film strip, with an illustrated manual, are being exhibited to granges, schools, and other organizations.

The first approach to landowners is best expressed in the booklet itself, which says:

"This book has suggested some ways of adding to your income by taking better care of your woods. It has not told the whole story, by any means. Its chief purpose is not to tell how, but to point out why.

"Woods management is no road to quick riches. But, in return for reasonable work and reasonable skill, it pays well. Your woodland is part of your farm. Don't forget it. It should be a profitable part of your farm. There are ways to find out how your own woods can make more money. Help is available, both by way of advice and of actual service. They are provided by your State and Federal Governments and by private industry."

The project will not be perfect, but it has the merit of being a sincere, noncontroversial approach to the woodland owner who is urged to do something for his own benefit.

While it is too early to chronicle results—and the ultimate results may be felt for years to come—this much can be said: Here is an instance in which the pulp and paper industry, the lumber and other forest industries, virtually every State and Federal agency concerned with trees, and many others, too, have joined hands to do a job. Who can doubt that the job will be done?

The Volunteer Fireman

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith an editorial which appeared in the Alton (Ill.) Evening Telegraph on January 30, 1948:

THE VOLUNTEER FIREMAN

A volunteer fire department gets its praise the hard way.

A community's volunteers, pledged to safeguard the city in time of fire, seldom come in for any recognition for just having had a meeting. The boys have to go into action before anyone acts as though he knew the firemen are alive.

There are occasional remarks by nonmembers about how nice it must be to run off "upstate somewhere" to a firemen's convention, and there's usually a party-crasher or two on hand to criticize when the firemen throw one of their infrequent "feeds."

But even these outsiders are ready with their praise as they watch the firemen battle a blaze, in subzero or midsummer weather. Called from their beds, or off their jobs, the volunteers are always ready to respond to the call for aid. Theirs is a humanitarian endeavor.

There is seldom any worth-while compensation involved. The volunteer department chief's job is more or less an honorary position, though there is some pay for his added duties.

Lumbermen, plumber, efinery worker, florist, and grocer, all find a common purpose and understanding in banding together to protect and rescue their community from fire.

The volunteer fireman is an unappreciated man—until you've had your home saved by his efforts.

Water for California

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. POULSON. Mr. Speaker, in asking permission to insert this editorial taken from the Los Angeles Daily News of January 27, 1948, I want to call attention to one significant statement made therein. It refers to what will be the determining factors in the adjudication of water rights for the future in the West.

We have before this Congress bills introduced by the California and Nevada Senators as well as their Representatives requesting the Attorney General to start legal action before the Supreme Court to effectuate final determination of the water rights for the Lower Colorado River Basin. Even on the assumption of our belief that our riparian rights are more authentic than those of Arizona, we have in addition this new concept as very ably brought out in this editorial. It follows:

WATER FOR CALIFORNIA

This State is going through one of its driest periods. If there is any truth in the cycle theory (and there seems to be) we may be in for another year of insufficient rainfall.

Mark Twain once said, in effect, that the weather is something everyone talks about but no one does anything about. There are a few things we can do and which our State and Federal Governments are hereby urged to do.

The first and most obvious duty is to settle, once and for all, what the policy is to be with reference to the service of water by the United States Bureau of Reclamation in the Central Valley and other regions. This is not the time and place to go into this highly controversial question on its merits. It is time to insist, however, that our State and Federal Government, through their proper agencies, confer and establish for all times and for all to know on what basis California's thirsty valleys are to get water.

The next step suggested is that we proceed to implement to the fullest extent our flood-control policies as translated into law and, again, in full consultation and cooperation with the United States Army engineers and such other agencies as may be authorized to deal with it.

Flood control means more than taking care of surplus waters during flood periods, important as that is. It means impounding surplus waters in reservoirs for future use. Los Angeles must recognize that its water supply from the Owens Valley and from the Colorado River is limited and it should utilize every other available source of supply. That is particularly true when the State and the Government both recognize our need and evince willingness to aid us to the fullest extent.

California must likewise move expeditiously toward a settlement of its Colorado River water controversy with Arizona. If this means suits in the United States courts then we should prepare and file those suits at the earliest possible dates. This should be done in the most friendly possible fashion in order that our normal relationships with our neighboring State may not be impaired.

Water supply in the West is more than a matter of law and engineering. It is a matter of major public policy, which involves both and determines the economic existence of a vast and growing area. Riparian rights in years gone by, in times and places where water was abundant and it was more of an academic matter than anything else, may have involved nice questions of property right face, precedent, and numerous other elements.

Today, in the semi-arid West, two factors determine water rights. One is the population and its needs and the other is how much diligence has been used to put water to beneficial use for that population. It is not what people would like to do with water or what they say they will do with it, but their needs and what they are actually doing to meet those needs that form the basic considerations as far as courts are concerned.

The city of Los Angeles alone has a greater population than the entire State of Arizona probably ever will have. That is half the battle. The other half is to assert that right by action.

There are two other items of less importance but which properly influence the whole situation. One is the need of readjusting our water treaty with Mexico in congressional action and with the aid of the State Department. This treaty should constantly be an object of the closest scrutiny.

The other item is attention to any possible changes in crop cultures that may be indicated by weather cycles. The State, fortunately, is aware of this and disposed to be helpful.

L. E. C.

The Late Orville Wright

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Hampshire Morning Union of February 2, 1948, entitled "Orville Wright."

ORVILLE WRIGHT

Orville Wright, codeveloper of sustained flight by heavier-than-air "flying machines," outlived Wilbur by a generation. He died of typhoid fever in 1912. Only 9 years before he and his older brother had made their first feeble flights at Kitty Hawk, N. C., where four sustained hops aloft were made, the longest of 59 seconds' duration and a 30-mile-an-hour speed.

But progress—sensational in that period of development—came quickly. The first military plane in the world, built by the Wrights for the United States Government, maintained in 1908 a continuous flight of 1 hour, and not only that, carried a passenger on a second hop. The performance, according to contemporary news accounts, "made a profound impression."

The Wrights did not foresee the use of the airplane in war. Wilbur never did realize its potentialities, but Orville saw its evolution as a war-hawk in two world conflicts. In the first, the airplane was merely trying its wings; in the second, it had found them; and the Allied victory is due in great degree to our air supremacy. Orville also was to know of what the future holds for aeronautics as a force of destruction in war—and as a contribution to progress in peace.

In 1943, in honor of the 40th anniversary of the first flight, President Roosevelt declared that "Orville and Wilbur Wright did not labor and toil to create an instrument of war. Knowing them as I do, their inspiration was not a destructive weapon."

That is so, but these are the most critical times in this Nation's history. We must maintain our military air strength, for air preparedness will either secure the peace or destroy our enemies. Then, again, as was Orville Wright's wish, the airplane will be one of man's most outstanding contributions to the progress of men.

Radio Networks Use Their Monopoly Power in Irresponsible Fashion

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, the judgment of the American people can be no better than the information available to them. Consequently there is nothing of greater importance than the necessity for getting full information to the people on vital issues. In a casual inquiry of the broadcasting industry in this connection I have made an alarming and almost terrifying discovery.

The four great radio networks of the Nation—NBC, ABC, Mutual, and Columbia—are reported to control about 95 percent of the night-time broadcasting power in America. This broadcasting power represents almost a practical monopoly of the most powerful avenue of information and propaganda known in the modern world.

Because of the propaganda power possessed by these networks, plus the fact that this power is a quasi monopoly, it becomes vital to our existence as a free nation that this power be used to present fairly both sides of every important issue.

The four networks on the basis of their own evidence have utterly failed to fulfill this responsibility on the so-called Marshall plan.

Without exception, the networks have given an overwhelming preponderance of radio time to the promoters of the Marshall plan. They seem not to have made even the attempt to preserve a semblance of a two-sided presentation. For eight long months since Marshall made his speech inaugurating this handout scheme, the radio networks have drenched the Nation with ballyhoo and propaganda favoring it.

A discussion of the irresponsible misuse of power is outlined in the February 2 front page article from the Chicago Tribune which I am including with these remarks.

The consequences of this failure and abuse of power by the radio network are impossible to calculate. It is my intention to report my findings to the chairman of the Interstate and Foreign Commerce Committee in the hope that his committee will investigate this situation promptly and move to deal constructively with this situation.

The article referred to follows:

RADIO DRIPS WITH ALIEN AID PLEAS—6-TO-1 BIAS BARED BY SURVEY

(By Willard Edwards)

WASHINGTON, February 1.—The four major radio networks of the Nation have saturated the air waves for 7 months with propaganda in support of the $17,000,000,000 European spending program, Representative SCHWABE (Republican, Missouri) declared in making public the results of a survey.

SCHWABE accused the radio chains of failing in their duty to furnish a "fair and equitable presentation of facts and arguments both for and against the Marshall plan."

The Missourian disclosed that he had received data from three networks in answer to letters requesting that they detail the amount of radio time given to speakers favoring and opposing the vast spending scheme. The fourth network, the National Broadcasting Co., wrote that it could not furnish the information at present.

SIX-TO-ONE RATIO

"The results were amazing," SCHWABE said. "Taking the networks' own figures, the ratio of radio arguments for the plan, compared with opposing views, since State Secretary Marshall first proposed it last June, has been six to one.

"All the networks claim that they furnish a balanced presentation on subjects of great public interest. The fact is that the people depending upon radio news reporters, commentators, and programs for information on the Marshall plan have been given a sadly distorted and one-sided picture."

SCHWABE said he began his inquiry after he noted the discrepancy between radio views on the Marshall plan and the sentiment of the people in his district. A poll of his constituents, in which 5,000 replies were received, showed three to one against the proposal, he said, and six to one against if it involved price controls and rationing.

ONSLAUGHT OF PROPAGANDA

He said he became convinced that the American public was being deceived through a nightly onslaught of radio propaganda which attempted to make it appear that opposition to European spending was practically voiceless.

SCHWABE addressed letters on January 12 to the heads of the Columbia Broadcasting System, the National Broadcasting Co., the Mutual Broadcasting System, and the American Broadcasting Co.

"The Marshall plan is a far-reaching issue," he wrote. "In my post, I conceive it to be of paramount importance that the American people fully understand this proposal.

"I recognize that much of the people's information about this plan comes to them

from radio news reporters and commentators. I would like to be informed on your procedures for balancing your presentations on this specific issue, together with data evidencing this balance."

ASKED TO GIVE DATA

"In replying, please state what methods and techniques your network has used to see that your listeners have received a fair and equitable presentation of facts and arguments both for and against the Marshall plan. Furnish data on the allocation of time since the plan was advanced last June."

Replies were submitted within 2 weeks by CBS, MBS, and ABC. Niles Trammel, president of NBC, after 9 days, replied that the information requested was "so voluminous and will require so much research that it is not possible to supply actual data very quickly."

"How a network can achieve a balanced presentation of information on a subject without regularly compiling such relevant data is a mystery to me," commented SCHWABE.

ONE HUNDRED SPEAKERS LISTED

The other three networks gave SCHWABE a listing of programs, forums, and debates affecting the Marshall plan. Approximately 145 speakers had been given radio time between July 1, 1947 and late January 1948, to discuss the Marshall plan. Of these, 120 had urged its adoption. President Truman, Secretary Marshall, and other Cabinet officers, and numerous representatives of organizations created to support the program, had appeared time and again on the air.

In contrast, less than 20 persons had been permitted to air their views on the networks in opposition to the plan. Senator TAFT, Republican, of Ohio, who has demanded a large reduction in foreign spending, was granted time on all three networks on separate occasions. Senator BROOKS, Republican, of Illinois, another opponent of unreserved expenditures, appeared on an ABC program in which the issue was debated by speakers of opposing views.

THOMAS LISTED AS OPPONENT

Some of those listed as opposed to the Marshall plan actually supported it. CBS listed Norman Thomas, Socialist Party leader, as an opponent given radio time. Thomas favors the plan because it will promote socialism in Europe and appeared on an ABC program with his speech labeled "Why I favor the Marshall plan."

"The conclusion is inescapable," SCHWABE commented, "that the American people have been permitted to hear only one side of the proposal during most of the time they are listening to the radio."

Communism in Europe, in America—Malignant There, Benign Here

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. HOFFMAN. Mr. Speaker, the President and his advisers tell us that, if we do not give his administration billions of dollars and millions of tons of supplies to aid him in fighting communism in Europe, we should prepare to fight a third world war, draft American youth for compulsory military training, conscript our young men for armed service abroad.

He and his advisers are telling us that, unless we submit to price control, rationing, and regimentation here at home, in short, surrender our constitutional form of government, give him the powers of a dictator, the Communists backed by Russia will sweep over Europe down to the Atlantic seaboard, roll across the Atlantic and, like a tidal wave, engulf and destroy us.

Summed up, the story is that communism is a malignant, incurable cancer, about to destroy our Nation.

But does he fight communism here at home in the Nation's Capital? Does he use the surgeon's knife to cut out and destroy the cancerous growth of communism as it exists in his own administration, in his own front and back yards here in Washington?

Here in Washington, members of local 471, UCRW, an affiliate of UPWA-CIO, employed in some 42 cafeterias serving Federal employees, went out on strike. The administration closed the cafeterias in the Labor Department and in the Supreme Court Building, thus aiding the strikers.

The employer refuses to bargain with the unions because the officers of both the local union and the parent international organization, having been charged with being Communists, the unions accused of being dominated by Communists, refuse to sign an affidavit that they are not members of the Communist Party, that they do not believe in and are not members of or do not support any organization which believes in and teaches the overthrow of the United States Government by force or by any illegal or unconstitutional methods.

No one contends that the employer in this case may not, if it wishes, bargain with Communists, with thieves, or with known criminals, nor does anyone contend that it can legally be forced to bargain with either.

Notwithstanding the fact that the Congress has by law provided an orderly, effective way of collective bargaining, the President, knowing that the Congress has provided an effective way to use collective bargaining; that it has provided a conciliation service designed to avoid strikes and lock-outs; knowing that the Congress, for the protection of our country, desires to freeze Communists out of the labor movement, nevertheless calls in Secretary of Labor Schwellenbach, who has no legal standing in the dispute, and requests him to call upon the employer to sit down and bargain with these gentlemen who have been charged with being Communists and who think so little of public opinion that they refuse under oath to deny that they are the enemies of our country. Some of them have been dodging the subpenas of a House subcommittee.

The people of this country have excused the President of the United States in a good many instances for doing many things, but, in my humble judgment, they'll never excuse him for calling upon the people's representatives to fight communism abroad to the extent that we may weaken our own ability to defend ourselves, while at the same time following a program which aids the Communists here in America.

Harry S. Truman is following a course in connection with this strike which, if he wants the respect and the confidence of the American people, he should at once abandon. He cannot expect loyal Americans to believe that he is sincere in his fight against communism in Europe while he coddles and encourages them in the Nation's Capital.

Russia's Secret Pacts

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol Courier of Wednesday, January 28:

RUSSIA'S SECRET PACTS

The secret German records, long suppressed by our Department of State and released a few days ago with a great fanfare of publicity, are fascinating to read—but they prove none of the case which the proponents of the Marshall plan seek to make against Russia.

They were given out as part of our cold war against the Russians, and were represented to the public as proving that Russia is treacherous, secretly hostile to the United States, greedy, and unreliable.

Moreover, their release was carefully timed to take the newspaper and reader attention away from the Hoover report, which was a document of monumental importance. They were used, not to encourage understanding abroad but to further confuse it at home.

What do these secret Nazi memoranda, pacts, and protocols, seized nearly 3 years ago and suppressed until recently, really prove?

Virtually nothing.

The broad facts of the matter are well known—they are familiar to every school child that reads his history books, perfectly well known to every American who reads the newspapers.

Back before the start of the Second World War, Hitler "bought" off Russia from her threatened anti-Nazi alliance with England by promising Russia half of helpless Poland. Stalin took the bribe, and broke his promises to England, France, and several other countries.

After the despicable bargain, Hitler attacked Russia, which promptly fled back to those she had destroyed, and they—principally with the munitions supplied by Uncle Sam—rescued Russia from the Nazis. Stalin thereupon demanded from his rescuers, the Allies (principally Churchill and Roosevelt) the very things which Hitler had been unwilling to give, and at Tehran and Yalta, by secret deals just as reprehensible as those covered by the recently released papers, he was granted all he asked, and probably much more than he ever expected. That was in line with the late President Roosevelt's "great experiment" of Russian appeasement, which now has so seriously backfired.

Naturally, every step of the negotiations between Germany and Russia which led to the rape of Poland was covered by memoranda, reports, private agreements, and the like.

But since it is a known fact that diplomats—even our own—rarely say just what

they mean, all of these records are in a sort of involved double talk with the significance all between the lines.

The secret papers reveal that the bargaining between Hitler and Stalin was carried on in the most fantastic spirit of duplicity, suspicion, fraud, and treachery.

As one commentator observed, the whole transaction was "a cynical marriage of convenience." Hitler himself later called it a hypocritical performance.

Stalin welshed on his part of the bargain before the ink was dry, and forced Hitler to add further lands to the bribe—most of Lithuania, which Hitler had planned to keep, and new territory in the southeast. Hitler himself later made it clear that he intended all the time to do what he eventually did—invade Russia.

Trying to prove now, on the strength of documents written in such an atmosphere, that any statement of either of the parties throws any light on their real purposes is absurd. For the State Department to pretend that these "secret" papers give any new information on foreign affairs is a piece of demagoguery just as offensive as were the propaganda machinations of Hitler and Stalin during the period in question—when the German envoy was able to write, as he did, that: "The (Russian) press is as though it had been transformed," and to comment on the ability of the Russian Government "in a masterly fashion to influence the attitude of the population."

How secret were these papers?

That is an interesting question. The whole attitude of the State Department has been one of pious indignation over a scandal recently come to its attention. But if that is true, and this information only lately come to the knowledge of our leaders, then it is the worst possible indictment of the capacity of our State Department.

As for the German-Russian treaty which partitioned Poland, the documents prove that Count Ciano knew all about the negotiations and the terms of the proposed agreement at least a week before it was signed. If he, not a party to the negotiations, could learn about it in Italy, why should it have been a secret from our own diplomatic staff?

As a matter of fact, the documents would do their greatest value if they could be used as a horrible example to the public of the very type of diplomacy which we ought most strenuously to avoid—but which unhappily we have been fumbling with disastrously since long before the Second World War.

That is secret diplomacy, condemned by patriotic Presidents from Washington's warning against entangling alliances down to President Wilson's demand for open covenants openly arrived at.

It would be most interesting to know how carefully the papers were edited and censored before being released, and how many similar documents are still being suppressed—why? Because they would tip the American people off, if released, to the extent to which our own State Department used the same type of duplicity and double dealing and misdirection in the days preceding Pearl Harbor.

There is a whole missing chapter of the reports made to Hitler by his observers during the days when our National Government was technically neutral—but pulling every wire to get us into the war. These, and the diplomatic papers circulated among the Axis Powers on these matters, would make most interesting reading now for the American people—who were hoodwinked while this was going on.

But the great significance of these papers lies not in their bearing on current problems so much as their bearing on the foreign policy of President Truman during the time when he had it in his power to have corrected the evils that now appear to force us directly toward a third world war.

That period was, roughly, from the time of President Roosevelt's death up to and shortly after the Potsdam agreement.

Assuming (for all its doubtfulness) the State Department's intimation that President Roosevelt never knew of the hostility toward this Nation which Russia expressed in the German-Russian documents, and that he died thinking Russia was "trustworthy" and appeasement a sound policy, these papers should have disillusioned President Truman at once.

They were seized the same month that President Roosevelt died. They were in American hands when the San Francisco conference was held, and they were in American possession during the Potsdam conference.

Yet at San Francisco the agents of President Truman ratified the horrible deals previously made at Yalta and froze the destructive "veto clause" into the United Nations program. And at Potsdam President Truman signed an agreement authorizing Russia to loot crushed Germany to the extent which has now paralyzed Europe; he authorized the reparations program which is now the great bone of contention between the United States and Russia; and he accepted the scheme for dividing Germany into zones that has proven advantageous only to Russia.

If these papers prove, as the State Department seems to expect the public to believe, that Russia is not a reliable partner in trying to work for peace in coming years—then why didn't they prove the same to President Truman in time for him to have done something about it before all the harm resulted?

Reflections on Gandhi—French Advice Ignored

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mrs. DOUGLAS. Mr. Speaker, under permission to revise and extend my remarks, I wish to include the following articles to be inserted in the Appendix of the CONGRESSIONAL RECORD:

[From the Washington Post of February 3, 1948]

TODAY AND TOMORROW

(By Walter Lippmann)

REFLECTIONS ON GANDHI

In the life and death af Mahatma Gandhi we have seen reenacted in our time the supreme drama of humanity. Gandhi was a political leader and he was a seer, and perhaps never before on so grand a scale has anyone sought to shape the course of events in the world as it is by the example of a spirit which was not of the world as it is.

Gandhi was, as St. Paul said, transformed in the renewing of his mind; he was not "conformed to this world." Yet he sought to govern turbulent masses of men who were still very much conformed to this world, and have not been transformed. He died by violence as he was staking his life in order to set the example of nonviolence.

Thus he posed again the perennial question of how the insight of the seers and saints is related to the work of legislators, rulers, and statesmen. That they are in conflict is only too plain, and yet it is impossible to admit, as Gandhi refused to admit, that the conflict can never be resolved. For it is necessary to govern mankind and it is necessary to transform men.

Perhaps we may say that the insight of the governors of men is, as it were, horizontal; they act in the present, with men as they are, with the knowledge they possess, with what they can now understand, with the mixture of their passions, and desires, and instincts. They must work with concrete and with the plainly and generally intelligible things.

The insight of the seers, on the contrary, is vertical; they deal, however wide their appeal, with each person potentially, as he might be transformed, renewed, and regenerated. And because they appeal to experience which men have not yet had, with things that are not at hand and are out of their immediate reach, with the invisible and the unattained, they speak and act, as Gandhi did, obscurely, appealing to the imagination by symbolic evocation and subtle example.

The ideals of human life which the seers teach—nonresistance, humility, and poverty and chastity—have never been and can never be the laws of a secular society. Chastity, consistently and habitually observed, would annihilate it. Poverty, if universally pursued, would plunge it into misery and disease. Humility and nonresistance, if they were the rule, would mean the triumph of predatory force.

Is it possible that the greatest seers and teachers did not know this, and that what they enjoined upon men was a kind of suicide and self-annihilation? Obviously not. Their wisdom was not naive, and it can be understood if we approach it not as rules of conduct but as an insight into the economy and the order and the quality of the passions.

At the summit of their wisdom what they teach is, I think, not how in the practical issues of daily life men in society can and should behave but to what ultimate values they should give their allegiance. Thus the injunction to render unto Caesar the things that are Caesar's is not a definite political principle which can be applied to define the relation of church and state. It is an injunction as to where men shall have their ultimate obligations, that in rendering to Caesar the things that are Caesar's, they should not give to Caesar their ultimate loyalty, but should reserve it.

In the same manner to have humility is to have, in the last reaches of conviction, a saving doubt. To embrace poverty is to be without possessiveness and a total attachment to things and to honors. To be nonresistant is to be at last noncompetitive.

What the seer points toward is best described in the language of St. Paul as the creation of the new man. "And that ye put on the new man, which after God is created in righteousness and true holiness." What is this new man? He is the man who has been renewed and is "no longer under a schoolmaster," whose passions have been altered, as Gandhi sought to alter the passions of his countrymen, so that they need no discipline from without because they have been transformed from within. Such regenerated men can, as Confucius said, follow what their hearts desire without transgressing what is right. They are "led of the spirit" in the Pauline language, and therefore they "are not under the law."

It is not for such men as them that governments are instituted and laws enacted and enforced. These are for the old Adam. It is for the aggressive, possessive, carnal appetites of the old Adam that there are punishments and rewards, and for his violence a superior force.

It is only for the regenerate man, whose passions have been transformed, that the discipline of the law and of power are no longer needed, nor any incentive or reward beyond the exquisite and exhilarating wholesomeness and unity and freedom of his own passions.

[From the Washington Post of February 3, 1948]

FIASCO IN GERMANY

(By Sumner Welles)

FRENCH ADVICE IGNORED

The lessons of the two world wars are unmistakable. The Germans must be taught that they cannot succeed in any new aggression. Germany cannot safely be permitted to be a politically centralized state. Until there is proof that the German people have experienced a moral conversion, Germany must be kept under international control so that her manpower and her resources cannot again be used for war. If all of this is accomplished, the major powers must cooperate in carrying out a joint policy.

The Allies disregarded these lessons in the 1920's. The Second World War was the inevitable result.

In our own policy toward Germany since 1945 these lessons have again been ignored.

It is true that Russia's effort to use Germans for her own ends has so far blocked any agreement upon a United Nations policy. But we have been occupying a zone of western Germany for 2½ years. We have had ample time to launch a program of reeducation that could teach the Germans what democratic liberties mean. We have had every opportunity to lay the foundations for a political and economic system which could help to build up a peaceful Europe. We have had the chance of showing the Germans that Britain, France, and the United States can maintain a common front.

What is our record?

Denazification in the American zone has been a tragic farce. After endless bungling, its control has now been handed over to the Germans themselves. What kind of denazification will we get when the average German still believes that nazism's one defect was that it lost the war?

The press, the universities, the schools, adult education, the moving pictures and the theater were the obvious means through which German mass reeducation could be carried on. It is in this field where we might have been expected to be most successful, that our failure has been the most abject. The surveys conducted by the American Military Government show that the Germans are even more totalitarian than they were 2 years ago.

The American occupation has stressed relief. It has done little to stimulate German self-help. Until the individual German realizes that it is by work and not by strikes that he will get food and clothing there will be no productive and self-supporting western Germany. But our cockeyed occupation policies have often made it impossible for many Germans to find the chance to obtain work and have impeded the distribution of German-produced food. The distinguishing features of our economic program are widespread corruption, the black market, and primitive barter.

The continuation of the concentration camps for displaced persons, and the frequent use by our military authorities of notorious collaborators in screening the inmates of these camps are a further blot upon our record. They are partly responsible for the continued strength of anti-Semitism in western Germany.

We have persistently ignored France in shaping our German policy. The French Government had no knowledge of our recent proposals for a new form of administration in western Germany until after these had been offered to a number of German political leaders at Frankfurt on January 6.

The French contend that if the militarists and nationalists are to be prevented from regimenting the German people in the future, any central German Government must be a federal agency of the several German states and must not be elected by the German people as a whole. They insist that the solution of the German problem can only be found through the integration of Germany within united Europe, and that this can never be accomplished if Germany is permitted once more to become a unified, superindustrialized, and highly centralized state.

The past 30 years have shown conclusively that the French are justified in this belief. Only if Germany becomes a federation, in which each state retains sufficient political and economic autonomy to enable it to cooperate with its non-German neighbors, can the German people be expected to become a peaceful and constructive force in the European body politic. Yet the proposals the United States offered the Germans at Frankfurt would tend to bring about precisely the contrary result.

It was announced in Washington last week that by July 1 our administration in Germany would be in civilian hands. This change should have been made 2 years ago.

The whole set-up in Germany should be transformed from top to bottom. The military should be an instrument to enforce policy and not the policy maker. Policy should not only be made in Washington rather than in Germany, but it should never be decided upon until after full consultation with France and with Germany's other western neighbors.

France has had her sons slaughtered and her lands devastated by the Germans three times within the past 80 years. Her survival today depends upon the adoption of a policy toward Germany that spells security. Her advice in 1919 was spurned, yet experience has shown she was right. Is it too much to expect of the administration in Washington that it recognize that the French are as good judges of what the policy toward Germany should be as we ourselves?

Postal Workers Deserve Increase in Pay

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. RAINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I attach herewith the following editorial which appeared in the Gadsden Times, Gadsden, Ala., entitled "Postal Workers Deserve Increase in Pay," which I commend to the attention of the Members of Congress:

POSTAL WORKERS DESERVE INCREASE IN PAY

None among the workers who have been caught in the squeeze between rising prices and fixed salaries have been more severely handicapped than those in the postal service.

During the current battle between climbing prices and pay adjustments the postal workers have been unable to get the attention from Congress that their cause merits. And it is only from Congress that they can get increased pay.

The clerks, carriers, and others in the postal service are members of unions, affiliated with the American Federation of Labor.

But these unions operate under restrictions that prevent them from the kind of bargaining and pressure that are available to other labor organizations.

The economic fate of the postal workers is in the hands of Congress and the people. Unless they get wider support from the public for their requested pay increases they may continue to be ignored in Washington.

Despite the handicaps, the postal workers continue to efficiently and faithfully discharge their duties. This service is a constant and vital national necessity. It requires well trained and loyal personnel.

The postman has a home to maintain, bills to meet, children to educate, and the many other financial responsibilities of modern life. All his expenses have skyrocketed.

But pay increases have been small and infrequent. While other workers went on strike or brought about wage raises through organized effort, the postman continued on his job.

It is time that the public reminded Congress that this loyal and efficient service should be rewarded with an urgently needed and deserved salary adjustment.

Absurd on Its Face

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. HOFFMAN. Mr. Speaker, section 3, of article II of the Constitution, provides that the President "shall from time to time give to the Congress information on the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient."

Each succeeding President of the United States has followed the constitutional directive, and on the convening of each session of Congress sent to it a message purporting to give his views on the state of the Union, carrying his suggestions as to needed legislation.

Complying with the constitutional provisions and following the long-established custom, the President, on Wednesday, January 7, personally delivered his message. Whether that message accurately described the state of the Union or recommended legislation that would be expedient is a matter of opinion. From a President of the United States one would naturally expect recommendations which would meet the test of sound judgment, logic, and consistency.

To illustrate what the Congress actually received from the President, permit a typical excerpt from his message. Said the President:

At least $50,000,000,000 should be invested by industry to improve and expand our productive facilities over the next few years. But this is only the beginning.

Then the President recommended:

A cost-of-living tax credit be extended to our people consisting of a credit of $40 to each individual taxpayer and an additional credit of $40 for each dependent. * * * It is estimated that such a tax credit would reduce the Federal revenue by $3,200,000,000.

Then he told us that to get back that loss of revenue, we should increase the taxes on corporation profits—which are now taxed 38 percent of their income, though we know money to improve and expand industry's productive facilities must come out of original investment or corporate profits.

Naturally, human nature being what it is, we are all for any program which

would save us $40 plus an additional $40 for each dependent. But is it good sense, is it logical, is it consistent to say in one breath that industry, and, of course, that means the larger corporations, which create jobs, should spend $50,000,000,000 to improve and expand its facilities, and at the same time ask it each year to pay an additional $3,200,000,000 in taxes?

To some it seems to be nonsensical to ask industry, over the next few years, to spend $50,000,000,000 in expanding its plants, and at the same time pay an additional tax of $3,200,000,000 when we know that corporations are now taxed 38 percent of their income. The President did not tell us where industry is to get the $50,000,000,000 if he takes it from it by additional taxes.

If we assume that corporate taxes continue for the next 3 years at the $17,000,000,000 level reached in 1947, the President's plan would take the entire net profit of all corporations after payment of taxes at the present rate for that period. How many people would put their money into corporations, into the building of plants, if they knew that for 3 years there was no possibility of getting a profit on their investments?

Nor is the President's proposed $40 tax reduction just what it seems, for he also recommended increasing the social-security tax by 1 percent. If a worker earned $3,000 per year and the social-security tax was increased as recommended by the President, there would be taken from him thirty additional dollars and $30 from $40 leaves $10, the actual tax reduction some would get.

I am afraid the President was talking through his hat and with the 1948 campaign in mind, rather than having his eyes on, his words directed toward, the state of the Union and the recommendation of sound, remedial legislation.

Palestine

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Daily Evening Item, Lynn, Mass., Monday, February 2, 1948:

ANOTHER JOB FOR UNCLE SAM

There have been two appeals in the last few days for the United Nations to set up an international police force that can stop the fighting in Palestine before it flares into major war. One came from Harold Stassen, in the course of a political speech. The other was made by Mrs. Golda Meyerson, of the Jewish Agency on her arrival at UN headquarters from Palestine.

It is a wonder that there have not been more appeals. It is a greater wonder that the UN has not done something long since to carry out its order of partition. For the organization stands to lose the prestige it gained in the Soviet-American agreement on Palestine by its inaction since then.

The UN was clearly warned of trouble ahead. On the very day that partition was voted representatives of the Arab states told the General Assembly that their governments would not abide by the decision. It was evident that opposition would take the form of concerted international action. And that is just what is happening.

The Jews have been guilty of some needlessly bloody reprisals in Palestine. The British have been guilty of a half-hearted effort to keep the peace. But it was the Arabs who started the fighting.

Some have said that new nations are born slowly and in pain. They point to our own long revolution, and to the bloodshed from which many other governments of today have emerged. But this does not mean that history must go on repeating itself. The UN was created to change the pattern of history, to put an end to wars, declared and undeclared, and to preserve peace.

Efforts have been made by the UN in India and Indonesia to stop the fighting there and settle disputes. They have had some success. But the trouble in Palestine—trouble born within the assembly chamber—is ignored.

Partition was unpopular with the Arabs and their supporters, and the Security Council knew it.

Yet the Security Council has not acted. The UN Commission on Palestine has not acted. The British Government refuses to cooperate with the UN decision. And the Arab states are assembling an invasion army to crush the embryo Jewish state which the decision decreed.

If the invasion is not halted or broken up by international action, unilateral action by a UN member will not be surprising. Britain obviously is neither willing nor able to take that action. And what other nation is near enough and strong enough to step in? None but Russia, of course.

Some people with an understandable suspicion of Soviet policy think that Russia's agreement on partition was made with just such an outcome in view. If a major invasion of Palestine should come about, the future of the Jewish state and its people would be seriously threatened.

It is not easy to predict where the Red Army would be sent and how long it would stay, once it was in Palestine. But the possibilities cannot bring much joy to Washington or to London. Evidently London is going to do nothing about it. So, for the sake of justice and self-interest, it looks as if it is up to Uncle Sam to break the silence and stir the Security Council to action.

England Does Not Intend To Give Up Its Rule Over Palestine!

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1948

Mr. KLEIN. Mr. Speaker, only a few Members remained last night to hear several of us who spoke about the present tense situation in Palestine and the defiance of the United Nations by the Arab states and by Great Britain.

In this morning's mail I received a poignant letter from the American-Hungarian Jewish Federation, a religious relief society which has done valiant work in aiding the tragic victims of Nazi aggression in Europe, and in aiding the migration of Jews to Palestine.

I am inserting the letter in the RECORD under consent because it expresses so clearly the fears entertained by the world Jewish community at the present time, and points up what was said here yesterday.

AMERICAN HUNGARIAN JEWISH FEDERATION,
New York, N. Y., February 3, 1948.
Hon. ARTHUR G. KLEIN,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: It is abundantly clear by now that England is determined to use all the tricks in its rich arsenal of imperialistic rule, in order to sabotage the establishment of a Jewish state in Palestine.

The refusal by the British to open up a port for large-scale Jewish immigration, their continuous disarming of the Jews, while conniving with the Arabs in their attacks, their refusal to allow the organizing and arming of a Jewish militia under the auspices of the United Nations, their unwillingness to admit the United Nations Palestine Commission into Palestine before May 1, etc., etc., could only mean one thing, namely: That England does not intend to give up its rule over Palestine and is ready to achieve this aim by drowning the Jewish population in a sea of blood. Unfortunately, Bevin's policy of sabotaging the creation of a Jewish state seems to have some strong supporters in influential government circles in our own capital. This probably explains why till now nothing has been done by the United States Government to stop the bloodshed in Palestine and to help carry out the decision of the Assembly of the United Nations. On the contrary, the clamping down of the embargo on arms to the Jews of Palestine strengthens and encourages the Arabs to go on with their attacks and helps England in its nefarious aims.

In the light of this alarming and dangerous situation, we appeal to you, dear Congressman, to do all in your power to urge our Government to live up to its obligations both to the United Nations and to its own citizens, by taking energetic steps through the Security Council, aimed at stopping the present Anglo-Arab conspiracy against the creation of a Jewish state. Arming the Haganah and organizing an international police force would be, to our mind, the first proper steps in that direction. A stern warning to the Arab States to stop their aggression is also long overdue.

In conclusion, we wish to express our shuddering at the thought that by our Government's disinterestedness and hands-off policy, new large-scale massacres of the Jews of Palestine are being prepared.

If during the war, certain democratic powers have resorted to the excuse of war expediency for their not interfering in Hitler's extermination of millions of Jews, then there is no war now and our Government's hands are not tied. It can and should act at once. England, which was saved from bankruptcy by the billions of dollars of our citizens and which is and will continue to be fed by us, can be made to fulfill its obligations to the United Nations, provided our Government wills it!

On the basis of your fine record and achievements till now, we feel that we can count on you to bring all your power and good offices to bear in defense of our great and noble cause at this crucial juncture.

Wishing you a great deal of luck and success in your humanitarian efforts, we are,

Yours with Torah and Zion greetings,

AMERICAN HUNGARIAN JEWISH FEDERATION,
Rabbi JACOB HOFFMAN,
Rabbi EMANUEL POLLAK,
Presidium.
M. WOBOLSKI,
Executive Secretary.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of a letter written by Mayor Rollin A. Newton of Massena, N. Y., to the editor of the New York Herald Tribune replying to the metropolitan newspaper's Sunday morning editorial of January 18, 1948, against the St. Lawrence seaway and power project. Mayor Newton has studied this project for years. His thinking is sound on this matter and I wholeheartedly agree with his arguments. I hope the Members of the House will read his letter carefully.

The text of the letter follows:

JANUARY 20, 1948.

EDITOR,
New York Herald Tribune,
New York City, N. Y.

DEAR SIR: I have been a reader of your paper for the past 20 years or more. I always figured you had a very liberal mind from your editorials, but after your comments on the St. Lawrence seaway project on Sunday I find that your liberality is concerned mostly with the city of New York.

We of the north country feel that we are entitled to a little consideration, knowing that the great city of New York has been given hundreds of millions of dollars in Federal funds spent on the port, on airports and on Federal buildings.

We feel we should not be penalized because New York City has been so shortsighted politically as to allow a large deficit from operation of its subways to color its political views, and because the city is in no financial position to develop its airports.

Your argument that the St. Lawrence seaway should be delayed is not very well taken. I am sure that you are liberal-minded enough to realize that America must wake up to the importance of conserving her natural resources.

We have helped finance two World Wars and have contributed a great deal of lumber, iron, and coal to help win these wars. Some competent authorities today doubt whether our natural resources will stand another world war.

I suppose that Mayor O'Dwyer would make the assumption that the seaway would take a lot of business away from the port of New York. I doubt if he can substantiate that argument as true

Your former mayor, the late F. H. LaGuardia, stated on a great many occasions that it would not affect the port of New York because of the fact that the seaway would be closed 4 to 4½ months each year.

At the present time the Great Lakes-St. Lawrence canals are carrying shipping equal to the load of the Panama and Suez Canals combined. I doubt very much that operation of the international section of the river from Ogdensburg to Montreal would materially increase the shipping. The only thing it might do is to facilitate that shipping. The 6-mile canal around the Long Sault rapids will have two locks, and the 2-mile canal, 5 miles above Waddington, to get around the control dam, will have one lock. These three locks will take the place of 25 or 30 now used in obsolete canals on the Canadian side.

One of the Congressmen that visited the site of the seaway in August was from one of the large coal-producing States. He told me at that time that the only thing John L. Lewis and the coal operators were agreed on was to defeat the seaway and power project. But he remarked that he thought it was time to conserve natural resources.

A necessary measure is to develop all hydroelectric power, not only in the State of New York, but in all areas where such development is needed. At the conclusion of World War II one of the first Russian moves was to rebuild the Dnieper Dam.

The development of power in the St. Lawrence, which is supplied by the Great Lakes, will produce a continuous supply of 2,200,000 horsepower. This power is greatly needed in this area, since the Federal Government built a $20,000,000 aluminum plant in Massena during the war. The plant was operated by electric power produced by coal in New York City. This power's cost, delivered to the Massena plant, was seven to seven and a half mills per kilowatt-hour.

The plant is now closed because there is no power cheap enough to operate it. Water power developed in Massena resulted in its growth from a population of 1,000 in 1901 to 15,000 today. The Aluminum Co. of America built a large plant up here. They have kept expanding, but the power was not sufficient for their needs, so they had to import some from Canada. The Federal Government has built hydroelectric plants in the South, Southwest, and on the Pacific Coast. In the last-mentioned area the cost is reported as 2 mills per kilowatt-hour.

As a result, the Aluminum Co. is building plants on the Pacific coast, which might otherwise have been built in the State of New York and added to the employment of local labor.

I wish to bring to your attention these facts to show the relative cost of producing energy from coal as compared with hydroelectric power.

Engineers have estimated that power could be developed here for about 1½ mills per kilowatt-hour.

A friend recently called to my attention the fact that the United States was one of the most wasteful nations in the world. I am not in a position to prove this, but it is about time that we gave some consideration to the matter.

The interests opposed to the seaway are those who have products to sell in competition. Their principal interest is the almighty dollar, regardless of the welfare of the American people.

R. A. NEWTON,
Mayor of Massena.

Power and the Rockwell Bill

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregon Daily Journal for January 28, 1948:

POWER AND THE ROCKWELL BILL

It will cost power users $1,000,000 more a year in increased rates if the Rockwell reclamation bill, as amended and passed by the House, finally passes, says Representative JACKSON of Washington. However accurate may be his estimate, some Members of the House, not to mention the United States Bureau of Reclamation and the Bonneville Power Administration, were very unhappy over last-minute revisions. No wonder.

The floor amendments, jammed through over vigorous protests, kicked the stuffing out of the compromise bill painstakingly worked out by Representative ROCKWELL, chairman of the Irrigation and Reclamation Subcommittee of the House Public Lands Committee.

This compromise measure, which had the hard-won approval of both the Bureau of Reclamation and the National Reclamation Association, would have cut interest rates on funds appropriated for power units from 3 to not more than 2½ percent, would have extended the time for repayment of costs from 50 to 7ℓ years, and would have settled the hot interest component controversy by providing that four-fifths of the interest on commercial power should be paid into the United States Treasury, rather than being utilized at the discretion of the Secretary of Interior to subsidize irrigation costs.

As amended and sent to the Senate, the bill would limit the repayment period for reclamation-project power-unit costs to 50 years and would require congressional approval of each and every reclamation project instead of permitting the Secretary of the Interior to proceed with self-liquidating reclamation projects which his engineering studies show are feasible—subject, of course, to congressional appropriations.

Reclamation Bureau and Bonneville Power Administration officials have already expressed their disapproval of these amendments. They see one favorable factor only, that is, a clause which would permit the Secretary of the Interior to allocate a portion of the costs of any multiple-purpose project to silt control, salinity control, recreation, and wildlife conservation. Otherwise, they fear the 50-year limit on repayment of power costs, without increasing costs to irrigators, will spell higher power rates.

This fear of higher power rates is shared by the Journal which questioned the original 1947 version of the Rockwell bill and urged the Bureau of Reclamation and the National Reclamation Association to get together on a compromise measure, before irreparable damage was done to western reclamation, power projects, and appropriations. It was shared by the National and the Oregon Granges which roundly criticized the reclamation association for supporting the original Rockwell bill.

It is doubly regrettable, therefore, that the compromise measure has been scuttled on the floor of the House. The Senate can still save it, however, and it is to be hoped that it will do so.

Veterans in College Training

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. MORSE. Mr. President, I ask to have published in the Appendix of the RECORD certain news releases, including a release on the living costs of veterans in college training, which have been prepared by the American Council on Education, released through the University of Minnesota. In introducing that material into the RECORD, I want to say that I am very happy that the House of Representatives in recent days has passed the two bills in regard to veterans' legislation for which I have fought so hard for many

months past, which bills were passed by the Senate last July. I want to commend, because I have been critical heretofore, Mr. President, and I happen to be one who can commend as well as criticize when commendation is deserved, I want to commend the Republican leadership of the House for, at long last, bringing the bills out in legislative form. I am sure that under the leadership of the Senator from Ohio, who is chairman of the Senate conference committee on one of those bills, we shall have no difficulty in reaching a reasonable and fair settlement with the House conferees on the job training and ceiling bill. I am very pleased to be able to call the attention of the veterans of the country at this time to the fact that the other bill, namely, the bill for subsistence allowance for veterans in college, is now where I have wanted it to be for a long while, at the White House, awaiting signature.

There being no objection, the releases were ordered to be printed in the RECORD, as follows:

LIVING COSTS OF VETERANS IN COLLEGE TRAINING

(This is the first of a series of articles describing the results of a survey of college veterans based on the responses received from interviews with a scientifically selected sample of veterans attending all types of colleges located throughout the country. The study was planned by a national committee appointed by the American Council on Education and was made possible by a grant of funds from the Disabled American Veterans. Dean E. G. Williamson, of the University of Minnesota, acted as chairman of the committee. Ralph J. Strom, formerly of the Veterans' Administration, was director of the project and conducted the survey.)

MINNEAPOLIS, January.—One of the important problems facing the present Congress is the matter of proposed increases in subsistence payments to veterans attending educational institutions under the GI bill of rights and the Rehabilitation Act.

Veterans all over the country have been requesting increases in the $65 monthly allotment for single students and the $90 per month for married veterans so that they may remain in school despite skyrocketing living costs.

A portion of a survey on veterans' education recently completed by the American Council on Education and financed by the Disabled American Veterans, was devoted to an investigation of the cost of living of a scientifically selected and representative cross section of veterans attending colleges and universities throughout continental United States.

To determine how much of a differential exists between the $65 and $90 monthly subsistence payments, and their actual living expenses, each veteran contacted in the Nation-wide poll was asked to make a careful estimate of his average total monthly expenses while attending school.

Results of the poll indicate that the average total monthly expenses of single veterans in college is $106.13, while the average for married veteran college students is $175.38. This means that single students spent $106.13 monthly but received only $65, a difference of $41.13. Married students spent $175.38 but received only $90 from the Veterans' Administration, a difference of $85.38.

Board and room costs of the large number of single veteran students who reported paying for their room and board in one lump sum were found to have an average of $55.19 monthly. However, in the case of single veterans who said they found it necessary to eat at places other than where they roomed the average cost of their meals alone was found to be $51.08 monthly. This amount, in addition to the average sum of $21.48 which veterans in this group pay for room rent brings the monthly cost of room and board to $72.56.

Married veteran students, according to the poll, spend an average amount of $38.96 for rent monthly, while their average outlay for food was found to be $61.71, adding up to a total of $106.67 for rent and food ($16.67 more than the total subsistence allowance).

In order to make ends meet, many veterans work during school terms, and the wives of a great number of married veterans hold jobs on either a full-time or part-time basis. Summer vacation jobs are helpful to a large percentage seeking to augment their income.

Results of the Nation-wide study indicated that 36 percent of college student veterans work for additional income, 12 percent up to 10 hours during the week, 14 percent from 11 to 20 hours, and the remaining 10 percent more than 20 hours a week.

Despite physical disabilities, one out of four unmarried disabled student veterans was found to be working to supplement his income from the Government; one out of three married disabled veterans are working, while almost one-half of the married nondisabled veterans are employed.

Of the more than one-third of the college veterans employed, the survey showed that 46 percent earn $10 or less, 33 percent earn from $11 to $20, and 13 percent earn from $21 to $30. Earnings of the remaining 8 percent range from $31 to $105.

Wives of 56 percent of the married student veterans are working to supplement their husbands' incomes, the survey disclosed, 43 percent on a full-time basis, 9 percent part-time, and 4 percent intermittently.

To help pay their living expenses and in an effort to set aside additional funds for supplemental financing of their educational costs during the current school year, 6 out of 10 veterans worked to some extent during the last summer months, according to the poll.

Despite the fact that many veterans did outside work last summer, many were unable to set aside any funds for their scholastic expenses. This was found to be particularly true of the married veterans, many of whom were unable to retain any of their summer earnings for school costs after paying their summer living expenses.

Of the 6 out of 10 married veterans who worked last summer, 62 percent said they were unable to accumulate any savings, 21 percent reported they were able to lay aside up to $250, and 17 percent more than $250.

Many single veterans who worked last summer were in a better position financially when school opened since 40 percent were able to save up to $250, while another fourth set aside more than $250. Only one-third of the single veterans who worked during the summer said they were unable to save any of their earnings.

In an effort to determine the financial cushion which student veterans are able to maintain, they were queried in the poll as to their total personal savings now available for financing their educations.

More than one-third reported in the survey that they have no reserve savings whatever upon which they can draw to help pay their way through school.

The savings of married student veterans are decidedly less than those of all student veterans, according to the poll, 40 percent of this group having no savings whatsoever. In the case of married disabled veterans attending college, one-half have no financial reserves to supplement their income.

ATTITUDE OF THE COLLEGE VETERAN TOWARD HIS INSTRUCTION AND EDUCATIONAL PROGRAM

(This is the second of a series of articles describing the results of a survey of college veterans based on the responses received from interviews with a scientifically selected sample of veterans attending all types of colleges located throughout the country. The study was planned by a national committee appointed by the American Council on Education and was made possible by a grant of funds from the Disabled American Veterans. Dean E. G. Williamson, of the University of Minnesota, acted as chairman of the committee. Ralph J. Strom, formerly of the Veterans' Administration, was director of the project and conducted the survey.)

MINNEAPOLIS, January.—The tremendous growth of colleges and universities in this country since the end of the war through the enrollment of one and one-quarter million veterans has raised numerous questions as to the adequacy of the instruction given to our ex-servicemen.

The answers to what the veterans themselves think of the instruction or teaching to which they have been subjected were learned in the Nation-wide poll of student veterans just completed by a committee of the American Council on Education and financed by the Disabled American Veterans.

Quality of college instruction was rated "average" to "very good" by 89 percent of the veterans polled, while 7 percent said they considered their instruction as "inferior" and only 1 percent branded college teaching as "very poor." In the survey, 3 percent had no opinion.

Of the 89 percent evidently satisfied with the instruction they are getting, 33 percent described it as "average," 35 percent as "good," and 21 percent as "very good."

Asked whether they felt that the present day greatly increased enrollments had lowered or raised the educational standards of their institutions, only 24 percent of the student veterans replied that standards had been lowered. No appreciable change in standards was reported by 26 percent, and 43 percent stated they felt that educational standards in their institutions actually had been raised as a result of the enrollment increase.

Of those who thought that the standards had been lowered, 31 percent said that it was because of crowded classes, and 29 percent expressed the opinion that the large enrollments resulted in less individual attention. Another 17 percent asserted that their professors and instructors were not sufficiently qualified to teach, while 7 percent saw a lowering of standards because of lack of teaching facilities such as laboratory materials, books, etc.

Increased competition among students for grades was cited as the reason primarily responsible for the increase in standards by 37 percent of the group which felt that large enrollments had resulted in such an increase. Greater maturity of students was the reason advanced by a fifth of this group, while another fifth attributed the higher standards to current higher college entrance requirements and to raised graduation and class requirements in grades. Other factors cited by this group as causes included: "More and better professors," 6 percent; "tougher courses," 4 percent; "school tries to get rid of the less fit," 3 percent; and "larger selection of new courses," 3 percent.

Six out of every 10 veterans in college, according to the Nation-wide poll, feel that their present-day attitude toward their education is different from that of nonveterans. Twenty-eight percent said they believe their attitude to be essentially the same as those students who had not been in service, while 12 percent had formed no opinion.

When asked why they felt that their attitude is different, 46 percent of the responding group stated they believed the difference to be due to the fact that veterans are more serious than nonveteran students about their work. Twenty percent said they thought veterans were more mature in their approach to college studies, 19 percent said they had more practical and definite goals than the nonveteran; and another 17 percent contended that veterans realized more

fully the value of the educational program which they are now undertaking.

Considerable variation was found when the responses of married and single, disabled, and nondisabled veterans on the question of attitude toward education were compared.

Of the married disabled veterans, more than 72 percent replied that their attitude differs from that of the nonveteran student, while 65 percent of the married nondisabled veterans answered in this manner. That their attitude toward education differs from that of nonveterans was the opinion of 62 percent of the single disabled veterans and 57 percent of the single nondisabled veterans.

Fifty-seven percent of the married disabled veterans who stated that their attitude differs from the nonveteran student said it is because they are more serious about getting an education. Half of the unmarried disabled veterans in this group agreed with this statement as did 49 percent of the married nondisabled veterans and 42 percent of the single nondisabled veterans in this group.

Of all of the married veterans who reported a difference in attitude, 23 percent credited the difference to their own increased maturity, while 18 percent of the single veterans in this category offered the same explanation.

Veterans in college, the survey shows, are for the most part pretty well satisfied with college life, 93 percent reporting either that they are well satisfied or that they have "just a few gripes." Only 6 percent said they are "fed up."

Of those who reported having "a few gripes" or being "fed up," 43 percent complained of the inadequacy of courses and instructors, 21 percent said that their subsistence pay has been delayed or is too low or complained of a general lack of finances, 10 percent reported that classes are too large, 7 percent cited bad food and poor facilities, 8 percent contended that tuition and living costs are too high, while 5 percent complained of poor housing facilities.

EFFECT OF WAR EXPERIENCES ON THE VOCATIONAL GOALS OF COLLEGE VETERANS

(This is the third of a series of articles describing the results of a survey of college veterans based on the responses received from interviews with a scientifically selected sample of veterans attending all types of colleges located throughout the country. The study was planned by a national committee appointed by the American Council on Education and was made possible by a grant of funds from the Disabled American Veterans. Dean E. G. Williamson, of the University of Minnesota acted as chairman of the committee. Ralph J. Strom, formerly of the Veterans' Administration, was directer of the project and conducted the survey.)

MINNEAPOLIS, January.—The general belief that war experiences have altered the vocational plans and ambitions of the great majority of American veterans is discounted by the Nation-wide survey on veterans' education made by the American Council on Education with the financial backing of Disabled American Veterans.

Results of the study indicate that more than half (51 percent) of the veterans now enrolled in the Nation's colleges and universities are preparing for the same vocations they planned to enter before they went into the armed services.

Only 35 percent, the survey shows, have changed their vocational plans made before entering military service, while 11 percent had not chosen vocations prior to donning uniforms.

The greatest change in vocational aims was found among the disabled veteran students, with 46 percent of the married students in this group and 43 percent of the single students enrolled in programs leading to occupational goals different from those they had prior to the war.

Principal reason advanced for changing vocational choice was "change of interest." Of the 35 percent who have changed their plans, one-fourth gave this reason. Other explanations advanced for change of vocational plans included "more opportunity in second choice," 17 percent of this group; "more aptitude for second choice," 13 percent; "is better paying," 4 percent; and "too long to prepare for first choice," 4 percent.

One-tenth of the student veterans who changed their plans stated that they had tried the vocation of their original choice, did not like it and had switched to another. Only 1 percent of those who changed said they found preparing for the first choice "too tough."

Once having embarked upon training for a vocation under the GI bill of rights or the rehabilitation program, most student veterans have remained "on course." The study shows that 86 percent have made no change in vocational plans since starting training under Government benefits. Some 12 percent reported having switched vocational plans once since starting training, while only between 1 and 2 percent said they had changed vocations two or more times.

Most student veterans feel that the majority of courses they are now taking are directly related to the vocations for which they are preparing. According to the survey, only 20 percent do not consider their present college courses directly related to their chosen vocations.

All but a few veterans in college are satisfied with the progress they are making toward their chosen vocations, the study indicates, with 72 percent considering their progress as average, 21 percent as excellent, and only 5 percent as unsatisfactory. Two percent said they did not know whether or not their progress is satisfactory.

ATTITUDE OF THE COLLEGE VETERAN TOWARD THE VOCATIONAL GUIDANCE HE HAS RECEIVED

(This is the fourth of a series of articles describing the results of a survey of college veterans based on the responses received from interviews with a scientifically selected sample of veterans attending all types of colleges located throughout the country. The study was planned by a national committee appointed by the American Council on Education and was made possible by a grant of funds from the Disabled American Veterans. Dean E. G. Williamson, of the University of Minnesota, acted as chairman of the committee. Ralph J. Strom, formerly of the Veterans' Administration, was director of the project and conducted the survey.)

MINNEAPOLIS, January.—With the Nation's colleges and universities staggering under the impact of one and one-quarter million veterans added to their enrollments since the close of the war and with $2,000,000,000 being expended for the training of veterans for the last fiscal year alone, increased emphasis is placed on the need for the proper selection of the course of training and the vocational objective of the student veteran.

What the student veteran thinks of the vocational guidance which he received from the Veterans' Administration and from his college or university was revealed by a Nation-wide poll taken by the American Council on Education, financed by the Disabled American Veterans, results of which have just been released.

Present veterans' legislation requires that all disabled veterans must select their vocational objective with counseling assistance of the extensive advisement facilities of the Veterans' Administration. Nondisabled veterans, those attending school under the provisions of the GI bill of rights, are offered the assistance of these facilities but are not required to make use of them. Nondisabled veterans are permitted to select any vocational objective they wish.

The Nation-wide survey of veterans in college indicates that only about 4 out of every 10 are availing themselves of the Veterans' Administration vocational guidance facilities and that of those who are making use of VA guidance, three out of four feel that the guidance they have received has been adequate, while one in four disagrees.

Another phase of vocational guidance is that which student veterans receive from their colleges and institutions. One-third of the veterans polled said that they had received adequate vocational guidance from official college counselors sources at their schools, and 16 percent stated they had not received adequate guidance from such sources. One-half of the student veterans included in the survey said they had not consulted any sources at their institutions.

The colleges and the Veterans' Administration were not the only sources of vocational guidance for these veterans, however. Of those queried, 37 percent had received additional help from other sources in the selection of their vocations.

In this latter group, 30 percent stated that they had received help from members of their family, while 39 percent obtained aid from individuals already in the vocational fields for which they were preparing. Eighteen percent received help from friends, while 11 percent had received help from members of their high-school faculty.

Further investigation showed that of those who had received help from these outside sources, 10 percent thought that this aid was less valuable than that received from the college or the VA, 23 percent thought it was equally as valuable, while 30 percent felt that this assistance was more valuable. Thirty-two percent of those receiving help from these other sources did not make use of the counseling facilities of either the Veterans' Administration or the college or university which they were attending.

The disabled veterans, who are required to receive Veterans' Administration vocational counseling, were asked whether the VA had given fair consideration to their own wishes in the selection of a vocational objective. Eighty-five percent indicated satisfaction in this respect, 4 percent were dissatisfied, while the remainder had no opinion.

Of this group of disabled veterans, 16 percent stated that their disability prevented them from entering vocations which they would have liked to enter, while 3 out of every 4 said that their disability had not affected their choice of vocational objectives. The remainder had no opinion.

EXTENT OF PARTICIPATION OF COLLEGE VETERANS IN EXTRACURRICULAR ACTIVITIES

(This is the fifth of a series of articles describing the results of a survey of college veterans based on the responses received from interviews with a scientifically selected sample of veterans attending all types of colleges located throughout the country. The study was planned by a national committee appointed by the American Council on Education and was made possible by a grant of funds from the Disabled American Veterans. Dean E. G. Williamson, of the University of Minnesota, acted as chairman of the committee. Ralph J. Strom, formerly of the Veterans' Administration, was director of the project and conducted the survey.)

MINNEAPOLIS, January.—More than one-half of the veterans of World War II now attending colleges and universities take little part in organized student organizations and activities outside the classroom, according to the results of a Nation-wide poll of veterans in college conducted by the American Council on Education, and financed by the Disabled American Veterans.

An additional one-third of the veterans queried in the survey said they participate in

extracurricular campus activities to an average extent, and only 7 percent answered that they take a large part in such activities as veterans' clubs, student government, professional clubs, and like organizations.

When those veterans who take but little part in extracurricular activities were asked why, 63 percent advanced the reason that they do not have sufficient time, 20 percent said they are not interested in such activities, and 7 percent reported that part-time employment prevents their participation.

Further analysis of the results of the Nation-wide poll indicates that 73 percent of the disabled married veterans now enrolled in college work do not take part in such affairs because of lack of time, while 13 percent expressed lack of interest.

In the married nondisabled group, 68 percent said they lack the time and 13 percent are not interested. Among all the single veterans contacted in the poll, 58 percent gave lack of time as their explanation, while 24 percent said they are not interested.

Of the relatively small proportion of student veterans who stated that they take a large part in organized extracurricular activities on the campus, 27 percent said they find such activities of great interest, 18 percent cited social reasons, 14 percent stated that they like to be active, and 11 percent said they consider such activities a part of college life. Only 3 percent of this group said they thought such activities would be of help when it comes to getting a job, and 1 percent said they participated on a large scale in order to make personal contacts for use later on in life.

Informal social and recreational activities as differentiated from organized student activities attract a much greater participation by veterans in college, according to the survey.

Asked the extent to which they take part in these informal activities, 59 percent of the student veterans said they participate to an average extent, 21 percent to a very little extent, and 19 percent replied that they take part in a big way.

As in the case of organized activities, the married student veterans, both disabled and nondisabled, are much more restricted in participation in informal social and recreational pastimes than are the single students. Minimum participation in such informal enjoyments was reported by 34 percent of the married veterans and 16 percent of the single veterans. Participation in a big way was reported by 11 percent of the married veterans and 21 percent of the single veterans.

Dr. S. H. Scott

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. DAGUE. Mr. Speaker, under permission to extend my remarks, I include a letter I have just received from Mr. A. C. Croft, publisher of the Educator's Dispatch, which calls attention to the splendid record made by Dr. S. H. Scott during his 54 years of service as a member of the board of directors of the Coatesville, Pa., school district. In addition to being a great physician, Dr. Scott has by this outstanding civic service shown himself to be a great citizen as well as a great humanitarian. I know that his many friends and admirers in the Ninth Congressional District are joined with me in congratulating him on this splendid record.

Mr. Croft's letter follows:

WASHINGTON, D. C., *February 4, 1948.*
Hon. PAUL B. DAGUE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN DAGUE: An unusual record of public service has just been completed by a citizen of Coatesville, Pa., and we believe that such a record should receive recognition through the pages of the CONGRESSIONAL RECORD.

Dr. Scott's tenure covers the era of greatest growth and development in the Coatesville schools. When he was first elected to the school board in 1893 only two pupils were in the high-school graduating class. Today the number of graduates averages more than 300. In 1893, there was one building of only six rooms and six teachers for the entire city. Now the city boasts of four elementary schools, two junior high schools, and one of the finest senior high-school plants in America.

As an impartial observer, I believe that Dr. Scott's record should be commended nationally.

Sincerely yours,

A. C. CROFT,
Publisher.

Rationing and Price Control

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. COLE of New York. Mr. Speaker, unquestionably the one national problem which is most generally discussed is that relating to the present high cost of living. A considerable portion of our citizens have urged the reinstatement of rationing and price control with the necessary subsidy out of the Public Treasury to support a reduction in current consumer costs.

Recently, I have received a letter from C. N. Silcox, official of the Cooperative Grange League Federation Exchange, of Ithaca, N. Y., giving some very interesting and pertinent data with respect to the relationship between market prices of foodstuffs under governmental subsidized control and free market. These figures clearly indicate that some very strong factor has developed since removal of price controls which has caused current prices to rise so substantially. Anyone who considers this problem without bias must recognize that this factor stems primarily from the tremendous drain of foreign shipments upon our domestic production.

The letter follows:

COOPERATIVE G. L. F. EXCHANGE, INC.,
Ithaca, N. Y., January 30, 1948.
Hon. W. STERLING COLE,
House Office Building,
Washington, D. C.

DEAR MR. COLE: During recent weeks many people, particularly in Washington, have been making statements which when interpreted mean that this country made a serious mistake in removing price controls at the time it did. The charges are based on the fact that highly desirable foods like meat, milk, and eggs have advanced materially because controls were removed.

I happened to be looking over some prices which I found very interesting and which do not bear out the fact that the removal of price controls allowed advances which would have not otherwise occurred.

Since the price of meat, milk, and eggs is influenced to a large degree by the price of the four main grains, it is proper to look at their price levels in trying to determine what really caused the present high price of meat and other animal products.

Price ceilings on corn, oats, wheat, and barley expired June 30, 1946. The following table is interesting. All prices are Buffalo basis.

	Price ceiling expired June 30, 1946	Market price January-February 1947 (6 to 7 months later)	Price as of Jan. 5, 1948
Corn	$1.65 per bushel	$1.48½	$2.86
Oats	$1.05 per bushel	.91	1.47
Wheat	$2.24 per bushel	2.39	3.22
Barley	$1.33 per bushel	1.29	2.16

The ceiling on feed ingredients was removed for the last time October 17, 1946. The relation of prices in January and February 1947 to the ceiling prices is shown in the following table:

	Price ceiling expired Oct. 17, 1946	Market price, January-February 1947	Price as of Jan. 5, 1948
Bran	$53.60	$41.50	$82.00
D. D. grains	41.00	41.00	93.00
Gluten feed	64.30	44.10	110.00
Soybean meal	68.40	63.60	107.00
Meat scrap	97.50	74.80	132.70
Dried whey	184.10	160.00	140.00

It is obvious by comparing the prices of January and February 1947 with the last ceiling prices, that the removal of ceilings did not result in material advances in feed-grain prices, which are the basis of food costs. Something else was responsible for the price level which now prevails.

Of course, any experienced student or observer of the market knows that the advances were due to the failure of the 1947 corn crop and the policy of this Government in shipping vast quantities of food grains abroad at a time when we were in short supply ourselves due to the corn-crop failure.

The talk of rationing only certain items when and if needed brings to mind that saying: "Oh, what a tangled web we weave when first we practice to deceive." Personally I think we are deceiving ourselves if we think that limited rationing will work, and this Nation will never stand for a return to a complete program of rationing and price controls.

What is your position on food rationing?

Cordially yours,

C. N. SILCOX.

Greece—Turkey

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the REC-

ORD and include a newspaper article, I wish to include a report by the CDN of date December 15, 1947, which was published in the Washington Evening Star of same date, and which I think should be of much interest, and especially interesting to the Members of Congress, in view of the situation described in the article, and the further fact that the Congress will undoubtedly be called upon for further appropriations by the State Department in the near future.

The article is as follows:

TWO-THIRDS OF GREECE REPORTED IN CONTROL OF RED GUERRILLAS

ATHENS, December 15.—Despite the American aid program, two-thirds of the Greek mainland today is subject to temporary control by Communist guerrillas.

Except for the Peloponnesian Peninsula and Attica Province, of which Athens is the capital, the guerrillas dominate all the mountainous areas of Greece.

The Greek Army is able to protect only the more important centers of population, which are located in the plains and valleys.

But all land communications between them are liable to immediate rupture by the Communists.

If their Gen. Markos Vifiades so desired, he could isolate almost any town except Athens and Salonika and keep it isolated for several days, until the army assembled sufficient reinforcements to drive his forces out. He could even isolate the entire province of Thrace, if he wanted, and he may yet do so, if and when it serves the Kremlin's purposes.

STRATEGY OUTLINED

So far General Vifiades' guerrilla bands have not attempted to remain in control of any populous area. Their strategy is not to occupy territory, but to harass those who must defend it—in the hope of eventually exhausting Greece's powers of resistance.

The Communist tactics in Greece are identical to the tactics of the Bedouins of the Arabian desert during the first World War.

Inspired, paid and equipped by Col. T. E. Lawrence and other British agents, bands of Arabs no more numerous than the Communist bands in Greece succeeded in separating Arabia from the Ottoman Empire.

They succeeded partly because Turkey found itself on the losing side of an international war. But they succeeded also because of the faulty tactics of the Turkish Army—the same defensive tactics that the Greek Army is using today.

BOOK IS RECALLED

Passages of Mr. Lawrence's book, The Seven Pillars of Wisdom, might have been taken from a Soviet military manual issued for the instruction of General Vifiades' guerrillas, or vice versa.

So long as they are able to receive aid from Albania, Yugoslavia, and Bulgaria, and move back and forth at will across an undefended Greek frontier, the guerrillas will never be defeated.

They will be defeated only after the frontier is forcibly sealed and the Greek Army embarks on a serious offensive, lasting many months, to exterminate all guerrillas cut off from their bases outside Greece.

To that end the American military mission has authorized the formation of a national defense corps to relieve the army of the need for defending the towns and cities and lines of communication between them.

The Greek Government is hoping that the American military mission ultimately will increase the defense corps' strength to 50,000 men, but perhaps present plans call for supplying British arms and equipment for only 20,000.

BRITISH SUPPLIES NEEDED

British rather than American supplies are necessary in order to conform with the standard British equipment of the Greek Army. To reequip the Greek Army with American supplies would be a waste of time and money, although there are many Greek officers who would like to have us do so, since they consider our equipment superior.

If all goes well, and the strength of the defense corps is brought up to 50,000 men, it may be possible for the Greek Army next spring to begin in earnest the long, hard task of liberating Greece.

But nobody of any consequence here—Greek, British, or American—is so wildly optimistic as to believe that the job can be completed before the American aid program expires on June 30, 1948. Indeed, most observers doubt that it will be completed until the United States has set up permanent air and naval bases here and deployed two or three divisions of American soldiers or Marines along the Greek frontier.

Our Merchant Marine

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1948

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the annual meeting of the Mississippi Valley Association, St. Louis, Mo., January 26, 1948:

My friends of the Mississippi Valley Association, I am honored and flattered that you should ask me to speak here today, because I have followed over a period of years the splendid work of the Mississippi Valley Association, and I sincerely believe that no small part of the credit for the magnificent development of the Valley area of our country is due directly to the vision and foresight of the members of this association. I feel that I can make this observation without fear of contradiction, because I live in the great port of New Orleans, and there have seen with my own eyes the fruit of your work.

I am glad, too, to come here today and talk about the American merchant marine. I may be accused of self-interest, because I represent an area which is so dependent upon an American merchant fleet, and because our port is the lifeblood of my home community. Should the charge be made, however, I would deny it, as the problems of the merchant marine transcend all local considerations, as they are directly related to our national well-being and security. The fact that I live in a great port means only that I have had a little more opportunity to witness first hand the significance of a strong American fleet.

It is difficult to understand why anyone should have to dwell upon the importance of the American merchant marine. To me it seems so very elementary. It would be almost ridiculous for a speaker to come before you in this day and age with the announced intention of convincing you of the importance of the Army, the Navy, or the Air Force. You know how important they are. And it would be presuming upon your intelligence to even argue the point. I am convinced that this audience likewise recognizes the vital importance of the American merchant marine, because this audience knows that no adequate defense program can be undertaken without fast, modern, dry cargo ships and tankers to move the men and supplies needed for the other branches of the services.

Yet, there seem to be many who do not quite understand this vital connection between our merchant ships and our national security. These people remind me of the isolationists who are still in our midst. The isolationist saw his theory exploded in 1917, and yet, because of the national disillusionment which followed World War I, he went right back to that type of thinking, and again the Nation had to fight a World War because of it. Nevertheless, there are many who are still unconvinced. May I take a moment of your time to cite a few of our great national leaders on the vital importance of the merchant marine:

Gen. Dwight D. Eisenhower: "When final victory is ours there is no organization that will share its credit more deservedly than the merchant marine."

Adm. Chester W. Nimitz: "Without the ships which have been wholly devoted to winning the war by the American maritime industry, our substantial progress would not have been possible. * * * This war has fully confirmed the necessity for a strong and sound merchant marine to be maintained in time of peace so that it may be employed as an auxiliary of the Army and Navy in time of war. The convincing way in which this fundamental fact has been demonstrated in the Pacific is a tribute to the ability and patriotism of the American merchant marine and augurs well for its future."

W. Averell Harriman: "A healthy American postwar merchant marine must be fostered. I feel we should aim at a fleet of the most modern ships—most efficient for each trade from our various ports to carry about a half on an over-all basis of our foreign trade. To accomplish this our Government should stimulate constant new construction on an annual replacement basis. This will give us a healthy shipbuilding industry as well, so sadly neglected after the last war."

Harry S. Truman: "As an aftermath of the war, the United States faces critical problems in connection with construction, modernization, and maintenance of an adequate fleet of passenger and freight vessels. With no new passenger liners and few cargo vessels scheduled to be built in the immediate future, the Nation is not assured of the existence of a balanced and modern merchant fleet. This is a matter that concerns not only our commerce and trade, but our national security as well. I feel that the whole problem should be carefully studied in all its phases. * * *"

Prior to World War I Woodrow Wilson said this: "It is necessary for many reasons of national efficiency and development that we should have a great merchant marine. The great merchant fleet we once used to make us rich, that great body of sturdy sailors who used to carry our flag into every sea, and who were the pride and often the bulwark of the Nation, we have almost driven out of existence by inexcusable neglect and indifference and by a hopelessly blind and provincial policy of so-called economic protection. Moreover, we can develop no true or effective American policy without ships of our own—not ships of war, but ships of peace, carrying goods and carrying much more; creating friendships and rendering indispensable services to all interests."

Prior to World War II Franklin D. Roosevelt said this: "I present to the Congress the question of whether or not the United States should have an adequate merchant marine. To me there are three reasons for answering this question in the affirmative. The first is that in time of peace, subsidies granted by other nations, shipping combines, and other restrictive or rebating methods may well be used to the detriment of American shippers. The maintenance of fair competition alone calls for American-flag ships of sufficient tonnage to carry a reasonable portion of our foreign commerce. Second, in the event of a major war in which the United States is not involved, our commerce, in the absence

of an adequate American merchant marine, might find itself seriously crippled because of its inability to secure bottoms for neutral peaceful foreign trade. Third, in the event of a war in which the United States itself might be engaged, American-flag ships are obviously needed, not only for naval auxiliaries, but also for the maintenance of reasonable and necessary commercial intercourse with other nations. We should remember lessons learned in the last war."

The maintenance of an American fleet has always been a difficult job. It might be well to briefly review our maritime history:

The fortunes of our merchant marine have surged and subsided as those of no other country.

Stories of the clipper ships of the early years of the nineteenth century, which carried as much as 90 percent of our foreign trade, appeal to the imagination and are familiar to everyone. Following the days of the clipper ships and the advent of the steamship, the American merchant marine reached its early peak, in number and tonnage of vessels, in 1860 with 1,440,000 gross tons engaged in foreign trade. Then came the Civil War, followed by a period of intensive internal development of the country and an extreme lack of interest in foreign trade and the merchant marine until in 1910 we had approximately one-half the tonnage of 1860 and carried only slightly more than 8 percent of our foreign commerce and our merchant marine reached the lowest efficiency in history. During this period all other maritime nations had been increasing their merchant fleets.

At this time there were no American-flag ships operating overseas from the ports of the Gulf of Mexico and there were no dependable services by foreign ships to many markets. Foreign ships which brought coffee from Brazil to New Orleans did not offer a return service but loaded cotton, grain, and other products for Europe and then carried manufactured goods from Europe to the east coast of South America, making what was termed "triangular voyages." Naturally the owners of those ships were interested in developing commerce between their own countries and South America. Sailings to European ports and to the Orient were seasonal and dependent upon the movement of cotton or grain. Because of their infrequency and uncertainty they were of no value to the exporter of manufactured products.

Then came World War I, finding us dependent upon the ships of other nations for the transport of nearly all of our foreign commerce. When these foreign ships were suddenly withdrawn for war service, there was stagnation of our foreign trade and ocean freight rates advanced to fantastic heights. We had goods for export for which the world was crying but no means of transporting them. This loss of trade cost our country a vast sum of money even before we entered the war.

When we finally became participants in World War I, we were forced into a frenzied era of ship construction costing more than $3,000,000,000 for vessels that could have been built for less than one-third this sum during the preceding years of peace. As few of these ships became available until after the war, the ships of our allies had to transport our men and supplies to the scenes of hostility.

While in 1910, our merchant fleet engaged in foreign trade amounting to only 782,000 gross tons, after World War I, as the result of the mightiest shipbuilding program in history up to that time, we found ourselves in possession of a fleet of more than 10,000,000 gross tons. A substantial number of these vessels were good ships, but many of them were of insufficient commercial or military value to warrant their preservation.

Under the provisions of the Merchant Marine Act of 1920 the Shipping Board selected the most suitable vessels from the emergency built fleet, and through private operating agencies undertook to establish steamship services to meet the immediate needs of our foreign commerce. About 4,700,000 deadweight tons, unsuited for commercial use, were sold for scrapping. Not one of these vessels was sold to foreign countries for competition with American shipping.

Efforts were made to induce private citizens to purchase and operate the various services developed by the Board, but finally it was concluded that private capital could not be attracted to shipping without the payment of a subsidy to equalize the lower costs of shipbuilding and operation enjoyed by foreign competitors. During the period 1922–28 there was not a single keel for a ship laid in the United States for service in foreign trade. Our ships, with a life expectancy of 20 years, were becoming old, and there were no plans for replacing them.

Further legislation was passed in 1928 which attempted to improve this situation by awarding mail contracts to the operators of American-flag vessels, which proved of some help and resulted in the construction of 31 combination freight and passenger vessels of high types which were launched between 1929 and 1932, representing an investment of $142,000,000. However, a total of $176,000,000 to overcome operating handicaps were paid out on the various mail contracts between 1929 and 1937 under the provisions of the act of 1928.

"Mail contract" was a misnomer. Subsidies were paid upon a mileage performance without regard to the amount of mail carried. This led to criticism by many who were more interested in finding fault with the administration than in building our merchant marine.

When it became clear that the act of 1928 had failed to achieve its principal objective—the development of an orderly replacement program—for the war-built vessels (only 13,265 gross tons were under construction on December 31, 1933), and that obsolescence was rapidly overcoming our fleet, the Merchant Marine Act of 1936 was passed and marked the real beginning of the rehabilitation of our merchant fleet under private ownership. The Merchant Marine Act of 1936 expressed the policy of our Government in the following language:

"It is necessary for the national defense and development of its foreign and domestic commerce that the United States shall have a merchant marine:

"(a) sufficient to carry its domestic waterborne commerce and a substantial portion of the water-borne export and import foreign commerce of the United States, and to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign water-borne commerce at all times;

"(b) capable of service as a naval and military auxiliary in time of war or national emergency;

"(c) owned and operated under the United States flag by citizens of the United States insofar as may be practicable; and

"(d) composed of the best equipped, safest, and most suitable types of vessels, constructed in the United States and manned with a trained and efficient citizen personnel.

"It is hereby declared to be the policy of the United States to foster the development and encourage the maintenance of such a merchant marine."

Many fine vessels equal to any afloat have been built by American citizens, at a cost of more than $500,000,000, since the passage of this act. These vessels were available to serve our foreign trade on essential trade routes before we entered World War II and then in some measure, to meet our early military requirements; however, our fleet was far short of the requirements of expanding military operations and a second intensive emergency building program costing billions of dollars was necessary.

The end of World War II left us with close to 50,000,000 tons of ocean vessels. Such of these vessels as were left of those which had been requisitioned from private companies for war purposes were progressively turned back to their owners and under the provisions of the Ships Sales Act most of the better type of vessels suitable for commercial operation were sold to American companies. Others of the slower and least desirable type were chartered to those companies or sold or chartered to foreigners. The remaining tonnage was placed in laid-up reserves to be available for any future national emergency.

With vessels available to meet their requirements American shipowners began service on thirty-odd trade routes declared by the Maritime Commission to be essential to our foreign trade. These services reached all parts of the world and as of March 31, 1947, employed hundreds of privately owned dry cargo and combination ships, together with over 1,200 Government-owned dry cargo vessels under bare-boat charter to American-operating companies, as compared with 217 such vessels in 1937. The increased size and speed of the ships comprising the present fleet, moreover, results in an even greater capacity than is indicated by the increased number of ships alone.

It looked like the American merchant marine, after the interruptions of war, was again on its way.

But now there comes a new threat. This time there is being advocated in high places a policy directly contrary to that enunciated in the Merchant Marine Act of 1936; a policy that might very well undo all that has been done and again scuttle the American merchant marine.

This new threat comes in the guise of an essential part of the Marshall plan for the rehabilitation of Europe. The President, in his message to Congress on December 19, 1947, said the following:

"The interest of the United States will be served best by permitting the sale or temporary transfer of some of our war-built merchant ships to the European countries. Because of world steel shortages, the sale or temporary transfer of ships should be linked with a reduction or deferment of the projected shipbuilding schedules of the participating countries. These arrangements should be consistent with their long-range merchant-marine requirements. They should also be consistent with our long-range objectives of maintaining an adequate merchant marine and shipbuilding industry for the United States.

"Making these vessels available to the European countries will materially reduce the cost of the United States aid both by lowering shipping costs and by reducing the use of scarce materials for new-ship construction overseas."

It is unfortunate that someone has so misinformed the President and the State Department, because a recommendation such as this merely gives ammunition to those who are already opposed to the Marshall plan and who are looking for excuses to sabotage it.

For my own part, I want it distinctly understood that I am supporting the Marshall plan in principle. I am not supporting it from humanitarian motives, as compelling as they are. Nor am I supporting it because of economic advantages which may accrue to our Nation, but for the same reason that I plead with you today to maintain a strong American merchant marine: that is, from the selfish, unaltruistic motive of our own national security.

It is inconceivable to me that we can maintain the free enterprise system in our Nation if all of Europe should become totalitarian. The mere cost of maintaining our national defense and of preventing attacks from within and without would soon seriously

jeopardize our own system. The Marshall plan may fail. It is a gigantic gamble. But it is a gamble that we cannot afford not to take. Therefore, it is unfortunate—most unfortunate—that some so-called economic advisers should have the President endorse a program which may very well wreck the American merchant marine and which gives aid and comfort to the enemies of the Marshall plan.

The transportation features of the Marshall plan as recommended by the President propose that America shall turn over to the 16 nations receiving aid, 500 vessels from our reserve merchant fleet owned by the United States. Under the proposal, 200 of these vessels are to be sold outright, and 300 are to be chartered for bare-boat operation, operated under foreign flags and manned by foreign crews.

The evils inherent in these proposals are very clear. Since the conclusion of the war, 950 American vessels have already been transferred to foreign nations. The additional transfer of 500 more ships will make the number of ships under foreign operation greater than in 1929, when this Nation carried less than 30 percent of its exports and imports on American-flag ships, and it must be remembered that this competition is particularly bad because no foreign ship is required to maintain the labor and safety standards of American vessels.

It is now estimated that under existing schedules, the Marshall nations will soon have merchant fleets of 10,000,000 tons more than prewar, when their competition with the American fleet was destructive. Under the proposed plan, this amount will be increased by 500 vessels.

These 500 vessels represent more than half of our presently operating merchant fleet under private ownership.

At the present time American shipping companies are carrying ocean-borne foreign commerce in hundreds of vessels either privately owned or owned by the United States and bare-boat chartered to the private companies. These chartered ships fly the American flag and are manned by American seamen. If these ships were to transfer their flags, between twenty to twenty-five thousand officers and seamen, many of whom have been trained by the United States Government, will be thrown out of employment.

Admitting all of these facts, it might still be possible to justify the proposal if the economy argument—that is, that it will cost less to deliver relief supplies in foreign vessels than in American vessels, thus leaving additional dollars to be used for the purchase of relief commodities—was a sound one. But it is not. With equal logic we could argue that the sensible way of obtaining our raw materials would be by importing cheap foreign labor to man our farms, to mine the coal, to operate our railroads, and to run our industries. Of course, we won't do this. But, in effect, if we carry out the so-called transfer of American vessels we will be abandoning the American merchant marine when it is as vital to the security of our Nation as any phase of business or industry.

It is well to bear in mind, as I pointed out a few minutes ago that the Marshall plan is a gigantic gamble. I hope and pray that it will work and that it will succeed, and, as I said, I am supporting it because I can see no alternate; but we face a determined opposition. We face a government motivated by a philosophy so contrary to ours that it employs any means to justify its end of world domination. With Europe suffering as it is, we might not succeed. Do you think for one moment that these vessels would be returned if we failed? And would we not be providing ready-made a great merchant fleet that might conceivably be used against us?

Let us revert to the economy argument for a moment. Reliable computations indicate that over the full period of the Marshall plan the transfer of 500 American ships to foreign flags may result in a dollar freight saving of approximately $200,000,000, without crediting recapture of charter earnings and income taxes which would have been paid to the United States if the vessels were operated under the American flag. The bare-boat charters under which American companies are presently operating merchant vessels owned by the United States provide for the recapture by the United States of 90 percent of all profits made by the American charterer. The 10-percent profit retained by the charterer is, of course, subject to income tax. If allowances are made for these factors, it is safe to assume that the saving will be reduced to a small percentage of the estimated $200,000,000.

The President's Committee on Foreign Aid recognized this in its own report when it said:

"It is argued that this dollar cost could be still further reduced if the United States would transfer additional vessels abroad for foreign-flag operation in the bulk trades. * * * The limited financial savings are not sufficient to justify the drain on the United States resources for national defense which such transfers would involve."

And again:

"The United States needs an active merchant marine for national defense, and we must not create conditions in which that merchant marine cannot survive."

The President's own Advisory Committee on the Merchant Marine, after a study of more than 11 years of peacetime and wartime operation under the Merchant Marine Act of 1936, reached the conclusion, in its report made public in November 1947, that the act is fundamentally sound and should be retained, and that the payment of construction and operating differential subsidies is absolutely essential to the maintenance of an American merchant marine of a size commensurate with national needs.

The Committee recognized the absolute necessity of the American merchant marine in the following conclusion:

"The Committee is convinced that a modern, efficient merchant fleet and an effective and progressive shipbuilding industry are necessary economic adjuncts to the peacetime economy of the United States, despite the unavoidable present necessity of Government financial aid to maintain them.

"Even if this were not true, the Committee faced the inevitable conclusion that such a merchant fleet and shipbuilding industry are indispensable to national security and would have to be maintained even should there be no other benefits accruing."

In conclusion, it is, indeed, difficult to understand how the recommendations of the President and the State Department could be seriously proposed in the face of current world conditions. They would be grossly unfair if they affected a so-called nonessential industry, but when they threaten the very existence of an industry not only vital to the economy of the Nation but positively essential to its national defense, they must be rejected.

It is my intention to vigorously oppose this proposal before the Committee on Foreign Affairs in the House and, if necessary, in the public debate on the measure when it reaches the floor of the House. In this endeavor, I am confident that I will have the support of all of you gentlemen, because many of you, if not the vast majority of you, have devoted many years of your life to the development of our great system of inland waterways, to the development of the commerce and trade of the Mississippi Valley, and the Gulf coast area, and this proposal, in my humble opinion, is directly threatening all that you have done, and all that you contemplate doing.

Thank you.

RESOLUTION ADOPTED AT ANNUAL MEETING OF MISSISSIPPI VALLEY ASSOCIATION, JANUARY 27, 1948

MERCHANT MARINE

The American merchant marine engaged in foreign trade now offers a service to shippers second to none in the world. We urge that American vessels should be patronized whenever possible by the public and by Government agencies.

However, the lack of suitable passenger ships and other special types, and the danger of loss of our shipbuilding facilities and skilled personnel is deplorable. We believe that the Government should create conditions which will induce private capital, under the provisions of the Merchant Marine Act of 1936, to build the passenger and other special-type vessels necessary to keep the merchant fleet modern and a leader on the high seas.

Great uncertainty exists as to whether the United States Maritime Commission can make operating differential subsidy contracts for more than 1 year, as an annual appropriation by Congress has recently been made necessary to carry out the subsidy provisions of the 1936 Merchant Marine Act. Such uncertainty will seriously interfere with the financing of urgently needed new construction because ship owners require definite assurance of the long term Government operating aid provided by the above act as a condition for investments in vessels for operation under the American flag.

Therefore, we urge that the intent of Congress, as expressed in the 1936 Merchant Marine Act, be made perfectly clear in the annual appropriations act so as to authorize operating subsidy contracts over a sufficiently long period to induce prudent businessmen to invest the capital necessary to build the ships now so urgently needed and those necessary for future replacement.

With special reference to the proposal of the State Department to transfer 500 ships to foreign nations, which we strongly oppose, the association further urges that neither by national nor by international action should foreign shipping be elevated above its prewar competitive position at the expense and deterioration of the American Merchant Marine, and that no action be taken by Congress or any Government policy be adopted which would result in the use of foreign ships for the transportation of more than 50 percent of the movement of cargoes under the Marshall plan for foreign relief should it be adopted.

We also urge that whatever is necessary be done to immediately reestablish our domestic coastwise water carrier services.

The association pledges its continued active support to the promotion and maintenance of a strong, privately owned and operated merchant marine sufficient for our national security, and for our economic needs.

Lincoln Day Address by Hon. Owen Brewster, of Maine

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a portion of the address I delivered last night at the Lincoln Day banquet at the Knights of Columbus Hall in Detroit, Mich.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

1949

In 3 years we have had two Presidents and three Secretaries of State. Fortunately we have had one Senator VANDENBERG. Whatever continuity—I might almost say coherence—we have had in foreign policy has been largely dependent upon Senator VANDENBERG as Chairman of the Committee on Foreign Relations.

Assurance of the continuance of Senator VANDENBERG at the helm of our foreign policy for the next few years is the best guarantee that America may begin to command some measure of respect in international affairs by reason of consistency and continuity.

To continue Senator VANDENBERG as the pilot of the American ship of state in the stormy seas that lie ahead it is imperative that Michigan return Senator FERGUSON for another term in the Senate of the United States.

There are many reasons for the reelection of Senator FERGUSON, but the supreme significance of keeping Senator VANDENBERG at the helm of foreign policy overshadows them all.

Emphasizing the leading role of Senator VANDENBERG in the evolution of American foreign policy in one of the great dramas of history by no means minimizes the outstanding service of Senator FERGUSON as an investigator with few, if any, peers, as a legislator with an eye single to the welfare of his country and his world, and as a Senator in the highest tradition of a State that has contributed so preeminently to the enrichment of our American public life and to the development of a nation that now stands in the forefront of human destiny.

Michigan, indeed, has reason to be proud of its two great sons and the country is grateful to Michigan for continuing in the Senate two men who contribute so greatly to keeping America as a leader of world civilization in these most trying times.

Let us always bear in mind in our preoccupation with Europe and its affairs that there are many problems and many millions of people outside Europe that are of concern to the people of the United States.

Our century-old interest in our neighbors to the south must continue as a cornerstone of our foreign policy.

Senator VANDENBERG pointed out a year ago at Cleveland that his counsel had not been sought to any extent outside the important but still limited fields of the United Nations and European policy.

Meanwhile, with Argentina, we had a Braden policy in Washington and a Messersmith policy in Buenos Aires and never the twain could meet. Under the pressure of a public suggestion from Senator VANDENBERG, we finally, though belatedly, moved to call the Rio Conference and released both Braden and Messersmith—the latter having simply carried out his instructions with all the skill of a quarter century in our diplomatic service.

In place of Messersmith to the most important diplomatic point in the Western Hemisphere from our standpoint we sent Mr. James Bruce, a dairyman instead of a diplomat, and left poor Mr. Peron to figure out the implications so far as our foreign policy was concerned.

In China there was a similar schizophrenia. Having sent Marshall to argue Chiang into a union with the Communists we pronounced a ban on Communists everywhere else in the world and abandoned China to the tender mercies of the Soviet.

Our unilateral action in Greece and Turkey in bypassing the United Nations was only saved from complete disaster by the prompt action of Senator VANDENBERG in clearing the procedure through the United Nations. The precedent may still give us very serious trouble in the Middle East or elsewhere.

Meanwhile at the eleventh hour we championed the partition of Palestine in the United Nations and immediately abandoned the Middle East to inevitable chaos.

All this adds up to the continuance of Senator VANDENBERG in his present, if not a greater, position of influence on our foreign policy.

In the rapidly changing panorama of Washington Senator VANDENBERG at least remembers yesterday and also that tomorrow is just around the corner.

Let us make sure Senator VANDENBERG is continued on the job.

TAXES

In fiscal 1949 as we call it—meaning the year beginning July 1, 1948, and running to June 30, 1949—there will be a tax reduction of at least $4,000,000,000—the objections of the President notwithstanding. There will be debt reduction of at least $4,000,000,000. There will be a reduction in the Presidential budget of close to $4,000,000,000.

Here also in the financial field we see the same divided and deviating counsel. Two years ago with corporations swollen with war profits President Truman signed a bill submitted by a Democratic Congress cutting corporate taxes by more than $3,000,000,000.

Now with the corporate refund provisions running out the same President seeks to restore the very tax he repealed and offers a $40 rebate to every taxpayer in a form that the Democratic minority in the House found so unworkable, unacceptable, or inequitable that the Democratic leadership would not even allow it to come to a vote in an almost unprecedented repudiation of White House counsel.

Perhaps the reason is found in the failure sufficiently to consult the responsible authorities in the administration or in the Congress concerned with fiscal affairs, since it seems clear that the President's proposal was out of Hollywood by Congresswoman HELEN GAHAGAN DOUGLAS. The only question seriously debated in the smoke-filled room was whether the proopsal should be $25 favored by the President, $50 urged by the moderates, or $100 insisted on by the left. The result was chalked like a jury at $40 but found no takers among the responsible Democratic leadership in either House or Senate.

In labor relations also the same conflict of viewpoint appears within the Presidential mind.

Faced with a strike in transportation President Truman proposed drafting the strikers into the Army although the war was long since over. This proposal although limited in time would have established a precedent that would have been the envy of Adolf Hitler or Joseph Stalin. This was work or fight. This was work or else.

That proposal received overwhelming approval in 1 hour by a Democratic House and was through a Senate Committee and ready for final action in the Senate inside of 3 hours when it was stopped by the courageous action of a single Republican Senator. Over the week end with some chagrin some Senators paused to read the bill and it never again saw the light of day.

What assurance has anyone that such a proposal—perhaps the most un-American in all American history—will not recur?

If it was considered good policy in 1946 by the dominant advisers in the White House why may it not bob up again if expediency should seem to argue for its desirability? Has there ever been a public confession of error?

Americans may well consider where the greatest security lies—in the shifting winds of political expedience or on the bedrock of fundamental American principles.

I have predicted a reduced budget, a reduced debt, and a reduced tax bill for 1949. Let me also predict with equal assurance a Republican President. Who will it be? There are 50 eligibles among the governors, past and present, Congressmen, and Senators, who are competent to guide America out of the wilderness of doubt in which we are wandering. Perhaps a Speaker of the House. Perhaps a President pro tempore of the Senate. Men of a character and competence that presents only a problem of selection to determine who will be captain of a team that is equal to any challenge at home or abroad.

America is entering the fourth great period of its expansion under the guidance of the same principles that have carried us so successfully and so far since the Pilgrim Fathers launched this great experiment 3 centuries ago at Plymouth Rock.

Award to Postmaster Albert Goldman, of New York, by the Veterans of Foreign Wars

---

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. IVES. Mr. President, the postmaster of the city of New York, the Honorable Albert Goldman, was recently honored for his patriotic devotion to duty during the war. At the eleventh annual meeting of the General Theodorus Bailey Post, No. 104, Veterans of Foreign Wars of the United States, on January 31, 1948, that organization presented to Postmaster Goldman its Americanism Medal.

Too often we fail to pay honor to faithful public servants. Because of the unusual devotion of Postmaster Goldman to his duties, and because of the outstanding nature of the citation recently awarded him by the Veterans of Foreign Wars, I ask unanimous consent that the text of the citation be printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

General Theodorus Bailey Post, No. 104, Veterans of Foreign Wars of the United States, presents to the Honorable Albert Goldman, postmaster, New York, N. Y., on the occasion of the elevent annual entertainment and dance at Manhattan Center, New York City, the Veterans of Foreign Wars Americanism Medal for outstanding service to our country during the Second World War, and to veterans of all wars; and

Whereas Postmaster Goldman by his alert initiative and executive ability quickly organized the New York Post Office to do a superhuman task in speeding forward those anxious letters and parcels to our armed forces all over the world, and

Whereas it was always his intent and purpose to keep the morale of our armed forces and their homefolk at a high level by his constant, diligent, and conscientious leadership, and

Whereas he has shown a sincere and humane understanding of veterans, and their problems whenever they have sought employment in the New York Post Office and at any time they sought his counsel and advice, and

Whereas he was ever ready and willing to aid, assist, and advise disabled veterans

and gave unstintingly of his time and money to their cause: Therefore, be it

Resolved, That the General Theodorus Bailey Post, No. 104, Veterans of Foreign Wars of the United States, present to the Honorable Albert Goldman, the Veterans of Foreign Wars Americanism Medal for his untiring efforts in contributing to the victory on the home front and for his willing and wholehearted efforts to bring cheer and good will to all our military personnel both at home and abroad during four hard years of war.

Duly approved at a regular meeting of the General Theodorus Bailey Post, No. 104, and in witness thereof we have placed our signatures and the seal of the Veterans of Foreign Wars of the United States, this 31st day of January 1948.

[SEAL] DAVID L. EDSALL,
Commander.
GEORGE NATHAN,
Adjutant.

The Republican Party's Contribution To Peace

EXTENSION OF REMARKS
OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Hon. Alf M. Landon before the Republican club at Ottawa University, Ottawa, Kans., on Wednesday, February 4, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

America has swung from a lurid, terrific, and unreal honeymoon with Russia to the opposite extreme of increasing casual acceptance of the imminence of war with her. Neither state of public mind is a credit to a great people.

In the final analysis I don't believe war is inevitable.

The price we have to pay for peace is: First, keep stronger than Russia; second, let her know that while we fear no one, we stand ready to make a lasting peace.

Therefore, I strongly believe that—

1. We must proceed at once to make ourselves as nearly invulnerable as possible in this atomic age.

That includes a more economical and efficient administration than we now have. National credit is as important as national arms.

The mighest armies, Navy and Air Fleets—will in the end be unavailing with the kind of wasteful and incoherent leadership of President Truman.

We just cannot afford that kind of leadership.

It will destroy us—if long continued—no matter what defenses and other safeguards we erect.

2. Go right ahead with a sound and coherent foreign-aid program. That includes a drastic reversal of our German policy.

3. Make it perfectly plain that we stand ready to come to an understanding with Russia.

I urge again that the President of the United States take, without delay, the initiative in bringing together the nations of the world in a peace conference.

If the Soviet and her puppets refuse to participate it would only be facing realities.

A basis for peace and the termination of World War II must be created either with or without the Soviet.

We are stressing No. 2—foreign aid—more than we are Nos. 1 and 3.

I believe that one, two, and three should all be equally stressed as part of a sound, constructive, and coherent policy for peace and progress—that will permit the fullest development of atomic energy for peaceful uses.

Despite the emphasis that has been placed on the Marshall plan, I am sorry to see it is losing ground with the American public.

Firm doubts about the wisdom of the plan are being created in the public minds by misinformation and lack of information. President Truman's refusal to explain his policies forthrightly to the American people is really a great and sinister failing of his national leadership. It has always been and always will be my contention that the American people not only want, but also deserve, to be told the plain unvarnished truth.

The isolationism this country is suffering from is isolationism from reality. For 15 years we have been settling one tremendous policy after another—that affect civilization to the end of time—by emotional appeals and sentiment rather than reason and necessity—by appeals to the passions rather than the mind.

Every thinking person realizes that we are the No. 1 world nation today. Our thinking and our actions must be compatible with that position. To lead us in that role we need not only a head man—but a man with a head.

Who is being fooled by President Truman's contention that the Government's food-buying program is not causing soaring food prices and rising cost of living when that is admitted by the administration's own dramatic appeals for ERP. The Marshall plan may be only one phase of a foreign spending program that will continue to boost the cost of living still higher.

I think the emphasis should be shifted away from food and placed where it belongs, on plant rehabilitation of Europe and restoration of normal world trade. But, of course, we are not going to accomplish that with the Marshall plan alone. It must be fitted into other major policies such as the restoration of Germany economically. That means another complete reversal of Mr. Truman's foreign policies.

Although I am well aware that public interest today is focused on the price of a good place to sleep—the high cost of food, fuel, clothes, caused by mistakes in economic planning by President Truman, we are faced with even a greater issue—war or peace. This drift toward war between the Soviet and western civilization seems to be becoming stronger with the passage of time. We know that the Russian people and the American people, or any other people in the world do not desire conflict and will do anything in their power to avoid another terrible bloody and perhaps totally devastating war.

The responsibility rests plainly on the men at the head of the countries to stop this drift to war before it is too late. It is their responsibility to lead, to have a planned course of action, and to strive night and day for policies which will create lasting peace. I restate that thousands of words appealing to the emotions will not solve this problem.

A battle commander just doesn't say forward charge—there is the enemy—go get them. To effect a victory he has spent hours of investigation, summarizing intelligence reports, planning. He knows his resources and to what extent they may be used without impairing his reserve, and he is able to inform his troops of the exact time and place where the attack will be made with a surety of success. What is the President's target today? No one can be sure from the vague and haphazard policies which have been put forth by his administration.

If we are headed toward war there is a lack of coordination of our preparedness program. If it is peace, which I pray that it is, there is a definite nonpartisan agreement that our foreign policies are not well thought out, and that no integrated peace program has yet been formulated.

With fanatical and constant reiteration by the Soviet leaders of their basic principle of dominating the world by force—with the Soviet eliminating opposition wherever it may crop up—by the concentration camp—by starvation—by the sword—with the Kremlin issuing daily propaganda against America's participation in world affairs—by the talk in America that another war is inevitable—that we have already lost another peace—and the provocative talk of military security by the administration in presenting its arguments for congressional appropriation for the Marshall plan—a poisonous and perhaps final devil's brew is being prepared.

Obviously only the most skillful handling of our foreign affairs at home and abroad in the next few years will enable us to avoid war with honor. On this one point I agree with Henry Wallace that the present administration is not capable of such skillful handling. But neither is Mr. Wallace. It is a case of the pot calling the kettle black.

On March 12, 1947, President Truman's message to the Congress on aid for Turkey and Greece—which I promptly supported—was uniformly considered as our answer to communism's constant attack on the foundations for reconstructing a prosperous and peaceful world.

That marked one of the most complete reversals in foreign policy in the history of any nation. Prior to March 12, 1947, the administration's policies had been to help Russia and communism entrench in the world. President Truman put an end to that—on paper—last March. Since then communism has lost several important engagements. But the President still refuses to adopt certain reforms in the administration's policy essential to the success of the Truman doctrine such as completely and finally reversing the horrible Morgenthau plan for Germany.

We announced, in more or less direct terms, that we had called a halt on the Soviet strong arm moves—that we had reached our limit in giving in to her outrageous proceedings.

As a result of promptings by Secretary of State Marshall, 16 freedom-loving countries and the United States are in the midst of developing a wide economic plan to help western civilization reconstruction.

On Thursday, January 22, 1947, Great Britain returned to her historical policies of undeclared hostility toward Russia. On that day Foreign Secretary Bevin admitted the labor party's policy of friendship for the Soviet was a failure. Also, completely ignoring the existence of the United Nations, Secretary Bevin proposes to return to Britain's age old balance of power policy on the European Continent built not on her former dominant position in world affairs, but on Secretary Marshall's European recovery program.

Republican cooperation for the sake of the Nation with the President is hampered by the President's incapability of steering the ship of state in the turbulent and dangerous waters we are now in.

We have a long, hilly, and rough road ahead of us. It is a road that only the uncommon American people can successfully travel. But even as great a people as we must have accurate road maps and information.

The education of the American people regarding road conditions should be forthright and continuous. But it is not.

We need to clear our minds of the myths that our foreign policies have been farsighted when the record shows they were

and are ridiculously bum-sighted—cross-eyed in fact.

The latest illustration of the confused thinking in the administration is the Secretary of the Army's statements before the Senate Foreign Relations Committee that we had to have the complete administration program for European aid or peacetime military conscription at home.

Yet, the President has said we must have both. Is the country to understand now that if aid abroad is voted that we will not have conscription at home. Here is a highly important point that requires clarification by the President.

Thus we repeatedly are left dizzy by the conflicting statements of the administration on major policies.

The present world situation is proof either of the fool decisions made at Yalta and Potsdam or their mismanagement.

Under the inept handling of our foreign affairs, our relations with the great nations to the south of us and with France have been muddied. President Truman's ultimatum to the Congress, "All or nothing," does not fit cooperation for the sake of the Nation.

We energetically write notes and sternly call the cops. But there are no cops.

It is a pure fraud to talk about referring the policing of Palestine to the United Nations, unless Russia and the United States can patch up their differences first.

The United Nations is neither constituted nor equipped to deal with a crucial situation of that kind.

So we are in a situation for which the administration is partially responsible—where a fumbled match can start a prairie fire.

And what is the administration doing about that?

It has plans for spending fifteen to twenty-five billion dollars annually for the next few years for a huge armament program. It is asking the Congress for a total of seventeen billions for its European-aid program.

On top of all this, it is asking the Congress to appropriate forty billion for its regular budget.

Where money is coming from for this stupendous peacetime expenditure does not worry this administration. In fact, where money comes from has never worried any Democratic administration.

We badly need an administration that realizes that Uncle Sam can go broke—that realizes that an economically sound nation at home is as essential to our security and to a durable peace as a strong nation militarily.

Most serious of all is the lack of coordination of our preparedness program—just as in our foreign policies.

I believe that in military strength lies not only national security but peace. Now the plans for fifteen to twenty-five billions for military services are not complete.

"But they are definite enough to prove what the President's Air Policy Commission confirmed—that there is not now and has not been any integrated and coordinated postwar plan of defense, and that individual plans and policies, largely uncorrelated, have, like Topsy, just 'growed.' "

Those words are not mine. They are written by no partisan. They are the words of one of the recognized top military experts—Hanson W. Baldwin—of the New York Times.

Therefore, the country is imperiled by any lack of coordination in its foreign policy and its military-defense program. And the Republican Party is handicapped in its effort at cooperation with the administration for the sake of the Nation.

The administration chants over and over again—the Marshall plan and universal training. The President was not even courageous enough to use the word "military" in his message to the Congress. If it is really nothing but universal training we can get that simply and easily through our high schools and colleges.

But there is more involved in our national security and welfare than simply the Marshall plan and universal military training.

There is danger of them becoming an American Maginot line.

Many of the younger generals and admirals believe that masses of trained men in the field are obsolete under modern conditions of warfare.

The younger military professionals are more concerned about guided missiles, jet planes, radar, bacteriological warfare, aircraft carriers, submarines, and, of course, the atom bombs. Bases in the Arctic are more important to them than bases in Europe.

Unquestionably there is need for a reservoir of trained men to meet any massed panic of sudden attack. But that can be obtained through the National Guard.

The Republican Members of the Congress have equipped a Democrat President with a big stick. They voted him almost a third of the 1947 budget for national defense. They will give him at least what he asked for in his last budget message—about the same.

Furthermore, the Republican Party, as necessary, will give a Democrat President additional billions under the Marshall plan for his use in economic negotiations with foreign countries.

However, I don't believe we can buy peace by the simple appropriation by the Congress of these billions.

I believe there is still the biggest job of statesmanship left. That job is to build a bridge of cooperation for peace between the masses of the Russian people and the masses of the rest of the world.

That is almost a superhuman job. But, as I study history, I cannot escape the conviction that better and wiser statesmanship could have avoided most wars. Few wars have been deliberately planned. They largely result from blockheaded statesmen who, seeking immediate political advantage, link their initial steps with ultimate disaster.

If we stand firmly upon the principle that the inalienable rights to life, liberty, and pursuit of happiness apply to the peoples of all nations, then it will be extremely difficult for any nation to remain immovably bullheaded in opposing progress toward the realization of that principle.

We must never forget that the peace of the world in the last analysis depends upon the recognition of those inalienable rights.

Our role is the promotion of international cooperation rather than the development of old-fashioned international alliances, which, after all, usually turn out to be shotgun marriages.

To the Republican Party comes the great opportunity and the heavy responsibility of effecting policies that will offer a sound base for peace.

The nations today are in a state of great change in life and power.

Our leadership in this inevitable world evolution should be directed toward paths of development without world violence and with consent of the governed.

We cannot merely attempt with fine words to sit on the lid of the explosive forces now working in the world as did the Holy Alliance of Vienna.

I yield to no one in advocating a strong military program. But I also believe equally strongly that the sword should never dominate our thinking. We must always make it plain for all people—without relaxing our opposition to world domination by communism—that we are willing to offer our hand in peace and good will.

I want the American people to think about the details of our national defense program. But I also want them to give more thought to the roads to peace.

Let us prepare for national defense without emotional appeals to hatred, and strive for peace without ceasing.

The Republican Party's foreign policies, as expressed by the majority of its Members in the Congress, are neither appeasement, warmongering, isolationist nor hallelujah international give-away.

Republican statesmen are concentrating on a long-run constructive rather than destructive program.

It is a great job that confronts America, and the Republicans in the Congress are approaching it with a vision of social justice and humanitarianism and generous self-interest, tempered with the realization that there is a bottom to the barrel.

The conclusion cannot be denied that the Republican Party today occupies a middle ground between the haphazard saber rattling of President Truman, and the disarmament-appeasement program of Mr. Wallace. I believe the Republican position is solid ground for the country.

Award to Robert I. Queen by Delta Sigma Lambda Fraternity

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. IVES. Mr. President, I ask unanimous consent that there be inserted in the RECORD a notice from the New York City News of January 27, 1948. The article describes the recent honor paid to Robert I. Queen, past county commander of the Bronx County Disabled American Veterans, by the Delta Sigma Lambda Fraternity. Mr. Queen recently received an annual silver medallion award of that fraternity. I commend the public-spirited activities of Mr. Queen in the field of veterans' affairs and in the national campaign for the prevention of infantile paralysis.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

R. I. QUEEN GETS FRATERNITY AWARD

Robert I. Queen, past county commander of the Bronx County Disabled American Veterans, has received the annual silver medallion award from the Delta Sigma Lambda Fraternity.

Mr. Queen, a former student at City College and New York University, was active while at school with student publications and handled public relations for the fraternity, first locally then nationally. He also was associated with the forty-third and forty-fifth precincts' public relations staffs for civilian defense, and served with other civic groups in similar capacities. He served with the United States Army in an infantry unit.

Subsequent to his discharge Mr. Queen became associated with the Bronx County DAV and the American Legion, in various posts of legislative chairman, civil service and public relations chairman, county adjutant, and finally county commander of the Bronx County DAV, becoming the youngest leader to attain that post. He at the time was employed with the United States Veterans' Administration in the capacity as a registration officer.

He was appointed to the Greater New York City Council and Department of New York DAV in public relations capacities, and to the New York County Rehabilitation Committee

of the American Legion. He was cofounder of the Bronx County Coordinating Veterans Council and is now serving as public relations director of the group. Another recent appointment by the chairman of the Bronx County March of Dimes Committee put him on the Bronx Executive Committee for this polio campaign.

Willamette Valley Project—Resolution of the Portland Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. MORSE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter from Hillman Lueddemann, president of the Portland Chamber of Commerce, together with a resolution adopted by the Portland Chamber of Commerce at a recent meeting, in regard to the Willamette Valley project.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

PORTLAND CHAMBER OF COMMERCE,
Portland, Oreg., January 21, 1948.

The Honorable WAYNE MORSE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MORSE: The entire meeting of our board last Friday was devoted to the Willamette Valley project, with Col. O. E. Walsh, of the Corps of Engineers, discussing the review report, and Valley communities being represented.

The following motion was passed at that meeting:

"That the board of directors of the Portland Chamber of Commerce go on record vigorously supporting the Willamette Valley project; that the resolution of the agricultural and Willamette Valley project committees be adopted and copies sent to Oregon delegation in Congress and to the Governor of the State of Oregon, said resolution to carry the names of all the members of the board of directors."

We are pleased to enclose a copy of that resolution.

Yours sincerely,
H. LUEDDEMANN,
President.

Whereas the economic position, social conditions, and cultural attainments of the people of Oregon depend largely upon the maintenance and further development of the productive capacity of its lands; and

Whereas within the immediate future there is little opportunity to greatly increase cropland acreage or otherwise increase production, except through flood control, drainage, and irrigation, and improved land management practices; and

Whereas the average annual flood damage in the Willamette Valley, based on 1947 values, is $7,413,710, with an estimated annual loss in excess of $10,000,000 by 1970, unless flood waters are adequately controlled; and

Whereas the review report of investigations of the Willamette River and its tributaries, recently completed by the Corps of Engineers, presents modifications of the presently authorized Willamette Valley project, necessary to met changing conditions; and

Whereas this integrated plan for resource development will effectively stop recurring floods resulting in millions of dollars in property damage and loss of valuable top soil that can never be replaced; provide urgently needed hydroelectric power; enable the installation of major land drainage facilities and subsequent irrigation, thereby providing new opportunities and greatly expanded production; provide navigation locks at Oregon City and channel improvement for waterborne commerce to up-river points; and provide for improved fish facilities along with pollution abatement and recreational facilities: Therefore be it

Resolved, That the Portland Chamber of Commerce, in the interest of conservation and development of our land and water resources, continue to give full cooperation to the Willamette Valley project and pursue strong measures to secure approval of the review report by the Board of Engineers for Rivers and Harbors; and be it further

Resolved, That copies of this resolution be sent to the Oregon congressional delegation in Washington and to the Governor of the State of Oregon.

Proposed to the board of directors of the Portland Chamber of Commerce by the Willamette Valley project committee and agricultural committee of the chamber of commerce, January 15, 1948.

Approved by the board of directors of the Portland Chamber of Commerce in meeting, January 16, 1948.

Officers, Portland Chamber of Commerce: President, Hillman Lueddemann; First Vice President, Albert Bauer; Second Vice President, Charles H. Stewart; Secretary, Clark Burgard; Treasurer, E. V. Burns; Chairman of Board, Sid Woodbury; Directors: Leith Abbott, Neil T. Again, John Albright, Frank Belgrano, Jr., J. H. Branlund, Roland Davis, H. J. Detloff, Anthony J. Dwyer, Jr., Robert L. Eaton, S. Mason Ehrman, K. C. Eldridge, M. J. Frey, George Halling, Ben Hazen, George Henderson, Dean Ireland, Philip L. Jackson, Carvel Linden, Gerald R. Martin, Frank E. McCaslin, Paul B. McKee, Orville Miller, Ralph Montag, Fred Meyer, Chester A. Moores, Harry Morrow, Frank Nau, F. C. Nelson, Dr. Morgan Odell, Roy Owen, E. F. Pearson, James H. Polhemus, O. C. Roehr, E. Don Ross, Lynn P. Sabin, E. C. Sammons, David B. Simpson, F. D. Tellwright, Preston Smith, E. B. Stanton, Manley Treece, Max Tucker, Roy A. Ward, Albert H. Wey, W. L. Williams, Thomas C. Young, Lee Stidd, Jr.

Saudi Arabian Agricultural Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. TEAGUE. Mr. Speaker, I was very glad to receive a recent report on the progress of the Saudi Arabian agricultural program which is being conducted there by several Texans who had previously rendered great service to American farmers while employed by the Extension Service. These men are now teaching the farmers of Saudi Arabia the more advanced agricultural methods of the United States. This is a great contribution being made by America whereby our trained agriculturists encourage, inspire, and teach the farmers of this foreign land to do for themselves.

Mr. K. J. Edwards has been in charge of our agricultural mission there since January 1947. He is a graduate of the Agricultural and Mechanical College of Texas and has had considerable experience in the extension service in Texas. It is a pleasure to have this report on the accomplishments of a close friend.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a progress report on the Saudi Arabian agricultural program:

SAUDI ARABIAN AGRICULTURAL PROGRAM

About 1938 King Ibn Saud of Saudi Arabia became interested in developing an agricultural program for the benefit of his people. The Crown Prince, Amir Saud, has felt the same way about an agricultural and livestock development program and has rendered great service to this work. Shaikh Abdulla Sulaiman, Minister of Finance, has assisted the King and Crown Prince in every way possible and has handled many of the details of the work during the intervening years.

Actual work on this program was started at Al Kharj, about 60 miles from Riyadh, the capitol of Saudi Arabia. This project includes about 3,000 acres of irrigated land. Most of the crops which do well under irrigation in Arizona and California have done well at Al Kharj. These crops include wheat, alfalfa, maize, tomatoes, onions, carrots, eggplant, watermelons, cantaloupes, honeydew melons, Persian melons, and all kinds of pumpkins and squash, as well as many others.

Water for irrigation is pumped from two gigantic ains, which are in reality natural surface reservoirs of approximately 100 to 150 feet in diameter and several hundred feet deep. The Arabian-American Oil Co. was called upon to install pumps to lift the water from the ains into the irrigation systems and to construct the main ditches at Al Kharj. The work of the company has proven to be very efficient and the company pumping and irrigation systems have functioned successfully since their installation. In the years immediately following 1938, numerous groups from Middle Eastern and European countries assisted in the development of the project. In December 1944 a group of American agriculturalists, headed by David Rogers, of Arizona, arrived there. They stayed at Al Kharj until June 1946. This group was sponsored by FEA of the State Department. After the departure of this group, King Ibn Saud called on the Arabian-American Oil Co. to assist him in finding American agriculturalists to carry on the program at Al Kharj. Complying with the King's wishes, the Arabian-American Oil Co. brought a group of Texas agricultural men to Arabia and they started operations at Al Kharj in January 1947. This group was headed by K. J. Edwards, ably assisted by Sam Logan, Sonora; Bennie Gray, Canton; R. E. Nolan, Livingston; Joe Smith, Floydada, and John Gaudill, Rio Grande Valley. Edwards, Logan, Gray, and Nolan are all graduates of the Texas A. and M. College and have had extensive Extension Service experience. Joe Smith is a graduate of Texas Technological College at Lubbock and John Caudill received his degree from the Texas College of Arts and Industries at Kingsville.

The program of Al Kharj has been organized on the basis of research, demonstrations, and an educational program similar to

the work done by county agricultural agencies in the United States. At the same time, special effort has been made to make the project produce the maximum amount of crops at all times. All produce from the farm is sent to Riyadh.

Although operations at Al Kharj have been in progress under the direction of the Texas group for about a year only, King Ibn Saud, the crown prince and Shaikh Abdulla Sulaiman are so well pleased that the king has requested that four more agricultural centers be set up as soon as possible. These new centers will be organized just like Al Kharj on the basis of research, demonstrations, and an educational program reaching individual Arab farmers and livestock producers. They will be located at Hofuf, Qatif, Taif, and near Jeddah. Sites for the farms have already been selected at Hofuf and Qatif. Before the selection of these sites was made, the program was explained in detail to Amir Bin Jaluwi, the governor of the Al Hasa Province in which Hofuf and Qatif are located. The Amir was highly in favor of the program and appointed committees of Arab farmers at each place to work with the Al Kharj personnel in the selection of the sites for the agricultural centers.

The members of these committees were found to be highly intelligent and very much interested and enthusiastic about the program. They were extremely anxious that it be set up in such a way that it would be of equal service to everyone. The committees made some very valuable suggestions about the operations and services to be performed by the program. It is anticipated that these committees will continue to be used in advisory and policy-making capacities.

In the beginning work at the centers will concern various types of field crops and vegetables and will include all phases of the soil-improvement program. Work with livestock and poultry will be done as soon as the crop operations are well under way. With the entire approval of the Arab farmer committees, special emphasis will be given to setting up a phase of the work similar to the 4-H Club program for boys in the United States.

Experimentation and demonstration in crops will include the use of better seeds, fertilizers, insecticides, and fungicides. Extensive introduction of new crops of all kinds will be made. Improvement of soil fertility will receive major attention, and drainage in the Hofuf and Qatif areas will be of great importance. Within due time it is hoped that these centers will become the sources of supplies of good seeds for all the farmers, as well as the distributing point for improved livestock. Tractor and rice- and wheat-threshing services will be provided to a certain extent. It may be necessary that Government programs supplying fertilizers and insecticides and other farm supplies to the farmers at reasonable cost be instituted for awhile until the farmers can handle the purchase of these supplies themselves.

The Arabian American Oil Co. has rendered every possible bit of assistance to the operation of this program. In fact, there would be no agricultural program in Arabia if it were not for the oil company. The executives of the company feel that it is their obligation to encourage the institution and subsequent operations of an agricultural program which will furnish the people with more food to eat, raise their standard of living and do away with the necessity of importing huge amounts of foodstuffs as has been the system in the past. Saudi Arabia is the show window for this new program of American assistance in the Middle East. It is believed that successful methods employed in developing the Saudi Arabian agricultural program will be instituted in other middle eastern countries within due time.

King Ibn Saud has proven himself a great leader in this agricultural development work. He aims to develop a permanent program in agriculture, which within due time will be of tremendous benefit to the Arabian farmers and livestock producers. His Majesty is a very friendly, generous, and loyal person and has always been ready to listen to all problems arising out of agricultural operations. He has given his unstinted backing at all times. The same applies to the Crown Prince, Amir Saud, and Shaikh Abdulla Sulaiman and all Americans connected with the program in Arabia are looking forward to great improvement in the agricultural situation in the country and feel that the opportunity of being of service to the King and to the people of Arabia is extremely great. Perhaps within due time this agricultural program in Sauda Arabia will be an effective demonstration to all other countries in the Middle East, and even in Europe where agriculture needs to be rehabilitated.

President Truman is extremely interested in this program and made some very valuable suggestions about its operation during a recent 30-minute conference with him on this subject. Radio stations and newspapers have been anxious to carry significant programs and articles about the work. Harvard and Cornell Universities have invited K. J. Edwards to explain the program to its officials and students. The Department of Agriculture, through its Extension Service and FAR, is providing every possible amount of effective help, cooperation, and encouragement.

E. S. Shattuck Rips Military Training Plan

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. TAFT. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an article from the Los Angeles Daily News of January 20, 1948, entitled "E. S. Shattuck Rips Military Training Plan."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

E. S. SHATTUCK RIPS MILITARY TRAINING PLAN

Universal military training is the opening wedge to government control of the people, Edward S. Shattuck, former general counsel of Selective Service, said yesterday.

Shattuck, vice chairman of the Republican State Central Committee and former State commander of AMVETS, attacked the proposed bill at a town-hall luncheon in the Biltmore Hotel.

"There is no security for free Americans in such a step," said Shattuck. "We must not let this proposal become an American Maginot line, offering us a false security and lulling us into a fatal sleep."

"The only real hope of national security," he said, "lies in the early establishment of international law, international courts of justice, and international armed forces."

"There is no single step which will guarantee our security," he continued, pointing out that proponents of the plan claim the training of 18-year-olds for 6 months will make this country safe from attack.

Shattuck blasted universal military training on what he said was its only ground of justification—that it is essential to meet the manpower needs of our armed forces now and in the future.

Instead of building a single fighting force, trained in modern weapons, and made up of Regulars, the program would divert 185,000 Regulars from other duties to make it work, he charged.

"I have a deep conviction this Nation can solve the problem better and do it by traditional volunteer methods," he said.

"We must consider very carefully a course of action which might lead us away from our concepts of individual liberty and into an irrevocable step toward totalitarianism in America," he warned.

"Before we take such a step," he said, "we most certainly should convince ourselves beyond all doubt that it is absolutely and immediately necessary and that in no other way can we enlist sufficient military manpower to accomplish our objective."

Our Immigration Problems

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1948

Mr. DAVIS of Georgia. Mr. Speaker, under leave previously granted, I insert herewith a speech delivered in New York City, January 30, 1948, to a meeting of members of the American Legion, by National Commander James F. O'Neil:

The most important single occurrence on this earth during the past 25 years has been the emergence of the United States of America as a world leader. In the wake of two World Wars, a crippling economic depression, and a series of crises which have altered the character of almost every other major government, the United States exists today not only with its original form of government intact but as the most prosperous, most powerful, and most influential of all the world's nations.

It stands to reason that our national thinking and doing must be adjusted to fit this new role. In some fields, the appropriate adjustment already has been made.

Where once we permitted a naive policy of appeasement toward Soviet Russia, there is now a concerted effort to overcome the Russian threat to world peace. The American Legion, as one of the first and consistent opponents of Communist totalitarianism, applauds this change.

Where once there was reliance on England and France as protectors of American sovereignty abroad, we now realize we must steer our own course, strengthening friendly nations as we go. This recognition of the need for international cooperation of democratic countries the American Legion also welcomes.

The traditional American apathy toward national preparedness has given way to a great and growing public awareness of the need for universal military training, a powerful air force, greater scientific research, and other vital components of an adequate preparedness structure. The American Legion hails this trend toward realism.

These are a few of the realistic adjustments made in recent years by Americans whose Nation has come of age.

Unfortunately, this kind of fact-facing has not carried through all phases of our national affairs.

I want to talk to you today about a field of great importance to our national stature at home and abroad in which the necessary transition has not been made. I want to discuss immigration and America in 1948.

The immigration system now in effect in the United States is a conglomeration of legislative relics and antique regulations. This is not a random opinion. It is a measured statement of fact.

For 150 years, immigration has been treated as a stepchild of Government. Successive Congresses and administrations have heaped laws and regulations one on the other. Responsibility for executing the program has been bucked by four different Government departments. As a result, what goes by the name of United States immigration and nationality policy today is a massive pyramid of conflicting and complex directives which defy understanding, much less efficient administration.

Let me cite an example. In order to determine the classes of aliens excluded from admission to this country, it is necessary to consult 22 different sections of 13 different laws. To strike up even a passing acquaintance with the over-all subject of immigration, it is necessary to read almost 2,000 pages of printed laws and regulations.

I do not hesitate to say that officials of the Justice Department and the Immigration and Naturalization Service charged with administering the program find it difficult to comprehend all of its ramifications.

The national-origins provision of the Immigration Act of 1924 forms the basis for our present immigration policy. At the time of its adoption, this plan represented our pioneer effort to establish a numerically restrictive and automatically selective system.

Has this system worked? Your guess is as good as mine. The fact of the matter is that no one knows, for the simple reason that there has been no comprehensive analysis made of the character of immigrants received or any factual data established as to the degree of their assimilation. Patchwork legislation resulting from hit-and-miss attempts to modify the quota plan has further beclouded the issue.

The American Legion believes that what is best for America must be the paramount consideration in any modification of the quota system.

For this reason, I urge that the Congress appoint an appropriate commission to make a detailed analysis into all phases of our immigration laws, of the character of immigrants received under the present policy, and their effect upon our national economy. I further believe that this commission should be empowered to recommend to the Congress such revision and codification of the immigration laws as their study may determine.

The American Legion has dealt realistically and energetically with the problem of displaced persons in Europe. As a result of intensive consideration of this matter, including personal investigation of displaced persons camps in Europe, our organization has taken a firm and positive stand on the issue.

We believe that this matter must be divorced from the general subject of immigration and treated specifically for what it is—an emergency question involving vital humanitarian obligations. We further believe that the displaced-persons problem belongs and must be kept above partisan or selfish interests, and that the welfare of our Nation and our responsibility in relieving friends in distress must be the paramount and only considerations in its solution.

Accordingly, the American Legion recommends that the United States permit the emergency immigration to this country of displaced persons who were officially designated as such on January 1, 1947, less those who have since found haven, in numbers proportionate to our obligation as a member of the International Refugee Organization.

In recognition of the bond uniting men and women the world over who have fought in war for a common cause, we urge that special consideration be accorded war veterans and their families among the displaced-persons group.

We further recommend that all displaced persons who desire to settle in Palestine be permitted and assisted in doing so.

At present, there is a woeful lack of understanding as to the total number of displaced persons requiring relocation. Estimates range from several hundred thousand to the million mark. As an elementary prerequisite to any practical solution of the DP problem, the American Legion affirms that a count be made, that the exact maximum of persons to enter this country be fixed, and that we adhere strictly to that figure.

Our organization has always been interested in the betterment of relations between our country and foreign nations. At this hour of international tension, when the success of the United Nations and the best hope for peace everywhere depends on reciprocal good will among men, that is an objective especially to be cultivated.

At the same time, it is absolutely essential that we accord a firm first priority to our own national security and welfare. The American Legion believes that American residence and American citizenship are privileges which should be accompanied by the acceptance of certain obligations. Applicants for these privileges must measure up to the minimum personal standards of loyalty and industry on which our cherished institutions have been built. Common sense argues that the immigrant must conform to America, not America to the immigrant.

We want to make dead sure that immigrants will contribute to and not detract from the economic, cultural, and spiritual heritage of America. We are not obliged to burden our national structure with the malcontents and cast-offs and ne'er-do-wells of foreign societies. We do have a very definite obligation to exclude these elements from the American scene.

During the past two decades our immigration laws have been misinterpreted, misused, and even perverted to the lasting disadvantage of America. In spite of the fact that the law specifically excludes anyone who proposes the overthrow of our Government by force, we learned through congressional investigations that prominent Communists have paraded in and out of the country almost at will. Seemingly, one of these Reds obtained the necessary password from the White House itself. Certain influential persons in and out of Government apparently have made a hobby of smuggling aliens through lawful immigration barriers.

The American Legion vigorously protests this practice. As presently constituted, our immigration laws pose an almost insurmountable administrative problem. It is neither good sense nor good citizenship to magnify this problem by subjecting proper authorities to pressures which encourage evasion of the law.

Whether these attempts are made in ignorance or otherwise does not reduce by one iota their potential damage to our national welfare. A Communist smuggled into America under any other name is still a Communist, dedicated to the destruction of American institutions and possessed of the will, knowledge, and tools with which to advance that purpose.

In hundreds of deportation proceedings, brought during the past few years on the ground of Communist membership, scarcely any of the persons charged have admitted Communist membership. In most cases, the Government has been unable to prove such membership to the satisfaction of the courts.

The reason for this condition, of course, is that Communists are past masters at deception and secrecy. Almost all Communists assume fake names, and the Communist Party classifies its membership lists as top secret.

How many Russian fifth columnists have infiltrated American borders is anybody's guess. On the basis of the number of Communist aliens turned up recently, it's safe to say a small army of their brother and sister agents is still at large.

Chairman THOMAS of the House of Representatives Un-American Activities Committee announced several weeks ago that his group will investigate the illegal entry of aliens into this country. Public hearings on Communist aliens illegally in the United States are scheduled to begin March 1. This is a field in which the Congress should leave no stone unturned. The American Legion is pleased that the House committee will investigate the matter. We sincerely hope that the committee will recommend prompt and decisive congressional action to plug the loopholes in our immigration system.

To paraphrase an old saying, an ounce of exclusion is worth a pound of explusion. For once these blockade runners are in the United States, it is a near-impossible job under existing procedure to get them out.

I will mention just one case in point.

Gerhart Eisler, a German Communist, made use of a forged passport to enter this country in 1933. During the next 10 years he became a leader of the Communist Party in the United States, meanwhile enjoying several round trips abroad with the help of additional forgery. In 1943, his status was changed from that of an alien in transit to an alien for pleasure. As such, he had the complete run of the country. This, mind you, while many other aliens visiting America legitimately were having their visas revoked for such violations as failure to advise of changes of address.

Gerhart Eisler was brought to bay 14 years late, tried and convicted of lawbreaking—and released on bail pending appeal of his sentence. What is he doing today?

This agent of Soviet Russia, identified by the Department of Justice as a leader of the Communist Party of the United States, convicted and sentenced for contempt of the Congress of the United States, arrested and convicted for violation of the Passport Act, a known enemy of the Constitution of the United States, is even now preaching the Communist gospel before audiences in America.

If existing laws render this Government powerless to expel Gerhart Eisler and his kind from the United States, then by all means let's revise the laws. It is inconceivable to me that we should jeopardize all that our constitutional government has achieved in the past and promises for the future, out of reluctance to mend inadequate statutes. If there is license in our laws for the operations of Gerhart Eisler, then there is precious little protection in those laws for 140,000,000 loyal American citizens and the institutions they believe in.

More recently, an alien wanted as a war criminal in Hungary was discovered in the United States. His admission ticket to this country was a forged passport. He helped himself to a Spanish diplomat's title and got away with that ruse, for a while at least.

Then there is the case of the titled Englishwoman who overstayed the time limitation of her visitor's permit by 6 months, and was detected only after a bad check she had cashed called attention to this fact.

When the Canadian espionage trials of 1946 disclosed evidence of Soviet spy-ring operations in the United States, the Federal Bureau of Investigation followed the conventional trail of forged passports to locate a key suspect. He was posing as a student in the social sciences at the University of Southern California. He turned up missing one day and nothing more has been reported publicly on the case to this hour.

These are instances of immigration violations spotlighted by publicity. How many more are there that we don't know about?

The American Legion applauds the recent order by Attorney General Clark which will place drastic restrictions on the activities and travel of alien visitors in this country. We trust that the Department of Justice will pursue this policy relentlessly. Properly administered, it will go a long way toward eliminating many of the pretenses and ruses with which the evil minority of our alien guests have bewitched our immigration authorities in the past.

There are other "soft spots" in our immigration structure that require immediate attention.

Under existing law, visitors who qualify as "official representatives" of their government are accorded immunity from our legal processes. They cannot be bonded or detained by our law-enforcement officers. Inasmuch as industry and all else in Soviet Russia and company are under state control, all representatives of these nations qualify for the "official representative" classification. While learning from American experts the lessons of American technological and industrial skills, these Red missionaries are in a perfect position to scan the entire American scene for the benefit of the Kremlin. The American Legion advises that this policy, whose counterpart is unknown beyond the iron curtain, be terminated.

Another current regulation in sorry need of amendment permits the waiver of deportation proceedings in the case of an illegal entrant provided he avoids detection for 7 years and does not commit major offenses during that period. This is judicial double talk of the worst kind. It not only encourages law violaters to go into hiding, thereby making evasion of punishment a substitute for punishment, but it also promises the violator an easy avenue to legal residence after he gives himself up. All the violator need do after his 7 years' leisure is cross the Canadian border, apply for and obtain a number under the appropriate immigration quota, and return to the United States as a bona fide immigrant.

Several months ago, upon receipt of certain information, I confirmed and made public the fact that the notorious "Tokyo Rose" of Japanese radio fame had applied for a preentry passport to this country. This native-born American who tormented and attempted to demoralize fighting GIs in the Pacific area, wanted to resume residence in the country she had betrayed. Of course, I immediately registered the American Legion's objection to this proposal. So far as I know the matter rests pending further investigation by the State and Justice Departments.

But the point I want to make is this: When members of my Washington staff queried the State Department for information, they were told by an official of that Federal branch that the "Tokyo Rose" files were supersecret, and my assistants received a hint to abandon their inquiry. The same Federal servant volunteered the contention that "Tokyo Rose" had committed no serious wrong. I sincerely hope that this pathetic and preposterous attitude is not indicative of the over-all State Department position.

The American Legion deplores the secret treatment accorded such matters. We believe that information of this nature should be made a matter of public knowledge and subjected to public scrutiny.

We further recommend publication of the names of all persons who request visas for admission to the United States. This would be good for them and good for us. They want to join our national family to work and live with us. It is only right that we, as members of that family, should have the opportunity to know in advance who our brothers and sisters will be.

I daresay that this policy, had it been in effect during the past 20 years, would have resulted in a drastic reduction of illegal entries into this country. There would be fewer and fewer cases of the hook-or-crook immigration to America which has become so popular of late.

These are steps which the American Legion believes we must take in order to realize the potential advantages and eradicate the potential dangers inherent in our current immigration system. They are the products of long and meticulous appraisal of the entire immigration field by veterans of two world wars who hope and work for the establishment of a world society in which national security and international harmony will be coequal and sustaining factors.

Conservation: America's Most Basic Problem

EXTENSION OF REMARKS

OF

HON. FREDERICK A. MUHLENBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday February 5, 1948

Mr. MUHLENBERG. Mr. Speaker, as a member of the Public Works Committee of the House and therefore automatically interested in the subject of conservation of natural resources, I have read with great interest a speech by my colleague, Mr. FRANKLIN H. LICHTENWALTER, Member of Congress from Pennsylvania, former speaker of the house in Pennsylvania, at the meeting of the Interstate Commission on the Delaware River in Philadelphia on January 15. Believing the importance of the speech warrants its inclusion in the RECORD, I quote it below:

It is an honor to have this opportunity to speak with you about a subject so profound and fundamental as conservation. I am happy indeed to accept a part in your program, for I sincerely believe that conservation is America's most basic problem. In fact, I am willing to reach out farther. In my judgment, the salvation of the world depends upon the success in which we handle the job of conservation in this country. Conservation is not only an all-important domestic consideration; it is also a matter of vital international significance. General Marshall put the finger on that fact when, a short time ago, he stated: "Our foreign policy has entered the American home and taken a seat at the family table."

The world is sick today—very sick. It has reached the most critical point in all history. One only needs to read the headlines in any newspaper or listen to the radio to come to that conclusion. Hunger, poverty, strife, despair, human misery, and death are rampant. Although no longer at war, there certainly is no peace in the world.

Most of the globe's ills can be traced to one major cause—man's inhumanity to man and his arrogant disrespect of the simplest of the laws of nature. From time immeasurable, regardless of racial background or religious doctrine, humans have known that their existence and welfare are derived from the natural resources with which they have been surrounded. And yet, until most recently, nations have never seen fit to use the treasures of life which nature bestowed upon them in a prudent manner. At the peak of power and prime of life they always seem to change from plodding good samaritans to gluttonous, irresponsible monsters.

Only a brief consideration of history is required to confirm that assertion.

Consider first the plight of Greece, where an American mission of aid at present is striving valiantly to save that country from oblivion. At one time, Greece was a world power with an extensive domain. But, it squandered its resources, entered upon an era of intemperate living, and now lies weak and exhausted, a prey to the vultures who would devour it.

I need not refer to other examples of cultures which have recklessly wasted their resources and now lie dead and buried under their own debris. Suffice it to say that man has left a terrible path of ruin across the pages of history, in Europe, Asia Minor, North Africa, and China.

Now, let us take a look at the United States.

Today, it is the youngest major nation in the world. In its 172 years of existence—which, in terms of the span of life of man, is but 7 generations and, when measured by the age of the world, only a fleeting moment—America has become the most progressive, prosperous, and powerful country on the globe. Its rise to this pinnacle of supremacy can be attributed to two major factors: First, the abundance and diversification of its natural resources; and second, the excellence of its system of constitutional government. This combination of God-given assets and a Government designed to afford a free and full opportunity to its people for self-improvement has made it possible for the United States to become the beacon for all humanity.

The dominant question that confronts us now is: How long can America continue to maintain its enviable position of superiority? The answer hinges, more than anything else, upon how effectively the United States utilizes its natural resources from this point on, and upon how tenaciously it clings to the principles of government which has served it so well through the years.

Having stated this hypothesis, it is up to me to analyze and prove it.

As to our natural resources, aside from the air we breathe, the most important are soil, water, and minerals. Upon these three essentials hang the lives and livelihood of all human beings. It makes no difference where you live, what your occupation is, who your forefathers were, or who your children's children will be, you cannot sustain life and attain physical growth without the products of these three resources. Make no mistake about that!

At the beginning of our national history we were a republic of approximately 4,000,000 people. At that time we were in possession, in what is now continental United States, of 822,000,000 acres of virgin forests and approximately 460,000,000 acres of potential arable land with a cover averaging 9 inches of rich, fertile soil. Our streams sparkled with pristine purity and were alive with fish. Our tremendous store of mineral resources—coal, oil, iron ore, and uranium—had not yet been unearthed.

The passage of time has altered this picture materially. The amazing progress of this country, to which I have alluded, was made only at terrific cost. The price paid for industrial supremacy, for winning of wars, for our efforts to establish a lasting peace, has been stupendous. Over the years sight was virtually lost of the importance of our resources. So abundant were they that they were looked upon as being inexhaustible or forever permanent. As a result—a few times by necessity, more often through sheer indifference and thoughtlessness—we have permitted vast forests, fertile soils, clean waters, and valuable minerals to be wantonly wasted, ruthlessly ruined and selfishly exploited.

Today, in contrast to the 4,000,000 of yesteryear, we have 145,000,000 people in our own country to feed and sustain, and for whom to provide a livelihood—more than

35 times as many mouths to feed and much less to do it with. And in addition we are being asked through the Marshall plan to help feed, clothe, keep alive, and rehabilitate 270,000,000 additional people in 16 nations in western Europe during the next 4 years. And that is not the end to the prayers for succor from this country.

Can we carry this present load and shoulder our responsibility to future generations? The answer is an emphatic "No," if we continue our riotous extravagance and utter neglect of plain duty. Now, instead of 822,000,000 acres of productive forests we have less than 100,000,000 acres. While the area of our arable land has not shrunken, it has lost much of its richness. At least one-third of its topsoil has gone forever because of our failure to protect it properly from the ravages of wind and rain and the greed of men. Our streams not only have become open sewers and cesspools, but have been exposed to violent fluctuations of flow ranging from destructive floods to breathless dryness because of man's laceration of the forests and the lands from which they are fed.

Most of our mineral resources have been dangerously depleted.

In less than 200 years we have undone what it took nature thousands and thousands of years to accomplish.

On the basis of this record of denuded forests, scarred and eroded soils, polluted and desilted streams, reckless mining of minerals, and exploitation of gas and oil fields, destiny has written the condemnation: "Thou has been weighed in the balance and found wanting."

What shall we do in the face of this condemnation? Shall we maintain fierce and stubborn pride and deny the allegation? Or shall we acknowledge the fault and find a remedy?

Shall we, in ignorance and selfishness, continue to permit unnecessary waste and destruction of our natural resources? Or shall we admit our obligations and honor them?

Fate has flung the mantle of world leadership upon our shoulders. How shall we wear it?

We will only be able to fulfill our responsibilities to ourselves and posterity by making adequate provision now to embark upon an immediate and aggressive program of conservation. In no other way can this Nation continue to grow and prosper and, in the meantime, help tide over the destinies of others.

We are now living upon the products grown on about 390 of the total 460,000,000 acres of arable land which can be developed in this country. This production is sufficient only to provide the necessities of life in the form of food, fiber, clothing, shelter, and basic requirements of industry for a very little more than our present population.

Similarly, we are scraping the bottom of the barrel in respect to most of our irreplaceable mineral resources which, today, are the source of a substantial portion of all things that man uses. Curiously, however, we are witnessing the beginnings of a new era in the development of substitutes for many critical minerals and metals. Innumerable chemists in many laboratories are engaged in the synthesis of plastics and the adaptation of artificial resins for manufactured devices of all kinds. Spurred by the rapid depletion of nonreplaceable metals, science is developing usable substitutes from forests, plant life, and physical resources which can be reproduced, provided that we have the good sense to husband them properly.

Our population is increasing at the rate of one to two million persons a year. Western Europe is expecting us to supply her with $20,000,000,000 for the purchase of tremendous quantities of critical materials. Included in the list to be obtained from the United States in the first 15 months of the 4-year plan are 9,000,000 tons of grain, 1,000,000 tons of cotton, 43,000,000 tons of coal, 4,000,000 tons of steel, and $500,000,000 worth of manufactured machinery and equipment. The plastic age soon will place tremendous additional demands upon the products of our soil, forests, and waters.

If we are to meet these requirements we must make the most of our natural resources. It is imperative that we immediately adopt a program of action. Such a program, among other possible items, must include the following steps:

1. We must put our total area of 460,000,000 acres of arable land in first-class shape as speedily as possible.

2. We must stop soil erosion in the shortest feasible time. At our present rate of correction, putting an end to such waste will consume another 100 years. That is not fast enough. If we don't at least double the tempo we will soon experience the tragic results of another too-little-too-late proposition.

3. We must stop the needless slashing of our forests. Right now we are cutting annually 17,000,000,000 board feet more than nature produces. It will take us 600 years to replenish the 75,000,000 acres which we have irresponsibly laid waste. In the last 10 years we have lost by fire, disease, and waste enough lumber to build homes for 10,000,000 GI's.

4. We must redeem our streams and navigable waters.

5. We must conserve and replenish our underground water supplies.

6. We must mine our coal and mineral resources more judiciously and use them more wisely.

7. We must find further productive uses for oat hulls, sugarcane fibers, corn stalks and cobs, wheat straw, sawdust, and other lumber wastes, peanut shells, pulp and peel of citrus fruits, and all other materials which find their way into rubbish dumps and incinerators.

8. We must stop waste of all types.

If we do not do these things and do them quickly, the United States will go into a decline when its population reaches about 180,000,000. At the present rate of growth that is not more than two generations in the future.

Conservation is indeed America's most basic problem.

Russia is the only other self-contained nation on earth which has a quantity and quality of natural resources and a number of people comparable to the United States. We cannot shut our eyes to the fact that the two countries are competing frantically to curry world favor.

America must win that race. Otherwise, freedom may vanish from the face of the earth. And America will win. Not because of superiority of its resources, nor because of any advantage in population numbers. The United States will stay on top solely and simply because, under its system of free government, it offers its citizens a positive, spurring inducement to develop ways and means to make the most of themselves and of the resources which nature has placed in their hands.

America's future, the world's future, depends upon us here in this country today and upon the way we view and treat the problem of conservation.

Incodel is to be highly complimented for the example which it has set in advocating that the problem shall be solved by continuing the application of the long established and well-proved American principle of government of the people, for the people, and by the people; and for demonstrating that this procedure still works successfully.

The Tax-Reduction Bill, H. R. 479

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. PHILBIN. Mr. Speaker, the pending bill to reduce individual income-tax payments and for other purposes, has been carefully considered by the Ways and Means Committee and the Members of the House. It is not a perfect tax bill by any means but it embraces a clear-cut definite plan for immediate tax reduction.

There are few things indeed more desirable at the present time in this country than to lighten the tax burdens upon our people and our businessmen. The public debt stands at a staggering figure. The cost of running the National Government has risen to a truly unbelievable level. It must be obvious to any student of public finance and economics that the country cannot afford and our economic system cannot indefinitely maintain such gigantic expenditures by the Federal Government. These expenditures for the current year are about 10 times the cost of running the Federal Government in normal prewar years.

The cost of State and municipal government has also risen proportionately and onerous exactions are levied upon our citizens of every class and station in life. Income taxes, excise taxes, nuisance taxes, estate and gift taxes, taxes on some so-called luxuries which in America have become necessaries, taxes on automobiles, taxes on real estate, personal property, exactions of innumerable kinds from the cradle to the grave are burdening down the American business structure and the American people and threatening free enterprise, full-time employment and the deterioration of our industrial and financial institutions.

We are, in truth, a tax-ridden people and in this respect we are following precisely the way of all great democracies of the past which have fallen into ultimate ruin and disintegration because they taxed away the substance of their people, discouraged initiative and incentive and struck at the very mainsprings of economic activity upon which an abundant life depends. If this Nation is to preserve its vigor, strengths, and prosperity, this disturbing trend must be checked and checked now and in the months immediately ahead. No partisanism should intervene.

Our capitalistic economic system has tremendous vitality. That fact was demonstrated throughout the depression and particularly throughout the war and postwar period. It has successfully withstood the great burdens of government and war placed upon it and has emerged in sound, workable condition. It exemplifies our free way of life. We have learned the hard way that in this Nation enterprise cannot be put into a harness, that our people cannot be put

in strait-jackets. Undue restraints cannot be placed upon the operations of business or undemocratic restrictions fastened upon our people. We know now that we cannot compromise with proposals leaning toward the police state as fashioned after the principles of Karl Marx, or after the principles of the diverse socialistic philosophers, theorists, and politicians who have destroyed private initiative in certain European countries with such tragic results.

The war was a gigantic and tremendous venture costing us billions of dollars, and the American people will pay its heavy exactions for many years and generations to come. But we have left it behind and must reshape and strengthen our fiscal structure and industry for peace.

I am genuinely interested in extending relief to the millions of American taxpayers who are feeling the pinch of oppressive taxation at every level and who are also burdened at this time with excessive prices for ordinary necessaries of life. In the first instance we must have in mind the urgent needs of the average workingman and his family during this inflationary period. If we reduce the levies in the lower and middle-class income groups by a substantial margin and at the same time extend some relief to American business so as to provide for the accumulation and reinvestment of capital, the expansion of capacity, the extension of present facilities and by those means the increase of employment, we will be moving in the right direction.

I appreciate the fact that it is also desirable to insure the Nation against the resumption of deficit spending, to balance the Federal budget, and to provide sound fiscal conditions in the Treasury. I am also conscious of the fact that it is very difficult to reduce certain large items in the budget such as the appropriations for national defense, veterans' affairs, debt service, tax refunds, and other major items. But we must strive our best to effect economy, to promote efficiency, to strip Government of all unessential, wasteful expenditures, and to get down to the rock bottom of prudent management and careful budgeting. This can be done in my opinion without sacrificing any essential service, which is the only basis on which it should be done.

The formulation of a tax bill is one of the most difficult, complicated tasks assigned to the Congress. Under the Constitution the House has primary responsibility for revenue measures. It is not feasible to write a tax bill on the floor, and such measures must therefore be drawn and largely perfected in committee. This work demands the most expert, scientific, and laborious attention. We are fortunate to have a Ways and Means Committee comprised of some of the very ablest and experienced Members of this body. Under the leadership of the distinguished gentleman from Minnesota [Mr. KNUTSON] and the distinguished gentleman from North Carolina [Mr. DOUGHTON], this committee has exhibited industry, patience, and ability in outstanding degree and quality in formulating the pending bill.

I do not agree with all its provisions. I should like to see more emphasis placed upon relief for the lower- and middle-income groups, more relief for handicapped groups, a broader social approach. I should like to see higher personal exemptions for individuals and a repeal of many of the onerous wartime nuisance taxes which are unfair and oppressive. I hope this additional relief may come later. I should like to see a more equitable balance in apportioning the tax burdens on the principle of ability to pay so that the working people, the white-collar classes, professional, and small-business groups would be given greater consideration and larger reductions.

But it is not possible, however desirable, to avoid the current financial demands of the Federal Government. There is a point below which we cannot safely reduce the budget without impairing essential services or without risking a deficit for the fiscal year of 1949, and we must have this fact in mind if we would truly serve. On the other hand, as we cut the lower taxes sharply by 30 percent—and I think it should be more—if we fail to give adequate relief to those in the upper brackets, we may well be inviting disaster to the whole economic structure. Because in that event we will not only be effectually barring the reinvestment of necessary capital funds, but we will be also striking a severe and shocking blow to the spirit of incentive and enterprise which is indeed the main pulsating spring of our productive economy.

One fact stands out inexorably before us as we consider this measure and that is that this Nation cannot and should not continue to tax its citizens and businessmen on a wartime basis. This is untenable, unsound, and unwise on any theory save that of the regimented collective state which the American people unqualifiedly repudiate. If we continue these extremely heavy and onerous wartime tax burdens much longer, which at some levels are virtually a capital levy, at all levels a hardship, we are bound to inflict perhaps an irreparable damage upon almost every class and group, and in the end dry up the wells of private business activity so essential for the maintenance of our high, unapproached, and beneficent American wage and living standards which underlie the security and prosperity of our people. Increased productivity is the way to insure lower prices and higher standards. More production and less spending is the great need of the hour.

It is entirely appropriate that we should cling to the principle of ability to pay which in the main is equitable and just if prudently and honestly applied by the Congress and our taxing authorities. We should make sure so far as we can that all taxes levied can be paid with relative certainty and convenience. We should endeavor to provide that taxes levied are not repressive in their effect so as to produce diminishing returns or cause discouragement to ambitious individuals, legitimate business ventures, and vital risk capital. Let us take notice of the fact now that in these days of inflation many of our humble citizens do not possess the ability to pay such substantial sums out of their weekly pay envelope to the Federal Government without facing a real pinch, that these people have families to support and are entitled to prompt relief from their Representatives in Congress and the Executive.

Let us take notice of the fact that our business groups are also entitled to consideration in order that they may continue to expand and develop their enterprises along sound, healthy, and progressive American lines, so that incentive will not be discouraged, so that business activity will not be curtailed, so that full employment will not be reduced.

Our tax system must provide the basis for an economy which can expand and develop as a dynamic progressive organism. If we stand still industrially, economically, socially, we are in fact slipping back and that we cannot tolerate, because the path of America is forward. The example of certain foreign nations where initiative has been checked or destroyed is before us and we can therefore recognize the vital importance of keeping open the doors of opportunity to all who aspire to seek advancement in any sphere of American life. These are factors we must weigh and evaluate as we frame a tax bill.

I am prepared to vote for any motion to recommit the pending bill which, in my opinion, contains carefully considered, constructive, and nondilatory proposals to render the measure more equitable to the rank and file of American citizens, our workers, our artisans, our farmers, our white-collar and professional classes, our small businessmen, and all others who fall into the category of hard-working, earnest, and humble Americans who neither receive, seek, or expect special privileges from their Government, but whose every desire is to sustain and strengthen it by their labors and devotion. But the substitute, I regret to say, in my humble opinion does not conform to this standard. To be sure there is virtual unanimity of opinion here concerning the tax-splitting, community-property features of the bill which readjust an inequitable situation imposing disproportionate burdens upon taxpayers in many States. Naturally, I favor that proposal, and as I stated, I also favor raising the personal exemptions on individual taxpayers. But I cannot subscribe to a tax revision affecting the American people which imposes many billions of dollars of tax liability upon every class in the Nation which has not been carefully considered by the Ways and Means Committee.

If you are lifting tax burdens, this may well be done without hearing and without lengthy deliberation, though it should always be scrupulously and carefully done. But when you are imposing new taxes affecting many persons and business groups it is only fair that you should give the persons affected a chance to be heard. The proposed substitute levies an entirely new tax upon 22,000 corporations out of some 360,000 in the country, and I do not believe that this is either fair or just to those concerned. It does not make either for orderly procedure or a just comprehensive bill.

Let us remember that the excess-profits tax is a war measure. It is part of a system which embraces price controls, rationing, allocation of materials, and other restrictions necessary to carry on a great war. It aims to make it imposible for anyone to make excessive profits out of war. I have always thought that, if we could take profits out of war and apply the practice to the world scale, that this would be an excellent way of preventing wars in the future.

Another point: We have had enough experience with high taxes to know that all too often they are simply passed along to the consumer in the form of higher prices and to the worker in the form of reduced real wages. Of course, it is not possible to justify legally, morally, or practically the selection of 22,000 corporations out of all the corporations in the country for the imposition of a special excess-profits tax. The corporations affected are new corporations. They are not the large corporations, the trusts, combines, and monopolies with huge invested capital and high base period earnings.

They are new corporations which were formed during the war or since and many of them are undoubtedly owned, controlled, operated, and directed, in whole or part, by the very class of young men in this country which this Congress should be most interested in helping, namely, our returned war veterans. To tax this one group is not only discrimination but unfair competition, because it places taxes on one class of business and leaves the others tax-free.

Excess-profits taxes in peacetime are not defensible and if long continued will debilitate and disintegrate our American economy. Every great fiscal expert since World War I has recognized this fact. In 1945 we repealed the excess-profits tax at the urgent request of the President and the Secretary of the Treasury because it was deemed necessary to provide incentive, stimulation to business, to provide for expansion and recovery during the reconversion period. There is no justice whatever in reimposing this law long after the war is over and at a time when our current tax laws are producing sufficient revenue to balance the budget and provide a surplus. The fact that this proposal did not emanate from the committee but rather from a small group and, what has been alleged on the floor to be a 1 hour's conference, serves to clinch my view that such a proposal was hastily conceived, not carefully prepared, violative of cardinal tax rules and principles, and would bring destructive results to the American economy.

The pending bill offers real relief, though not all to be desired, and for that reason I will support it. I wish amendments could be offered to raise the individual exemptions, because I would also support them. Under the legislative situation confronting us under the rules of the House, however, that is not possible. The bill provides for a substantial rise in the exemptions, substantial reductions in taxes for most of our people, laudable community-property features, special consideration for the blind, and on the whole moves toward the most desirable aim of eliminating wartime taxation and bringing the country back to a position where we can balance the budget, make some payment to reduce the national debt, meet all our essential current obligations and commitments, and assist our common people by reducing their taxes at a time when such relief will be most welcome. For the foregoing reasons, and because I believe that it is the best tax bill that can be achieved at this time, I will support this measure.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. KNOWLAND. Mr. President, on behalf of the Senator from Nebraska [Mr. WHERRY], I ask that there be printed in the Appendix of the RECORD an article entitled "The Shaw Plan," which appeared in the Greater Nebraskan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SHAW PLAN

"We should be careful that our benevolence does not exceed our means." (Cicero.)

We have boasted that this is a free America. (It was up to 1933, the advent of the New Deal.) Secretary of State Marshall has a legal right to his so-called plan. We still claim an equal right to present our plan. We ask only for a patient consideration. You, Mr. and Mrs. America, must act as both judge and jury—the momentous decision is yours. (Mark M. Shaw, editor.)

Charity is a primal virtue and characteristic of man, enjoined by Scripture, and nowhere in the world is it more exemplified than in the United States of America. We are, and always have been, cheerful lenders and givers to other nations; in fact, our Uncle Sam has become a veritable Santa Claus—although some ungrateful recipients of our bounty have dubbed him Shylock.

The majority of the people of America are willing to aid friendly nations to recover from the ravages of war and to forestall the further spread of communism, but the extent of such aid must be consistent with our means, and we are definitely opposed to giving the vast amounts proposed by the so-called Marshall plan.

It is said, "There comes a time when patience ceases to be a virtue," and many of our people are beginning to feel that such a time has come with respect to all the spending, lending, and giving which has been imposed upon us during the past 15 years by the most improvident, lavish, and prodigal administrations that have ever scourged this fair land—and, boy, do we fervently hope that there will soon be an end to the present administration and all the vagrant train of New Dealers and spenders and lenders and givers of our hardened shekels.

Altruism is commendable, but it should not be carried to the extent of self-sacrifice on the part of the altruist. In other words, think of and do for others, but, at all times, have due regard for your own interests and ability, if you would satisfy both giver and recipient to the greatest extent practicable.

For the past 15 years our administration has spent and lent and given away our money, our food products, machinery, and what-not, without any regard for our own interests and our own needs, until we are head over heels in debt, short on food products, oil, machinery, equipment, etc., and now comes along the so-called Marshall plan proposing further aid to foreign nations to the extent of approximately $15,000,000,000 over a 4-year period.

We are unalterably opposed to the Marshall plan, or any other plan, of giving vast sums of money to foreign nations. We would favorably consider contributing a reasonable amount of food or money to any friendly nation in need of food for sustenance of life or health, and money for economic and industrial rehabilitation. We would do this for benevolent reasons as well as a good-will gesture with a view to hindering the further spread of communism. In determining the extent of such contributions, however, we should be mindful of the fact that we are in dire need of our precious dollars and of our oil, equipment, foodstuffs, and other necessaries of life; that we have an inflation menace to combat; the problem of high prices to solve; and an excessive national debt which cannot seem to be wiped off with just a stroke of the pen, as our former President said it could be done—(you know who). Jefferson had an altogether different notion about the national debt. He said: "The principle of spending money to be paid by posterity, under the name of funding, is but swindling futurity on a large scale"; while another famous Democrat, Woodrow Wilson, remarked: "The way to stop financial joy-riding is to arrest the chauffeur, not the automobile."

And then there are those infernal taxes which are bleeding people white, and from which we can expect no relief as far as the present administration is concerned, while every taxpayer feels there should be an immediate revision and simplification of the Federal tax structure, the reduction of income-tax rates, and the elimination of some of the other vicious forms of taxation, to the end that taxation be confined solely to the purpose of raising revenue for payment of the legitimate expenses of government.

Grover Cleveland "hit the nail on the head" when he said:

"When more of the people's sustenance is exacted through the form of taxation than is necessary to meet the just obligations of goverhment and expenses of its economical administration, such exaction becomes ruthless extortion and a violation of the fundamental principles of a free government."

Some of those billions of dollars proposed to be given away under the Marshall plan could be used to good advantage right here at home for so many things that we need. For example:

The widening and improvement of our highways, particularly in the Midwestern area where so many serious accidents have occurred recently:

For soil and water conservation in our river valleys;

The establishment of adequate manual and business training schools for the benefit of our youth, many of whom become loafers and juvenile delinquents, mainly because they have no such training;

The elimination of dangerous railroad and highway crossings;

Payment to the American Indians of our long-delayed debt to them, many of whom are not only starving but lack hospital and medical care as well as adequate educational facilities for their children; and

In every large city in our land there are thousands of our own people who are homeless, ill-clad, and ill-fed. Surely they are entitled to consideration and relief before we send such vast amounts of money and other things to foreign countries.

All in all, we sincerely believe that it is the part of wisdom and common sense to first satisfy our own wants—take care of our

interests—before being so lavish with our money and effects to others; and we feel confident that Congress will not be bulldozed into appropriating any such amount as contemplated by the Marshall plan.

The foregoing suggestions are submitted in the sincere belief that they are more in harmony with the ideas of the average American citizen and taxpayer than is the grandiose Marshall plan.

Get this straight in your mind: The Marshall plan is the Communist-inspired scheme to make American citizens slaves in order to free Europeans and the semi-insane scheme to bankrupt America that France, Great Britain, and other European nations may become rich through the efforts of 170 years of toil of millions of American citizens. The most brazen scheme in all history—the robbery of the thrifty and industrious for the benefit of the shiftless and improvident.

MARK M. SHAW, *Editor.*

The Taft-Hartley Act

EXTENSION OF REMARKS
OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. BUTLER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article appearing recently, entitled "The Taft-Hartley Act, What It Does Do, What It Does Not Do," by the senior Senator from Ohio [Mr. TAFT].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TAFT-HARTLEY ACT, WHAT IT DOES DO, WHAT IT DOES NOT DO

(By ROBERT A. TAFT, U. S. Senator)

One of the most outstanding accomplishments of the Eightieth Congress was the passage over the President's veto of the new Labor Management Relations Act of 1947. Probably no piece of legislation has ever been so carefully studied and worked out in such detail, both in House and Senate, and in conference. It was not the work of any one or two men, but represents the consensus of opinion of scores of legislators after prolonged debate.

The law was enacted in response to a general public demand, arising out of the tremendous injustices from the action of certain irresponsible unions and the prolonged strikes which interfered so seriously with recovery.

Union leaders have subjected the new act to bitter attack and misrepresentation. Without presenting any material specific criticism, they have tried to smear the act as a whole, its authors, and the Congress. They have threatened to purge from public life every man who voted for the act. President Truman weakly yielded to their pressure, but Congress did not. The majority, even of the Democrats in the House of Representatives, voted to override the veto, and the Democrats in the Senate were almost equally divided. If this veto had been sustained, union leaders might properly have boasted that their power would always prevail over the desires of a majority of the American people.

The truth is that, while the unions have succeeded in stirring up some opposition to the act as a whole, its major provisions meet the approval not only of the people at large but of the majority of union members themselves.

The difficulties in the labor field arose, for the most part, from existing statutes—the Clayton Act, the Norris-LaGuardia Act, and the Wagner Act. Originally, the employer undoubtedly had a great advantage over his employees in such bargaining as took place. These acts were passed to correct that situation, and they did so. But taken together with the various regulations made by administrative boards and decisions of the courts, the results went far beyond the real intent of Congress and gave the labor leaders not only an arbitrary control over their members but a great advantage in dealing with employers, except the largest companies in the country. The little businessman was practically at the mercy of the big union. The theory of the new law, even more than of the old laws, is to base all labor relations on free collective bargaining between employer and union, but to give some assurance that that bargaining shall be on a basis of equality. It does not prevent any reasonable union activity. It requires union recognition and strengthens the principles of collective bargaining rather than weakening them.

The second purpose of the act was to remedy abuses which have become apparent, particularly where they have arisen from the provisions of existing law. In correcting these abuses, the act endeavors to protect the individual union member against arbitrary or unjust action by his own union, to protect the employer against unfair and one-sided rulings, and to protect innocent third parties not involved in a labor dispute against the arbitrary action of employers and union.

In the third place, the act recognizes the power which labor unions have acquired and should necessarily restrain, and imposes responsibilities on these unions commensurate with their power.

In view of the uproar made by some labor-union leaders, it is well to point out what the act does not do. It does not permit any employer to refuse recognition to a union representing his employees. It does not in any way interfere with the right to strike if the purpose of the strike is to secure better wages, shorter hours, or better working conditions. It does not make any man work against his will, or impose any compulsory arbitration or government fixing of wages. It does not restore in any way power of the individual employer to secure court injunction, free from the provisions of the Norris-LaGuardia Act. It does not interfere with Nation-wide collective bargaining, even if such bargaining amounts to a monopoly, except that where national safety or health is threatened strikes may be enjoined for 80 days while mediation procedures are attempted and elections held.

The contract between the United Mine Workers and the coal operators makes those who declaimed about a slave-labor bill look very silly indeed. Of course the act never intended to pass on, or let the Government pass on, the rate of wages to be paid. It never intended to interfere with the right of employer and employee to enter into whatever contract they wished to make so long as it did not interfere with the individual rights of labor-union members. The act does require that both parties enter into collective bargaining in good faith, and complete it by a written contract. Therefore, it would be an unfair labor practice for a union after negotiating terms to refuse to sign a contract, or to sign a contract which releases the union from all liability for its performance. Just as the unions compelled the employers to put their collective bargaining agreements into writing, so can an employer compel a union to sign a valid contract. But if the employer does not choose to file an unfair labor charge, there is nothing illegal in the failure to sign a binding contract. The Lewis coal contract does not relieve the labor union from liability for its performance. I can see no legitimate objection to a limitation of liability by unions for acts of others which it cannot restrain.

IMPORTANT PROVISIONS OF ACT

Public-opinion polls show that while a majority of employees are opposed to the act as a whole, they generally approve its specific provisions when they are acquainted with them. Some of the most important provisions of the act are as follows:

Freedom of speech is guaranteed for employer and employee alike. The desirability of doing this was recognized before our committee, even by Mr. William Green, A. F. of L. president.

Secondary boycotts and jurisdictional strikes are made unfair labor practices and subject the union conducting them to monetary damages. Testimony before our committees was almost universal as to the serious injustices brought about by secondary boycotts and jurisdictional strikes, particularly to those third parties who were in no way involved in the dispute. No witness defended this kind of strike. There was some suggestion that certain kinds of secondary boycotts might be justifiable, but no one could ever define what they might be. If they can be found, they can still be exempted from the provisions of the act.

Unions are required to file financial reports with their members and other information with the Secretary of Labor. Most unions admit that their members are entitled to this information, and there is no subject on which the public and the union members themselves are so united. Eighty-five percent of union members favor it. Corporations have had to make these reports for years.

The closed shop, which gives the union a veto power over all employment, is made illegal, but the union shop, under which persons employed must join the union within 30 days, is permitted if approved by the vote of a majority of the employees. However, even in this case, the union is not permitted to force a man's dismissal if that man is willing to join the union and pay union dues. In other words, a union may arbitrarily refuse to admit a man or fire him, but if that refusal or firing results from some cause other than nonpayment of dues, then the union cannot force the employer to dismiss that man. The Board is given the power to prevent excessive or discriminatory dues.

We had many cases where a union has fired a man because they did not like his political opinions, or the way he testified in court, or his opposition to the union leadership, and where, because of a union-shop agreement, the employee was dismissed from his job. Nothing could be more opposed to fundamental principles of American freedom or justice than such power or its abuse. Undoubtedly the union leaders wish to retain this power over their men, but we could not continue the present law if workmen are to have any real freedom at all. Some 77 percent of union members apparently approve this provision.

The abolition of the closed shop resulted from abuses shown to exist, particularly in the maritime industries and their hiring halls, in which union control of employment in many cases had absolutely destroyed discipline and efficient operation.

Unions are made liable on their contracts as if they were corporations and are required to bargain collectively in good faith with their employer, just as employers have been required for years to bargain in good faith with their union leaders. Unions today are theoretically liable on their contracts, but the difficulties of enforcing union liability has been so great in many States as to be impracticable. Furthermore, judgments against

unions have been enforceable in some States against individual members of unions. The act provides that they are now enforceable only against the union itself and its funds. For years the unions have insisted upon the importance of collective bargaining agreements, and have boasted of their desire to abide by them. Those union leaders who now object to liability for breaking contracts show only their own unreasonableness, prejudice, and bad faith. Unions today are big business. There can be no logical argument for exempting them from liability on their contracts. Even union members approve such liability by a large majority.

The law requires all union officers to file affidavits that they are not Communists, or members of any organization that believes in or teaches the overthrow of the United States Government by force or by any illegal or unconstitutional methods. There is a penalty on any such officer who files a false affidavit. This would seem an effective way of getting rid of Communist officers in American unions. A desire to get rid of these officers has been often expressed by union leaders, and is certainly shared by an overwhelming majority of union members. The opposition of union leaders to the filing of such affidavits raises a serious question in the good faith of their protests against Communist-controlled unions.

WAGNER ACT REWRITTEN

The Wagner Act is rewritten to eliminate injustices, and made the act a two-way street. Up to now it has been entirely a weapon against the employer. The new act prescribes unfair labor practices on the part of unions, but without modifying in any way the existing restrictions on employers. Thus, it is provided that a union cannot coerce an individual employee into joining a union or staying away from his job. Unions are required to bargain collectively. Secondary boycotts and jurisdictional strikes are made unfair labor practices. So, also, the forcing of an employer to discharge a man without cause.

The one-sided nature of the Wagner Act has long been recognized. There is no reason why it should not operate against improper activities by unions as well as by employers. The principal beneficiaries, incidentally, will be the individual union members who are protected against the arbitrary acts of their officers.

The act is also amended by separating the prosecuting and judicial functions of the National Labor Relations Board. In the hearings in 1939 I was impressed by the complete injustice of any procedure where the same man or men initiate the prosecution, conduct the trial, and pass judgment on its results. The new act gives the general counsel charge of initiating and pressing prosecution for unfair labor practices and confines the Board to judicial action. Furthermore, in reviewing that judicial action, the Federal courts are given a wider power than they have today. The Supreme Court has held that almost no action of the Board could be reversed under existing law. The new act, while it gives preponderant weight to the Board's decision, permits the courts to examine the entire record to see whether it offers substantial evidence to support the Board. No man with an impartial mind and a respect for justice could criticize the action that has been taken.

UNION POLITICAL CONTRIBUTIONS

The act continues the present provision which prohibits unions from contributing to political campaigns when Federal offices are involved, and adopts the provision that unions shall not make expenditures for such political campaigns. A tremendous furore has been stirred up on the ground that this interferes with freedom of speech. Of course, there is nothing whatever in the act which prevents union officials from taking part in political campaigns and expressing their opinions of candidates as violently as the laws of libel will permit. The law has long prohibited corporations from making contributions, and it was always supposed that this also prevented the expenditure of corporate funds directly in elections through the publication of advertisements or pamphlets. The law simply subjects unions to exactly the same limitation as corporations. Unions are formed for certain specific purposes, and one of them is not to support or oppose candidates for office when there is almost certainly a difference of opinion among the union's own members. Dues paid by union members are paid for union purposes by members of all parties and friends of all candidates, and they are not paid for the purpose of promoting the interests of those candidates whom the union officers happen to favor.

It is suggested that the publication of a union newspaper might itself be a violation of the new act. The legislative history in Congress shows that this was not the intention. If the act is in any way ambiguous in this regard, I should favor an amendment making it clear that the act did not intend to affect any bona fide newspaper, even if the subscriptions are paid for out of union dues. But the act certainly is intended to prevent funds contributed for union purposes from being used to defeat or elect Members of Congress. It does not prohibit the setting up of political organizations sponsored by unions, such as the CIO-PAC, but their funds must come from those who believe in their political principles, and must not be coerced from every union member.

The act sets up a new impartial mediation service with a national labor-management panel of 12 men. More responsibility is given to this service to prevent strikes before they occur. A 60-day waiting period is prescribed, but if negotiations are opened 60 days before the end of the contract, the waiting period need not extend beyond the expiration of the contract.

Strikes by Government employees are forbidden. This is no change in the existing law. It is considered that men who choose to work for the Government give up their right to strike.

Limitations are placed on the check-off and the creation of welfare funds. Contracts providing for the check-off or for welfare-fund payments divert from the individual employee the money which his labor has earned, and places these funds in the hands of the union leaders. Consequently, admitting the desirability of these practices, there should be some regulation to limit the practice and prevent abuse by union leaders. The act simply requires that welfare funds created by direct payments from the employer to the union be trust funds for the benefit of, and enforceable by, each individual employee, and that his rights be definitely stated in the agreement. It also requires employer participation in the management, and independent audits of the fund. The provision is, in effect a stopgap provision until a more complete study can be made of the whole subject of welfare funds in particular industries and their relation to the national social-security system. In the meantime, we do not desire to give union officers huge sums to be dispensed at their discretion for anything they may choose to call welfare, or permit them to favor some employees or classes more than others. The check-off provision merely requires that check-offs be authorized in writing, which is the usual provision today. Seventy-four percent of union members favor such a limitation.

The act contains a provision to deal temporarily with strikes or lock-outs affecting an entire industry or a substantial part thereof which imperil the national health or safety. It permits the President to appoint a board of inquiry, and then obtain an injunction effective for 80 days. During that period, the mediation service attempts to settle the dispute and finally holds an election on the best offer made by the employer.

It is quite true that this proposal limits the right to strike contrary to the general principles in which I believe. It was felt, however, that where the national health or safety were threatened, it was not unreasonable to ask employers and employees to continue the status quo for 80 days until every possible effort for settlement had been made.

The public generally demands a much more extensive prohibition against the right to conduct national strikes. I don't believe they realize how much the freedom to strike is necessary to a free economy. If the right to strike is taken away, something must be substituted for it, compulsory arbitration or Government fixing of wages. Once the Government undertakes to fix some wages, it will probably go on to fix all wages. Once it fixes wages, it must fix prices, and we move rapidly toward a totalitarian state in which there is no longer a free competitive economy.

But it is said, what will happen if a national strike paralyzes our economic system? My answer is, in the first place, that it has not done so yet, and that voluntary methods in the end have succeeded and probably will succeed in preventing such strikes or ending them before serious damage occurs. If we do have something in the nature of a general strike or a strike in a particular industry which threatens the existence of the people, then we have what amounts to revolution. As the very last resort, I would support a special emergency act dealing only with the particular emergency, giving the Government power to seize facilities and operate them, call for volunteers, seize union offices and funds, and take every other effective measure necessary to preserve the people and the Government. But such a law is no proper part of a Labor Relations Act.

The act has not been written for the benefit of employers, except as they have suffered from the abuses of existing law. It has been written to abolish injustice, and to protect alike the employer, and the employee, and the public.

Russia and Certain Works of Art

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a recent article from the New York Times and the United States News evidencing the sacking of European countries by Russia not only of priceless works of art but also billions of dollars worth of goods, materials, and equipment which we have furnished for the rehabilitation of war-stricken nations.

It is truly incomprehensible to me, if these reports are true, that our Government officials should be willing to pour in such stupendous quantities of goods and supplies of every character when Russia is draining off as reparations or loot everything within reach. We are talking about a program to build up Europe against communism, but according to these reports our Nation has actually strengthened and is materially aiding communism and nations within its orbit and control.

Our people are not seeking war. We do not wish to be involved in another conflict. We want no supermilitarism or warmongering. We propose to work for peace and we propose to give our best efforts to the building up of the United Nations as an effective instrumentality to preserve the peace. But we must not let this attitude be interpreted by Russia or other nations as a sign of weakness. Let us lay the cards on the table. There can be no appeasement of communism and no appeasement of illegal and unwarranted territorial expansion by force or subterfuge. Our Nation cannot possibly acquiesce in the enslavement of free peoples, exploitation of small nations or helpless individuals, or denial of God-given human rights.

The Russian people are not in a position to choose or determine the form of government under which they live. That is done for them by Marxist dictators, commissars, and bureaucrats. But we should not permit this latter class to dictate to the United Nations or to this Nation with respect to territories, governmental rights and ideals, propaganda, infiltration, or other Communist techniques which are directed against democracy, against the fulfillment of our war aims, against the principles of the Atlantic Charter and the "four freedoms," against the opinions of the democratic-minded peoples of the world.

We need not invite war to make our position known. We need not invite war to impress upon the Russians that we do not propose to stand by while they sack and dominate part of the world and seek through infiltration and propaganda to rule over the rest of it, including our own country. If ordinary diplomacy cannot impress upon the Russians that we mean business when we protest against these outrages, then we should not hesitate to break off diplomatic relations. We can break off economic relations and make endeavors to prevail upon other democratic nations of similar traditions, background, and attitude to join us in insulating the Christian democratic world against further encroachments by militant, arrogant, anti-religious, and anti-Christian forces which are ruthlessly spreading their domination and influence into many lands in violation of the fundamental principles upon which our own Nation is based and for which we have just waged the bitterest and most costly war in history. Whether it relates to Russia or any other nation, there is no excuse or justification as long as necessaries of life are in short supply or prohibitive cost in this country, for sending these vital commodities to Russia or elsewhere.

The fundamental approach to the rehabilitation of Europe should be predicated on the distribution abroad of our own surpluses. We should not give away to others that we need for the welfare, well-being, and health of our own people or for the stability and efficiency of our own economy. That doctrine is so plain and logical that it requires no argument. But in any event it is appropriate now, even at this late time, to serve unmistakable definite notice upon Russia and her satellites that we do not propose to be used as a pawn to strengthen communism and that we do not propose to tolerate further outrages against democracy and against the plain intendments of our war and postwar agreements, against the rights of democratic-minded peoples and against the interests of our own country.

ONE HUNDRED AND SEVENTY MILLION DOLLARS IN ART TAKEN FROM DRESDEN BY RUSSIANS

(By Edward A. Morrow)

DRESDEN, GERMANY, January 20.—The Soviet Army has removed art treasures valued at more than $170,000,000, including Raphael's Sistine Madonna, from the famous Twinger Museum in this city, it was learned today.

A catalog of the famous paintings formerly housed in this museum showed that 1,695 of the museum's best-known works had been taken to Russia. Left behind are 1,231 lesser known and minor works.

While the Soviet officers conducting eight American correspondents through the Soviet zone were eager to show the amount of restoration of cultural works that they were encouraging, they were unable to explain the disappearance of these art treasures or what would be done to fill the gaps in the galleries when the Zwinger Museum is restored.

According to Hubert Semesch, museum architect who is in charge of rebuilding the museum, which was heavily damaged during the war, the art works were sent to Moscow soon after the Russians took this city. He declared that an all-Russian trophy commission had given the paintings to Russia as a gift.

The catalog listings disclose among missing paintings Correggio's famous "Holy Night" as well as Raphael's Sistine Madonna, whose value on the open market could not even be estimated. To support the statement that $170,000,000 was a conservative figure for the value of the treasures taken, well-informed sources said that the following also had been removed to Russia:

Twenty-four original Van Dycks, 6 Palma Vecchios, 17 first class Rembrandts, and an equal number of Rubens; 7 of Poussin's works.

Other masters represented by several paintings were Tintoretto, Murillo, Jan Ruisdaels, Velasquez, Vermeer, and Veronese.

Represented among modern masters were Degas, Van Gogh, Manet, and Renoir.

One authority who declined to be quoted asserted:

"The selection was an excellent one. Without exception, not a work of international renown or of special artistic or scientific value remains. The twelve hundred left behind are either purely German in origin or utterly worthless. Only two important paintings by Paolo Veronese remain and these are here because of the difficulties that would be encountered in handling them because of their size."

[Two hundred and two famous paintings taken out of Germany by Americans and now in Washington are considered German property and American assurances have been given that they will be returned.]

The architect preferred to talk about the work that was going on in reconstructing the museum. It was built in 1709 by August the Strong and was almost completely destroyed in 1945. He estimated that the job would take 20 years if the materials were available.

[From the United States News of January 30, 1948]

BUILDING UP THE SOVIET BLOC

(Reported from Washington, London, and Berlin)

(A new Russian empire is growing fast in eastern Europe. The Molotov plan, which is jumping ahead of United States Marshall plan, is to tie nations closely to Russia, exploit their wealth. Russia's take to date: $12,000,000,000. United States on its side has poured out $15,000,000,000, part of it to Russian areas. United States method is to give aid, Russia's to exploit gains.)

Russia's Molotov plan for eastern Europe is pushing ahead of the United States Marshall plan for western Europe and is gaining momentum. The Russians are moving faster to tighten their hold on the area along their western border.

The Molotov plan, in practice, is described by United States officials as streamlined imperialism. Using it, Russia is drawing off reparations from former enemy countries. She is organizing companies to exploit the industries and resources of those countries. She is arranging trade deals that bind all the nations in eastern Europe more closely to her. She is completing a series of treaties that not only assure her dominance in the area, but are designed to tie the various nations to one another.

Countries in the network include Poland, Czechoslovakia, Hungary, Bulgaria, Rumania, Yugoslavia, and Albania. Dovetailed with them are the Russian zones of Germany and Austria. Thus, the area in which the Russians now hold sway consists of a solid land mass that adjoins Russia and extends all the way from the Baltic to the Black Sea.

Gains made by Russia since the war, as the chart on page 20 shows, are in the form of goods as well as in power and territory. Estimates are that she has taken a total of $12,600,000,000 worth of goods from the former enemy countries. These have consisted of removals, reparations, and payment of occupation costs. Of the total, nearly $9,000,000,000 is estimated to have been taken out of Germany. Big quantities of machinery, livestock, and materials have been removed from Germany by the Russians to cover part of the damage the Germans inflicted on Russia during the war.

Russia's policy of extracting goods from her sphere is in sharp contrast to the policy followed there and in the rest of the world by the United States. This country has advanced more than $15,000,000,000 in nonmilitary loans and gifts since the end of the war. Part of these have gone to areas under Russian control. Now, under the Marshall plan, the United States is proposing to advance additional billions in western Europe, largely by gift.

Scope of the Molotov plan, however, includes much more than reparations. Official reports show that what Russia is trying to do is to create an eastern European bloc that, in effect, will be part of a new Russian empire.

A "Danubian federation" is expected to be announced at some later date. When and if it comes, this will merely give outward form to a structure that already is taking shape. Details now available for the first time show that this structure is being buttressed by agreements of three kinds—military, cultural, and economic.

Military alliances, known as "treaties of friendship and mutual assistance," form the foundation of the structure. At least 18 of these already are in effect and more are pending. First, Russia herself entered into an alliance with each of the satellite nations. Then Yugoslavia concluded a similar treaty with each of the others.

The remainder of the network now is in process of completion. Bulgaria has treaties with Albania and Rumania and is negotiating one with Czechoslovakia. Poland has treaties with Hungary and Czechoslovakia. Rumania has a treaty with Hungary. But Czechoslovakia and Hungary still are at odds, and other links in the network have not yet been forged.

Backing up the treaties is a system by which arms are standardized and armed forces are organized on the Russian model.

Cultural treaties go along with the military alliances. These provide for exchange of professors and students and for setting up cultural societies in the respective countries.

For example, there is a Yugoslav-Bulgarian society, with headquarters in Belgrade, the capital of Yugoslavia. Its opposite number, a Bulgarian-Yugoslav society, has its headquarters in Sofia, the capital of Bulgaria. The ostensible purpose of these societies is to promote cultural and scientific cooperation. Actually, according to United States officials, they are being used by the Russians to spread Communist doctrine through youth groups and other agencies.

Economic treaties, however, give Russia the strongest hold on her bloc. Some of these provide for barter of definite quantities of goods. They are short-range and do not run for more than 6 months or a year. Others provide for long-range development of resources, with Russia supplying part of the capital and having a dominant voice in the control. Joint companies have been created in the former enemy countries for this purpose, the stock and the profits being divided equally between Russia and the government of the nation involved. In Rumania, companies of this type have monopolies on shipping, banking, and lumber production. In Hungary, similar firms control aviation, Danube shipping, and the mining of bauxite.

A series of agreements between members of the bloc also is being completed. One, between Yugoslavia and Bulgaria, lays the basis for an eventual merging of the two countries. They already have a customs union. Joint hydroelectric projects are planned. Yugoslavia is to produce Diesel tractors for Bulgaria, and Bulgaria is to build up a canning industry for Yugoslavia's fruit. The two nations will act as a single unit in any trade treaties with the west.

Russia's leverage over the former enemy nations results largely from the goods she has been able to seize in their territory. In the joint companies, she usually pays for her share of the stock with goods she has received as reparations or with German assets she has acquired. She can set high values on the assets she puts up, and low values on the assets contributed by her partners. She tries to collect on any debts owed to the Germans, but can repudiate any debts Germany owed.

A study by the economic staff of United States News-World Report shows that, of the total of $8,850,000,000 worth of goods Russia has taken from Germany, about $1,620,000,000 worth was removed from Berlin alone, immediately after the fighting stopped. The chemical, machine-tool, electrical, rubber, optical, automobile, textile, and plywood industries of eastern Germany were largely stripped. In addition, reparations from Germany's current production have totaled $1,250,000,000. Occupation costs paid by the Germans total another $3,100,000,000.

Rumania has yielded Russia goods worth $1,235,000,000, including the bulk of her oil and timber. Bulgaria has provided $320,000,000; Hungary, $520,000,000; and Austria, $570,000,000. The remainder of the goods Russia has taken from former enemy territory has come from Finland and Manchuria.

Most of the goods acquired have gone to Russia. But some have been allowed to remain in the countries that have provided them and are being used to consolidate Russia's position there. One of Russia's main aims now is to make going businesses out of the satellite economies.

Russia's problems, in consolidating her eastern European bloc, are complex.

Resistance of the people forces her to go slowly with communistic measures in many localities. Individualism is especially strong in Hungary and Czechoslovakia. Also, in areas where farms have long been of family size, collective farming is opposed. However, where big estates are broken up and given to farm laborers, as in Poland, and the new farm units prove too small, these laborers then offer little resistance to collective farming.

National jealousies also complicate the picture. Hungary, for example, refuses to sign a treaty with Czechoslovakia because of the way peasants of Hungarian origin have been treated by the Slovaks. And the Czechs, for their part, do not want to be in a military bloc that has Yugoslavia's Marshal Tito as overlord. They prefer to deal directly with Moscow instead.

Lack of goods to send to the satellite countries prevents Russia from bringing those countries completely within her orbit. They are badly in need of machinery and other equipment, which Russia is unable to supply. Therefore, with Russia's approval, they are resuming their prewar trade with western Europe as rapidly as they can.

Lack of currency that can serve as a common medium of exchange handicaps trade within the Russian bloc. In the absence of such currency, most of the trading between nations consists of barter deals. There are rumors, however, that Russia is preparing to make the ruble an international currency, and to set up a ruble area in eastern Europe, similar to the sterling and dollar areas elsewhere. In that event, the ruble for the first time in many years will have a definite value in international exchange.

Political opposition to Russia and the Communists still is powerful in some countries. The Russians, taking no chances on losing their hold, are gradually wearing this opposition down. In their maneuvering, they are using the trials of political leaders and the activities of secret police. Also, the presence of the Russian army not far away speaks louder than words. Nevertheless, even where open opposition disappears, much hostility to Russia remains beneath the surface.

Russia's ultimate aim, United States officials suspect, may be to absorb the entire area of eastern Europe that she now controls. That would add more than 100,000,000 to her population and boost the total to around 300,000,000. In any event, Russia makes it clear that, through her Molotov plan, she is determined to keep her influence in the area supreme.

A vital question facing the United States is this: What is the chance that the eastern European nations can or will get out from under Russia's dominance in the future? The men guiding United States policy believe the chance is good. Therefore, they are combating Russia's influence among those nations in every way they can.

This country's plans assume no final split of Europe, but the restoration of a big volume of trade through the iron curtain. Russia now is not trying to prevent that trade. If she does prevent it in the future, the whole basis of the Marshall plan will have to be changed.

While the United States is challenging Russia's hold on eastern Europe, Russia is challenging United States influence in western Europe. The result is a test of strength, with the Molotov plan on one side pitted against the Marshall plan on the other. The Molotov plan already is being applied, whereas the Marshall plan still must run the gauntlet of Congress. That puts the Molotov plan several jumps ahead.

Statement by Hon. Robert F. Wagner, of New York, Made in Connection With Broadcasts on Housing

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 5 (legislative day of Monday, February 2), 1948

Mr. MURRAY. Mr. President, on behalf of the Senior Senator from New York [Mr. WAGNER], I ask unanimous consent to have included in the Appendix of the RECORD a statement by Senator WAGNER dealing with a series of broadcasts on the housing problem produced by station WNBC in New York City, as well as one of the broadcasts.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Mr. WAGNER. The critical housing shortage merits the continuous and searching attention of the people of this country. There is no national problem which weighs more heavily on the welfare of our families and our children than the shortage of housing and the continued existence of the slums which have disgraced American cities for generations. Nevertheless, notwithstanding the vital importance of attaining a solution of the housing problem, the efforts to acquaint our citizens with the real issues and to provide them with the information they need in order to determine upon the proper solutions are too few and far between.

For this reason, I wish to call the attention of the Senate to a series of four broadcasts entitled "Housing, 1947," which were produced by radio station WNBC in New York City during the fall of 1947. In these broadcasts, all the issues and all the points of view on housing were presented to the public in dramatic, incisive, and accurate form. Authoritative spokesmen for industry, labor, and the public made their own observations on the housing problem and the best manner of curing it. I believe this series of broadcasts represents a noteworthy example of public service in informing the public on an issue of major national importance and I believe station WNBC should be strongly commended for undertaking it.

While all the broadcasts were of deep interest, I believe the Senate will be particularly interested in the following excerpts of a discussion on the Taft-Ellender-Wagner long-range housing bill (S. 866) by a number of housing authorities who participated in the broadcast of September 25, 1947:

Mr. GRAUER. I remember you said last week that tonight's subject is on a highly controversial issue.

TED. It certainly is. The people we hear from tonight are going to give their views on Government entry into the housing picture.

Mr. GRAUER. Government. That would bring in politics, wouldn't it, Ted?

TED. Exactly.

Mr. GRAUER. How do you feel about political implications in this housing shortage, Ted?

TED. Well, for that answer I went to Robert Armstrong, editor in chief of the Real Estate Appraised Journal and vice president of the New York Building Congress. I asked him if he thought there were political implications in the housing shortage. He said:

Mr. ARMSTRONG. I think that the political implications amount to no more and no less than canned dynamite. Of course, most Americans want to see private industry do the required work. They want to see private industry erect all of America's homes, but if this does not occur, if it cannot occur in the next year or two, I am quite certain that we are likely to see the Government engage in a public-housing program that will make both the past and present advocacy of public housing seem as ripples when compared to the oncoming tide. No matter what party wins the election in the fall of 1948, it most certainly will receive a mandate whereby it will be obligatory upon the Federal Government to construct perhaps as many as a million and a half homes a year until the shortage is alleviated.

TED. And now for another of Government's role in housing, I want you to hear from Commissioner Herman Stitchman, of the New York State Division of Housing.

Mr. STITCHMAN. Decent housing is a necessity, and I think the Government at all stages—municipal, State, and Federal—the Government, I say, has got an interest in seeing to it that every citizen has a decent house at a rent or a price which he can afford to pay.

TED. At a price which he can afford to pay. Commissioner Stitchman was talking about me then, and a lot of you listening in, I know. Whenever I did find a place available, it was just way out of the range of my pocketbook. And here's what Mr. Stanley Issacs, of the city council, had to say in that regard:

Mr. ISSACS. Housing produced by private builders at the present time costs so much that it is far beyond the range of most of the people who need decent housing and need new housing.

TED. I asked many people if they thought Government should step in and help the emergency. Mr. Charles Abrams, housing adviser to the New York Post, had some very interesting statements to make.

Mr. ABRAMS. We've got to adopt a theory that we had during the war, and that is that there is no housing at all or very little housing being produced, and, therefore, it becomes the function of Government to produce that housing.

We have local housing authorities, 800 of them, in 41 States of the Union, and if these local authorities were to build houses for all of whom private enterprise doesn't provide, for the lowest-income as well as for the middle-income group and the veteran, then I believe that we can produce housing in quantity. We can standardize specifications, we can buy cheaply by contracting for the whole output of factories. In that way we can produce houses on a mass-production basis and get them down to a low cost. In addition to that, the Government can borrow at low interest rates, the Government agency can build large communities that create their own environment and that resist the inroad of blight that affects private housing. We can replan our cities. We're given the opportunity for a real frontier in housing, and we should take advantage of it, if possible.

TED. Mr. James Kunens, of the Citizens Housing Council, was another man who had some definite opinions on how the emergency should be met.

Mr. KUNENS. Naturally, the primary responsibility is that of private enterprise. In New York City, which is predominantly a rental area, the emphasis has to be on large-scale rental projects. From this point of view it's necessary that we have more of the large-scale developments built by insurance companies, savings banks, and other large-scale builders. But at today's costs these groups can only take care of part of the demand, and we believe it is the responsibility of Government to take care of the basic housing needs of people whom private enterprise cannot serve. For this reason we've consistently urged action on all three levels of Government—Federal, State, and local—to supplement private activity.

On the Federal level we think that passage of the Taft-Ellender-Wagner bill is an absolute necessity.

TED. Now I'd been hearing a lot about the Taft-Ellender-Wagner bill from the people I talked with, so I decided to find out exactly what its provisions were.

Mr. GRAUER. I'd like to know a few more of the details of that bill myself, Ted.

TED. Well, of course, Mr. Grauer, we don't have the time for a complete study of the T-E-W bill. But here are the main things it would provide.

MAN 1. It gives aid to private enterprise in building.

MAN 2. It aids rental and mutual housing projects through insurance protection, with low interest rates and repayments lasting as long as 40 years.

WOMAN 1. It guarantees annual returns to investors, and in that way would attract large amounts of private capital into the housing field.

MAN 1. It helps people to buy moderate-priced homes with smaller down payments and installments extended for 30 years.

MAN 2. It will help clear slums.

WOMAN 1. It will aid the building of 500,000 units of community-owned low-rent housing projects for families which private enterprise cannot serve.

MAN 1. It will help private enterprise build 250,000 rural homes.

MAN 2. It will provide money for research in the housing field. Research in the use of new materials and new methods.

Now an interesting thing, which probably a lot of you know, is that the Taft-Ellender-Wagner bill has never reached the floor of Congress for discussion. Some people feel that there is a definite group responsible for the lack of action on the bill. Mr. Franklin Roosevelt, Jr., national housing chairman of the American Veteran's Committee, made this comment.

Mr. ROOSEVELT. I would say that remembering Mr. Wilson Wyatt's veteran emergency program which the Government undertook in the spring of '46, remembering that program, remembering its initial success and remembering that it was sabotaged largely through the efforts of the National Association of Real Estate Boards in Washington, the real estate lobby in short; and also remembering that the one national long-range over-all national program, which is the Taft-Ellender-Wagner bill, that its defeat is largely due to the opposition of the real-estate lobby in Washington and, I might add, that the American Legion has joined in with them on that, I would say that on that record, that the real-estate lobby is primarily responsible today for the housing shortage both for veterans and the country as a whole.

TED. Now, you remember, Mr. Roosevelt mentioned that the American Legion had voted against the Taft-Ellender-Wagner bill. So I went to see Mr. Arthur Benline, department housing chairman for the American Legion of New York. I asked Mr. Benline why the Legion had voted against the Taft-Ellender-Wagner bill.

Mr. BENLINE. Because the national housing committee of the American Legion feels that the Wagner bill, although it has many good and desirable points, primarily is a bill to provide housing and slum clearance and not necessarily a veterans' housing bill. At the convention there was a considerable difference of opinion among the delegates and particularly among the housing chairmen who attended the meeting of the housing committee. As you have probably read in the newspapers, many of the delegates came to New York instructed to vote for the Wagner-Ellender-Taft bill, or as it was rewritten, the Taft-Ellender-Wagner bill. However, the prevailing opinion of the National Housing Committee prevailed in the final determination of the convention.

TED. Well, right here I think we should do a little studying of the Wilson Wyatt program. Even though it was abandoned last year, it's important to explain how it fits into the picture right now. Like the Taft-Ellender-Wagner bill it was a Government move to relieve the housing shortage. It differed, however, in that it was much more of an emergency measure and was designed to get a lot of houses up for veterans in a hurry.

Mr. GRAUER. In other words, Ted, the people who were opposed to the Wyatt program are generally the same ones who now oppose the Taft-Ellender-Wagner bill?

TED. Yes, Mr. Grauer, because both involve Government participation in housing. And some people are opposed to it. Like Mr. Douglas Whitlock, chairman of the Building Products Institute, an organization supported by the producers of building materials.

Mr. WHITLOCK. Well, we have experienced in the past several years the heavy hand of Government on the construction industry. We've found it in the OPA where it prevented us from producing the types of products that ought to have been available for low-cost housing. We have seen the fiasco of the Wyatt program where a group of Government bureaucrats plan the course of the housing industry in such a way that it couldn't get started at a time when it was sorely needed. We believe that if the Government will stop interfering with the construction industry, that it will produce the houses that are needed for the American people and will take care of the housing demand that exists at the present time.

TED. The next person I talked with was even more against public housing than Mr. Whitlock. This man is chairman of the Washington committee of the National Association of Real Estate Boards—whom Mr. Roosevelt mentioned earlier. His name is Alexander Summer, the head of a real estate and mortgage concern in Teaneck, N. J.

Mr. SUMMER. Well, I think the general adaptation of a public housing building program means the end of this country, this life as we have known it. Trace back the history of every country that's gone communistic or socialistic, and it all started with public housing. Just a little bit of public housing to relieve the present emergency means a little bit more public housing. It's socialism pure and simple. I know there are a few people who are honest and sincere and conscientious advocates, but by and large most of those who advocate public housing do it for their own selfish interests and I think it's the greatest threat to the backbone of this country, private ownership of your own home.

TED. In view of Mr. Summer's statements I went back to some of the people who advocate public housing and asked them if they felt that public housing is a threat to private enterprise. Mr. Roosevelt said.

Mr. ROOSEVELT. No, public housing has never been a threat to private enterprise for the simple reason that private enterprise has always admitted that it cannot provide adequate housing for the lowest income groups and is a fact most private enterprise builders today will admit, that they cannot provide decent housing for the so-called no man's land which is the lower, not the lowest, but the lower income groups. Such acts as the Taft-Ellender-Wagner bill have been called socialistic. I'd like to point out that Senator TAFT, who in my opinion, is far from a Socialist, is one of the sponsors of the bill and that the Catholic Church, which has certainly never endorsed any socialistic legislation, the Catholic Church is behind the Taft-Ellender-Wagner bill.

TED. And Commissioner Stitchman of the New York State Housing Department said.

Mr. STITCHMAN. Public housing properly run won't hurt private housing in the slightest, as a matter of fact it's the only salvation for our cities today in my opinion.

TED. I saw New York City Councilman Issacs again and I asked him "Do you think public housing would hurt private enterprise?"

Mr. ISSACS. Not in the faintest degree. Private enterprise can build and should build to the fullest possible extent today but it can't produce homes at present costs, and this has been proved over and over again, that can rent for less than $23 or possibly $25 per month per room. There's no competition with private enterprise when you provide homes for those that can't pay more than 60 percent of this figure, $15 per month per room at the outside. Those people have to be provided for and private enterprise can't provide for them. When you provide for them through public aid you don't compete with private enterprise.

TED. Another interesting aspect of how public housing could be managed was given

by Mr. Charles Abrams, the housing adviser we heard from earlier.

Mr. ABRAMS. What the Government ought to do is build housing for those who want to own housing and use all of the private mechanisms including even the speculative contractor who can become a contractor instead of an owner. In other words we should have a program to build housing for sale as well as for rent.

TED. Mr. James Felt, who is in the real-estate business and acts as a housing consultant, brought up the same point which Mr. Abrams just mentioned.

Mr. FELT. Under the circumstances, I think it would be a fine idea if public housing went ahead in these jobs, developed housing even on the outskirts, so that we could have dwelling units for our families as quickly as possible, but at the same time make arrangements whereby at the expiration of a certain number of years, when the emergency was over, that that housing would be turned over to private enterprise and operated by private enterprise.

TED. Mr. Felt's idea that housing built by the Government could be turned over to private enterprise when the emergency ends interested me very much. And many of the other people I saw made the same suggestion. You see, those in favor of public housing say that private enterprise cannot afford to build for families in the lower income groups and therefore Government building would be no threat to the private builders. However, the people who represent private enterprise say that in perhaps 5 or 10 years, when prices are not so high, they will be able to build for these lower income groups and then the public housing will be a definite threat to private business. But it seems to me that if provisions were made to turn the public housing over to private enterprise at the end of the shortage, as Mr. Felt suggested, the threat of Government competing with private interests would be eliminated.

Now, the next person I saw was Mr. Kalman Klien, president of the Long Island Home Builders' Institute. When I asked Mr. Klien who was going to build a home for the man who makes, say, $45 a week, he said:

Mr. KLIEN. I'll admit, though, that under the present framework we're not providing houses for the veteran making $40 a week because the average house is about $8,000. Unless you want to go out into communities which are far from transportation and take an awful lot out of the house, give them a very small house, for example, where you can produce a house for a little less than $8,000 or $7,000, but even a $7,000 house doesn't answer the problem of a $40-a-week income group. However, the Government could do something about the veteran making $40 a week, and I don't think the answer is in rentals either. The answer could very well be in the purchase of a home, and they can do possibly three things: On the national level, of course, the Government could subsidize part of his interest rate. I think instead of 4 percent, if the Government would subsidize some part of that, that would bring the carrying charges down. Coupled with that, instead of a 25-year mortgage, if a 35-year mortgage pattern would be initiated that again would bring the carrying charges down so the price of the house isn't so important as the monthly carrying charges, and then on the local level the various municipalities could do something for the veteran by reducing the assessed valuation on the house, by giving them some tax exemption. It could be within the limits of three to five thousand dollars, that, too, would help bring the monthly carrying charges down. The sum total of those three items alone makes a tremendous difference in carrying charges. By doing that I think we could satisfy a great many veterans and they don't have to live in rental projects. They can own their own home and have room for expansion and enjoy a different way of life. It makes a big difference, living in a private house as against living in an apartment.

TED. Mr. Grauer, you remember Mr. William Levitt, whom we heard from on last week's program?

Mr. GRAUER. I certainly do, Ted. He's the builder in Manhasset, Long Island, who's constructing 3,000 houses this year.

TED. That's right. And the houses sell for approximately $7,500 each. Mr. Levitt is outstanding because he has the production-line system of building which we talked about earlier. Well, I asked Mr. Levitt what he thought of public housing, and he said * * *.

Mr. LEVITT. I think there's a very definite need for public housing, or its equivalent.

TED. Frankly, I was surprised that Mr. Levitt, being a builder, would make such a statement. And I told him I thought it was a little unusual.

Mr. LEVITT. I know, I've spoken to a lot of builders and practically none of them will ever say that public housing is needed, but at the same time somebody has got to house the $30-a-week fellow and I know that my company builds as cheaply as anybody in the business but I don't know how to do it.

TED. Well, now I want you to hear the answers I got to a series of questions I asked Mr. Maxwell Tretter. He was executive director of the New York City Housing Authority from January 1938 to July 1947 and now practices law and acts as a housing consultant. The first thing I asked him was, "Mr. Tretter, what are your suggestions for meeting the housing emergency?"

Mr. TRETTER. I'm glad you used the word "emergency" because we must use emergency methods in order to improve housing conditions today. Of course we must encourage private enterprise to the fullest extent but to provide housing now we must have a large public housing program.

TED. Then do you feel that public housing should be only an emergency measure?

Mr. TRETTER. No, I don't. It has been our experience over the years that private enterprise has not been able to take care of families in the lowest income group and therefore it will be necessary to have public housing with cash subsidies for families in the lowest income group. Nothing has occurred in the building industry which leads us to believe that private enterprise can build for the lowest income group now and in the near future. And in addition, in this emergency there must be an expansion of the public housing program so that Government will provide homes for families in the next income group. By that I mean public housing without cash subsidy.

TED. Mr. Tretter, I understand that public housing with cash subsidy means that the Government would make up the difference between what an apartment or house cost and what a family is able to pay. And I understand that this cash subsidy would be for the benefit of those in the lowest income bracket. But I wonder if you would explain a little more fully just what public housing without cash subsidy is?

Mr. TRETTER. That is housing built by public agencies like housing authorities throughout the country with the aid of the Federal, State, or local governments and it is housing provided for families in New York City who cannot afford to pay more than about $50 a month for an apartment. In contrast, public housing with cash subsidy in the past has been provided for families which can afford to pay about $7 or $8 a room per month.

TED. Well, Mr. Tretter, there's one thing I'd like to get straight in my mind. Just how can the Government build without losing money and rent at a price that is less than that private enterprise must charge?

Mr. TRETTER. Well, I agree that Government can't perform any miracles, but Government has certain instruments available to it which private enterprise does not have. For instance, in Government housing there is no profit involved; secondly, Government can borrow at much lower interest rates than private enterprise, which results in a substantial saving in overhead costs; thirdly, Government can afford to build these projects on a very large scale, which also results in reduction in construction costs and management costs.

TED. Do you think that Government building without cash subsidy is a threat to private enterprise?

Mr. TRETTER. Every fair-minded person who knows anything about the building industry will have to admit that there is still a tremendous gap between the 12- or 13-dollar per room per month rental to be charged in public housing without cash subsidy and what private enterprise can build for today. My answer is that we can now provide and at the end of the emergency these public-housing projects that are being built without cash subsidy should be sold to private enterprise and put back on the full tax rolls.

TED. Do you think that public housing will mean socialism?

Mr. TRETTER. Well, I certainly wouldn't like to see socialism in this country, but I am convinced that public housing is not the back door to socialism. All of us hate to see Government intrude into traditionally private fields, but it has also been the established practice in this country to ask Government to provide a service which is required by the public and which cannot be provided by private enterprise. If we maintain that principle and are certain that public housing will serve that market in the low-income group which private enterprise cannot serve then we will not have any socialism.

Union Leader Opposes British Labor Government's Palestine Policy

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. JAVITS. Mr. Speaker, the following letter from a trades-union leader, Mr. Charles Zimmerman, secretary-manager of the Dressmakers Union, Local 22, one of the great components of the International Ladies Garment Workers Union, AFL, shows the trouble and perplexity even of those who are deeply sympathetic to the British Labor Government in view of its Palestine policy. This policy, if it may be called that, is alienating British labor's long-standing friends:

COPY OF LETTER SENT TO ERNEST BEVIN AND CLEMENT R. ATTLEE

DRESSMAKERS UNION, LOCAL 22,
New York, N. Y., January 16, 1948.

DEAR SIR AND BROTHER: I am addressing this letter to you as a labor leader who is responsible for the government of Great Britain. * * * We in the labor movement of America have always felt very close to British labor and have been accustomed to look to it for inspiration and guidance. We were naturally elated when labor swept the last general elections and took control of the Government. * * * A new spirit of far-sighted humanity and justice, we particularly hoped, would be brought into British foreign policy. It is with deep regret that we have to confess that in one respect at least—in the British treatment of the Jews in Palestine—we have been cruelly disappointed.

It is, of course, no secret to you that we have sharply disagreed with you in your Palestinian policy in recent times, and I do not intend to rehearse our criticism or engage in political argument. I want to appeal to you as an American labor man addressing his British colleagues on a level beyond politics or political controversy. You know as well as we do what has been the fate of the Jews in the past two decades. In Europe, the rise and triumph of the Nazi movement meant the launching of a deliberate, carefully-planned program to enslave, torture, and exterminate the millions of Jews on the Continent. This dreadful crusade was accompanied in Palestine by savage Arab attacks on the Jewish settlements with the obvious purpose of terrorizing the Jews and making impossible the development of a Jewish homeland in that country, although that had been guaranteed in more than one solemn declaration of the British Government holding the mandatory power. The net result of 15 years of horror has been tabulated in cold figures: Six million Jews murdered on the European continent. The handful of survivors uprooted, displaced, and homeless, are now—2½ years after the end of the war—still languishing in DP camps without chance or opportunity of reconstructing their lives on a normal human basis.

Here was a situation in which we, American labor men, certainly had a right to expect a great deal from you, the British Labor Government. But what have you done? Not only have you done nothing to bring relief to these shattered victims of Nazi savagery, not only have you shut the doors of Palestine in their face; what is worse, you have not shown the least sign of human sympathy or understanding of their dreadful plight—or at least no such sign of understanding or sympathy has ever been manifested publicly in any significant way. We looked, and looked in hope, for that new spirit that was supposed to animate British policy. We found it in the courageous British resistance to totalitarian expansion in Europe, we found it in India—but in relation to the Jews, in relation to Palestine, not a trace!

Finally the question of Palestine came before the United Nations. After long investigation and deliberation, a decision was reached—partition and the establishment of a separate Arab and Jewish state. The decision of the United Nations immediately became the signal for the mobilization of the Arab forces against the United Nations and the launching of furious attacks against the Jews. Violence and chaos began to ravage the Holy Land. No one questions that the Arabs were the aggressors and that the Jews were placed in a position where they either had to defend themselves or submit to extermination. We do not condone terrorism and we have in the past more than once condemned the small terrorist groups among the Jews in Palestine. But that the violence that has followed the UN decision has been provoked by Arab aggression and that the Jewish community and its security forces have been entirely on the defensive, no one who is not blinded by prejudice can deny.

But what has been the attitude of the British Government, of the British Labor Government, led by you? You have apparently not found one word to say in condemnation of the Arab terror, directed not only against the Jews but against the United Nations. But when the Jews, compelled to action in self-defense, strike back at the Arab terrorists, your spokesmen in Palestine are quick to denounce the dastardly action. I do not even mention the reports that British police in Palestine have protected or given actual aid to Arab aggressors, nor do I make a point of the action of the British authorities in disarming the Jews and thus leaving them helpless against their enemies. I merely ask: Why is it that the British Government finds its voice only for condemning the Jews when they engage in self-defense, and has nothing whatever to say about the Arab terror, about the wanton Arab defiance of the United Nations? This is something that we simply cannot understand.

I am not talking of politics, I am talking of the most elementary claim of humanity. Here is some sort of solution for the aggravated Palestine problem; here is a glimmering of hope for some of the wretched, forlorn remnant in the DP camps. Why is there not a single sign of sympathy, a single gesture of help, forthcoming from you and the Government which you head? Have sympathy, humanity, and compassion no part in the program of British labor? Does British socialism mean nothing more than the nationalization of the Bank of England and the reconstruction of British industry? But what is socialism without justice and humanity?

Despite everything, we have not lost our faith in Britain or in British labor. We can never forget Britain's services to the cause of human freedom through the centuries. We still remember that it was Britain that held the fort against Hitler when the world was at its darkest. * * * But why—why, we ask—should it be so different in your treatment of the Jews in Palestine and the DP camps? Why must the Jews be made an exception? Why is there no understanding or sympathy for them, why only cold unconcern and ill-disguised hostility?

We are perplexed, disturbed, deeply troubled.

Sincerely and fraternally yours,

CHAS. S. ZIMMERMAN,
Secretary-Manager.

Oregon Common Sense

EXTENSION OF REMARKS
OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. Earl T. Newbry from the Oregon Journal:

OREGON COMMON SENSE

(By Earl T. Newbry, secretary of state)

Since long before statehood the women of Oregon have played an equal part with men in the molding of a community based upon common sense and fairness to all citizens.

It is natural to look upon early-day explorers as men. Yet many pages of our early Oregon history are filled with the accomplishments of women. It was a woman, the Indian Princess Sacajawea, who did so much to smooth the path of the Lewis and Clark party.

The names Walker, Spalding, Whitman, Jason Lee, Smith, Wells, and many others are famous as those of the early-day missionaries. Each of these names, however, was borne by a team—a team of a man and a woman striving to do a common job.

Long before women paraded in front of the White House demanding the right to vote, the women of Oregon were going to the polls and expressing their political preferences.

Mrs. Abigail Scott Duniway is generally credited with the victory that gave Oregon women the right to cast a vote.

Women of Oregon are an integral part of our political system, holding officers in political parties, being elected to the legislative assembly, and generally wielding much power for good.

Because of the influence of Oregon women, this State has made outstanding political contributions to the Nation.

Oregon was the first State to abolish the convention system of nominating candidates for public office when it adopted the direct primary. The secret ballot was another forward step by Oregon. It was the first to adopt the Australian ballot—as it was called in those days. The secret ballot—something that still is a mystery to many nations—enables a voter to enter a booth and mark his choice of candidates without any other person on earth supervising his selections.

Oregon was the first State to place in the hands of the people the privilege of electing United States Senators. Today it is a common practice, but when Oregon spear-pointed the innovation it startled the other States. Oregon also was the first State to adopt a preferential Presidential primary. It was the first State to introduce the initiative and referendum. Thirty-six years ago, Oregon enacted a law that 8 hours was to be the limit of a day's work on all public instruction.

We have the wages-and-hours law for women workers which set a pattern for other States to imitate. This was used as a model law in the finally successful fight against sweat shops in New York.

To assure the purity of our elections, for 40 years we have had the Corrupt Practices Act.

Oregon enacted a law to eliminate free passes on railroads for public officials. This spread across the Nation, and today the President must pay his own way when he travels.

Oregon provided for the removal of elective officers when their acts outraged public opinion by adopting the recall.

This is a brief picture of Oregon common sense. You are familiar with all of this. I have simply sought to refresh your memories.

Men or women elected to State office in Oregon have a pattern of conduct already mapped out for them. It is a pattern drawn by the voters themselves over a period of years of free elections.

As a businessman I have been favorably impressed by the character of our State government. In our Statehouse it is common to find the employee treating the public dollar with as great care as he does his own.

In the helter-skelter of some types of politics, Oregon is sometimes referred to as a reactionary State. The thing overlooked by these accusers is simply that Oregon moves forward rapidly and without a lot of noise. Oregon has grown up as an orderly State. Our people do not have to be driven to necessary reforms—they initiate them.

The business of our State government has grown at a tremendous rate. This has not been brought about by the creation of new bureaus and departments. It is simply the effect of a great population growth.

As a result, plans are now under way for a sizable expansion of State office accommodations. Work has already been started to increase the capacity of our State institutions. In other words, we are keeping pace with progress.

If we are to continue to keep pace with progress, or, as we have in the past, lead progress, Oregon women must continue to take an active part in State leadership.

Oregon, I believe, has been built upon hope, faith, and a lot of hard work.

Junior Chamber of Commerce of the United States

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday February 5, 1948

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to include a complimentary but well-merited editorial from the Chicago Sunday Sun and Times on the work of the Junior Chamber of Commerce of the United States:

ACTIONS SPEAK LOUDER

We can't prove it, but we have a hunch that when most young cave men grew strong enough to swing their own axes they grumbled about the way their elders were running tribal affairs.

Down through history, the discontent of young men and women has played a large part in changing the ways of men.

Young men played a dominant part in America's own war for independence. They played a big part more recently in Theodore Roosevelt's "square deal," and Franklin Roosevelt's New Deal.

Within the last few days we have had an opportunity to watch two distinctly different groups of young men and women in their approach to problems of 1948.

Young men and women appeared to be in the majority at the meeting of the Progressive Citizens of America, which met here to indorse Henry Wallace for President. This group believes the operation of our present free enterprise system is promoting economic injustices. It demands, for example, public ownership of the steel industry, coal mines, public utilities, and railroads.

A few days later the Chicago Junior Association of Commerce and Industry held its annual banquet to honor young men who have distinguished themselves in civic affairs. These young men believe that "economic justice can best be won by free men through free enterprise."

Members of this group, who call themselves Jaycees, show their discontent with present day conditions in another fashion. They spend their spare time activity working on constructive projects which will make their community a better place in which to live. They work for the success of such projects as the Community Fund, Chicago Boys Clubs, Red Cross, Boy Scouts, etc. Politically, they are interested in making democracy work better by staging get-out-the-vote activities on election day.

Thus, the Jaycees carry out through action their belief that young people can best help improve city, national, and international conditions by participation. While the young PCA'ers concern themselves with resolutions against the Taft-Hartley law and the Truman loyalty order, the Jaycees plan action against rheumatic fever, traffic accidents, and destruction of school property.

This distinction between the two groups extends all the way up to their international attitudes. The Wallace-PCA group is against the Marshall plan. The United States Junior Chamber of Commerce is in favor of it.

The PCA'ers passed a resolution saying funds for Europe should not be used to interfere with the national sovereignty of the beneficiary nations. The PCA believes the Marshall plan contemplates forcing America's ideas of government upon other nations against their will.

We believe America's attitude is better expressed by John Ben Shepperd, president of the United States Junior Chamber of Commerce:

"The scream of the eagle must be heard around the world. We must adopt a positive program of selling our way of life to the whole world. When we help the less fortunate in Europe under the Marshall plan, we should accompany it with the old-fashioned gospel of democracy—pointing out that only under our system of free opportunity and enterprise has a people been able to work and produce enough to relieve the chaos of a troubled world."

As President Cleveland put it, we are today confronted with a condition, not a theory. Many agree with Irving Dilliard, who writes in the current Survey Graphic: "Communism is changing from a challenge to democracy to a threat."

There are some who believe the way to combat communism is by force. They're wrong. Ideas can't be stopped by force.

There are others who believe communism should be allowed to run its course in Europe. They're wrong. Communism might some day recede. But in the meantime great damage to the world would result.

And then there are those who believe the best defense—or offense—against communism is to show the world that democracy works better than communism.

Wallace and his group of eager young men in PCA believe that the way to make democracy work better is to create a new political party. Even if this could be done, it would take several years. Meantime, pressing problems cannot wait.

We need men of action such as the Jaycees to go after the problems of the day. And we hope that as they grow older they will not change their belief that "service to humanity is the best work in life." When men or governments forget that, they foment conditions which cause young men to grumble about the way their elders are running the tribal affairs, just as the PCA'ers are doing today.

Admission of Members of the Polish Army in Exile to the United States

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. MacKINNON. Mr. Speaker, as you know, H. R. 3620, which I introduced to permit members of the Polish Army in exile to immigrate to the United States, is presently being considered by the Immigration and Naturalization Subcommittee of the Committee on the Judiciary. I urge this subcommittee at this time to give the most thoughtful consideration to this measure, and under leave to extend my remarks, include a letter this day received from Mr. Charles Rozmarek, president of the Polish American Congress, and excerpts from the statement he made on June 13, 1947, when he appeared before the Subcommittee on Immigration and Naturalization, Committee on the Judiciary, United States House of Representatives:

POLISH AMERICAN CONGRESS, INC.,
Chicago, Ill., February 3, 1948.

Hon. GEORGE MacKINNON,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: I am acquainted with your H. R. 3620 bill and I was very pleased when you introduced it last May.

Six million Americans of Polish descent were at that time elated, too. The Polish soldiers whom your bill favors took heart and they are still hopeful that the gates of the United States will be opened to them.

While we backed Representative STRATTON'S earlier bill, H. R. 2910, we asked that section 5 be amended so that it would also embrace the members of the Polish Army in exile—our gallant fighting allies. Your bill is the answer to their hopes and our plea in their behalf.

I am enclosing herewith a copy of what I said in this matter before the Subcommittee on Immigration and Naturalization. Committee on the Judiciary, United States House of Representatives, on H. R. 2910, on June 13, 1947.

You may use it in toto or excerpts from it in the CONGRESSIONAL RECORD, if you want to.

Appreciating your intercession for the loyal Polish soldiers, I am,

Sincerely yours,

CHARLES ROZMAREK,
President.

DISPLACED POLISH SOLDIERS

(Excerpt from statement of Mr. Charles Rozmarek, president, Polish American Congress, before House Subcommittee on Immigration and Naturalization, June 13, 1947)

While we back Representative STRATTON'S bill, we do not endorse it entirely in its present form. We ask that section 5 be amended so that it would also embrace the members of the Polish Army in exile—our gallant fighting allies.

When Britain's fate hung in the balance, they performed daring deeds of bravery over the skies of England. They fought at Narvik, at the Maginot Line and in Tobruk. On the slopes of Monte Cassino alone, 3,600 of them laid down their lives, thus saving the lives of our American boys in General Mark W. Clark's Fifth Army and British lives in the Eighth Army of General Alexander.

These heroes of the biggest battles of the last war, many of whom were decorated with America's highest honors for bravery, are now disarmed and deprived of their military status, placed in camps of the so-called Polish Resettlement Corps.

Is this the reward for the Polish soldiers, who with our American boys fought for the cause of freedom, and who were the first to fight Germany and the last to cease fire? Is this the reward for the men who put their faith in the spoken and written pledges of the United Kingdom and the United States of America? Marked by the Soviet police, slated for labor camps in Siberia, prisons or gallows, if they return—170,000 healthy, young, heroic, and determined human beings are to languish in humid Quonset huts of British camps.

These Polish soldiers in Great Britain, Germany, or in the Middle East are entitled to come to the United States if only as a reward for the invaluable services they rendered America as our allies. It would in some measure repay them for their fighting and for their services. Their hearts bleed at the thought that they can't return to the kind of Poland for which they had fought. A great many of them come from eastern Poland, which at Yalta, without the consent of the Polish people, was turned over to Soviet Russia as an outright reward for aggression. And in what is left of Poland, there is a Communist government, which owes its allegiance to Moscow. Try to visualize, if you can, our own American boys in the same plight—unable to return home—because a ruthless foreign power in the guise of a liberator had occupied their country.

These gallant Polish heroes represent the highest human material from the point of view of any sensible immigration policy.

They, like their countrymen in concentration camps, love liberty. Most of them come from sturdy Polish peasant stock, psychologically akin to the American pioneer stock. Our vast areas of the West, the Southwest, northern Maine, or Alaska should be opened to them for the benefit of our country and our economy. Many of them are highly skilled and seasoned soldiers and it is safe to assume that they would enlist voluntarily in our Army, thus swelling its depleted ranks.

I would urgently suggest that this subcommittee avail itself of the presence of Gen. Mark W. Clark in this country and request his testimony on behalf of the Polish soldiers who fought under his command. Most of them are young people and single. They would certainly find wives in this country, build up families, raise new generations of Americans.

The displaced Polish soldiers and civilians are of the same blood and stock as the 6,000,000 loyal Americans of Polish descent. We cherish the fact that prior to the enactment of the draft law in 1940, over 17 percent of the entire United States Marine Corps, all volunteers, was composed of boys of Polish descent. Our casualty lists are replete with Polish names. We are proud of our record of achievement on the battle and home fronts. Unlike our native Communists who owe their allegiance to a foreign power, we Americans of Polish descent owe our allegiance to only one flag—the glorious Stars and Stripes of the United States of America.

AN INVESTMENT IN JUSTICE

The displaced civilians and soldiers are an American responsibility. Their plight is attributable directly to the Yalta agreement, to which America was a party. In depriving them of the protection of a legal government, of an independent country, of freedom, of their homes, and of their beloved ones, we are coresponsible for their wretched fate. Theirs is a heartbreaking story. No one can measure the depth of their grief and despair.

The Polish American Congress, the voice of 6,000,000 Americans of Polish descent, pleads not only for the cause of Polish displaced civilians and soldiers, but also for all displaced persons of every nationality, race, and creed who fear returning to homelands now transformed into Soviet lands of slavery.

To insure justice and fair play to all groups, we ask that the admission of homeless displaced persons and soldiers should be on a prorata basis in direct proportion to the numbers of nationalistic groups.

Aside from purely humanitarian considerations, there are economic reasons that should prompt Congress to allow displaced persons of good character to enter our country.

While doing our share in lightening the burden of their sorrow and in calming their fears, we will at the same time be alleviating the heavy financial burden now borne by the American taxpayer in maintaining them in their present state of idleness and misery.

The United States cannot carry on forever the burden of feeding DP's. A speedy solution to this grave problem is imperative. To permit those who typify the highest moral standards to enter the United States would be the quickest and cheapest solution. Their love of freedom would be the best investment in the future security of America. Because they would be sponsored by responsible individuals and organizations, there need be no fear that they would become public charges.

Our moral duty is to save these people. Let America set a shining example to other countries by throwing wide open its doors to a fair share of these unfortunates. The number who would come in under a revised H. R. 2910, which would also include displaced Polish soldiers, would still be far below the number of immigrants who would have entered the United States had there been no war.

In providing a haven to these homeless civilians and soldiers, God would bless America and the Congress of the United States would receive the gratitude and approval of the judgment of time.

Increase in Subsistence Allowances for Veterans Pursuing Courses of Institutional Training

EXTENSION OF REMARKS
OF
HON. HAMILTON C. JONES
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. JONES of North Carolina. Mr. Speaker, a bill, known as the Meade bill, to increase subsistence allowance to veterans pursuing certain courses under the Servicemen's Readjustment Act of 1944, as amended, was passed by the Veterans' Affairs Committee of the House of Representatives during the first session of the Eightieth Congress and referred to the Committee of the Whole House on the State of the Union on July 23, 1947.

Before passing same, the Veterans' Affairs Committee considered the bill very carefully, and we think reasonably, after hearing representatives of the American Legion, Veterans of Foreign Wars, American Veterans of World War II, regulator veterans' organizations, Members of Congress, and the Administrator of the Veterans' Administration.

It was not until this session of the Eightieth Congress that the House considered this bill. On Tuesday, February 3, 1948, the bill was considered by the House and passed practically unanimously with 370 for and 6 against.

This bill is an excellent one and meets a need which has been very real to the veterans who are pursuing institutional training. The increase is not a large one but it has been for some time greatly needed by the veterans who are enrolled in courses of institutional training under this act.

The increases are as follows: Single veteran, from $65 to $75 per month; veteran with a dependent, from $90 to $105 per month; and veteran with more than one dependent, from $90 to $120. These increases do not seem large in casual observation, but they are certainly large to those young veterans who are taking these courses of training in the various institutions under this act.

Personally, I know of a number of worthy veteran students who are doing splendid work in the college and university courses and who are having a most difficult time making ends meet. This increase, although not large, will be a godsend to them and enable them to pursue further a course of training when otherwise they might have to drop out of the institution in which they are taking the course of training.

It is a source of satisfaction to the Veterans' Affairs Committee of the House which has not been in the least dilatory in this matter to see this much-needed legislation enacted into law. I know it will be welcome and good news to the many veterans and their families pursuing courses of training in the various institutions pursuant to this act to learn that they have been granted this increase which has become so vital to their decision as to whether they can continue their institutional courses of training in preparation for pursuing chosen avocations in life.

The People, the Atom, and the Press

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. COLE of New York. Mr. Speaker, American leadership in the field of atomic energy is just as dependent upon a well-informed public as it is upon the actions of the Members of Congress who are members of the Joint Committee on Atomic Energy and the few who have been selected to direct the United States Atomic Energy Commission. In order to have a well-informed public, however, it is necessary that there be a full disclosure of all permissible knowledge on the subject. The nature of the problem and the need for security in many phases of atomic energy administration places a tremendous responsibility on the United States Atomic Energy Commission and, to a lesser degree, the Joint Committee on Atomic Energy. It bars disclosure of much information, even by members of the Joint Committee on Atomic Energy to other Members of Congress. Such a prohibition is inherent in the subject, but there is much which can, and should, be made available to the American people.

A step forward in this direction has been taken recently by the United States Atomic Energy Commission. An office of public and technical information service has been established by the Commission to release factual news to the people through the usual channels such as press and radio. The Commission, under the leadership of David E. Lilienthal, is to be complimented for this action. It is creditable, too, that the organization's releases have not been colored by statements of opinion, but have been strictly unbiased and factual.

Information on advances in nuclear research is vital to the farmer, the industrialist, the doctor, and the general public. It is only with such knowledge that the 130,000,000 Americans can make intelligent decisions which will guarantee to the world that our use of atomic energy will be for peaceful purposes alone.

Recently, Mr. David E. Lilienthal, Chairman of the United States Atomic Energy Commission, made an admirable discussion of this aspect of the atomic-

energy problem before the New York State Publishers Association, which merits the consideration of the public generally:

THE PEOPLE, THE ATOM, AND THE PRESS

(An address by David E. Lilienthal, Chairman, United States Atomic Energy Commission, before the annual convention of New York State Publishers Association (meeting with New York Associated Dailies and New York State Society of Newspaper Editors) DeWitt Clinton Hotel, Albany, N. Y., Monday, January 19, 1948)

Will the United States be able to maintain, and even to increase its world leadership, in the development of atomic energy? This is a question on the minds and in the hearts of a good many people these days.

Upon the answer to this question a great deal depends, a very great deal indeed.

The people of the United States have a right to expect and to receive from the Atomic Energy Commission as candid and forthright an answer to this question as, in the present state of this troubled world, it is possible to give publicly.

For by the Atomic Energy Act of 1946, the McMahon Act, the people, through the Congress, have placed the responsibility for solid and swift progress in all aspects of atomic energy squarely upon this Commission.

It is appropriate that I should state my views on this question before an organization of men engaged in the newspaper business; not a gathering of scientists or engineers or military men or industrialists, but newspaper men, publishers, and editors. For the press has a large, and it may be a conclusive role to play, in determining where American atomic energy development will be 3 or 5 years hence, in relation to its present condition and in relation to efforts elsewhere in the world.

In my opinion the answer to the fateful question: What are the prospects of continued American preeminence in atomic energy development—including atomic weapons—depends largely, indeed chiefly upon American public opinion. It depends upon how important atomic energy progress seems to the American people as a whole, and to the natural leaders of opinion within the thousands of communities of this country.

The state of American public opinion will be decisive. That opinion depends largely upon how well the people know what is at stake for them and for their children, in this race—this race for more and more knowledge of this new land of the atom. Giving the people help in learning what is at stake, what is the fundamental nature of atomic forces—here is a high function of the press. Providing the people with information, knowledge, and an interpretation of facts and events—all ingredients in the formation of realistic public opinion—is part of the trusteeship vested in our newspapers.

What has American public opinion got to do with the health and vigor of an intricate scientific, engineering business—and national defense—undertaking? Let me try to make this clear.

Bear in mind that this enterprise—from the raw ore through production and including the design and production of weapons and most research and development—this undertaking is wholly owned by the public, by the Government of the United States. It is a monopoly, by explicit provisions of law; a law so reasonable under the circumstances that it passed the Senate of the United States without a single dissenting vote. The reason atomic energy is at present a Government undertaking is an obvious one: its close interrelation to national defense and security.

The public, then, is the owner and the boss. Contrast this situation with that during the war. During the war the American people knew nothing of the atomic project; indeed, public money was spent to see to it that they did not know. Over $2,000,000,000 were spent without public knowledge or a chance by Congress to stipulate or even examine the manner of spending.

But that was in wartime. It was not the normal situation of a Federal enterprise.

The fact is, and we must face it, that it has yet to be demonstrated that in peacetime the cumbersome and time-consuming normal process of our Federal Government can make a success or insure leadership, world leadership, of such a complex scientific and technical undertaking as this.

But our difficulty today goes even deeper than this. If America is to remain in a position of world preeminence in atomic energy and atomic weapons, we simply must have at work in this pioneering field the most creative brains of science and the finest talents of industry and management. Such men, it goes without saying, are in the greatest demand in private life. It has yet to be demonstrated, however, that the United States Government in peacetime will be prepared to provide for such men the kind of opportunity and conditions without which men of this rare capacity will be repelled rather than attracted and held in the service of atomic-energy development. Here is the very crux of the matter, for it takes a high order of human energy to produce atomic energy.

Huge sums of appropriated money, alone, will not keep us ahead; the conditions of public service must be such as to encourage and stimulate scientific engineering and managerial effort in one of the most intricate and exacting enterprises of our time.

The members of the Atomic Energy Commission realize fully these difficulties. We realize that to overcome them will be an accomplishment without precedent. We feel certain that the job can be done if the American people are constantly aware of how vital it is for our country and our future that it shall be done.

There is in this country the scientific talents required to continue and lengthen our leadership in atomic energy developments. We have the engineering and industrial and administrative skills to keep our lead and to increase it.

But if the American people are not acutely aware of the vital importance of this development to them, to their future, to their security, there is a real hazard that in a brief time neither scientific talents, nor engineering or administrative skills or huge sums of money will avail us. Red tape, bureaucratic frustrations, petty politics, dull unimaginative direction will move in and change the whole atmosphere from one of pioneering to dull routine. Drive and intensity, initiative, a sense of urgency cannot be sustained in such an atmosphere. Top scientists will turn to other lines of inquiry; good administrators will have nothing to do with such an enterprise. It will become a fine nesting place for industrious mediocrity. And America's head-start and her position of preeminence will be lost, lost in less time than I care to think about.

What are some of the things about atomic energy that it seems important that the public should know, and that newspapermen should know so they may, in turn, aid in public education? Obviously it is not necessary that newspapermen or the general public become atomic scientists. Nor are the fundamental facts about this new field of knowledge too complex or technical for general lay comprehension. The notion that these are things that are "over the heads" of the general nonscientific public is bunk, in my opinion.

Let me, by way of illustration, refer to a few of the considerations that seem to me important for general public understanding.

Atomic science is not confined to weapons, but opens a new world of knowledge. This new realm of knowledge deals with the forces contained within every particle on the earth and in the sea and in the very air we breathe. These atomic forces are within our bodies, within every living thing on the farms of your home county, within every object you touch or eat or wear. Atomic forces are fundamental, as are electrical forces, and the forces of gravity and of magnetism. We are not dealing here merely with a new explosive, with "just another bomb," however powerful. You and I are witnesses, here in our time, of the unfolding of new knowledge that goes to the very heart of all things physical.

The first large-scale demonstration of this energy was the detonation of a bomb, a weapon that in a single blast destroyed an entire Japanese city. The dramatic way in which word of the release of atomic energy first reached us, with this news of the first atom bomb, naturally enough created the impression that this was only a military weapon. Quite overshadowed was its importance as the opening of a door to a whole new world.

Atomic energy is far more than weapons. But let no man underestimate its destructive power. However fantastic atomic weapons may seem, they are real, as those of us who live with them well know, they are very real indeed.

Atomic energy is a military force of vast power. Its further development is, by express provision of law, a paramount obligation of your United States Atomic Energy Commission. In the laboratories and plants of the Commission this is a high duty that we seek to discharge with vigor and determination. One evidence of the importance we give to weapons is supplied by the Commission's recent announcement that we have presently under construction proving grounds in the Marshall Islands of the Pacific (7,000 miles from our place of meeting today) for routine experiments and tests of atomic weapons. The design, improvement, and production of atomic weapons goes on in the Commission's laboratory at Los Alamos, on top of a mesa in the mountains of New Mexico. This constitutes a scientific and engineering undertaking calling for the highest order of skills. No effort is being spared to keep this part of our responsibility to you and to all Americans on a high level of superior competence and vigilance. In this we have the cooperation of universities, industries, and the National Military Establishment.

This country for 2 years, since November 15, 1945, has made and continues to make efforts to place the destructive aspects of atomic energy under effective workable international controls. For we are and always have been a peace-loving nation. But until such controls are effective throughout the world we must act on a realization that here are weapons that have shaken previous military and international concepts as has no event in centuries, if ever. This fact is just as important to you and your neighbors in up State and central New York as it is to those who sit at the council tables of Washington or London or Paris or Moscow.

My purpose in seeking to dispel the notion that atomic science and atomic weapons are synonymous is not to deprecate the position of this force as a weapon. It is rather to warn that this mischievous myth (that the two are one and the same) is a major fallacy, a fallacy that will make it more difficult to eliminate atomic energy as a weapon of war, a fallacy that may keep up from an understanding of this great force and deprive you and yours of the peaceful fruits of this discovery.

You and I have been vouchsafed the great privilege of living in that moment of time when we can dimly see ahead a whole new world of knowledge about nature. But the

door to this new understanding is but barely opened, just far enough for us to realize that beyond its portals lie vast new continents to explore and develop. Even the most talented men of science insist that they are profoundly ignorant about the nucleus, the dense core of the atom, and about the forces that hold that nucleus together with energies that are almost unbelievable.

As to these energies, let me illustrate rather simply. Suppose this small black cylinder I hold in my hand were a lump of coal. If you were to burn this amount of coal, the coal's energy thereby released in the form of heat would be negligible. But this black cylinder is not coal. This is uranium. It is uranium of very great purity. Six years ago no man had ever seen even this small amount of uranium of this purity and quality. It had never been a substance of any particular importance. Tonight, as we meet here this black metal, this inanimate object is a central figure at the council tables of the peoples of the world. This cylinder is made up of three million billion billion atoms of uranium, and each of these atoms has a nucleus. If the energy within the atoms of this cylinder were released not by burning, as in the case of coal, but by the splitting of the nucleus, by what is called fission, the energy from the heat that would be created would be equivalent to that produced by the burning of 2,500 tons of coal. That is about the amount of coal required to supply electricity for the city of Albany for 3 to 4 days. Atom for atom, the energy released by the burning of this amount of coal compared with that released by the splitting of the fissionable atoms in this cylinder of uranium bears the ratio of one for coal to tens of millions for atom splitting.

These forces within the nucleus are so fundamental that it is of the utmost importance that they should be understood—in their essentials—by all of us. Here are two facts of the greatest importance to every living being the world over.

First. Mankind has probably learned more in the past 30 years about atomic forces than in all the preceding centuries.

Second. Within the next few years, a decade perhaps, if the people of this country make it plain that they are determined that this Nation shall lead the world in pressing forward in this field—we should be in a position to unlock new knowledge about life and matter and growth and disease and suffering so that wholly new concepts of human life will follow in the wake of this new knowledge.

New knowledge is the very lifeblood of progress in a country such as ours; new knowledge is the foundation of our military strength.

A major part of this search for new knowledge that may yield majestic benefits for man is going on here in the State of New York.

Under contract with the Atomic Energy Commission, the University of Rochester is carrying on a research program in medicine and biochemistry so extensive that the Commission has just undertaken to construct at the university a 6-floor building to house this work. This will include the training of doctors in how to use atomic energy as a new instrument for diagnosis and treatment of disease. At Rochester, medical science is seeking ways of preventing and treating radiation harm to human beings, a matter of vital concern in a world that must consider the possibility of some day being involved in atomic warfare. At Rochester they are using radioactive substances produced in the Commission's nuclear energy furnace at Oak Ridge to trace the causes of many diseases, including cancer, and to progress toward the hope for cure of this dread disease.

In Schenectady, the General Electric Co., under contract with the Commission, is developing the Knolls Atomic Power Laboratory. There nuclear scientists and engineers will tackle the long series of problems that have to be solved before we shall be able to produce electricity from atomic energy.

Cornell at Ithaca is a leader in using radioactive and stable isotopes from the atomic furnaces at Oak Ridge to seek out new knowledge of plant growth, so that plants may be helped to produce more food, at less cost, from each acre of land and each hour of labor. This work is not part of any Atomic Energy Commission project. It is made possible, however, by the fact that the radioactive isotopes—the tagged atoms—used in these new lines of research can be produced in such variety and quantity and so inexpensively in the Commission's nuclear reactors at Oak Ridge.

In short, at Rochester, Schenectady, and Ithaca there is leadership in the scientific and technical drive of this Nation to claim for its people and the world's people three great possible benefits of the atomic age: (1) New knowledge that will aid in diagnosing and treating diseases that shorten and burden man's days; (2) new knowledge and new know-how that will bring to the service of men more mechanical power to lift his load of drudgery and free him to develop further the things of the mind and the spirit; (3) new knowledge that will help to increase the annual yield from the soil of the earth and the toil of the farmers, and thus to overcome one of the greatest threats of this century—the fact that world population is now increasing faster than world food production.

Underpinning all of these applications of science to the service of man is the research into the basic nature of the nucleus of the atom and its behavior under different conditions. Here, too, New York State is the site of research work of the utmost importance. At Brookhaven National Laboratory on Long Island—old Camp Upton—nine of the great universities of this country (including Cornell, Columbia, and Rochester) have joined together and under contract with the Commission are operating a large segment of the entire basic research program of the Nation in this field.

I have referred by way of illustration to some of the kinds of information the American public must have, through the press and otherwise, if it is to make informed decisions on the issues of atomic-energy development. There is another side to this coin. Congress has forbidden public issuance of a considerable range of information. In the law this is called "restricted data"; information that might be altogether too interesting to individuals and nations who are potential enemies of the United States.

Congress has placed severe penalties on revelation of restricted data. But it is not so much the risk of incurring penalties that deter reporters, editors, broadcasters, and speakers from the use of restricted data; rather it is their genuine desire to avoid harm to the Nation's defense and security.

The first problem of the press and other media is to know what is restricted data—the information that the Congress has directed, in general terms, should not be published.[1]

The press here is in an impossible situation unless it has some guidance from the Commission that under the law has been made responsible for determining from time to time just what is secret and what is not. No one can put a piece of copy or a picture or an article alongside the brief definition of restricted data in the act and say with certainty whether it does or does not contain restricted data. Even the scientists and engineers working in the atomic-energy projects cannot decide this for themselves. Therefore the Commission maintains a declassification system, originated uner the Manhattan district. Working in this system, passing judgment on all copy submitted from inside or outside the project, are more than 120 high-ranking scientists, engineers, and technicians, each expert in one line of subject matter, each familiar with his phase of our Declassification Guide, a secret document developed by a group of the Nation's top scientists saying what may be published and what must be withheld. This system is complicated, but it is rather well administered and it works more rapidly than you would expect.

So there is a way, a fairly precise way, for determining whether any piece of copy or picture or anything else for publication originating inside or outside the atomic energy projects contains or does not contain restricted data. The Commission will put this machinery at the disposal of any newspaper, periodical, radio broadcaster, lecturer, or picture service man who wishes to have copy examined. A division called the Public and Technical Information Service will handle the copy, and give the person asking for the service the judgment of our scientific reviewers on whether it contains restricted data.

To manage both the security guidance and the positive information service for all media of public communication, the Commission maintains a small public information staff—four in Washington, one at each of the five managerial offices elsewhere in the United States. This staff, to the limits of its capacity, will help your Washington bureaus, and your home staffs, if they request help, in all possible ways.

I have emphasized somewhat this matter of security guidance because it is a new thing under the American journalistic sun. Now let me turn to the equally important function of accounting to the public through the press and other media on that part of the costly and important national atomic energy program that can and should be freely and fully reported.

Let me assure you first that there is no scarcity of information free and open to the technical community, and, if it wants it, to the press and other media. Quite the contrary. In the past year, our reviewers declassified more than 1,200 technical dissertations averaging 20 pages each. The Commission has under way the publication of a National Nuclear Energy Series of technical data that will run to more than 100 500-page volumes, 21 of which already are prepared up to the point of readiness for the press.[2] So that there is a great volume of material open already to technical and scientific men, and to the press, if it desires to use it. I have here a book 2 inches thick which contains the abstracts of the declassified literature in this field issued in the past 2 years. This book and the papers which it lists can be consulted any time by any newsman through our Public and Technical Information Service.

The Commission does not intend to undertake the popularization, for the press and other media of this material. We are proceeding on the assumption—and correctly, I believe—that the American press wants to do its own analyzing and interpreting and

[1] Sec. 10 (b) (1) of the Atomic Energy Act provides: "The term 'restricted data' as used in this section means all data concerning the manufacture or utilization of atomic weapons, the production of fissionable material, or the use of fissionable material in the production of power, but shall not include any data which the Commission from time to time determines may be published without adversely affecting the common defense and security."

[2] Sec. 10 (a) (2) of the Atomic Energy Act provides the following as a policy to guide Commission action: "That the dissemination of scientific and technical information relating to atomic energy should be permitted and encouraged so as to provide that free interchange of ideas and criticisms which is essential to scientific progress."

reporting of public data. The Commission wants to confine itself to making the information available, and to count upon the existing informational and educational system of this Nation—notably the press and radio, and the schools and universities—to do the actual reporting and teaching and interpreting.

To repeat: The Atomic Energy Commission does have a duty to provide guidance regarding security. But most of the information—and I cannot emphasize this too strongly—most of the information necessary for an understanding of the fundamentals of atomic energy and the formulation of public policy has long since been public, and some of it since before the war.

The Commission does have an information responsibility, but it is a limited one—and it should be kept limited. That is our firm intention. We are opposed to building up a large information staff for the dissemination and interpretation of information about atomic energy or about the work of the Commission. There is a strong and wise tradition in this country against anything in a Government information operation that smacks of propaganda; or of promotion for the prestige of particular Government agencies or the men who temporarily are directing them. It is of the utmost importance that under no pretext, excuse, or justification of "national security" should the Atomic Energy Commission or any other agency create information or public-relations staffs beyond (1) the minimum actually required for security service to those writers or speakers who desire it, and (2) that staff required to provide such positive information service as the press and other members of the public explicitly require and request. Last week a special Committee on Atomic Energy appointed from its membership by the President of the American Society of Newspaper Editors began an independent inquiry for the society into the Commission's information problems and how they can best meet the needs of the press. This is a step we welcome.[3]

Congress recognized the central importance of public information in developing American policy in this new and often bewildering field. In the Atomic Energy Act there is a remarkable declaration of policy, one that is without precedent so far as I know. Here is the language of the law:

"The effect of the use of atomic energy for civilian purposes upon the social, economic, and political structures of today cannot now be determined. It is a field in which unknown factors are involved. Therefore any legislation will necessarily be subject to revision from time to time." The paragraph then concludes: "It is reasonable to anticipate, however, that tapping this new source of energy will cause profound changes in our present way of life."

Congress then proceeded to design special legislative machinery to make this declaration effective. The Commission does, of course, report regularly to the whole Congress but these reports, made semiannually, contain only nonsecret information. To insure, therefore, that as far as possible your representatives, the representatives of the whole people, are kept currently informed, that they have the facts including secret data, Congress established a permanent Joint Committee on Atomic Energy of nine Senators and nine Representatives. To this committee, which is thus in a position to consider in an informed way the public views and those of their colleagues in the Congress, and those of the executive branch, the Congress looks for guidance on broad policy decisions.

The present membership of this 18-man permanent committee is an indication of the importance Congress itself assigns to it in charting the difficult policy course ahead. Its chairman is Senator BOURKE B. HICKENLOOPER, of Iowa, a former governor of that State, a member of the Committee on Foreign Affairs, an experienced administrator as well as legislator. Its vice chairman is Representative W. STERLING COLE, of Ithaca, in this State, who, as you know, is among the most respected and influential Members of the House, with long experience in matters of national security. The committee includes the chairman and the ranking member of the Senate Committee on Foreign Affairs, Senators VANDENBERG and CONNALLY, of Michigan and Texas; it includes Senator BRIEN MCMAHON, of Connecticut, who as chairman of the Special Senate Committee on Atomic Energy in the Seventy-ninth Congress, sponsored the Atomic Energy Act and who follows with keen interest the international situation on atomic energy control; it includes Senator EUGENE D. MILLIKIN, of Colorado, chairman of the Finance Committee. On the roster of the committee are other men of both chambers most of whose names and reputations are familiar to you. In all, the committee is unusually broadly representative of the country, both geographically and in its group interests.

The setting up of this permanent high-level joint committee, aided by a staff under the direction of Mr. Fred B. Rhodes, is an example of the political inventiveness which has characterized American history from the founding of the Republic. Increasingly as time goes on the people of this country will come to look to this committee as a principal means whereby the broad policy decisions that atomic energy will require may be studied, weighed, and recommendations reported to the Congress as a whole, and to the people. The very fact of the existence of the joint congressional committee is security against the exercise of arbitrary power by the Commission, while we on the Commission, vested with a kind of quite terrible responsibility, find in it a great reassurance.

This joint committee mechanism, functioning in the objectives and earnest spirit which has motivated it, seems to me one of the most important facts in the atomic energy picture, and among those that needs to be better and more widely known and understood by newsmen and the general public.

Among the most important decisions in our history as a Nation will be those made concerning the course and direction of atomic energy development, and the uses to which this new force is put. These decisions will affect our most cherished institutions. They will have—they have already had—a deep and pervasive effect upon our relations with other nations and peoples of the world, and perhaps upon the very preservation of freedom in the world. These will not be scientific nor technical decisions. They will be human decisions, decisions about human organization, about our way of life, about the relations of science to well-being, about the issues of peace, or of war, war of a destructiveness beyond our imagination.

Those decisions will be made with wide understanding by the people of the facts, of the consequences of the decisions, that is to say, in accordance with the democratic process, or these decisions will be made without understanding, made in the darkness, made under the compulsions of hysteria and fear, not of reason and judgment.

It will be your job, in my opinion, not only to disseminate the underlying facts, within the limits of security, but to interpret and give meaning to those facts. It will be your task to see that your public servants, legislative and executive, are held to the highest standards of performance, to see to it that atomic energy shall never become the victim of petty politics or narrow partisanship. It will be your job not simply to increase public knowledge but what is equally important, to make that knowledge effective in determining the course of the Republic. It is for such a historic and fateful function as this that through more than 150 years this Nation has never wavered in its determination that the schools, the churches, and the press shall remain vigorous, independent, and free.

[3] The membership of this Committee of the ASNE is as follows: Gideon Seymour, executive editor, Minneapolis Star-Journal and Tribune, chairman; W. S. Gilmore, editor in chief, Detroit News; B. M. McKelway, editor, Washington Star; C. G. Wellington, managing editor, Kansas City Star; Laurence L. Winship, managing editor, Boston Globe; Paul C. Smith, editor-manager, San Francisco Chronicle.

Increase in Veterans' On-the-Job Ceilings

EXTENSION OF REMARKS

OF

HON. HAMILTON C. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. JONES of North Carolina. Mr. Speaker, a bill to increase the monthly maximum allowed to veterans receiving both compensation for productive labor and subsistence allowances for education or on-the-job training, known as the Kearney bill, was referred to our committee, as you know, on January 3, 1947, and was referred to the Rules Committee on February 26, 1947. Between the period of January 3, 1947, and February 26, 1947, the committee considered this bill very carefully and we think reasonably after hearing representatives of the American Legion, Veterans of Foreign Wars, American Veterans of World War II, regular veterans' organizations, Member of Congress, and the Administrator of the Veterans' Administration. All have expressed their views or the subject.

The change is not a great one from the old ceiling of $175 and $200 per month, but it takes in a group of veterans who are not making more than these amounts and gives them the necessary help to really live on a decent scale. It is admitted to be true that many of these boys do not have jobs that would earn for them more than $175 to $200 per month and with the old ceiling they were getting no help from the Government whatsoever and were not making enough to really live decently. The change from $175 and $200 to $250 for a veteran with dependents; $325 for a veteran with one dependent and $350 for a veteran with two or more dependents is not a great one, but it is one that is very helpful to many deserving veterans who need help in getting launched in their life work after being interrupted by serving in the armed forces of our country.

Under the old bill, a single veteran got $175 and the married veteran got $200. They would get no assistance whatsoever, but with a veteran earning $185 a month, he would get $65 per month, if single, totaling $250. If married and thereby having one dependent and if he were earning $210 per month, he would then have a $90 supplement which would give him $300 per month. Of course if he had two or more dependents, which

would entitle him to the full ceiling, and earns $260, with his subsistence allowance of $90, he would receive $350. These rises are not excessive as the committee views it and we felt that the House would approve them.

Under the old regime, there was an apparent hardship and rather a restraint on ambition and tended to keep veterans from entering on-the-job training courses because they could not live on the amount as fixed by the old ceilings. So, as I have previously stated, these figures were not arbitrarily selected but agreed to after very careful hearings and consideration by the committee which voted unanimously to include them in the bill.

We feel that the ceilings are not at all excessive, but are fixed in the recognition of the ever-increasing cost of living and helping the veteran who is trying to learn a trade and at the same time maintain a decent standard of living. The additional amount required to increase these ceilings is not very much. It is well justified, as the stimulus it would give to so many veterans to get started in a trade in the right manner and at the same time have a decent living while in training.

I would like to call to the attention of the House that the Veterans' Affairs Committee has not been dilatory in passing this bill, as this was done on February 26, 1947. We acted early in the previous session on this important matter, so we feel the bill should be passed at once.

I was in my district, and particularly in the city of Charlotte during the recess, and I found many of the veterans anxious to know just what the increase of ceilings was going to be so that they could make their plans accordingly. It is natural for them to want to know whether or not they would have a decent living while training on the job, and they are anxiously awaiting the action of the House in this important matter.

I might say that there were 21,000 men in the armed forces from Charlotte and Mecklenburg County, N. C., and about an equal amount in the other counties of the Tenth Congressional District. These veterans are all anxious to have this matter definitely settled and the slight increases made in the ceilings, for on-the-job training would help them.

"Thou Shalt Not Succeed"

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1948

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the United States News of February 6, 1948:

"THOU SHALT NOT SUCCEED"

(By David Lawrence)

(Program for breaking up profit-and-loss system set forth in study of oil industry. Large companies held to be monopolies merely because of size. Antitrust action invited when business becomes successful and efficient.)

Radicalism is always difficult to combat when it skulks behind a tree.

Radicalism, however, in America has finally come out into the open. It seeks to demolish the profit-and-loss system and to substitute a system of state socialism or state capitalism.

The main purpose, of course, is to break up industry, disintegrate its efficient units, demoralize the whole economic system and make it impossible for businesses to get capital from frightened investors and thus introduce Government capital and Government control under the guise of emergency.

The plain implications of the radical viewpoint were set forth by a group of five Yale University professors in a book published last week by the Yale University Press at New Haven, Conn.

The book is entitled "A National Policy for the Oil Industry," but it applies as well to all other industries and might better have been entitled "A National Policy for Breaking up Large and Efficient Units of American Business."

The project is described on the title page as one of a series designed to present the result of studies made in the course of an interdepartmental program of research in national policy, organized at Yale University in 1946, by members of the department of economics and political science, and the school of law.

Funds for the project were furnished by the Carnegie Corp. which, it is stated, is supporting the Yale program of research in national policy, and by the Ganson Goodyear Depew Memorial Fund.

It is ironical that the funds for the propagation of a doctrine of destruction of our economic system should have come down from men who earned their surplus in life through the system of private initiative.

TECHNIQUES OF DESTRUCTION

But the study is to be welcomed. It tells frankly the technique whereby the American system can be broken into small pieces. The book will challenge the interest of the American people as the first comprehensive outline of the weapons of law and pseudo-constitutionalism which the radicals would like to use to bring on state capitalism.

Nowhere in the book is there, of course, any precise advocacy of such an ultimate course. It isn't necessary. Anyone may see the formula plainly.

Thus the book glorifies the Sherman antitrust law as an instrument of progress. With an enthusiasm that amounts almost to exultation, the authors point to the Supreme Court decision last year in the tobacco cases as affording an opportunity at last to break down large businesses.

THE CRIME OF SUCCESS

It isn't necessary any more, say the Yale professors, to prove conspiracy to fix prices or to prove the existence of any so-called evil practices. All that's necessary is to show that businesses are big and that whenever they want to act together, they can do so. Eugene V. Rostow, professor of law and a member of the graduate faculty of economics at Yale, is the principal author. He states the case quite bluntly, if not naively, as follows:

"Painstaking search for scraps of evidence with a conspiratorial atmosphere are no longer necessary. There need be no parade of small businessmen as witnesses to testify that they have been driven from the trade, and their lives ruined, by the ruthless squeeze of monopolistic pressure. Under the tobacco case, the economic fact of monopoly is very close to being the legal proof of monopoly. The decisive elements are the power to assert a degree of control over price and output in the market as a whole; and the power to deter or discourage potential competition."

There it is at last in plain view—the mere economic fact of large size and efficiency is proof of monopoly. Success is the crime.

The Yale professors' study raises and answers some possible objections to its own conclusions.

First of all, there's the little matter of efficiency. Yes; it says, large units are efficient but efficiency can be obtained in other ways, such as the elimination of large expenditures for selling.

Then there is the question of getting working capital. Yes; it says, large companies do raise money more cheaply because of their record of success while smaller companies have difficulty. But, after all, reasons Mr. Rostow, why should a little thing like a defect in the capital markets or its ways and customs interfere with the steps necessary to reorganize an industry.

Presumably if the capital markets rebel at furnishing capital to broken-up units of the oil industry, the Government can step in. And, of course, Government capital under a system of State socialism sets up its own restrictions of control and selects its own executives and builds up its own political bureaucracy.

The study anticipates the argument that reorganization of the oil industry would disturb the market value of outstanding securities and shake the faith of investors in all industry.

To this, the Yale professors answer that to consider any such contingency would make the Sherman law "nugatory."

It is admitted in the Yale study that to line up as many as 20 oil companies as defendants because they control a total of 80 percent of the volume of business in the industry, might be novel but the Department of Justice is nevertheless pointedly invited to try it.

What this study centers on, to be sure, is the claim that identity of price as between competitors, known in business as the natural or stabilized price, is unlawful under the Sherman law. What is sought evidently is to force instability of prices, if not of profits, and substitute for the natural appraisals by management of sales and costs a factor of artificiality or perhaps a public-utility regulating process.

The corner grocer sells his sugar at the same price as the competitor across the street. He must now put his price 1 cent lower or 1 cent higher to avoid identical price making. He may lose money on the former and lose his market on the latter, but apparently if a competitor preempts a particular price level, he must choose another price.

GOOSE STEPPING TO EFFICIENCY

Certainly there would be an elimination of expenses in many an oil company if half the filling stations in the country were abolished. Lots of ways could be found to reduce expenses if the Government controlled everything. Indeed, half of the restaurants or eating places could be abolished if the American people would only agree to a staggered system for lunch and dinner. If a certain number would eat lunch at 11, 11:30, 12, 12:30, 1, 1:30, 2, and 2:30, it would eliminate a lot of waiters and waitresses. It would reduce expenses, and we would all goose step to meals as prescribed by government.

But who wants that? Isn't it a citizen's privilege to eat when he pleases or to motor along the highway and fill his gas tank when he pleases?

What is involved in the Yale study may be found in nearly all blueprints for governmental control of the economic system—a theoretical justification for the elimination of waste and a theoretical claim that large-sized operations do not mean efficiency or low prices.

THE RIGHT TO SUCCEED

The contrary can be proved by fair examination of the facts. What American businesses furnish the American people is

a service unparalleled anywhere in the world. Quantity production has given us cheap transportation, cheap tires, cheap gasoline, cheap appliances for the household under a standard of living higher than that of any other people, including socialistic England and communistic Russia.

Large businesses nowadays are not owned by a few individuals as in yesteryears. Today stockholders are numbered in the tens of thousands in almost all large companies. The public which has saved its money invests in these large companies with the hope of getting the fruit of long days of labor.

The Yale book is important because it reflects to no small extent the views of the "trust-busting" school of thought in the Department of Justice, where antitrust suits are filed by the dozens with funds supplied by a none too vigilant Congress.

"Thou Shalt Not Succeed" is the new commandment from the radical dictatorship.

The right to succeed is, however, the real incentive to American progress. It is a prime requisite if the American people are to enjoy the "privileges and immunities" set forth in a Constitution designed to safeguard the right to "life, liberty, and the pursuit of happiness."

Boom-Bust Tax Cut

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marquis Childs, from the Washington Post of Thursday, February 5, 1948:

WASHINGTON CALLING

(By Marquis Childs)

BOOM-BUST TAX CUT

Now that the Republicans in the House have had their fun with an old-fashioned boom-and-bust tax-cut bill, the Senate will get down to the serious business of drafting a measure that can be passed over the President's veto. The cut finally approved is likely to be less than half of the $6,500,000,000 which Representative Harold Knutson, in the role of heedless Santa Claus, dangled before the voters.

In the Senate more cautious Republicans are discussing a cut of two and a half or three billions. This is a frank recognition that most of the big talk about slashing the Truman budget is just political talk in a political year.

There seems litle doubt but that a measure will be framed which can be passed over the President's veto. One thing it will contain for certain is the community-property provision enabling husbands and wives to divide one income and thereby pay at a lower tax rate. Since 12 States now have laws permitting such a division of income, it is only fair that the same provision should apply to all married taxpayers.

The final bill will also contain increased exemptions for individual taxpayers and some relief for corporations. In short, it will be a political compromise aimed at appeasing the largest number of voters while doing the minimum of damage insofar as national and international responsibilities are concerned.

This is the intention, at any rate, of those Republicans who are acutely aware of the spectacle in the House. Such blithe spirits as KNUTSON may feel that six and one-half billions is a good vote catcher. But even this is doubtful.

The other day, Speaker JOE MARTIN made a speech that didn't sound like the shrewd, able politician from Massachusetts. He solemnly warned of a plot to sabotage Congress and undermine the faith of the people in representative government.

Obviously Speaker MARTIN failed to realize how close to home he was hitting. The real saboteurs are the irresponsibles in Congress. Faith is destroyed by those who indulge in nose-thumbing political gestures, willing to take a chance that someone will save them from the full consequences of their irresponsibility.

KNUTSON is an interesting example. Giving his home as a summer resort in Minnesota and vacationing each year in Florida, he may just possibly be a little out of touch with the problems of ordinary citizens in this period of inflation.

From a reader comes a comment on President Truman's proposal to increase the personal exemption of each individual by $40. This has been laughed at as a cheap bait of the Knutson variety. But the following grass roots point of view is different:

"I would like to take exception to your expressed viewpoint that a tax cut would be inflationary. At least in my own case I do not see how it could contribute to inflation.

"If the tax cut were confined to those suffering from malnutrition because they can't buy enough foodstuffs to allow them a proper diet, in a case of this nature how could it contribute to inflation? In our case we get enough to eat, even though it has reached the point where we are having to draw on our small savings that we were able to make during the war years. These savings were made possible by long hours, but not at the prevailing high wartime wages.

"I made 80 cents per hour during part of the war and 94 cents per hour the latter part of the war. I get $1.12 now, which for 45 hours and 20 minutes per week, gives me a net take-home amount of $51.96 to support myself, wife, and two children.

"If we were given the benefit of Mr. Truman's plan of $40 per person off, I don't see how we could buy any more and thus add to the scarcity problem. But his relief plan would, I believe, make it possible for us to get by on what I am earning and thus stop the drain on our savings, which we desire to hold as a buffer against emergencies, medical expenses, hospital bills, and so forth."

Chairman KNUTSON, now on his Florida vacation, might be surprised at how many families these days are having to dip into their savings. It is a fairly common experience of those who are trying to maintain something like the standards of the past. But whether the Knutson across-the-board tax cut would give them any real relief is quite another matter. It would inject another $6,500,000,000 into the already swollen money stream.

Untimely Tax Cut

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star:

UNTIMELY TAX CUT

The temper of Congress—and presumably of the people—being what it is, any protest against a tax cut this year probably is futile. Nevertheless, the protest should be made, for this is not the time to be cutting taxes.

With a margin of more than enough votes to override a veto, the House again has called for tax reduction. This latest measure would take 6,000,000 people off the tax rolls and reduce revenues by $6,500,000,000. This is accomplished principally by increased exemptions, a sliding-scale percentage cut in the tax rate, and by adoption of the community-property principle.

In normal times this would be a good tax-reduction program. But these times are not normal.

One of the reasons for the present inflation is that the supply of dollars in the hands of consumers is greater than the supply of goods. The effect of this is to force prices up and the addition of $6,500,000,000 to the volume of purchasing power is almost certain to drive prices still higher. The national debt stands at $256,000,000,000. It is imperative that this debt be reduced, and a maximum reduction ought to be made when the national income is high, as it is now. The Republicans hope that they can provide for tax reduction and still reduce the debt this year by $2,600,000,000. That is an optimistic estimate, but even if it should prove valid, the fact remains that at this rate it would take 99 years to pay the debt, and this is without any allowance for the lean years that are bound to come.

Finally there is the fact, largely ignored when taxes are under discussion in a campaign year, that this country is more at war than at peace. With international conditions as they are, we cannot afford to take the chances that might be taken in a tranquil world. If we have any margin of revenue over and above a proper debt reduction, that margin should be used to strengthen our defenses and to finance the countermoves we are making in the face of Russian expansion. This is a field in which there can be no certain cost figures, but we would be wiser to plan on spending more rather than less than the current estimates.

These considerations point to one conclusion. Any tax reduction now is inimical to the best interests of the Nation. But if, for reasons of domestic politics, some tax reduction is inevitable this year, then the cut should be held to the lowest figure possible. There are members of the Senate, where the bill now goes, who share this view, and they should be given every support.

Border War

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop, from the Washington Times-Herald of Tuesday, January 27, 1948:

BORDER WAR

(By Frank C. Waldrop)

While you are worrying about the possibility of meat rationing, you might as well do some thinking about what to do if there's no meat to ration. And if you can't imagine such a thing, then here are some facts:

Sometime in 1946 some bulls were imported into Mexico from Brazil.

On December 26, 1946, a major catastrophe was announced in Mexico.

Cattle were found to be dying of an infection called hoof-and-mouth disease. This is one of the world's great scourges, as mysterious and deadly among animals as influenza among people.

Humans do not ordinarily contract the disease, but if they so much as walk on the ground in an infected area they can track the germs into fresh territory with disaster to cattle and hogs.

People who do not know much about the hoof and mouth disease take it lightly. Such are the ones who are always screeching that the cattle barons of the United States of America are playing dirty in opposing the importation of Argentine beef here.

The cattle barons were long-headed enough some years ago to support a treaty between the United States of America, Canada, and Mexico under the terms of which none of the three countries would import cattle or meat products from infected countries.

The people who screeched, said:

"It's all for monopoly. Look at the Argentine. They have plenty of beef down there. Other countries buy Argentine beef. Hoof and mouth disease is highly over-rated as a menace."

The screechers ignored the lesson of Holland which imported uncontrolled items in the cattle line and was swept by hoof-and-mouth disease with absolutely disastrous results. They ignored the fact that Argentina's vast open ranges, as compared to our highly developed cattle country, are the last in the world that can find room for both infected and healthy animals in any numbers.

But the case of Mexico is so near to home that now the screechers, perhaps too late, are suddenly silent. The great Henry Luce, who sees all, knows all, and tells all, was one of the loud thumpers against the cattle control policy for years.

But what has happened to Mexico has even shut him up and that is a monumental achievement, though expensive, for he and the other meddlers were encouraging Mexico in its violation of the non-importation treaty.

What has happened to Mexico is this:

Since 1946, hoof-and-mouth disease has swept the whole central belt of the Mexican peninsula. The government of Mexico, admitting its inability to do anything, has called on the United States of America, for rescue.

Our Department of Agriculture has several hundred experts down there buying up, shooting, and burning animals in the infected areas. The United States taxpayers, of course, are footing the bill and it runs into many millions.

The Mexican farmers are squawking. What good is money, they say, when they lose cattle for reproduction and get no replacement animals?

Of course, there is no help for that. They lose from the disease anyhow, but they are ignorant people and don't think it that far through. They are resisting the quarantine and that is tragic, because the quarantine can barely hope to succeed even with full cooperation.

It is not succeeding, now. The quarantine line is slowly but surely retreating northward.

The Agriculture Department says it has a new vaccine that hasn't been tried out in Mexico yet but is supposed to immunize animals for 6 to 8 months. Not good enough.

Only complete immunization will make the meat supply of the United States of America safe.

The United States is loafing on its job. The Mexican project is nothing like strong enough. A more stringent quarantine and a really full-scale vaccine effort are absolutely essential.

To quote the world's ablest cattleman, Robert J. Kleberg, head of the King ranch in Texas:

"The hour is late. Much valuable time has been lost. The job can be done only with the full cooperation of all departments of Government both here and in Mexico."

Our Government is a huge and many sided bureaucratic organization. It is slow to move on anything, no matter how important.

If you are looking for something about which to write in to Congress and the President, needle them all to get going against hoof-and-mouth disease.

Otherwise you may wake up one bright day and find no meat to eat around here and we'll be down on our knees to Peron, of the Argentine, for some scraps of his leftovers.

Our Contradictory Foreign Policy

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. SHAFER. Mr. Speaker, you can imagine the bewilderment of the average American today in regard to our so-called foreign policy, when even the experts are puzzled by the various contradictory moves that are being made by those who are in power in the executive branch of our Government, or one of its adjuncts.

Not long ago, you will recall, President Truman was asked if he did not consider it contradictory that we were shipping locomotives and freight cars to Poland, a nation that is definitely inside the iron curtain and most positively in the Russian economic orbit.

Believe it or not, the President blandly replied that there was no contradiction between shipping freight cars and locomotives to Poland, while at the same time shipping materials to western European nations in an effort to stop totalitarianism.

Now we have the news that the World Bank, which is financed almost wholly with American tax money, has decided to grant Poland's request for a loan of $60,000,000, ostensibly to allow Poland to modernize its coal mines.

This news comes on the threshold of the time we here in the House of Representatives will be asked to appropriate from five to fifteen billion dollars for western Europe to stop communism. Stripped of its bare essentials, that is exactly what the so-called Marshall plan is, and everybody knows it, a proposal to stop communism. It is a WPA way of trying to win friends and influence people. Now, apparently, we are trying to play WPA to our enemies as well as to the folks we hope to make our friends.

A most pertinent article concerning this World Bank loan to Poland has been written by the well-known foreign correspondent, Constantine Brown, and published in the Evening Star for February 3, 1948. Under leave to extend my remarks, I include this article.

I, for one, cannot understand how any man, however benighted or however cynical, can defend this loan and our other shipments of goods to Russia and at the same time urge the enactment of the so-called Marshall plan to build up a bulwark against communism in western Europe. The actions are contradictory, two timing, anomalous, and just downright stupid. One set of actions may be defended logically by itself, but playing both ends against the middle—the middle in this case being the American taxpayer—is not only ridiculous, it is inexcusably stupid.

THIS CHANGING WORLD—WORLD BANK APPROVAL OF POLISH LOAN SEEN AS LATEST OF DIPLOMATIC PUZZLES

(By Constantine Brown)

The World Bank has decided to grant Poland's request for a loan of $60,000,000, earmarked, according to bank officials, for the purchase of equipment to modernize the Polish coal mines.

This loan is being made in spite of the fact that Poland is spending many millions of dollars for military training of all her citizens between the ages of 16 and 21, and in spite of the fact that Hilary Minc, Polish Minister of National Economy, has just returned from Moscow with a new Russian trade agreement in his pocket.

The loan has been under discussion for about 18 months since Poland applied for a $600,000,000 credit, but the amount was too large to be floated in this country under the guaranty of the World Bank.

FOUND POOR RISK

Last summer a commission representing the bank, under the chairmanship of John J. McCloy, went to Warsaw to study the question on the spot. Mr. McCloy returned to Washington with the conclusion that Poland was a poor risk for a big loan, but a limited sum—about 10 percent of that asked by Warsaw—could be made available from funds still available in the bank.

The chairman was of the belief that purchase of new tools for the Polish mining industry would increase its output substantially and thus would help the Marshall plan. Poland's leaders had intimated that the increased production would be shipped to western Europe to relieve shortages of coal.

Although the heads of the World Bank pointed out that only economic considerations were taken into account in granting loans, it was admitted off the record that political solvency together with the applicant's leanings in the present international set-up had to be taken occasionally into consideration, particularly since the vast majority of the bank's funds came from American taxpayers.

Last fall the bank considered Poland a poor risk. A congressional group which visited Poland last September came to the same conclusion. The congressional group, headed by Senator SMITH, Republican, of New Jersey, and Representative MUNDT, Republican, of South Dakota, at the end of their visit received from our Embassy in Warsaw a confidential outline of Poland's economic and political situation. This contained the conclusion that "every dollar given Poland under the present set-up is a dollar given to the Union of Soviet Socialist Republics."

Ever since the Polish Government was recognized by other powers, it has showed itself to be nothing but an obedient stooge of Moscow. The men at its head were carefully hand-picked by the Politbureau and blindly obeyed orders from Moscow. On orders from their superiors, they went out of their way in their effort to side-step agreements with the United States and to humiliate the citizens and official representa-

tives of this country on every possible occasion.

NOT A FREE AGENT

The Chairman and other directors of the World Bank were obliged to take cognizance of these facts. Moreover, they had been told that existing treaties between Poland and the Union of Soviet Socialist Republics were so tight that Poland had ceased to be a free agent and was in no position to live up to its international commitments.

The bank was warned that whether Polish coal would be sent to western Europe depended entirely on Russia's mood. Economic treaties between Moscow and Warsaw are so worded that the former can give them any interpretation it desires.

The study by World Bank experts was completed last fall but no action was taken because, in the words of some responsible bank officials, the results of the Big Three Conference in London had to be seen.

The conference failed and the policy of the Union of Soviet Socialist Republics toward the Western World became more aggressive. Yet high officials of the State and Commerce Departments indicated to the bank's American Chairman last month that they no longer opposed the $60,000,000 loan to Poland, in view of the increasing deterioration in relations between the United States and the nations behind the iron curtain.

What has persuaded the State and Commerce Departments to approve the idea is one of those diplomatic puzzles which have harassed the American people since the end of the war.

Address of Hon. Joseph W. Martin, Jr., of Massachusetts

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1948

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by the distinguished Speaker of the House to the conference of small-business organizations on February 3, 1948:

ADDRESS OF HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

It is a pleasure to address a group of small businessmen. I, too, am a small businessman. Therefore, I feel quite at home in this gathering. I can appreciate and sympathize with your problems. I have had to meet problems of a similar nature. I know the headaches incidental to running a little business—material shortages, labor shortages, customers' complaints, high taxes, governmental interferences. I am also familiar with its rewards. They are rich and good. Not in a monetary sense, but in a spiritual sense.

We small-business people find ourselves important cogs in our home communities. Our customers are our friends and neighbors. We share their smiles and their heartaches. We watch their babies grow into awkward boys and giggling girls, and later become men and women of substance. We often help in that transformation. Our part in the life of America may be unsung, but it is indelibly imprinted on our times.

The small businessman is the backbone of business, just as the small farmer is the backbone of agriculture. The small-business venture is home owned, home operated, and staffed by home labor. It is the mainstay of thousands of communities. In the fiscal year 1947 small business employed 45 percent of all persons employed. His employees are not only employees—they are his friends. This Nation grew great because small business and the small farmer started us on the road to greatness. And they are today helping us stay great. That is why we must give them a chance to live and prosper.

In the past 15 years the tremendous contribution of small business has gone largely unappreciated. Queer policies prevailed and a strange assortment of theorists thought they knew more about business than the business people did. They were advocates of governmental controls. To be a businessman was almost discreditable. To be a successful businessman was, to the theorist, disgraceful. To provide good jobs for people was to be branded an oppressor of the workers and a reactionary. Consequently, the little businessman found himself in a squeeze play between big business, big taxes, and big demagogs.

During the last 15 or 16 years the small businessmen have had few friends in Washington bureaucratic circles. He was the real forgotten man. He could not make frequent expensive trips to Washington, or hire high-priced agents to protect his interests. During that time he was harassed almost beyond endurance. Bureaucrats hounded him from morning until night. He was compelled to report to Washington over and over again a chronological list of his activities. In his nightmares he saw countless Government forms to be filled out—more than 76,000 administrative regulations, wrapped up in 93,000,000 words, regulations having the force of law, beset and bedeviled him. In many instances he was summarily denied recourse to the courts. Bureaucratic arrogance was in the saddle. Bureaucratic theorists tried to tell him how to run his business. They told him what he could sell, what he could buy. They told the farmers to take the horse's shoes off at night to save metal. They ordered slaughterhouses not to butcher any more "female steers". They tried to tell women what to wear, and men what not to wear. Never before was there such a carnival of dunce-witted government by decree. The fuss-budgets had a great time. Spenders and wasters were in the saddle driving hell-bent for ruin.

Small businessmen and farmers found Washington had a passion for regulation, but no talent for it. If a businessman made an honest mistake or inadvertently overcharged a customer, he was often hailed into court to pay a fine.

Pressure from Washington became so great, finally, that many small businessmen could stand no more. They closed the doors of their establishments, many of which had been in operation for years. We here can understand and sympathize with their bitter disillusionment. They had literally been hounded out of business by their own Government. As far back as 1939 it was my privilege to appoint the first Small Business Study Committee. This led to the creation of official committees and helped to give the little businessman a break.

Many of you in this very audience, no doubt, can recall trips made to Washington in war days. Many of you can recall fruitless and frustrating visits to the War and Navy Departments, the War Production Board, and other wartime agencies of the Government. You pleaded with the bureaucrats to be permitted to use your facilities to speed production of war necessities. If anybody ever got the merry run around, you did. You were made to feel that instead of trying to help, you were actually in the way. After days of humiliation, of futile assaults on the citadel of official red tape, you returned to your own community sadder, madder, but wiser men.

Under the continuous urging of the Congress, the small businessman was reluctantly permitted to make a greater contribution to the war effort. This contribution aided in bringing the conflict to a more speedy end, thus saving the lives of countless American boys.

In England the value of widely dispersed small business was clearly shown during the war. Had it not been for small business, England would have perished. Under continuous aerial attack, production in her large plants was constantly disrupted if not completely stopped. Her small business production was decentralized and that saved the day. In another war—and pray God there never is another—small business may be the mainstay of America.

Military planners are assuming air assault is inevitable. They are thinking in terms of decentralized industry. They are well aware this Nation must depend on small business to provide much of our war material. Passing are the days when the small businessman must cool his heels in the outer offices of bureaucrats when he wants to contribute to America's production.

The place of small business in a peacetime economy is vitally important. The world today is divided into two ideological spheres—freedom and communism. Our free economic system is under constant attack from within and from without. Moscow tells the world through its controlled press and radio our American system has failed. The out-and-out Communists within our own borders echo this propaganda. Their fellow travelers give them aid and comfort, using our own Constitution and our own institutions to protect them as they preach their poisonous doctrines. When we seek to curb their seditious activities they screech to high heaven their constitutional rights are being violated. They invoke the very instrument they seek to destroy.

Congress is the target of their special hatred because Congress is their major obstacle. It is the branch of our Government which has met and must continue to meet this challenge to America's well-being. Congress has summarily hailed Communist leaders and their cohorts before its committees. It has uncovered their dangerous practices so all real Americans can see the wicked undercover attempts to destroy our American way of life. Congress has prodded the administration to purge its ranks of those Reds and sympathizers who infiltrated into high places on the Government pay rolls. Congress has served unmistakable notice it will not tolerate traitors in our Government establishments and agencies any longer.

For its courageous and patriotic stand, Congress has been constantly vilified. Though Communists have spearheaded this vicious attack, respectable citizens have unwittingly joined in. It has become too common a practice to belittle the legislative branch of our Government. We see flagrant instances of it in the press and movies. Leftish radio commentators and writers offer further proof of this insidious campaign. The Communists are out to destroy the Congress before the Congress destroys their plans to overthrow our American way of life. Their attacks will not for a moment swerve the Senate and House of Representatives from what they consider to be their patriotic duty. Your legislators will persevere until we have on the statute books adequate laws to deal effectively with traitors. We intend to bring to justice those who are serving the interests of a foreign nation—the only nation

with which there is danger of war. Your Senators and Congressmen will not cease their insistence that the Communists be dismissed from the service of your Government. We shall not let them disrupt the economic life of this country.

Small businessmen will be on the alert not to lend their aid to these un-American elements. The methods Communists use are clever and deceptive. In many cases they mask their activities under respectable cloaks. Citizens must be careful not to become the unwitting tool of the Communists. We must be vigilant against their subtle propaganda. Expose this propaganda and their activities whenever you can.

Today the small businessman is concerned over high prices, high taxes, the high cost of foreign aid, and the threat of more Government regulation. The President, in his state of the Union message to Congress, made it quite clear no tax relief is coming from the administration. He has presented a trick tax proposal which many members of his own party have privately dubbed impractical, and quite obviously political in purpose. It got very little support. We Republicans, after extensive and continuous study, determined to give the overburdened taxpayer real relief.

We do not believe it is necessary to increase the already heavy tax load on business. This would be disastrous to business. It would deprive business of the necessary funds to provide more jobs, increase production, and the lowering of prices. We believe business along with the rest of the taxpayers is entitled to honest tax relief.

It is a curious twist of thinking that the administration should want to load more taxes onto business, while at the same time, in the very same message demanding that business spend $50,000,000,000 for expansion.

We can achieve this objective by effecting long-needed economies in Government operations, economies which will not only permit tax relief, but also a substantial reduction in the huge national debt. Need I add these economies will in nowise impair the efficient functioning of the Government service. They will not be made at the expense of the national defense. We are all aware of the necessity of maintaining a national defense fully adequate to meet any contingency. The administration has clearly indicated it favors a restoration of Government controls. It seems to have inherited some of the views of the previous administration that a free economy is bad. I am indeed sorry there seems to be so little faith in the American system of free enterprise. Respecting the request for stand-by authority to reimpose controls, I have this to say: The special session of the Eightieth Congress gave ample power to deal with the situation as it exists today. This power was in addition to authority already possessed, and which has never been used. They tell us the measure we passed is inadequate before they even try it. No measure can work well if there isn't a will to make it work.

It has been a real pleasure to be with you tonight. In parting I would like to leave this thought with you. The small businessman can do much for good government; he can successfully help mold public thinking along American lines; he can contribute so much toward the elimination of economic evils.

He can help America prove to the world our American system works. Your forefathers believed in America, and they toiled to make it the land we know today. The blood of their courage, their love of liberty, their devotion to American principles, runs through your veins. Major problems confront us and you can help toward their solution by American methods. We need your courage, your independence, your initiative, your inherent honesty. I am sure you will give of it to the utmost.

Today's Problems

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks, I am inserting a speech given by the Honorable Franklin D. Roosevelt, Jr., at Springfield, Mo., on January 10, 1948:

Good evening, ladies and gentlemen, in the history of our country and of the world the year 1948 will be one of great challenge, of great responsibility, and of great decision.

Our challenge is to win the peace and to lay the foundations for a cooperating friendly and peaceful world based on the prosperity and security of our peoples. Our responsibility is to set the example and to accept the leadership in the struggle to help all nations and all peoples to be spiritually and economically free from domination either by their own state or by another. As a nation, we will meet this challenge and accept our responsibility only if by our decisions in the Congress and at the polls in November we have brought prices under control and have firmly embarked on the European recovery program as set forth in the Marshall plan.

No thinking person can deny that science has made us one interdependent world. During the recent war I learned the terrible effect of the weapons of destruction which were then available. Today, one atom bomb dropped in New York Harbor with a south wind blowing will in 30 minutes destroy 2,000,000 people. Our great problem is a social and political one for we now must learn as human beings to live together with understanding and mutual respect, sincerely dedicated to building for the general welfare instead of the destruction of us all.

This is a great question today: Must we accept the tragic inevitability of inflation, of depression, of a third world war, of the end of freedom in our world? I know that you will agree with me that the Democratic Party, under the able guidance of President Truman, has and will continue to answer with a sober but resounding "No," supplying the leadership for our people at home and faith and hope to the free peoples abroad.

The traditions of our party are grounded in the American progressive liberalism of Jefferson, of Jackson, of Cleveland, Wilson, and Franklin Roosevelt. We Democrats will continue to hold high the standard of these great Americans and to move forward with liberal and progressive answers to the desperate problems which confront us.

Liberalism in the traditional sense of the Democratic Party is not bogged down by a set of fixed dogmas, but within the framework of a free society adapts itself to the new problems of a changing world and provides new answers. As liberals and as free men, we are prepared to set the example for all the world to see. To do this we must first eliminate discrimination against and segregation of our minorities, economically, socially, and politically, for only when men feel free can they accept their full responsibilities as citizens.

Second, we must not curtail, as the Republicans would have us do, but instead we must expand our reclamation and soil-conservation programs.

Third, we must harness the great Missouri River as we did the Tennessee, not only to relieve our present shortage of electrical power but to make cheap power available to more Americans.

Fourth, we must expand educational facilities and opportunities through Federal aid for our citizens of tomorrow.

Fifth, we must put an end to the oppression of the rights of free labor as under the Taft-Hartley Act. We must raise minimum-wage levels to 75 cents an hour. We must expand and strengthen social security. And we must encourage in free labor a sense of responsibility for the welfare of the community as a whole.

Sixth, we must stand firm against the attempts of such men as Representative KNUTSON to soak the poor—luxuriate the rich.

Seventh, until all nations have placed their security in a superior military force of the United Nations, and until we are safe from the attacks of any expanding dictatorial ideology, we must dedicate ourselves to the security of our country through the enactment of the universal military training program.

Eighth, we must pass a long-range, national-housing program such as the Wagner-Ellender-Taft bill so that millions of our veterans and, in fact one-third of our Nation, can live decently and raise their children in a respectable, clean, and healthy environment.

Ninth, we must provide adequate health service for millions of our citizens through the enactment of a national-health program such as the Wagner-Murray-Dingell bill.

Tenth, we must continue to improve the living standards of our farm families by strengthening and extending the benefits of our crop-insurance program, by going forward with the rural-electrification program, by modernizing the price-support program.

However, the two greatest issues which face us in American today are, first, how can we assist Europe to help itself to rebuild and to remain free, and, second, how can we put an end to the desperate NAM-Republican-Taft inflation? These two issues are a clear example of how domestic and foreign policy are interrelated. For, if we have a runaway inflation, followed by a bust, the Marshall plan cannot work, the Russian prediction will have come true and western Europe will have lost all hope and may perhaps go communistic. The implications of such events are too obvious to contemplate.

Let us first look at the Marshall plan. It is a great and stirring example of true liberalism, for it is a new answer to a new problem. I am convinced that we cannot step backward with Senator TAFT, whose new isolationism of giving a little and too late is based on the belief that America can remain strong while the rest of the world slips into chaos, misery, and slavery. It is ironical that the Kremlin and Senator TAFT should see eye to eye in their opposition to the Marshall plan. The Kremlin is against it because it sees it as a means of helping western Europe to remain independent and free from Russia's crushing domination. Senator TAFT is against it because he is still a Victorian and has not learned the lesson of our atomic age, that all nations, that all peoples are today inevitably interdependent.

Senator TAFT tells us that the Marshall plan will increase our domestic inflation. He is correct only if we as a people are unwilling to sacrifice to secure total peace. Senator TAFT obviously does not know the facts. During the war we exported 32 percent of our total production and we consumed in America 58 percent. During this period of tremendous export our prices rose in 4 years only 6 percent and in the 2 years since the war we have exported 11 percent, not 32 percent, of our total production, and have consumed at home 89 percent, and yet our prices under the Taft-NAM uncontrolled inflation have risen 46 percent. To win the war we spent almost $300,000,000,000 and hundreds of thousands of American lives. The winning of the war will have gone for naught and we will have lost the peace and laid the

foundations for a third and more terrible war if we fail to make Europe independent and free through the Marshall plan. I cannot believe that we Americans, if we know the facts, are unwilling to spend $17,000,000,000 in the next 4 years, or 3 percent of our annual production, in order to thus lay the foundations for a permanent and lasting peace. However, there is one fact which we cannot escape. If we permit our present inflation to continue, the Marshall plan can never work. Already some prices are increasing at the rate of 100 percent a year. This trend may easily accelerate. This means that the $6,800,000,000 which the President is now seeking for the first 15 months of the Marshall plan operation will at the end of that time buy little more than one-half of what was estimated and needed. If our runaway inflation is allowed to be followed by the inevitable bust, we will be unable to help anyone, perhaps even ourselves.

As one of our great Democrats, Alfred E. Smith, used to say, "Let's look at the record."

A year ago the NAM-GOP-Taft combination gutted the stabilization program which for 4 years had held down the cost of living and protected the living standards of the American people. This they did in the name of freedom. In the name of freedom they set free the forces of greed that sound policy had kept under control. In the name of liberty they liberated the forces of inflation.

I well remember the full-page ads which the NAM placed in every paper across the land which proclaimed that the destruction of price controls would set industry free, that production would skyrocket and then prices would come down. Senator TAFT and Senator WHERRY were in the spring of 1946 vying with each other to get the credit for the destruction of the stabilization and price-control program. But, already, a year and a half later, Senator TAFT has recognized his blunder, has recognized that we do have an inflation as a result of his blunder and has introduced his own anti-inflation program which the Congress passed in December and which President Truman called weak and inadequate.

Governor Stassen has said that the premature termination of price controls was the greatest economic blunder of our generation. Recently, it was reported that Mrs. Taft, who often speaks out in behalf of her senatorial husband, proclaimed to a women's club that her good husband was not responsible for the end of price controls in 1946. I am appalled at such blatant attempts to twist the facts. Again, let's look at the record. It certainly was not President Truman. Time after time after time he called upon the Congress to continue the stabilization program without crippling amendments. His first appeal was made in the state of the Union message in January 1946, 6 months before the stabilization statutes were due to expire. As the months passed, the appeals made by the President grew ever more urgent. What response did he get from the Republicans. The NAM and its full-page ads took care of the propaganda campaign to confuse the American people, and Senator TAFT and Senator WHERRY and Representatives MARTIN, HALLECK, and BROWN saw to it that a cynical bill without teeth, impossible to administer, and without honesty was finally sent to the President for his reluctant signature. Yes, the NAM-GOP and the leadership of Senator TAFT stand convicted today of having willfully gambled with our cost of living and of having squandered our best chance to make an orderly transition from war to peace. In short, the record shows them to be responsible for our present skyrocketing prices.

As the Republicans in the months ahead try to avoid their responsibility for their tragic blunder, I urge you to apply this simple test of the sincerity of their professions of innocence.

In the face of a sharp and continuing rise in the cost of living, a rise that has already badly hurt millions of American families, in the face of a feed and meat shortage worse than any we knew during the war, the President on November 17 staked out a 10-point anti-inflation program and called upon the Congress for immediate action. If the Republican leaders were not the real wreckers of price control, would they not have responded at once. Indeed, had they been innocent would it not have been they who took the initiative, and the President who would have been reluctant? There can be only one answer. There is only one guilty party. The NAM-GOP-Taft cabal.

In the face of the damning record of their party, some Republicans try to absolve themselves by blaming the whole American people—for spending too much, eating too much. This group of Republicans has a characteristic remedy for inflation: All we have to do to bring prices back in line is to practice voluntary self-control over our family budget. You may be sure that the millions of American families who have been squeezed out of the meat market, whose children have cut down on milk and stopped drinking orange juice, treat this advice with all the contempt it deserves.

Another favorite scapegoat for the Republican blunder is labor. These hosts of working men and women, the Republicans allege, have greedily sought higher wages and so must bear responsibility for the inflation. I can think of no charge more dishonest and more unjust than this. The plain truth is that wages have fallen further and further behind the cost of living. The average pay envelope today buys 10 percent less than it did at the end of the war. Labor has been a victim, not the cause of inflation.

Equally false is the charge made by some Republicans that inflation is the fault of the farmer. The farmer is not responsible for inflation. He sells at prices determined in the open market.

Nor can businessmen be justly blamed—apart from the National Association of Manufacturers which, hand in hand with the GOP, destroyed price control.

Business too takes what it can get in the market. And that is the way it should be under normal circumstances, when competition can be relied upon to establish prices that bear a reasonable relationship to costs.

The trouble lies wholly in the fact that controls were destroyed and prices left to the free market before normal conditions had been restored.

Responsibility for this destruction which brought on inflation lies squarely upon our old friends the NAM, the GOP, the Taft leadership.

Here are a few plain economic facts that the Republicans refuse to face. Because of the bad corn crop and the shortage of other feed concentrates, the Nation's meat supply next spring will run 20 to 25 percent below the present per capita level. Meat will be scarcer than it was at any time during most of the war. Unless meat is rationed and put back under price control, meat prices next spring will be a third or more higher than they are today. And as you well know, meat prices today are appalling. As the price of the short feed supply goes through the roof, we can expect the prices of milk, butter, and eggs to tag along. Not immediately, of course, because spring is the flush season for such products. But next summer they will go up nearly as much as meat.

This dark forecast of the coming food situation is by no means a secret. The Secretary of Agriculture spelled this out for congressional committees all over Capitol Hill. But the NAM, the GOP, and the T-A-F-T still refuse to act.

According to the Department of Labor, feed prices by the end of 1947 were up 58 percent over June 1946, the last month of effective price controls. Industrial prices were up 34 percent. There is no evidence that we have reached the peak, and there is plenty of evidence that prices will continue to spiral. In the weekly wholesale price reports of the Bureau of Labor Statistics, you can find dozens of key items moving up week after week and in any single week jumping 2, 4, and 5 percent. A price rise of 2 percent in a week may not sound serious to some people, but unless this rate is checked it would double the price level in less than a year.

Contributing to our price difficulties are the serious bottlenecks in steel and steel plate, nonferrous metals, and other basic materials for which demand far outruns supply. Our continuing failure to break these bottlenecks is a standing invitation for industrial users of the materials to bid their prices higher and higher, with producers only too willing to charge accordingly. The same Republican soothsayers, the NAM, the GOP, and the T-A-F-T, who think they can make inflation disappear by chanting the magic formula, "Production, production, and still more production," are blind to the basic bottlenecks, which are the greatest obstacle to production and one of the greatest hazards to continued prosperity.

The refusal of the steel industry to undertake a constructive expansion program after the war is typical of several other industries whose products are in short supply. Unfortunately, although business is not primarily responsible for inflation, its current attitude is a strong contributing factor in the continuation of the upward spiral. Most businessmen today are convinced that a depression is inevitable; therefore they do not wish to take on an expansion program which might leave them in an overcapitalized position. Convinced of the coming bust, they are putting their excessive profits into a nest egg to tide them over the rainy days. Through expansion of production, these businessmen have the power to counteract inflation, but, instead, they have shown themselves to be lacking in the fundamental faith in the future prosperity and stability of their country.

It is because the administration has for some time been aware of the danger of an economic smash-up that President Truman summoned back the Congress on November 17 and submitted, along with the estimates of interim aid for Europe, a 10-point program to win the battle against inflation. But what happened to it? Once again, with the country on the threshold of disaster and only a fighting chance to stave it off, the Republican bigwigs turned to their friends in the National Association of Manufacturers and turned their backs on the people of the United States.

Running true to form, Senator TAFT came up with a characteristic Taft statement that rationing is totalitarian, apparently forgetting that thanks to his efforts we already have the cruelest kind of rationing—the kind that allocates butter exclusively to those families that can afford to pay $1 a pound, and eggs only to those families that can pay $1 a dozen.

When the President reluctantly signed the Taft voluntary anti-inflation bill, he aptly described it as a "feeble" and "pitifully inadequate weapon against the high cost of living." He once again urged Congress to enact a workable and positive program. Our job is to rally the country behind the realistic leadership of President Truman. I am convinced that if the people of the United States know the facts, know of our impending disaster and know of the need for European assistance and recovery, they will willingly sacrifice together to achieve the necessary objectives.

The Democratic Party has an unprecedented opportunity and responsibility as our

Nation, in this fateful year of 1948, approaches the crossroads of our destiny. Under the leadership of President Truman, we can, we must, achieve economic stability and security at home, and restore prosperity and faith to the free peoples of the world.

"Sail on,
O Ship of State,
Sail on, O Union strong and great;
Humanity with all its fears,
With all the hopes of future years,
Is hanging breathless on thy fate."

Honesty Essential in Foreign Affairs

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, on January 26 an article appeared in the Washington Post by Joseph and Stewart Alsop entitled "Honesty Is the Only Policy." I commend it to every Member of this House, for it states a truth and an objective which must be attained if our foreign policy is to have the confidence of the people of this country. Under leave to extend my remarks, I am including the article in question:

HONESTY IS THE ONLY POLICY

(By Joseph and Stewart Alsop)

In the higher ranks of the administration, a debate of the most far-reaching import is now in quiet progress. Will the real facts of the world situation at last be placed before the country and the Congress, with all the almost irresistible weight of Secretary Marshall's authority? Or will the opposition to the European recovery program be allowed to have its way, for sheer lack of understanding of the consequence? These are the alternative courses now being discussed.

This debate was precipitated by rather belated preliminary checks, which disclosed a distinctly bleak congressional situation. There is not the slightest sense of urgency on Capitol Hill today. As of today, action on ERP is likely to be greatly delayed; the program will probably be festooned with unworkable restrictions, and the amount appropriated is expected to be cut to somewhere near the $4,000,000,000 level advocated by former President Hoover.

A final survey is now being made, so that the most dependable data on the outlook in Congress may be laid before Secretary Marshall on his return from the South. But the results of this survey are not likely to give new cause for optimism. Therefore, the American policy makers are discussing the choice outlined above. There is only one way to rescue ERP from the effects of congressional indifference. That way is to arouse an adequate sense of urgency in Congress and the country. Equally, there is only one way to arouse this sense of urgency, Secretary Marshall must at last tell Congress and the country what are the real motives of American policy.

Here there appears a strange anomaly, which the American policy makers are free to confess. In the great American decisions, from the British loan down to ERP, moral, humanitarian, and, of course, economic motives have been given due weight. But the really impelling motives for every one of these decisions have been motives of pure political and strategic self-interest.

"We did all these things," one of the wisest men in the Government remarked the other day, "because if we hadn't done them, or had done even a little less, the Soviets would have been able to carry out their program of expansion and domination. If the Sovients ever carry out their program, we shall face a Europe and Asia in Soviet hands, and we shall have no choice but to fight or to surrender." As anyone familiar with the practical workings of Congress must realize, self-interest is the great congressional persuader.

Yet these real motives of American self-interest, which would quickly convince Congress, have never been publicly confessed or explained by President Truman, or Secretary Byrnes, or Secretary Marshall, or anyone else in authority. They have been hinted at, or suggested by shadowy generalities. But mere hints and suggestions do not pose big issues. In fact, the underlying issues of American policy have never been debated in the Congress, because each great American policy decision has always been put forward in elaborate moral, humanitarian, or economic fancy dress, with the real motives for it largely suppressed.

There are no exceptions to this rule. The strong language of the so-called Truman doctrine no doubt passed the Greek-Turkish aid bill but President Truman's rather grandiloquent defiance of the advance of totalitarianism contained no mention of realistic American interests.

When Secretary Marshall insisted upon Greek-Turkish aid, he had in mind only that Greece and Turkey were the keys of the Middle East, and that control of the Midle East would give the Soviets unchallenged domination of Europe and Asia. These hard facts were rather pointedly not stated by the President. A calmer statement, containing the fact, would have been more effective than the Truman doctrine.

Again, the British loan was presented as a great free-trade gesture until the last moment, when Secretary Byrnes had to make the House of Representatives' flesh creep with Soviet horror tales. The device worked. The loan passed in a mood of hysteria. But if it had been presented in sober honesty at the start, the loan could have passed in a mood of clear understanding of American interests.

In short, what is now proposed is not to "cry wolf" as is rather loftily asserted by the opponents of plain speaking. What is proposed is simply for Secretary Marshall to make a full, clear, plain statement of facts, which will only be alarming because the facts of the world situation are intensely alarming.

Those who advocate this course admit that it has not been the previous practice of American diplomacy. But they point out that although Parliament is much more responsive than Congress, Ernest Bevin's recent magnificent speech to Parliament was as strong and straightforward as could be wished. And they argue finally that it is undemocratic to ask Congress for great decisions without explaining the reasons for those decisions. Events seem likely to confront Secretary Marshall with a choice between adoption of this theory or acceptance of a gutted ERP.

Aspects of the Marshall Plan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks and include therein a series of five articles on aspects of the Marshall plan, by E. F. Tompkins, editor of the New York Journal-American, I wish to present the fourth of the series entitled "The Basis of European Recovery." The article follows:

ASPECTS OF THE MARSHALL PLAN

(By E. F. Tompkins)

IV. THE BASIS OF EUROPEAN RECOVERY

To recognize that drastic relief measures had become necessary last fall in some parts of Europe is not to concede that the Marshall plan must be approved by Congress on European terms.

The crop failures and fuel shortages in western Europe, caused by the cruel winter of 1946–47 and prolonged droughts in the following seasons, came close to being catastrophic.

That emergency was met by the congressional donations to Austria, France, and Italy and by the appropriations for Germany through our army of occupation east of the Rhine.

And the Marshall plan is not offered as a relief measure.

Its express purpose is to make western Europe self-supporting by revitalizing its agriculture and industries and expanding both (1) to equal the needs of a population of 270,000,000 and (2) to provide exportable surpluses to be exchanged for essential imports, including supplementary foodstuffs.

The European problem is not difficult to under; it is simply one of procuring production.

The Marshall plan should therefore be constructed and construed to this single end.

It will fail, and be doomed to fail, if it emerges as an instrument for building socialism, at American expense, as the left-wing Pied Pipers intend it to be.

And western Europe has within itself the basic means of production sufficient for its needs.

In fact, the task of self-rehabilitation through production after World War II—though hampered and obstructed by socialistic attitudes in politics and labor—was well advanced when the food and fuel crisis intervened as a temporary set-back.

The report of the Committee of European Economic Cooperation, in its own discussion of the Marshall plan, said:

"The scale of destruction and disruption of European economic life was far greater than that which Europe had experienced in the First World War. * * *

"The devastated countries had to start again almost from the beginning.

"Nevertheless recovery proceeded well—indeed, much faster than after the end of the First World War. * * *

"This was made possible by the efforts of the European countries themselves, with generous assistance from the United States and from UNRRA.

"So successful were these efforts that by the end of 1946 industrial production in Belgium, France, and the Netherlands had recovered to 85–95 percent of the prewar level.

"In the United Kingdom the process of demobilization of the war economy had been accomplished smoothly and the prewar level of national output had been fully restored."

At this point, however, the European committee appeals to the food and fuel crisis as its major plea for a Marshall plan according to its own ideas.

But the committee also gives the game away.

Congress, it has already been noted, was donating more than $5,000,000,000 for relief.

And the European committee asks for something else.

It submits a capital development prospectus calling for a production expansion by 1951 which will be similar in general scale to that achieved by the United States in the mobilization years of 1940 to 1944.

Then, interpreting Secretary of State Marshall's invitation in his Harvard speech, the committee computes Europe's financial ability to meet its own prospectus and requests the United States Government to underwrite a deficit amounting, in its own estimate, to some $22,000,000,000.

Subsequently, the total was scaled down to about seventeen billions.

No American should object to a European design of large production.

Yet there are questions which a prudent and capable businessman would ask before venturing his substance on such a prospectus:

1. What about management?

America's industrial war effort, which western Europe would emulate, was an accomplishment of our free enterprise system.

The European program is socialistic, first, because it is predicated upon governmental loans and governmental spending; and second, because the socialistic governments have declared themselves socialistically as recipients in the Marshall plan.

2. What about labor?

Respecting its own recovery program the European committee says:

"It calls for unprecedented peacetime effort of work by the whole population of the participating countries."

But in Great Britain millions of tons of coal production have been sacrificed by strikes and, until lately, by the socialistic 35-hour week.

In France and Italy the general confederations of labor are controlled by the Communists.

As evidence of what they can do, the communistic strikes in France in December 1947 cost the nation 2,000,000 tons of coal, 4,500,000 tons of steel, and a general equivalent of 6 months' production in manufactures.

3. What about confiscations and economic controls?

The French Cabinet is now imposing a forced loan or capital levy on large incomes, while the British Labor Government has just nationalized the railroads.

In most of the countries price controls and rationing, as well as wage fixing, seem to have become habitual and perpetual.

"The application of such a policy," the European committee notes, "presents increasing difficulties over a long period and may tend to react unfavorably on production."

An $80,000,000 Rat Hole

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks, I include an article written by Samuel B. Pettengill, a former distinguished Member of this House.

In this well-written article Mr. Pettengill makes reference to the outstanding work that is being done by the subcommittee headed by our able colleague, the Honorable FOREST A. HARNESS.

Mr. Pettengill's article follows:

AN $80,000,000 RAT HOLE

Congressman FOREST A. HARNESS, of Indiana, is a member of a special subcommittee of Congress investigating publicity and propaganda in executive agencies. He states that the chief interest of this subcommittee has been "the means by which Federal bureaucrats perpetuate themselves in office, generate pressures on Congress for more and bigger appropriations, and sponsor socialistic enterprises in the name of national emergency or an artificially stimulated public demand."

In the fiscal year 1946, some of the principal Federal agencies propagandizing themselves spent $80,573,678 of the taxpayers' money. Most of this was actually appropriated for other purposes. It took this committee six solid weeks to ferret out a project known as the health work shops of the United States Public Health Service, the Social Security Board, the Children's Bureau, and other health and welfare program agencies.

The reason it took so long is the spirit of defiance encountered by the committee investigators.

"We discovered that practically every argument, every pamphlet, every radio broadcast, and every statistical table advocating socialized medicine originated primarily in t' e Social Security Board. Here is the worldwide nerve center of the movement for socialized medicine."

Mr. HARNESS says that these advocates of socialized medicine have sent missions to every country in the world—missions often staffed by men identified with fellow-traveler outfits avowedly sponsoring the Moscow party line in the United States. They have gone to Europe, to South America, to Japan, to New Zealand. They return and write reports which are scattered throughout this country by the millions—and costing millions.

The ramifications of Federal propaganda in behalf of socialized medicine astonished the committee.

This is done, Congressman HARNESS says, in violation of a law which makes it illegal for an executive agency to use public money to put pressure on Congress. But no one is prosecuted.

"I am sure," he says, "that the United States has not yet reached the point where it must be submissive to the dictates of a bureaucracy in Washington".

We all know that the bureaucratic power feeds upon the rights and privileges and liberties of the people. Government propaganda is the method of dictators.

"Public opinion must be maintained in its free and virile state—in full harmony with the great American tradition of liberty. If we do that by stamping out Government propaganda at its roots, then we shall have rendered a great service, not only to medicine, but to the whole cause of liberty and freedom the world around.

"Our purpose will be to uproot and destroy Government propaganda wherever we may find it."

SAMUEL B. PETTENGILL.

Something New About Lincoln

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1948

Mr. DONDERO. Mr. Speaker, on July 26, 1947, there were opened and exhibited to the public certain private papers of Abraham Lincoln. They had been delivered to and deposited with the Library of Congress here in Washington by Robert Todd Lincoln, sole surviving son of President Lincoln, with the proviso that they should not be opened to public inspection until 21 years after his death. Robert Lincoln died on July 26, 1926.

This is a voluminous collection of 18,350 items. Included are many letters written to the President during the Civil War and some items before the war. It is interesting to note the manner in which Lincoln reacted to some of the communications which he received. On the back of some of them he made cryptic endorsements, and it is to such endorsements that I desire to call special attention. A few of them are herewith presented and made public for the first time.

Every Member of Congress receives many letters. I wonder whether we react or dispose of some of them in a manner very much different than Lincoln, more than 80 years ago. There were no typewriters, telephones, radios, television, or other methods of speedy communication in his day.

We are indebted to Mr. Percy Powell, of the Library of Congress, who cataloged the Lincoln collection, and now has supervision over that Lincoln treasure house. He prepared the rare items that follow, upon my request, for "something new about Lincoln":

SOME INTERESTING AND CHARACTERISTIC ENDORSEMENTS OF ABRAHAM LINCOLN RECORDED ON DOCUMENTS IN THE ROBERT TODD LINCOLN COLLECTION OF ABRAHAM LINCOLN'S PAPERS

In October of 1864, Elihu B. Washburne, Senator from Illinois and long a personal and political friend of Lincoln, the sole person to welcome him to Washington on February 23, 1861, became alarmed over the prospects of Lincoln's reelection in Illinois. He doubted if Lincoln could win without the soldier vote. So, on October 17, he wrote to Lincoln as follows: "Everything is at sixes and sevens and no head or tail to anything. Please consult with Stanton and have the soldiers started home at once. If you would save our State from the most appalling calamity, pray do not neglect what I suggest about getting the soldiers home."

Lincoln read the letter and endorsed it with one word, "Stampeded."

James R. Webster wrote President Lincoln on December 24, 1864, from New York and signed himself "Your affectionate friend." He was an old Illinois acquaintance and went as a delegate to the convention in Springfield, Ill., that nominated Lincoln for Senator. He asked the President for a job.

Lincoln made the following endorsement on the letter: "James R. Webster for something."

One William Kellogg was a delegate to the State convention in Bloomington in 1856, when the Republican Party of Illinois was organized. He served as a Presidential elector on the Lincoln ticket. In March 1861, Lincoln named him chief justice of Nebraska Territory. This is the same William P. Kellogg who went through the troublesome reconstruction times as Senator and Governor of Louisiana. In 1863, however, he wanted Lincoln to give him a big diplomatic assignment. He was offered the post of consul to Valparaiso. This irked him, and while in an angry mood he wrote to President Lincoln, on April 8, 1863, refusing the honor. The White House secretary briefed the letter and marked it unpleasant.

When the letter came to Mr. Lincoln's attention he endorsed it as follows: "I understand my friend Kellogg is ill-natured; therefore, I do not read his letter."

Abraham Lincoln's habit of making cryptic endorsements on his mail seems to have developed before his White House days. A New

York publishing house sent him a circular under date of May 21, 1859, announcing the forthcoming Livingston's United States Law Register and Handbook of Information Useful to Every Lawyer—"Published by subscription; will not be peddled through the country by agents." The circular listed some of the contents of the volume and suggested many possible uses for it.

Apparently the President didn't spend too much time reading the notice, for he made the following endorsement: "Too deep for me."

On April 25, 1863, Mr. Francis L. Capen wrote to Lincoln as follows: "Please refer me favorably to the War Department and I will guarantee to furnish meteorological information that will save many a serious sacrifice."

Evidently the President had interviewed Mr. Capen a few days earlier for he endorsed the request as follows: "It seems to me Mr. Capen knows nothing about the weather in advance. He told me 3 days ago that it would not rain again till the 30th of April or the 1st of May. It is raining now and has been for 10 hours. I cannot spare any more time to Mr. Capen."

It is known that Secretary of War Stanton could not always find places for the persons who expected to be appointed by the President. Colonel Hicks asked Mr. Lincoln to make him aide-de-camp to General Wool. Mr. Lincoln sent him to Secretary Stanton who refused to issue the commission. The colonel wrote the President on May 22, 1862, to the effect that the Government was run by the Secretary of War.

Mr. Lincoln made the following endorsement of the letter: "This note, as Colonel Hicks did orally yesterday, attempts to excite me against the Secretary of War and therein is offensive to me. My order as he is pleased to call it, is plainly no order at all."

During April and May 1863 President Lincoln received a number of letters from his political friends in Missouri telling him of the growth of factional feeling. Samuel T. Glover wrote that Secretaries Stanton and Chase were using their patronage power to build up a party opposed to the administration. Congressman J. W. McClurg wrote his objections to Governor Gamble and Senator Henderson. Congressman Henry T. Blow wrote about the quarrel, but stated that he was not in it.

President Lincoln endorsed Congressman McClurg's letter as "one side of the quarrel." He endorsed Glover's letter as "other side of the quarrel," and the letter of Mr. Blow as "more about the quarrel."

Secretary Chase wrote President Lincoln on November 8, 1862, that Mr. Masten, a New York patronage appointee of Congressman Steele, had been removed on the belief that he had contributed to the defeat of the Republican nominee for Congress and on the belief that the President agreed to the removal.

When Lincoln read the letter he turned it over and endorsed it as follows: "This note confounds me utterly. I am sure I have never been conscious that I was superseding Mr. Steele's man."

Henry Villard, the journalist (later railway promoter and financier), who reported the Lincoln-Douglas debates, became acquainted with Lincoln and collected Lincoln stories. He covered the Republican Convention at Chicago in 1860 and after the election went to Springfield, Ill., as correspondent for the New York Herald. He wrote to President Lincoln on August 14, 1861, asking for a letter of introduction to Gen. Winfield Scott, and adding that "you will doubtless remember me as a newspaper correspondent last winter in Springfield."

Lincoln made this characteristic endorsement on the letter: "I have only a slight acquaintance with Mr. Villard as a gentlemanly newspaper correspondent; and as such I commend him to others."

Rev. Samuel B. McPheeters, pastor of the Vine Street Church in St. Louis, Mo., refused to declare himself for the Union. He even went so far as to baptize a baby with the name of the Confederate General Sterling Price. A provost marshal arrested McPheeters and took control of the church property. Some 6 months later a petition signed by several elders of the church came to the President's desk. He made the following endorsement on it: "The assumptions of this paper, so far as I know or believe, are entirely false. I have never deprived Dr. McPheeters of any ecclesiastical rights. If, after all, the doctor is kept out by the majority of his own parishoners, and my official power is sought to force him in over their heads, I decline that also."

Senators S. C. Pomeroy and J. H. Lane of Kansas wrote President Lincoln on March 14, 1862, and asked that George McGlouflin be removed as Forage Master at Fort Leavenworth and the job given to Mike Grulish, a valuable Irish Republican.

President Lincoln transferred the matter to the Secretary of War with the precautionary "unless" clause, in the following manner: "Let the removal and appointment within requested by Senators Pomeroy and Lane be made, unless there be some reason to the contrary unknown to me".

Divisions Within Democratic Party Should Not Be Taken Too Seriously by the G. O. P.

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following transcript of a radio commentary by George L. Reedy over Station WOL this morning:

The current revolt of southern Democrats will make a serious crack in party solidarity. But it's not very likely to result in any real attempt to set up a new political organization—at least not this year.

That is the opinion of the inner-circle Democrats who are trying to direct their party to victory in the coming elections. They believe that the dissatisfaction of their southern colleagues can be ignored for the moment.

The real significance of the movement, however, is that it affords a dramatic example of basic divisions inside the Democratic Party. They have been there for years, but it is only recently that they have cropped out violently.

The Democratic Party is the oldest in our country. And yet, over the years, it has failed to bring all of its followers together under one program. Today it is a combination of at least three conflicting groups.

They are the southern democratic, the New Dealers, and the old-line, practical machine politicians of the big cities. They can get together on individual issues, but in the long run they are bound to turn upon each other.

The current scrap is over the President's so-called civil-rights program. It was absolutely necessary for him to advance it if he wanted to keep the northern vote. It was equally necessary for the southern Democrats to protest vigorously.

In this particular case the argument will probably be smoothed over. Nobody expects the President's program to be enacted by Congress. As a last resort, it would be filibustered to death in the Senate.

At the same time the southern Democrats realize the advantages of staying in the party. By themselves they would find it impossible to capture Congress, and they certainly could not look for a permanent alliance with the Republicans.

Consequently, both sides will probably back down from their extreme positions. At least they will stop talking about it and quit embarrassing each other. In an election year anything else would be suicide.

The southern Democrats have some pressures short of a bolt from the party. These they will certainly apply. Just as an example, there is the interesting suggestion—already applied in South Carolina—that they withhold the funds from the Jackson Day banquets.

These are an important source of income to the Democratic Party. The leaders would think twice before letting them go by the board. They need that money, and they need it badly.

On the other hand, the administration has a few pressures it can apply in retaliation. Not the least is its power to appoint people to certain Federal jobs. Furthermore, the southerners are doomed to remain a minority unless they cooperate with their northern brethren.

It all adds up to peace within the party. But it is a peace with a difference. Some dirty linen has been washed in public, and it isn't very likely that the public will forget. This is especially important in an election year.

It's a good spot for the Republicans. They have to do nothing except sit back and let events take their course. Sooner or later on this kind of a proposition the odds are bound to be in their favor.

Inflation

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. POULSON. Mr. Speaker, without a doubt the most discussed subject today is inflation, because it affects every one of us. We all receive over our desks an almost unlimited number of articles on this subject. Many of them I have tried to read and digest. To date, the editorial which I am asking to insert in the RECORD contains what I think is one of the most condensed, common-sense, and logical analyses that I have read on this very controversial subject. It is written by Mr. Manchester Boddy, publisher and editor of one of the influential newspapers of California.

(By Manchester Boddy)

At long last nearly everyone knows that "inflation" means "too much money chasing too few things."

Inflation exists in every part of the civilized and semicivilized world. Relatively there is less inflation in the United States

than elsewhere for reasons that will be explained shortly.

Sound money is based on real wealth.

War destroyed real wealth; therefore, the only way to restore sound money is to replace the wealth that war destroyed. There is no other way. Millions of words have been written about measures finance ministers in London, Paris, Moscow, Warsaw, Tokyo, Vienna, Nanking, Brussels, Stockholm and Washington are taking to prevent, cure or end inflation in their respective domains, but the hard truth remains. No amount of juggling, no political soft-soaping, no "monetary reform," however ingenious, can take the place of real wealth. A nation's money is valuable only when it represents wealth.

A classical example of inflation in the making is contained in a recent United Press dispatch from Peiping, China, which says the Communists have shelled the Nationalist stronghold of Mukden, Manchuria, knocking out a huge hydroelectric plant on the city's outskirts.

It is a foregone conclusion that if and when the Communists capture the area, the Nationalists will then feel free—indeed, obliged—to give the power plant and other industrial installations a further blasting to prevent them from being used by the Communists.

That is inflation in the making.

Of course neither side really wins. Whichever side is "victorious," a sizable chunk of wealth will have been destroyed, which will have to be replaced by hard work on somebody's part if it is to bear its former function as a foundation for sound money.

Except for the premeditated, managed, policy inflation that swept Germany in 1922–23, Europe had sound money before the advent of World War II. That is because it had real wealth.

It now has unsound, inflated currency, because its wealth was so largely destroyed. In Germany, the plan for reparations approved as reasonable and desirable the pegging of Germany's industry at one-half its prewar capacity. Besides the terrific destruction by bombing, England suffered a tremendous loss in wealth through the worst kind of attrition—the overworking of her productive facilites without repairs or improvements. Everyone is familiar with the vast destruction of wealth in France, including major ports and virtually all her livestock. And in Russia, the value of the wealth destroyed has been estimated by reliable authorities at approximately $60,000,000,000.

Regardless of Russia's protestations to the contrary, such destruction must, under any system, produce inflation. In the realm of food supply alone, one of the most vital kinds of wealth, the war cost Russia something like 26,000,000 cattle, 32,000,000 hogs, and 200,000,000 chickens. Among other losses were a third of her tractors and combines, and 8,500,000 horses.

Fertile soil plus available manpower is wealth. So is a plant that produces electricity; a mill that makes steel; a refinery that turns out gasoline; factories that produce tractors, automobiles, washing machines, and other useful, wanted things.

During the war each side cheered when its armies scorched the enemy's earth; blasted his dams; destroyed his factories, his power plants, his railroads, and killed his men. That destruction, so essential to winning a war, destroyed the only possible basis for sound currencies.

To win a war, something more than destruction is needed. Mass man must be told that the victory for which he is fighting means peace and prosperity.

The postwar politician, therefore, is faced with the problem of presiding over ruins while he strives to deliver peace and prosperity to the people who elected him.

Since money is regarded as wealth, his first desperate move is to dish out currency. This temporarily satisfies the people and gives him time for maneuvering. Liberalism, with all its virtues, usually is administered by practical politicians in terms of short hours of work and long piles of money. This leads to the mess we now see in England, France, Italy, and other desperately ill countries all across the face of Europe.

The United States has more available real wealth and more current production today than it had before the war. Therefore, it has a firm, solid foundation for a sound monetary system. But even in this country, the volume of money has increased faster than wealth has been produced. Consequently, the problem is either to drain off this excess money, or to increase real wealth through more production.

If we drain off our production through huge shipments to Europe and Asia, while at the same time increasing our supply of money, we, too, will have inflation of the disastrous kind.

President Truman's program calls for $18,300,000,000 over the next 4 years. It is, therefore, an inflationary measure. And it cannot be offset by price control, rationing or any other arbitrary measure. The only answer is enough production remaining in the United States to sustain our money in circulation.

DECEMBER 29, 1947.

Church and Professional Groups Support European Recovery Program

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1948

Mr. JAVITS. Mr. Speaker, following are resolutions of the Forum of Men's Class of Riverside Church and New York State Bar Association, strongly endorsing the European recovery program. It is further confirmation of the support from diverse and important organizations of our citizens, of this program of self-help and mutual cooperation with the support of the United States:

THE FORUM OF THE MEN'S
CLASS OF RIVERSIDE CHURCH,
New York, N. Y., January 13, 1948.

The Forum of the Men's Class of the Riverside Church on January 13, 1948, voted unanimously their support of the Marshall plan as presented by Secretary Marshall on January 8 before the Senate Foreign Relations Committee.

We believe that the Marshall plan, if administered with good will, discretion, and wisdom, can be of inestimable value in improving friendly human relations among all the peoples involved and in promoting the cause of world peace.

We further believe that time is of the essence, in order to preserve human lives as well as American prestige.

Therefore we, the members of the Forum of the Men's Class of Riverside Church, do earnestly petition the Congress of the United States to enact legislation to put the Marshall plan, together with administrative details as presented by Secretary Marshall, in operation by April 1.

JACOB F. FOSTER,
Chairman of the Forum.

"The New York State Bar Association recommends that Congress enact legislation in furtherance of the program for European recovery set forth in section 2 (b) of the draft bill that accompanied the President's message of December 19, 1947, to the Congress on this subject."

CERTIFICATE

I, Chester Wood, secretary of the New York State Bar Association, hereby certify that the foregoing is a true copy of the original resolution which was duly adopted by the association on the recommendation of its committee on international law, William Roy Vallance, chairman, at a regular session of the association held during its annual meeting on January 23, 1948, at the house of the Association of the Bar of the City of New York.

In witness whereof, I have hereunto set my hand and affixed the seal of said association, this 30th day of January 1948.

[SEAL] CHESTER WOOD,
Secretary.

NOTE.—The section 2 (b) referred to in the resolution was quoted in the printed report of the committee of the association, as follows:

"SEC. 2. (b) Purposes of act: It is the purpose of this act to effectuate the policy set forth in subsection (a) of this section by furnishing material and financial assistance to the participating countries in such a manner as to aid them, through their own individual and concerted efforts, to become independent of abnormal outside economic assistance within the period of operations under this act, by—

"(1) Promoting industrial and agricultural production in the participating countries;

"(2) Furthering the restoration or maintenance of the soundness of European currencies, budgets, and finances;

"(3) Facilitating and stimulating the growth of international trade of participating countries with one another and with other countries by appropriate measures, including reduction of barriers which may hamper such trade."

State Sovereignty Over Minerals Beneath Waters

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

Monday, February 9 (legislative day of Monday, February 2), 1948

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the senior Senator from Nevada [Mr. MCCARRAN] before the Colorado Mining Association at Denver, Colo., on February 7.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, I start off that way because you are my good friends, most of you; old friends, many of you.

My friends, this is an anniversary year.

A century ago the world awoke to the glorious recognition that there was gold in the hills of California, and new industry arose to shape our destinies.

This year is the centennial of that discovery, a discovery which brought both realization and utilization of mineral values previously unknown and ignored.

A century from now, we may well celebrate the centennial of the discovery and realization of a bonanza which has lain quietly beneath the waters of our inland lakes and our navigable streams, and which in those 100

years may have proved to be the natural stock pile of a wealth almost immeasurable in this world of rapidly depleting natural resources.

We who claim to represent the great mining industry are today aware that the picks of progress have struck into new ledges, filled not with gold and silver, but with new kinds of wealth unrealized in its undeveloped state. And not only do we have new kinds of mineral wealth to search for and develop; some of us have some new ideas about where to seek some of the old kinds of mineral wealth.

But I wonder if we do not lack the old-time spirit of the seeker.

A century ago they called them pioneers, and there was a gold rush. Men struggled and died to get there, and many fought and died to protect their interests when they found some color in the pan. Today we might be said to lack the energy, or horse sense, of the pioneers of '48. We aren't doing much to keep the mineral resources underlying our rivers, lakes, and ocean fronts open to the endeavors of those who might develop them. And we face a threat to the security of our mineral rights without fighting back, almost without realizing it is a threat.

Today we look back and praise the sturdy, rugged men who found the gold in 1848.

A century from now, I trust the remnants of what was once a great mining industry may not look back 100 years and condemn us who live today for having become too soft, or too slovenly in thought, to hold our rights and protect the future of our industry.

Let's take a look at what we're up against.

Last June the United States Supreme Court handed down one of the most far-reaching decisions in its history—a decision which, if allowed to stand, will change and unbalance the entire constitutional relationship between the States and the Federal Government and which will seriously confuse, if not obliterate, the legal distinction between governmental powers on the one hand and the property rights of the States and their citizens on the other.

This decision was handed down in the case of *United States* v. *California* (330 U. S. —, decided June 23, 1947), but the effect of the decision is not confined to the State of California and its implications are so far reaching that all States and their citizens are vitally concerned.

The prospective loss to legitimate and innocent lease and title holders, resulting directly from this abrupt and arbitrary reversal of title law, may be very great. The indirect results may include incalculable confusion in land titles—particularly titles to mineral land—and inevitable and grievous waste of the Nation's natural wealth.

Legally unassailable real-estate titles are the foundation of a sound national economy, just as protection of mineral rights and mining claims is vital to the mining industry. In every real-estate transfer the greatest of care is taken in removing all possible clouds to real-estate titles by careful record searches. Certainly in real-estate title law is absolutely essential, for any change in basic legal rules can have disastrous tendencies. It is decidedly anomalous for a decision of the United States Supreme Court to make such a change.

Because of the effect of this decision on minerals under water, not only in the coastal States but in the inland States as well, and because of its impact upon the mining industry and its importance to all concerned in that industry, a few words at this point, as to the background of this controversy, seem justified.

Since the formation of the Union the various States, or those who hold title as grantees of the States or under State laws and decisions, have always exercised full powers of ownership and control over all lands and resources beneath navigable waters within their respective boundaries. In the California case it was recognized by the Court that the 3-mile belt, or marginal sea, as it was called, is wholly within California's constitutionally established boundaries. The ownership and control of such lands and resources was always deemed to be a concomitant of State sovereignty. This principle was always applied both as to inland lakes and rivers and as to the 3-mile belt along the coasts.

Pursuant to this long established rule of property ownership, enormous expenditures have been made by both States and political subdivisions and their grantees for the improvement of ports and harbors and in filling and reclaiming submerged lands. On the same basis minerals, including, of course, oil, along the seacoasts, and iron, coal, brines, and other minerals beneath inland waters have been developed.

The lands beneath navigable waters are not to be confused with the public lands of the United States, which in most Western States were reserved to the Federal Government by the Acts of Admission to Statehood. These public lands and the minerals contained in them, being already fully owned by the Federal Government, are in no way involved in the present controversy. It has always been held that lands beneath navigable water do not come within the category of Federal public lands subject to the land laws of the United States. The Supreme Court's decision in the California case does not appear to change that rule.

The power of the Federal Government to regulate commerce and prevent obstructions to navigation in navigable waters within the States is not involved in this controversy. This Federal power has always been recognized by the States and is not challenged. But this power to regulate and control commerce and navigation has never, prior to the Supreme Court's decision in the California case, been considered as carrying with it the right or power in the Federal Government to appropriate lands or mineral resources underlying these waters.

For a period of 161 years, from 1776 to 1937, all State and all Federal officials had held that title to these lands was in the several States, and more than 50 decisions of the Supreme Court of the United States confirmed this holding. In 1937, Secretary of the Interior Ickes commenced agitation to reverse and upset all these precedents. To use his own words, Mr. Ickes changed his mind, repudiating an opinion which he had signed in 1933, and asserted a belief that these lands might belong to the Federal Government.

Prior to 1937 all Secretaries of the Interior, including Mr. Ickes, had uniformly ruled that title to the tidal and submerged lands belonged to the States. For example, on December 22, 1933, Mr. Ickes wrote a letter to an applicant for a lease on some submerged lands, in which he quoted from a case (*Hardin* v. *Jordan* (140 U. S. 371)), where the Supreme Court said:

"With regard to grants of the Government for lands bordering on tidewater, it has been distinctly settled that they only extend to high-water marks, and that the title to the shore and lands under water in front of lands so granted inures to the State within which they are situated, if a State has been organized and established there. Such title to the shore and lands under water is regarded as incidental to the sovereignty of the State—a portion of the royalties belonging thereto and held in trust for the public purposes of navigation and fishery—and cannot be retained or granted out to individuals by the United States."

Mr. Ickes quoted that. Then Mr. Ickes wrote:

"The foregoing is a statement of the settled law, and therefore no rights can be granted to you, either under the Leasing Act of February 25, 1920 (41 Stat. 437), or under any other public land law, to the bed of the Pacific Ocean either within or without the 3-mile limit. Title to the soil under the ocean within the 3-mile limit is in the State of California, and the land may not be appropriated except by authority of the State. A permit would be necessary to be obtained from the War Department as a prerequisite to the maintenance of structures in the navigable waters of the United States, but such a permit would not confer any rights to the ocean bed.

"I find no authority of law under which any right can be granted to you to establish your proposed structures in the ocean outside the 3-mile limit of the jurisdiction of the State of California, nor am I advised that any other branch of the Federal Government has such authority.

"Sincerely yours,

"HAROLD L. ICKES,
"Secretary of the Interior."

But when he appeared to testify before the Senate Committee on the Judiciary, Mr. Ickes said:

"Until 1937 these applications were denied by the Commissioner of the General Land Office, and, in those cases where appeals were taken to the Department, his decisions were affirmed * * *, but applicants and their lawyers continued to insist that the United States does own the land and the oil, and that the Department does have the power to grant them oil and gas leases. So we began to have doubts * * *. Consequently, since 1937 action on all of these applications, of which there are about 200, has been suspended pending a judicial determination" (p. 4, hearings, Senate Judiciary Committee, 79th Cong., on S. J. Res. 48 and H. J. Res. 225).

There, in his own words, is the history of Mr. Ickes' change of mind. Applicants for oil leases "and their lawyers" caused Mr. Ickes to decide that the "settled law" of 1933 had changed by 1937.

In other words, the controversy started as a conflict of interests between individuals holding oil leases from the State of California and other individuals who wanted the Federal Government to grant them leases of the same property. There were some 30 decisions of the Interior Department holding that the Federal Government had no authority to grant Federal leases under navigable waters because such lands belonged to the States. Nevertheless, Mr. Ickes did change his policy and assert Federal ownership.

It was to settle this controversy and to quiet the titles of the States and those holding under them that identical joint resolutions were introduced in the two Houses of Congress in 1945. Hearings on these resolutions were held before the House and Senate Judiciary Committees. More than 50 prominent State officials from all parts of the country appeared and testified in support of the resolution. The resolution sponsored in the House by the chairman of the House Judiciary Committee and in the Senate by the senior Senator from Nevada passed the House of Representatives by an overwhelming majority. Shortly after its passage, the Attorney General was persuaded by Mr. Ickes to file the suit against the State of California. It was obvious that this suit was filed for the express purpose of blocking the legislation, which was then pending in the Senate.

Exhaustive hearings were again held, before the Senate Judiciary Committee, of which I was then chairman. In all this time the only opposition to the measure was that of Secretary Ickes and a few individuals who had made application for Federal leases of California lands. The committee approved the resolution which had already passed the House. As chairman of the Judiciary Committee I sponsored that resolution on the Senate floor. When the resolution came up for consideration the question was raised whether Congress should act while the suit was pending in the Court. I took the position then that Congress is an independent branch of the Government and

should act on the legislation pending before it, especially where, as in this case, the legislation involved a matter of national policy vitally affecting State and Federal relations. I pointed out that if Congress must cease to act whenever a Federal official starts a lawsuit, Congress could be rendered impotent at any time. The Senate upheld my view and passed the bill by a substantial majority.

After the bill was passed it was vetoed by the President, the main ground of the veto being that the issue of the ownership of these lands was pending in the Supreme Court and Congress should await the decision of the Court. Following the veto the action in the Supreme Court continued, and the decision was handed down last June.

The fundamental theory of dual sovereignties, and States' rights, is endangered by this claim of superior Federal powers over State lands and resources.

The title and control of each State over its submerged lands are as old as the American Republic or the State itself, and never were successfully contested, or even seriously questioned, until Mr. Ickes came along with his Marxian dream of centralized power.

In a report filed April 26, 1946, the Senate Committee on the Judiciary stated:

"The title to all classes of lands underlying navigable waters has been confirmed to the States by the Supreme Court, and any modification of these decisions would constitute a change in a rule of property which has existed since the founding of the Nation" (S. Rept. No. 1260, 79th Cong., 2d sess., p. 3).

The Supreme Court of the United States has seen fit to make such a change; and has then sought to minimize the tremendous and far-reaching effects of its decision by the pious statement that "we cannot and do not assume that Congress, which has constitutional control over Government property, will execute its power in such way as to bring about injustices to States, their subdivisions, or persons acting pursuant to their permission" (*United States* v. *State of California*, (330 U. S. —)).

You will be told that the Supreme Court decision in the case of the *United States* v. *California* can have no possible effect upon inland waters or even upon bays and harbors. You will be told that the decision is so phrased that it does not apply to anything except the strip of marginal sea between low-tide mark and the 3-mile limit. Technically, it is true that the decree in this case does not by its terms affect anything except a 3-mile strip of marginal sea offshore from the State of California. But the principle enunciated by the Court in its decision is of much wider application. And the Supreme Court itself has said, in another case (*Illinois Central Railroad* v. *Illinois*, 146 U. S. 387, p. 435), that "there is no reason or principle for the assertion of dominion and sovereignty over an ownership by the State of lands covered by tidewaters that is not equally applicable to its ownership of and dominion and sovereignty over lands covered by the fresh waters of these lakes."

In the same report from which I have already quoted, the judiciary committee also said:

"If the Supreme Court of the United States should reverse itself, unending litigation would result for probably half a century, for it would mean that the boundary of every parcel of land fronting on navigable waters in the whole Nation would necessarily require judicial determination" (p. 5). That statement is as true today as it was when made; only now it is no longer a prediction, but an accomplished fact. Furthermore, the principle upon which the Supreme Court based its decision is so broad that there is no certainty at all but what it is equally as applicable to dry land as to land under water; and the result has been to cast a cloud upon the title to any land in this Nation which is underlaid with mineral deposits which either are, or may be in the future, necessary or desirable for use by the Government in connection with waging war or in its dealings with foreign nations.

This decision of the Supreme Court is based on a theory heretofore unknown in American constitutional law; a theory that in the exercise of its constitutional powers the United States may appropriate to its own use, and without paying for them, natural resources, existing within land wholly within the boundaries of a State, and not the property of the United States. This doctrine, if carried to its logical conclusion, might permit the Federal Government to appropriate, without compensation, minerals, forests, and other natural resources in State or private ownership, anywhere, which it deems essential to the performance of its constitutional functions.

In the suit against California, the United States alleged that it had either title in fee simple or paramount rights over the lands and minerals underlying the 3-mile belt off the coast of California and outside inland waters. Thus, no claim was made as to inland waters in that case, but there is nothing to prevent the United States in the future from making exactly the same claims as to inland waters and the lands and resources beneath such waters.

Some Federal officials have attempted to quiet the fears of the inland States by saying that it is not their intention to claim lands or minerals beneath inland waters.

Obviously, such assurances are of no value. Mr. Ickes was very positive, for a number of years, that the Federal Government had no rights in submerged lands. But under adequate stimulus he changed his mind in a hurry.

The mere statement of one Federal official that he has no intention of making such a claim is meaningless and without legal force and is not even binding on the person who makes it. A Federal official can change his mind after making such a statement, just as Mr. Ickes changed his in 1937.

The people of the inland States must look to the decision of the Supreme Court, examine the grounds upon which the Court based its decision, and see for themselves whether or not the doctrines upon which the decision is based could be extended to inland waters. If they could, then the inland States are definitely in jeopardy and will be subject to attack whenever Federal officials determine that such an attack should be made.

As a matter of fact, Department of Justice officials have stated to representatives of the Senate Committee on the Judiciary that the Department interprets the decision of the Supreme Court as probably being applicable to all the marginal seas of all the States having ocean frontage, regardless of any peculiar conditions under which such States came into the Union. Because of this interpretation, these officials say, they believe it is incumbent upon the Department to proceed with the filing of suits against all of the remaining tidewater States within the near future. The reason this policy has not yet been carried into effect is, presumably, that the Congress is again considering legislation with respect to these submerged lands, and the Department has been notified that hearings will begin on February 23, and has been asked to present its recommendations at that time.

In order that we may be in a position to form our own opinion on this point, let us examine the Court's decision in the California case to see precisely what the Court held and the precise grounds upon which it based that holding.

The Court specifically held that the Federal Government, rather than the States, has paramount rights in and power over the 3-mile belt, and that included within this power is the right to appropriate all the natural resources of the soil under the water, including oil.

The Court also held that California was not the owner of these lands and resources.

The Court did not directly hold that the United States was the owner of or had title to these lands and resources. It did not say in so many words who was the owner. This fact thas led many lawyers to the view that so far as ownership is concerned, the decision, instead of settling the question, completely unsettled it; that the only inference which can be drawn from the decision is that the land has no owner at all. However, this is completely at variance with one of the basic principles of the law of real property: namely, that real property must always have an owner. In the United States, any lands within the boundaries of a State which have no other owner must of necessity belong to the State.

I think it must be concluded that the language of the Supreme Court's decree, that "The United States of America is * * * possessed of * * * full dominion * * * over the lands," is sufficient to affirm ownership in the Federal Government, and was intended as such an affirmance. It is obvious, of course, that the Court's language is confusing, as well as something less than forthright.

The apparent reason why the question of ownership was left in this confusion was that the Court did not base its decision on chain of title or any ordinary attribute of ownership but rather on this paramount, overriding governmental power which the Court said transcends the rights of a mere property owner.

One of the most disturbing points in the Supreme Court's decision is this statement: "The Government, which holds its interests here as elsewhere in trust for all the people, is not to be deprived of those interests by the ordinary court rules designed particularly for private disputes over individually owned pieces of property." That statement is more than striking; it is shocking.

That could be construed as one way of saying that when the Government asserts an interest, private property rights will not be protected. The people of a free democracy never could assent to such a doctrine as that, and it is hard to believe that is what the Supreme Court meant.

Reduced to nonlegal language, what the Court seems to have said was that the Federal Government can appropriate for its own use, or can determine who shall appropriate, minerals, and other natural resources in the submerged lands within the 3-mile belt, without any regard to the question of who owns the soil and without making compensation to anyone.

This announces a wholly new and previously unheard-of doctrine in American law which obliterate the basic legal distinction between governmental powers on the one hand and property rights on the other. Never before in this country has it been held that governmental power extended to the taking of minerals or other resources from the soil wholly without regard to lease or fee ownership.

If that is the law, we have come a long way downhill from the Magna Carta and the Bill of Rights.

This holding of overriding governmental power which transcends title was not based on any previous decision or upon any hitherto recognized doctrine of constitutional law. In fact, the Court cited no authority whatever in support of its decision. The sole basis for the decision was the Court's own declaration that it is necessary for the Federal Government to have this overriding paramount power in order to perform its constitutional duties and responsibilities in relation to national defense and international relations. In other words, the Court said that if the Federal Government needed

oil or minerals for national defense, then such need alone, and without regard to title or ownership, would give the Federal Government the everriding paramount power to appropriate such minerals or other property. That is the rationale of the decision.

No wonder the Court was divided in its opinion.

It is not adequate to say that the Supreme Court, in the case of the *United States* v. *California*, has decided the question with respect to submerged lands. What actually happened is that the Court has reversed the rule which was uniformly upheld for more than 100 years, and has thus in effect confiscated State property, and private property derived from State titles; and has laid the foundation for further confiscation of mineral land wherever and whenever the Federal Government sees fit to declare or assert a "paramount interest" stemming from its responsibility to protect the country against dangers, or its responsibility for conducting United States relations with other nations.

The responsibility of the Federal Government for national defense clearly extends to all navigable waters, whether inland or otherwise, and, for that matter, extends to all the lands of the Nation. The Supreme Court's new theory of control of natural resources could, therefore, be extended equally as far.

California's coast line is approximately 1,000 miles in length. Not more than 15 miles of this contain any oil wells. The off-shore oil wells of California all are grouped in the vicinities of Santa Barbara, Long Beach, and Huntington Beach. The United States did not merely claim the oil rights, nor even limit its claim to that section of the submerged lands in which there was oil; it claimed the entire area of California's marginal sea. In sustaining that claim, the Supreme Court has certainly extended an invitation to the Federal Government to make similar claims elsewhere.

Officials of the Department of Justice, speaking unofficially, but in discussions with representatives of the Senate Judiciary Committee, and presumably weighing their words, have expressed the opinion that if the Federal Government should find that the land lying under inland waters was necessary to the national defense, or to the conduct of the Government's negotiations with other nations, the paramount Federal power might be asserted with the same force and effect as it has been asserted with respect to the California marginal sea.

In reading the opinion of the Court in *United States* v. *California*, one cannot help but be struck by the fact that there is nothing in it that is peculiar to California. The Court finds nothing in California history and no peculiar circumstances relating to California which call for a special rule which would apply only to that State. On the contrary, the entire decision is taken up with a consideration of the rights and powers of the Federal Government in the marginal sea generally—and the conclusions are based on the "constitutional responsibilities" of the Federal Government—responsibilities which are obviously no different as to California than as to Colorado, Wyoming, or any other State.

To grasp the potentialities of the decision as it may affect other States, we have only to look at the dissenting opinions of Justices Frankfurter and Reed.

Mr. Justice Reed in his dissent points out that the power of the United States is plenary over these undersea lands precisely as it is "over every river, farm, mine, and factory of the Nation." The constitutional power is the same everywhere. The Federal Government has the same duty to defend inland States from attack that it has to defend the coastal States. If, in the exercise of this power of national defense, the United States can appropriate oil under the marginal sea within California's boundaries, the same power would extend to minerals under the waters of inland lakes and rivers.

If California oil can be confiscated, Texas and Louisiana oil is not safe. If the Federal Government is entitled to take the oil produced in Texas, Louisiana, and California, by virtue of "paramount right," then the Federal Government can assert "paramount right" to the oysters from the bed of Chesapeake Bay, the gas from under Lake Erie, the iron ore from beneath the Minnesota lakes, the coal from under the rivers of Pennsylvania and West Virginia, and perhaps even the pay-dirt from the beds of our gold-producing streams.

Mr. Justice Frankfurter in his dissent points out that the contention that oil deposits in the marginal sea may be vital to national security is no more relevant to the question of ownership or of control than is the existence of uranium deposits wherever they may be. In other words, if this national power can justify the taking of oil, it could also justify the taking of uranium deposits even in private property, and if oil and uranium can be taken, why not iron, manganese, copper, coal, gold, and silver, or any other natural resources?

Reluctantly but inescapably, we are forced to the conclusion that the decision in *United States* v. *California* is an assertion by the Supreme Court of Federal rights and powers not declared in the Constitution and never asserted in the past by Congress or any other Federal agency; and that the decision is therefore a threat to property rights everywhere.

To realize the seriousness of this threat we must remember that the Court tells us that it is the needs of the Federal Government for national purposes which justify the existence of this paramount overriding power that transcends property rights. But who will determine these needs? Eventually the determination will fall into the hands of some Federal bureau. A bureau in Washington will decide when the Federal Government needs to appropriate your national resources, forests, mines, and fisheries. The Supreme Court's decision thus becomes a factor in the steady weakening of State and local government and the increased centralization of power in Washington, which if not checked can only result in the ultimate break-down of the constitutional balance between State and Federal governments.

Three days after the Supreme Court entered its decree in the case of the *United States* v. *California*, the Attorney General of the United States wrote a letter to the President advising him of the action taken by the Court.

The second paragraph of that letter starts with the following sentence:

"The signing of the decree brings to a successful termination the first phase of efforts being made to establish the rights of the United States in areas which, up to this time, had been claimed by the State."

I do not mean to attribute to the Attorney General any deep or hidden meaning, in his use of those words. But I say to you, his words were prophetic, in perhaps a broader sense than he intended them.

This decree of the Supreme Court does bring to an end only the first phase of the struggle. Efforts are being made to establish the rights of the United States in areas which up to this time have been claimed by the States.

In my opinion, such efforts are continuing and will continue; and there is no telling when or where they will stop, if the Congress does not stop them. This is not the plan or plot of any one man or group of men; it is a part of the pattern of centralized bureaucracy, which is at once a formula, a method, and a manner of thinking; and which is the natural and implacable enemy of States' rights.

Concluding his letter to the President, the Attorney General used this final sentence:

"What has been recovered may prove, in the coming years, to be but an insignificant fraction of the undeveloped and as yet unknown resources in the remaining area."

I think those words have deep significance, however the Attorney General may have intended them. Certainly, if the bureaucrats subsequently assert, and the Supreme Court upholds, a claim by the Federal Government to paramount power and dominion over lands beneath inland waters, and the mineral resources of such lands, what has been recovered already may indeed prove to be but an insignificant fraction of what might then be involved.

All sections of the country are affected alike by the threat implicit in this Supreme Court decision. Prospective losses of mineral rights and other natural resources may differ in degree among different States, as their natural resources differ, but the nature of the threat is the same; and there are no prospective benefits for any State, or group of States.

It is wrong to say that the reclamation States, or the reclamation fund, can profit in any way from Federal ownership of the submerged lands. These lands do not come within the provisions of the Public Lands Mineral Leasing Act, which appropriates 52½ percent of revenues from production to the reclamation fund. That act applies only to the public lands, and does not cover any submerged lands or marginal seas. The Attorney General of the United States has confirmed this, in a decision dated August 29, 1947. As a matter of fact, the briefs and stipulations filed by the Government in the case of the *United States* v. *California* made it very clear that the submerged lands cannot even be leased unless Congress passes some new act granting authority for the leasing.

The public domain was established in 1787 when Virginia ceded the Northwest Territory to the United States. Following this all of the other original States ceded their western lands to the Federal Government. These lands became the public domain; but this cession did not include lands beneath the coastal sea, nor lands beneath inland navigable waters, which were always reserved to the States.

Public lands are vacant and unappropriated uplands, subject to the land laws of the United States, and which have been surveyed by the United States under the public survey. The public survey has never been extended to cover the lands under navigable waters, either inland or along the coast, as such lands always have been considered the properties of the States.

If the decision of the Supreme Court in *United States* v. *California* was a good thing for the reclamation States, the National Reclamation Association would not be lined up against the decision, and the National Reclamation Association has by resolution directed its board of directors and officers to cooperate with and assist the governors and attorneys general of the States in their continued Nation-wide organization and campaign for suitable congressional action to undo the unsettling effects of this decision.

By petition, the National Reclamation Association has asked Congress to take immediate action declaring the law to be substantially as follows: First, that the exercise of the Federal Government's paramount powers in national defense, international affairs, and commerce shall not of itself be interpreted as vesting any proprietary interest in the land or resources so defended or dealt with; and, second, that, except as to those lands which the Government has previously acquired by purchase, condemnation, or donation, the respective States own the title to all lands beneath the navigable water

within their boundaries, which as to coastal States includes the marginal shelf, subject to such regulatory powers in the Federal Government as may be necessary in exercising its constitutional powers of and in national defense, commerce, and international affairs.

Anyone who will say that since the Supreme Court has now decided this matter, the Congress should not take any action, demonstrates his own complete failure to comprehend the problem. Congress not only should act; Congress must act. If we assume that the Supreme Court's decision settles the question that the Federal Government has complete sovereignty and dominion over the marginal seas within the 3-mile limit, then there are, literally, a score or more of questions which must be settled. These questions, of course, would not require separate and special handling if the Congress should dispose of the whole problem by disavowing Federal ownership of these lands. But if Congress does not take that course, then Congress must either itself take up, one by one, the many other questions which will then present themselves, or provide that they be taken up, and settled, in some other way.

Among these questions are the following:

Is the low-water mark, as it existed when the State came into the Union, to be accepted for purposes of a decree, or is the low-water mark as it existed at the date of the decision to be accepted?

What is to be done with artificially-made land projecting into the 3-mile area?

What are to be the limits upon the police jurisdiction within the 3-mile area, for law enforcement purposes, or for the abatement of nuisances, or the granting of fishing licenses, or the exercise of other police powers?

How are inland bays and waters to be distinguished from the low-water mark on the ocean shore line?

Are channels and inlets lying between islands within the 3-mile limit, or between an island and the mainland, to be treated as inland waters, or as a part of the area within the Federal jurisdiction, thus bringing the surface of such islands within the dominion and sovereignty of the Federal Government?

What is to be the disposition of public and private docks, loading terminals, and other harbor installations, including jetties and causeways extending into the 3-mile limit?

What are the rights of present tenants holding under grants or leases from the States?

What is the liability of the States to the Federal Government with respect to royalties and other revenues they have received from lessees, grantees, and licensees for the occupation and use of off-shore areas?

That list of questions is by no means comprehensive; but it will serve to give some idea of the complexity of the problem.

If Congress will not settle this problem at one stroke, then Congress must at the very least give its assent to negotiations for settlement, between the Federal Government and the States, looking toward a compact, or compacts, which shall be mutually binding, and which shall resolve the issues presented and give adequate protection to the rights of States and individuals. I have given considerable study to the question of compacts as a possible method of attacking the problem, and I shall give it more study, for I am inclined to think it might work.

It is my opinion now, however, as it was when I sponsored House Joint Resolution 225 in the Senate, that this is a question of national policy which should be determined by the Congress, if the Congress will act and if the President does not again nullify its action. The overwhelming sentiment of the people in favor of continuing State ownership and control was demonstrated in the passage of House Joint Resolution 225. The indications are clear that the Supreme Court decision has only strengthened that sentiment.

The only way in which this threatened invasion of State powers and rights can be prevented is by congressional action of some nature. To bring about such action I have recently joined with 19 other Senators in introducing Senate bill 1988, to restore ownership and control of all lands and resources beneath navigable waters to the States and those holding under them. This bill is a nonpartisan measure sponsored by 10 Democrats and 10 Republicans. Its basic aim is to preserve, as between the States and Central Government, the true constitutional balance of power which is essential to the preservation of our Federal system and upon which the strength and vitality of this Republic depend. I do not believe it is by any means perfect. In fact, I think it can be improved in language. But its purpose is sound.

I present this subject to this convention with a deep sense of responsibility. This great meeting, that has now become an annual conclave of historic significance, can well afford to give serious thought to the conditions that have arisen by reason of the decision recently rendered.

This Government would never have come into existence—in other words, the Constitution of the United States would never have been adopted by the original States—had it not been for the fact that in the organic law itself, it was declared, as it is now declared, that those rights not specifically granted to the Federal Government should be reserved to the States and to the people.

I know of no gathering that assembles in all the West to which this subject can be more appropriately addressed. The West is today, and we hope will always remain, the respository and frontier of individual human liberties; the guardian of the rights that belong to the States and the people thereof.

That being true, this conclave, assembled in the very heart of the West, can well afford to pronounce against what appears to be constant encroachment of bureaucratic centralized government.

As a last expression, let me express the thought that there is no form of totalitarian government that can be more ruthless in its dealings with the individual than that form of administrative hierarchy which we know as bureaucracy. A true dictator, being a one-man government, might change his mind, might yield to his heart or his conscience; but the bureau has no heart, and it has but an assembled conscience. A monarch, however bound by tradition, has a mind of his own, and may think. The bureau never thinks; it follows the formula. The individual cannot always pass the buck and escape responsibility, but the bureau can always resort to that method.

If your State, and my State, remain quiet and inarticulate on the subject that I have discussed here—if the people of the great open country of the West remain silent—we cannot tell what rights we may be letting go by default, or how soon they may go. But the generation coming on will hold us responsible for remaining silent, when the rights of the States, and the rights of the people, as individuals, are being progressively taken away, despite the apparently express guaranties of our organic law.

Others may remain silent, but I shall not; and I have sought today to present this subject as clearly as was within my power to one of the most important groups in western America, with the hope that you may be aroused, and so that you may at least be warned.

The American Farmer

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, February 9 (legislative day of Monday, February 2), 1948

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement on the subject The American Farmer, prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

QUIT CRITICIZING THE AMERICAN FARMER

The great work of American agriculture during the First and Second World Wars in helping to achieve victory is so well known that it certainly doesn't require repeating. So, too, the amazing job that American farmers have done after both wars in sending needed relief supplies to feed the hungry abroad is also an epic that has been told and retold.

It is amazing, therefore, that in spite of the magnificent record of American agriculture and its 29,000,000 people, there should be such widespread and unjustified criticism of the American farmer these days.

"The farmer is living off the fat of the land," "the farmer is profiteering," "the farmer is having life easy and is bleeding the American consumer." These are some of the examples of the synthetic, loose thinking which you and I hear in so many quarters today.

FARMERS MUST NOT BE MADE SCAPEGOAT

This talk is completely uncalled for, as I am going to show in this statement. The reason that I take the time to answer this talk is because I don't want to see American agriculture or any other fine segment of American society made the scapegoat for unfortunate inflationary conditions—for the fact that we have a 50-cent dollar today—which is, in large part, due to bureaucratic bungling anyway. I don't want to see American farmers crucified or persecuted any more than I want to see American labor or American management unjustly attacked.

WISCONSIN'S AMAZING FARMING RECORD

It is only natural that, representing as I do the great dairy State of Wisconsin, I should be keenly interested in Badger and all American agriculture. All of Wisconsin, with its almost two and a half million milk cows, with its annual production of over seven and a quarter billion quarts, with its butter production of 83,000,000 pounds, its 370,000,000 pounds of whole-milk cheese, its over 19,000,000 gallons of ice cream produced, is deeply affected by the progress of American agriculture. You and I know that Wisconsin is not only famed for its dairy production, but for its outstanding production of canning items—cucumbers, cabbage, peas; that it ranks first in the Nation in production of tame hay, clover and timothy hay, in hemp acreage, second in alfalfa acreage, in cranberry production, fourth in production of oats and honey. Wisconsin's over 177,000 farms form a vital component of American agriculture and of our entire American economy.

FARMER DESERVES RESPECT

Loose criticism of the Wisconsin and all American farmers must come to an end. The farmer deserves the respect and esteem of the American people because he is confronted today with a tremendous job which he cannot possibly do unless he receives the

full support and encouragement not only of Government but of all segments of American life.

ANSWERING CHARGE THAT FARM INCOME ROSE DISPROPORTIONATELY

Now let's answer the synthetic thinking point by point.

1. In the first place, there is a lot of misinterpretation of the fact that the farmer's income has increased in some cases more than the city laborer's income has gone up. While it is true that farm income has risen somewhat more than that of American workers, we mustn't forget the fact that the average income of the American farmer is still way below that of the American city dweller including the worker. Sure, farm income has risen, but it rose above such low levels—such an incredibly low income—that it doesn't represent a great advance in farm prosperity.

MEMORIES OF FARM DEPRESSION

You and I know that in the last two decades, American agriculture has lost folks through migration at the rate of 600,000 per year.

You and I well recall the day when farms were being foreclosed wholesale, when farmers were being turned out of homes which they and their fathers had occupied for generations, because they couldn't eke out a few dollars to pay the mortgage. One of the first acts that I did when I came down to the Senate in 1939 was to introduce a bill for a moratorium on farm foreclosures.

I reported then that in Barron County where my father before me and I have had a dairy farm of over 300 acres, some of the finest farms were being foreclosed because the farmers couldn't make ends meet. Farmers were selling milk, as I was, at 90 cents to $1.15 per hundred that cost $1.80 to produce. I don't want to see conditions like that return any more than does any other sensible, thinking American. If American agriculture prospers, all America prospers. If American farmers suffer, all other parts of the American economy which depend upon the farmer not only to buy items but to sell items, will suffer.

FARMERS GET FRACTION OF CONSUMER'S DOLLAR

2. Next, let us note the fact that the farmer still only gets a fraction of the total price paid by the American consumer. The wool suit on your back, the food items that you eat, all have shot up in price, but not because the farmer is profiteering. His share of the consumer dollar is still only a small part of the increased price that consumers are paying.

HIGH TAXES RAISE PRICES

The middlemen whose costs have increased, too, have sought higher prices to meet the problem of higher taxes and have passed those prices along to the consumer. Let's not allow the smearing of the middlemen any more than the farmer should be smeared. We all know how processors and distributors have been hit by high taxes and high labor costs. Their dollar, like our dollar, is worth only 50 cents or so in purchasing power today.

If taxes were reduced, as I have consistently suggested and voted, the pressure to make ends meet might be taken off the middlemen, so that they would be able to decrease prices. Reduced taxes means, too, added revenue to Uncle Sam, as was proven after the First World War because with taxes low, production is stimulated and increased.

But on the farmer specifically let us note the fact that according to the Department of Agriculture, between the years 1935 and 1939 the farmers only received 50 percent of the retail price of dairy products which the consumer paid; today, his share of the retail price has risen to 59 percent. When you think, however, of his tremendously increased costs in maintaining his farm animals, his buildings, his machinery, in buying his own goods, this comparatively small increase in the farmer's share is understandable.

When you think of the sunup to sundown hours that the farmer spends on producing his food items, the long years of investment that he has to put in, you can further understand his problems. In canned fruits and vegetables the farmer's share of the retail price is only around 26 percent today as against 14 percent back in prewar days. In poultry and eggs, the farmer gets only 54 percent of the retail price today as against 40 percent in years past. In fresh fruits and vegetables, the farmer gets 40 percent of the dollar we pay whereas he received only 35 percent in years past.

FARMER'S INCREASED COSTS AND SHORTAGES

3. Next, let's consider the fact that the farmer's own cost of living items have tremendously increased in price, thus sapping his purchasing power. It has been proven that the cost of items that the farmer buys have risen higher than the cost of items that the city dweller buys. In addition, it has been proven that in times of relative prosperity costs to the farmer rise sharply, but in times of relative depression those costs tend to drop only slightly and not as fast as do the farmer's prices for his own produced items.

SHORTAGES FARMER FACES

4. Any time anyone starts to think that the farmer is leading an easy life, let him go out and work a month or so on the farm. Let him tackle the tremendous problem of the shortage of labor and the shortage of farm machinery. I have been working with officials of the United States Employment Service, trying to assure an adequate supply of hands for Wisconsin fruit and vegetable crops. Moreover, I have been trying to help forestall the grave gasoline shortage which is going to hit American farmers during next spring and summer. The word "shortage" is all too familiar to the American farmer these days. The farmer is short on everything except needless criticism which he receives.

PROBLEMS ABOUT OUR FARM POLICY

5. It is assumed by some folks that America's farm policy is all squared away. Actually, there is tremendous need for wholesale reconsideration and revision of our entire agricultural program which is still operating on a makeshift basis and which needs overhauling in the light of modern prices. The whole parity price formula, according to statements from every qualified witness, like the President of the American Farm Bureau Federation, requires overhauling to assure justice and equity for America's farmers.

EFFICIENT USE OF FEDERAL FARM FUNDS

6. We know, too, that although we have been appropriating vast sums each year for the Agriculture Department, much of our funds never reach the American farmer but go into bureaucratic overhead. I well recall that back in 1939 we were spending a billion dollars or so a year for the Department of Agriculture, but so far as the farmer in Barron or Chippewa Counties was concerned, he wasn't seeing or getting nary a dollar of it to help him when he needed help in the way that he needed it.

Farmers are tremendously interested in getting a streamlined, efficient Government set-up to assist them. Right now, there is duplication, overlapping and conflicts in administration of several areas of the farm program. In the interests of economy and efficiency, it is time that we streamline the farm agency set-up.

DECENTRALIZE DEPARTMENT OF AGRICULTURE

7. Streamlining also means decentralization. I have introduced Senate Resolution 136, providing for a study by the Senate Agriculture and Forestry Committee of ways and means of decentralizing the vast Agriculture Department. There is no reason why this department should be concentrated principally in Washington, D. C., and a few other major cities. The time is long overdue to disperse this Department to the grassroots of America, to send the Dairy Division close to the dairy heart of America, the Cotton Division, the Wheat Division and so on down the line, close to the farmers who know their own problems best.

8. Still another need of the American farmer is an adequate program for research and education for increased consumption of farm commodities. If we are to maintain a high level of farm production once Europe's immediate food needs are met, we must make sure that we don't run into the problem of farm surpluses.

We don't want to ever see recur the day when farmers must spill their milk because they can't sell it at a fair price. It is important that we accelerate therefore our studies of using byproducts of agricultural commodities, that may be in surplus, of channeling surpluses in the school lunch program and in improved nutrition and health programs. We must encourage American consumers to eat greater quantities of wholesome, nutritious foods like cheese. As I have often said, if the American consumer was to consume cheese in as large a degree as do many European consumers in normal times, then we would probably never again see a recurrence of the problem of cheese surpluses and falling cheese prices.

CONCLUSION

These, then, are but a few of the many problems which face the American farmer. You and I know that we could go on at length discussing the problem of soil conservation—the problem of adequate electrification of farms—the need for adequate farm credit, and farm health programs, accident prevention, rural education, and a dozen other issues which the farmer confronts.

In any case, our study of this problem boils down to this—quit criticizing the American farmer and start helping him and encouraging him in the tremendous job he had done, he is doing, and he still has to do.

Advantages of Export to the Middlesex County Manufacturer

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, February 9 (legislative day of Monday, February 2), 1948

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Alexander S. Keller at the annual meeting of the Middlesex County Manufacturers' Association. I have consulted the Government Printing Office, and it is estimated that the matter will make two and one-quarter pages of the RECORD, at a cost of $159.75. I believe that the address is worth much more than that.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When your secretary, Mr. Hippler, did me the honor of inviting me to address you this evening, he suggested as the subject "Advantages of Export to the Middlesex County Manufacturer". I greatly appreciated the compliment of his invitation and accepted

the subject without an argument. It seemed like one which any export manager could handle with a great deal of ease. It certainly has been thoroughly explored and you will find a very general agreement that export is a good thing. I have heard it said by Republicans and Democrats, farmers and businessmen, labor leaders and industrialists. Mr. Henry Wallace discovered that export was necessary to support his 60,000,000 jobs. Now we've got the 60,000,000 and whether or not Mr. Wallace's prescription for reaching that point was the correct one, there is no doubt that our export figures for this year will exceed all previous records and play a vital part in supporting our present level of general activity.

To me, the advantages of export are about as obvious as the desirability of selling your products in New Jersey and California. Exports add to volume, employ labor, and help make the fullest use of plant and equipment.

There is, of course, one point about exports that must be emphasized and that is the advantage of export trade to those who are not exporters. I am, of course, particularly familiar with the machine tool industry which over a period of a good many years has shipped some 25 percent of its volume to foreign destinations. Now a gray iron foundry or an electric power company may not be greatly concerned with the problems of export but if they are selling castings or electric energy to a machine tool plant, you can just put it down that 25 percent of their sales to that machine tool builder are moving into export. Among the manufacturers of Middlesex County, there are many who are experienced exporters and understand the problems as well, or better, than I, but even if your product is a consumer article sold entirely within the United States, it can still find its largest possible distribution only during a period of general good employment and prosperity. Our economic history shows that every such period was marked by a very substantial export trade.

Conversely, the present indication that our foreign shipments have reached and passed their peak is one of the very important factors on which those who foresee a business recession are basing their predictions.

Let's take a look at the figures. The Department of Commerce tells us that we exported $12,000,000,000 worth of goods in 1946. In the first 6 months of this year that figure reached $8,300,000,000. In May alone we shipped over $1,400,000,000, which was almost as much in dollar value as we shipped abroad in the year 1932. Predictions were current that the total for this year would reach $17,000,000,000 or $18,000,000,000. It is now evident that May was the high point, June was off 12 percent, July another 7 percent, and August about the same as July.

Every exporter is familiar with the problems which have begun to arise. The so-called dollar shortage has been so widely publicized that there is very little reason for me to go into it in much detail. The fact is that almost every country in the world is now carefully limiting its imports by some system of control, and many of them are engaged in the most desperate efforts to become economically self-sufficient and reduce their needs for supplies from outside sources. This is not because they don't want the goods but because they haven't the means to pay for them.

Now, how about the other side of the picture? While we were exporting $12,000,000,000 worth of goods in 1946, we were importing $5,250,000,000 and the $8,300,000,000 in 6 months of this year were partially offset by $3,000,000,000 worth of imports. Those figures are records too, but they are a long way from balancing the terrific needs of our foreign customers.

The figures on exports and imports which I have just quoted are the most important considerations in our foreign-trade picture but they do not tell the whole story in the total balance of international payments. To get the entire picture, we must also take into consideration such items as services, including ocean freight, insurance, etc., interest on foreign investments here and abroad, the movement of long-term capital and the expenses of people traveling in foreign countries. Then there is a figure which is pleasantly termed "unilateral transfers" in the Department of Commerce reports. This is what we used to call immigrant remittances but in the last few years it has reached some enormous totals, including public and private relief remittances, lend-lease and UNRRA expenditures.

Now, gentlemen, with all due respect to the subject suggested by your Secretary, I feel that it is a little too easy. To me, the important question is not what are the advantages of export but how are we going to protect, maintain, and, if possible, expand our export position so that we are going to be able to continue and enlarge those advantages in the days to come Obviously, there is no sense in taxing ourselves, borrowing from ourselves, and inflating our own economy to support our export on a relief basis. We want to use our resources, our manpower, and our plant to the greatest extent possible, but unless we can see some return over the years we would simply be wasting our assets and our efforts. As an exporter, this is a problem which concerns me very greatly, as it must concern every thinking citizen interested in our peace and prosperity. I am going to venture to recommend a program which may help somewhat in solving it.

1. The Marshall plan should be approved and put into effect as promptly as possible so that we will continue to have a world in which our type of economy can flourish.

2. We must develop political and economic conditions under which private American capital can be prudently invested in foreign countries on an increasing scale.

3. We should develop foreign travel by our own citizens and encourage their purchases while abroad.

4. We should support the International Trade Organization and the reciprocal trade agreements resulting from the recent conferences at Geneva.

5. We must reverse our traditional attitude toward imports by recognizing them as a vital and beneficial portion of our national economy.

The Marshall plan has already had so much attention, and you will hear so much more about it, that I certainly do not propose to take up much of your time by going into details. I simply want to call to your attention the fact that we are still far from having passed out of the emergency stage to a position where we can safely rely upon normal trade and prudent investment to carry us out of our difficulties. We must preserve our friends and our prospective friends in Europe so that at least a substantial proportion of the economically advanced part of the world will continue to be available for the kind of business relations which are typical of our system of free enterprise.

I myself have said a little earlier this evening that we must find a way of supporting our foreign trade on something other than a relief basis. Many of those who are beginning to voice some opposition to the Marshall plan are pointing out that our investments abroad should be made on a sound economic basis which promise a reasonable return. To me the necessities of the Marshall plan are like the necessities for the use of public funds for relief or for the education of children in our own country. We don't spend our tax money for those things with the expectation that there will be direct repayment, but we are enlightened enough to know that our own future and that of our families is not safe if we permit an exaggerated condition of economic distress or of ignorance to prevail in our midst. Similarly, on an international scale, we cannot avoid present sacrifices to maintain a world in which there is a prospect of future safety for our own way of life.

The Marshall plan, however, is, and must be viewed as, an extraordinary effort under extraordinary conditions. It has a definite job to accomplish over the next 5 years, but it is not a program for the indefinite future, and that brings me to the second point which I have recommended to you.

A large part of the development of our industry and transportation during the nineteenth century was based upon the investment of foreign capital in this country at a time when capital and savings here were too inadequate to do the job. Today there are enormous opportunities for the profitable use of surplus American capital in undeveloped territories all over the world and in the further sound rehabilitation of countries which have suffered during the war.

It is true that the investment of capital abroad is faced with many adverse conditions which did not prevail here a century ago. There are large areas in which the investment of private capital is unwelcome and there are more areas in which there is so much doubt as to the economic and political future that prudent investment is impossible. In the period immediately following the last war we made substantial foreign investments, many of which were lost. Today there is a tendency toward nationalistic economic thinking which causes many countries, even though they welcome foreign investment, to hedge it about with restrictions and discriminations which are certainly discouraging It must be admitted that some of this attitude is the result of the special privileges which foreign capital has often demanded in the past.

In spite of these conceded difficulties, however, there is no question but that private investment, dollar for dollar, can do a far more effective job than Government investment. It is particularly important that the direct investment by American business in foreign subsidiaries and affiliates carries with it a share in management and the export of American "know how" which will be enormously valuable in advancing world recovery. And the movement of American capital into the foreign field can provide a very substantial item in the international balance of trade which will help to support our exports for a good many years to come.

The third point which I made had to do with the development of foreign travel and particularly with the encouragement of travelers' purchases abroad. Expenditures of our travelers in normal times have been a very important item in the balance of international payments. Our present position of economic and political leadership gives every promise that our foreign travel will automatically expand if peace and general prosperity are maintained.

Our government is already making efforts to eliminate some of the vexing problems of visas, which have been so burdensome to foreign travelers in recent years. Our foreign friends should cooperate in making the visitor's path as pleasant as possible, for their own direct benefit.

A further point, not too frequently recognized, is the effect of our own customs regulations. Undoubtedly many of you have traveled abroad and I am sure that the pleasure of your trip has been definitely limited by the thought of that customs inspector, whom you are sure to meet when you come back to the United States. Our present regulations, which permit an American traveler to bring back only $100 worth of foreign purchases duty-free seem to me to be ridiculous, out of date, and completely useless from any point of view. I can see absolutely no reason why an American traveling abroad should not be entitled to bring

home with him anything that he wants for his own use or for gifts to his family and friends. We have the resources in foreign exchange to permit it and it is impossible to see that any conceivable amount of purchases by travelers abroad would impinge so severely on any American industry that it would endanger its position.

The additional purchases that would be made by American citizens abroad would have a very beneficial and entirely harmless effect on the balance of international payments; and the freedom from constant consideration of that customs inspector would in itself encourage foreign travel and add to its enjoyment for a large number of our citizens. It is my recommendation that there should be no limit whatever to the value of goods which a traveler can bring back with him, that he should be required only to sign an affidavit that his purchases were entirely for his own use or for gifts and not for resale. The administration of customs should be directed altogether to insuring compliance with this simple regulation.

As my fourth point, I have suggested the support of the International Trade Organization and the reciprocal trade agreements developed at the Geneva Conference. The proposed charter of the ITO has now been published and it has come amazingly close to the ideals of American private enterprise which our Government attempted to establish as an international policy through this new organization. The desired effect is the ultimate elimination of many of the international barriers to foreign trade. Considering the amount of economic nationalism which is prevalent today (and in this we cannot help including the enormous barriers which have been set up by our own country) the substantial agreement arrived at in the draft charter is a truly monumental achievement.

Our negotiators didn't have an easy time. They were, of course, perfectly consistent in their desire to remove discrimination for or against particular countries or groups. But they couldn't deny the barriers which are inherent in our whole tariff structure. The reciprocal trade agreements which were negotiated at Geneva must go hand in hand with the ITO charter as an indication that we are willing to match the acceptance of our own principles by the rest of the world with a disposition to let them trade with us.

The most important point that I can make is the fifth, which is the reversal of our attitude toward imports. I said before that everybody is in favor of exports, or at least renders them lip service; but we've always had our share of economic isolationists who are against foreign trade, and particularly they live in fear of imports.

That, I submit, is a view that is obsolete and antiquated for two very good reasons.

First, we have learned at bitter cost in two wars that we cannot live in political or economic isolation. We are too big to stay out of the troubles, even when they are created by conditions far from our own country. Since we always get into them ultimately, it would certainly make better sense to prevent them, if possible, and to have good and strong friends in any case. Far from having no responsibility for World War II, there is powerful evidence that our high tariff policy was a contributory cause.

Secondly, it just doesn't make sense to live in fear of imports. Your children and mine know better than that. The part of their weekly allowance that goes into the box at Sunday school may be good for their souls, but it's that weekly importation of bubble gum that puts the glint into junior's eyes. No workman in our factories is content to exert his best efforts just for the sake of seeing the products roll out of the shipping room door. His interest is the pay check—and what it will buy. And, on an international scale, the fruits of our efforts in foreign trade are the goods and services which our people can buy and enjoy.

At an earlier stage in our economic history there was real validity to the argument that we must protect our industry and agriculture against the older, better financed, more efficient competition from abroad. Today that simply doesn't make sense in the light of the ever increasing world-wide demand for our products.

Equally obsolete is the argument that we must protect our standard of living against foreign labor on starvation wages. We know now that no labor is more efficient, dollar for dollar, than our own, with its background of the finest and most effective plant and equipment that the world has ever seen. Those products that we shall bring in at lower cost will actually improve, and not lower our standard of living.

A more recent argument against any change in our tariff policy is that there is no use trying to encourage imports because the rest of the world is so flat on its back that they have not anything to send us. It is certainly true that many of the European countries at least are suffering from a serious lack of productivity with serious effects, both on their own internal economy and on their ability to accumulate a surplus for export. This lack of productivity results from a variety of causes, some of which, like shortage of raw materials and fuel, are beyond their control. There are also other causes inherent in the current political and economic theories which have attracted too many of the countries of western Europe. The emphasis has been on socialization and security, while individual initiative and incentive have suffered. A vast amount of hard work on both sides of the Atlantic is going to be necessary to insure the recovery which we all need. It is the problem of the countries overseas to reestablish the amount of individual incentive necessary to restore their productivity. By encouraging imports we can provide a further incentive to them, at the same time as we assure a continuing market for our own exports.

We can do a great deal to restore a decent political atmosphere through the Marshall plan. We can accomplish much through the encouragement of private investment in foreign countries, but in the very long run this whole matter of the balance of international payment boils down to whether we really want to avail ourselves of the things that other countries can produce and send for our nourishment and enjoyment. Capital will not go overseas, and should not, unless it can be quite sure that interest payments will be made and principal ultimately repaid, and it seems to me to be the most primitive form of economic thinking, and the soundest, that tells us that if we are going to work, produce, save and invest, and export, we want more for our pains than gold at Fort Knox and another round of bankruptcies.

The reciprocal-trade-agreement program represents a magnificent advance in the history of our economic thinking. As you know, these agreements have always been based upon our making concessions in our tariff rates against concessions of equal value made by other countries. The use of the word concession has always amused me a little. Of course, it is very good when you are working out a deal to persuade the other fellow that you are giving him something and, of course, we were. But these concessions were very carefully considered to avoid any damage to our own industry and insofar as they succeeded in this, they also succeeded in bringing in more products at lower cost for our use and enjoyment; so while they were concessions to the other countries, they were benefits to ourselves.

Our tariff structure is enormous and complicated. To wipe it out all at once would be dangerous and might cause as many new injustices as were caused by its erection, but we should clearly favor its continued modification through the Reciprocal Trade Agreement route and perhaps through carefully considered legislation when necessary.

But the whole spirit of the administration of our tariff laws requires immediate attention. It has always been our policy to administer the law so as to put the greatest possible burden on the importer. If there was any doubt as to the classification of a commodity, it was put into the group carrying the highest possible tariff. Any difference of opinion was resolved by the customs officials against the importer and the delays in securing a judgment or appeal to the courts have been so great as to tie capital and merchandise up for years before some of the cases have been settled. Consequently an importer wishing to bring in a new product, concerning which there is any doubt whatever as to classification (and I assure you that our definitions give rise to a great deal of doubt), has in most instances given up the idea rather than to attempt to seek a decision which he feels sure will be adverse and which he knows will cause interminable delays. Occasionally an importer can find a good way of circumventing an unreasonable tariff schedule. I have always liked the story of the Canadian producer of mineral water who faced a prohibitive tariff here and then discovered that by freezing the water he could bring it into the United States as ice. That procedure is not available to many and the result has rather been a freezing of our entire foreign trade situation on the import side.

Regardless of the view that our present tariff barriers are excessive, the fact is that we have them, and we must use care in avoiding drastic readjustments in industries that have grown up behind them in all good faith. But I am absolutely sure that we could do ourselves and the rest of the world the greatest possible benefit by viewing the importer as a businessman who is performing an essential economic service. So let us engage in a process of gradual evolution of reorienting our tariff policy so that foreign goods are welcomed here and are only kept out when their admission would seriously endanger the structure of an existing industry or when an uneconomical industry must be maintained for reasons of national defense. Above all let us change, by law, the entire administration of our customs so that foreign importations are treated as the great economic benefit which they truly are.

Unfortunately this whole battle has thus far been carried by the importers who were presumed to have a special interest in this situation, as indeed they have; but even more important is the effect of our tariff structure on exports and on our entire economic and political well-being. From that point of view, it is the job of every one of us to take an interest in this situation.

It is ordinarily only the people whose direct interests are clearly affected who take the trouble to fight our most important battles. More and more generally exporters have come to realize that their own existence depends upon fighting the battle for imports. By the same token every citizen of our country has a stake in the battle for foreign trade.

Fears Rise in Italy of Red Revolt—Adriatic Arms Smugglers Hunted

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1948

Mr. LODGE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article

from the New York Times of Thursday, February 5, 1948:

FEARS RISE IN ITALY OF RED REVOLT—ADRIATIC ARMS SMUGGLERS HUNTED—MORE MUNITIONS CACHES DISCOVERED—POLICE TO ADD 20,000—CABINET ACTION DUE ON COMMUNISTS' EXPANDING PRIVATE ARMY

(By Arnaldo Cortesi)

ROME, February 4.—Fears that the Communists were organizing an armed insurrection to start if the Left Wing was defeated in the next general election increased today when it became known that the Government had ordered intensified surveillance of the Adriatic coast to prevent the smuggling of arms into Italy from Yugoslavia and Greece.

The navy was instructed to cooperate with customs guards to intercept several vessels believed to be about to sail for Italy with cargoes of arms, ammunition and explosives.

It is known that there has been considerable arms traffic across the Adriatic in the past and that many foreigners, mostly Yugoslavs with false identification papers, have been engaged in receiving and distributing the smuggled munitions.

Rome meanwhile is receiving additional reports of the discovery by the police of arms caches in various parts of Italy. An arsenal that included machine guns, other automatic weapons, ammunition and explosives was found on a farm outside Crevalcore, near Bologna.

Another cache was discovered in a cemetery at Parma. This one consisted of four machine guns, several submachine guns, 46 rifles, several thousand rounds of ammunition, four antitank mines, 196 hand grenades and 55 pounds of explosives. A Communist municipal councilor in Parma is reported to be the chief suspect.

TOGLIATTI STAND RECALLED

Large quantities of high explosives and gas masks were found in the attic of the home of a Communist stone mason in Prato.

All these facts, coupled with the Communist drive to recruit a large private army, appear to conform to official suspicions that the Communists may be preparing to take Italy over by force if the election scheduled for April 18 should go against them and their allies.

Palmiro Togliatti, the Communist leader, speaking at his party's congress in Milan last month, made it clear that the Communists expected to conquer power by democratic means but that they did not propose to abide by an adverse electoral verdict by the Italian people.

Although the threat of revolution does not appear to be imminent, the independent press, with the Tempo in the lead, urges the Government to act before it is too late.

Perhaps partly in reply to such proddings, the Official Gazette today published a decree authorizing the Government to increase the police force by 20,000 men, with recruiting to start immediately. This step follows the recall into service of many members of the Carabinieri from the class of 1905 onward.

The problem of what to do about a Communist private army should be taken up by the Cabinet Council tomorrow. The Government has been hampered hitherto by a lack of any specific legislation against private military and semimilitary organizations. Article XVIII of the new Italian Constitution, which came into force on January 1, forbids all secret associations and all those that even indirectly pursue political ends by means of organizations having a military character.

The Constituent Assembly, however, has not yet voted any law implementing this article. It is thought that the Government will outlaw all private military organizations by decree, but enforcing of the decree may prove difficult.

The tempo, which has been carrying on to call attention to the threat represented by a Communist private army, today published further revelations on the subject. They were believed to have been supplied by Government quarters and had every appearance of being authentic.

According to the Tempo, the Communists, after their Milan congress, decided to create permanent military formations for use "not only at home but also abroad." They were said to be called Garibaldi brigades in Italy and Maquis brigades in France.

In Italy, the newspaper says, these forces are recruited through the National Asscciation of Italian Partisans and the Youth Front, both of which are dominated by Communists. The Tempo adds that such formations existed in Milan even before last month and had their own transport, commissariat, and arms.

They effected a trial mobilization last November when they occupied the prefecture and center of the city, the newspaper added. These Communist "troops" are to be used in forthcoming street demonstrations, especially against the police, it was said.

ZONAL SET-UP REPORTED

The Tempo stated that Communist armed forces in northern Italy were at the orders of the branch office of the Communist information bureau that recently was established in Milan expressly to organize an armed insurrection. Its headquarters are secret and frequently changed from one place to another so as to escape detection, the newspaper added.

For operational purposes, the Tempo said, Italy is divided into "zones," each of which has its own "commander." The Tyrrhenian zone, which stretches along Italy's western coast from Genoa to Grosseto, has been entrusted to one of the Pajetta brothers, the newspaper said. There are two brothers, Giancarlo and Giuliano, both Communist deputies.

The Tempo said that arms were manufactured for the Communists by a factory near Genoa until the plant was discovered. It added that the Communists were seizing every possible occasion to test the efficiency of their organization by ordering partial mobilizations; some were called on such strange pretexts as a congress against illiteracy.

"There is no doubt that the Communists intend in the more or less distant future to plunge Italy into a frightful civil war," the Tempo concluded.

The Marshall Plan

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks, I am pleased to submit the text of a broadcast by Henry J. Taylor, in which he discusses the Marshall plan:

Exactly who gets the money in the latest European-recovery plan? Seventeen billion dollars. I've just found out for sure. I think you'll be very surprised to know.

Our money doesn't grow on trees. It's hard for most any of us to get along at best. Before we're challenged further by the idea that the $17,000,000,000 new European plan must be all or nothing and start paying the bill in our homes and work places and the high cost of living, we need some facts that are contrary to public impression and which were withheld in the original presentation of the plan itself.

Fact No. 1 is who gets the money. It's hard to imagine that fact was left out but it was, and I think we have a right to know. We've already spent $22,000,000,000 abroad since the end of the war. And now we're expected to spend seventeen billion more. Yet, in the mountains of words and figures, this fact was of itself an amazing omission. Actually, the plan, to be truly revealing, should never have been given to Congress and to the public without this fundamental information—who gets the money?

After all, who is more entitled to know where his money goes than the man who pays the bill, which means us all? But the State Department in Washington could not reveal and still feature the anti-Communist angle, my friends, on an over-all $17,000,000,000 basis, on an all-or-nothing basis. So in order to be factual and exact in discussing on the air this latest project, so important in your land and mine, so heavily involved in our inflation, high prices, taxes, the cost of living that is bearing down on us all and on our future, I've been making for weeks in Washington every possible attempt I could make to get official information regarding what countries in terms of percentage were to get our new seventeen billions.

So at long last here are the facts to plug that loophole, the official figures obtainable only yesterday. They indicate much we've not been permitted to know.

First you will find that in percentage of dollars, a full third of our $17,000,000,000-plan is primarily another aid-to-England project. The lion's share of the funds goes to the British Isles, one-third of the entire amount, $5,348,000,000 of the seventeen million—billion, to be exact. Now, certainly, that part hasn't anything to do with buying off Communist popularity there and to this large extent the Marshall plan should not have been presented to us an an anti-Communist measure, any more than the last $3,750,000,000 we gave England in 1945.

Maybe they need it, I don't know. But they certainly don't need it to stop communism in England. No one has even had the nerve to suggest that the British are on the verge of voting Communist. Had the fact that a third of the money we sent—or are to send—was to go there been made public, and early, it would have been impossible to present the powerful appeal for the over-all seventeen-billion fund on an anti-Communist basis, all-or-nothing basis, in the official support for the outlay, at least to the extent of one-third of the entire proposition.

Now, next with England, seven additional countries are ruled out in the same way, where there is, by common consent, no more ideas of the population voting Communist than there is in England—this plan or no plan. I refer to Holland, Belgium, Luxemburg, Denmark, Ireland, Norway, Portugal, and little Iceland. So let's see what they'll get. Some of the figures are unbelievable, my friends, but they are correct and official and at last come from our State Department itself.

Do you know how much all of us are to be taxed for the Dutch? Holland is to get 2,436,000,000 American dollars. Fantastic as it may seem, the plan gives Holland, a little country with fewer people than live in New York City $2,436,000,000. And if that's a calculated risk against communism in Holland it's quite a calculation, yet imaginable. The plan is nevertheless presented as "take the whole plan or nothing, all or nothing." Why, the figure for Holland alone means a charge on us for $308 for every man, woman, and child who lives on the shores of the Zuider Zee.

Denmark is supposed to get over a half billion dollars, $582,000,000 to be exact. For this one little country alone, with a population less than Chicago, that's as much as all the stop-gap aid for which the special session of Congress was so dramatically called

last November. Denmark, a half billion dollars.

Now Ireland: Ireland was not in the war. Ireland is an island. The Communists would have to swim to get there and if there's a Communist there now not an Irishman knows it. But Ireland is to get a half billion dollars, $497,000,000 to Ireland to be exact. So, my friends, three and a half billion dollars out of the seventeen billion go to Holland, Denmark, and Ireland.

For good measure, even Iceland. Apparently there must be quite a Communist threat in Iceland and a lot of western civilization tottering on the brink there besides, for Iceland comes into the Marshall plan and for $38,000,000. Fewer people live on that island than live in Trenton, N. J. And Iceland is just about as much in the throes of chaos, just about as much tottering on the brink of giving up western civilization as Trenton, N. J., except that there isn't much western civilization in Iceland anyway. But they're to get $38,000,000 from us, all or nothing, just the same.

Then there's Norway, where the Communist vote is about 7 percent. But Norway is in for $234,000,000 from us. The plan gives $234,000,000 to Norway.

Next comes Portugal in deciding whether or not the propaganda for the plan is padded in its over-all anti-Communist appeal to our public. Now, in Portugal, the Communist vote happens to be nonexistent. For 20 years the country has been and remains in the hands of a Fascist dictator, Dr. Salazar. Portugal did not fight in the war. Portugal profited immensely in the war by Portuguese standards. Yet Portugal gets our money just the same. Portugal gets 150,000,000 American dollars in the Marshall plan. All or nothing. Can the seventeen billion be cut? Can the first installment now asked for, $6,800,000,000, be cut? Well, I should say so, and now.

The anti-Communist angle is valid to a degree in some places where the money is to go, like Italy. But, my friends, the simple truth is, now that we get the figures, so belatedly published and in a most confusing way, only yesterday, the truth is that over ten billion of the seventeen billion is going to countries—I visited every one of them myself—that are by common consent no more on the verge of voting Communist than the State of Indiana, which I visited last week and which hardly looks on the verge of voting Communist to me.

Or take another angle. The appeal is made to us that we are aiding the victims of war-torn countries in gratitude for their losses in the war. Now, there are other appeals that are sound and very much better. That isn't a very good one. How many billions are ruled out on that one? Of the 16 countries in the Marshall plan over $6,000,000,000 out of the seventeen billion are to go to enemy countries, Germany, Italy, and Austria, for which there are other reasons to help, not gratitude. Seven hundred million goes to countries that stayed neutral, did not fight in the war, and, in fact, got richer than they've ever been in their lives during the war, largely at American expense. They might well be giving something back to us—as if anything like that could ever happen. Sweden and Switzerland, however, have asked us for nothing, praises be.

Now, my friends, all summer long in one European country after another, in England, France, Italy, Greece, Switzerland, Belgium, Luxemburg, Holland, Germany, and in broadcasting in Paris, where the 16 nations were meeting to put in their requests for additional American funds in substance now being decided, I tried to say on the air as factually as I could, right there on the scene and repeatedly, from London, Rome, Athens, Zurich, Berlin, Brussels, Paris, and a dozen other places, and since I've been home, that the objectives of the Marshall plan are good—heaven knows, there's no question about that—but that the gigantic amounts asked for were overstated, inflated, padded, padded, and padded, and shockingly weak in respect to how the money should be administered to get the results on which we pin our American hopes.

In short, I think we should be for the objectives of the Marshall plan. But the plan is no longer just an idea, you know. It's now a tangible piece of proposed legislation, ready to be enacted into law and to absorb billions in our American people's money and goods. It shouldn't be approved as written. I'm convinced it will not be. Once we get the air pumped out of the claims and make the necessary changes suitable to the real problem over there, which is a production problem, and needs realistic, production-minded American handlers to whip it, we can stop sailing in the pattern of the $22,000,000,000 that has already gone with the wind since the end of the war and really get some place, really serve ourselves and Europe and the cause of lasting peace by the changes that must be made in the plan, and save ourselves billions and billions besides, that would have been wasted had we allowed our judgment to be blitzed.

High Cost of Meat

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. REED of New York. Mr. Speaker, there appeared in the New York Herald Tribune of February 8, 1948, an article entitled "Price Control in Politics" with special emphasis on the cost of meat. Heptisax, the author, has made a very accurate analysis of the causes responsible for present inflationary prices of meat.

PRICE CONTROL IN POLITICS

(By Heptisax)

SOME INFLATIONARY FACTORS, WITH PARTICULAR REFERENCE TO THE COST OF MEAT

A friend of mine recently showed me a letter from one of the best-known Democratic Members of Congress on the subject of price inflation. It was long-winded and violent in tone. The author was either astonishingly ignorant of all the various forces at work to push prices up and their origins, or he chose to appear so. It was a tirade against the Republicans for killing off the Office of Price Administration. A reader of that letter in another land would be led to believe that no Democrat in Congress or in the administration had had anything to do with lifting price controls (or wage controls); that the rising cost of living was traceable to nothing else, and that it could be checked and set back by a few strokes of a bureaucratic pen if the Republicans in this Eightieth Congress would only give President Truman the authority to reestablish wartime checks.

Now this is the line that nearly every labor publication in the country has been following for months. The Republicans are held responsible for the passage of the Taft-Hartley law and must be punished for it this coming November. But labor leadership is not sure that this consideration is going to move a sufficient number of the rank and file to vote the Democratic ticket this fall. So the Republicans must also be convicted of the crime of lifting price controls, so that big business could indulge in an orgy of profiteering. It appears that this is going to be the Truman campaign line as well, which the tame economists of the Political Action Committee and of the Democratic National Committee will support with a great outpouring of figures, graphs, and charts.

Now, it is as easy these days to hire an economist to make the most of your case in the court of public opinion as it is to hire a lawyer who will take care of your interest in a law court, and the war cries of the embattled doctors of philosophy are very confusing. But one doesn't have to be a professor of the inexact sciences to understand that releasing the controls on the cost of living is no more the cause of inflation than releasing the brake on a car is what makes it go.

Step hard enough on the gas, and the car will go in spite of the brakes. Put enough pressure behind inflation, and no control will stop it. If a fellow is determined to keep his foot on the accelerator, he will only ruin the brakes by keeping them on; and the war was scarcely over when the American people made a display of their determination to step on the gas. They wanted everything they had done without during the war years—done without because there was a war to win; they had the money to pay for whatever they wanted, and they went into the market flourishing their wallets. And when the shelves were empty they went into the black market and paid whatever was asked. We have short memories if we have already forgotten how the brakes were smoking when they were released.

Those persons in the low-income groups upon whom inflation is now visiting real hardship are, of course, most concerned about the price of food. Rents are under control; clothes can be made to do a little longer; minor luxuries and amusements can be crossed off the list, and the doctor and dentist will usually wait; but one must eat every day, and Americans are not accustomed to adjusting their appetites to a bread-and-cabbage diet. They want the meat, fish, eggs, butter, and milk to which they are accustomed; and when high prices force them to reduce their allowances of such foods they are just as miserable as the oriental coolie who cannot afford a little bean curd and some greens with his bowl of rice.

So the correct answer to the head of a family on a small fixed income—the man who delivers the mail, let's say—when he comments angrily on the price of meat and curses the Republican-dominated Congress for refusing to reimpose price control, is not to tell him to "eat less." You have to explain to him why meat is high, why he wouldn't now be getting as much as he wanted at prices within his reach if controls had remained in force, and why an adequate supply wouldn't be brought within his reach if controls were reimposed.

The interplay of costs being what it is, the price of meat should not be considered apart from prices and costs in all other industries. The price of steel affects the cost of the production of meat. The price of meat affects the cost of producing steel. No domestic enterprise is so independent of all others that a readjustment of its budget does not have its effect on all other budgets. An increase of labor costs in a lipstick factory sends an imperceptible inflationary ripple across the whole economic pool. But, since the meat prices are of such immediate interest to all citizens and are of crucial interest to many, let us try to see why meat is high.

In the briefest possible outline, the answer to the question is that, despite more than 2 years of lively postwar spending, there are still so many persons in this country with so much money that they can afford to buy all the meat they want at present prices, and that, collectively, they want more than the American people ever did before, and are eating meat faster than it is being produced.

It must first be considered that the supply of money has increased enormously in the last 14 years. In 1934 we had roughly $5,500,000,000 of currency in circulation. When we entered the war we had about $11,000,000,000. In September 1947, the figure was about $28,500,000,000. That increase, mostly in paper, was due in part to New Deal deficit financing, in larger part to wartime deficit financing. However, it came about—and it came about under Democratic auspices—human experience through 30 centuries has shown that it is impossible to multiply the supply of money in the hands of the people without cheapening it—as impossible as it would be to multiply the amount of corn on the open market without bringing it down in price. Human experience has also shown that, once too much money has resulted in a reduction of its buying power, nothing will restore it but the redemption (out of taxes) and destruction of great wads of it, or the repudiation of it. With all its police power over the economy of the nation, Soviet Russia recently had to repudiate a high percentage of its paper (largely represented by peasant savings) to relieve its regimented economy of the inflationary pressure of its currency flotation.

Throughout the war our money was cheapening as the supply of it grew; but the inflationary pressure of it was held in check by rationing and price controls which kept it out of competitive buying to a great extent because patriotism reconciled the people to the necessity of it. They put their money into bonds and savings banks. The dam that held the destructive inflationary power of this rising flood of currency in check was psychological. The paper power of the OPA simply implemented the popular state of mind. There were small holes in the dam at all times, of course, which showed what would happen to the paper structure when its psychological support was withdrawn. I live near a poultry territory, in which I have some farmer friends. That territory was invaded early in the war by black-market agents. They weren't numerous and the farmers who dealt with them weren't numerous; but the farmers who did accept their high premiums bid sufficiently high prices for local supplies of feed to put quite a few honest ones, sticking to OPA prices, out of business. After the war they all sold to the black market and they all bid against one another for feed. Where the pressure of a vast amount of expendable currency squirted through small holes in the psychological dam during the war, it began to tear great holes in the OPA's paper dam immediately after it. During the war years, when the sugar ration was so low, country people let their fruit and berries rot because they couldn't preserve them. One heard little of black-market sugar. But during the first postwar summer the sugar racketeers were everywhere, and home canning boomed with the help of sugar at 35 cents a pound.

Then, as for meat; try to remember what happened. Everybody with a roll, which included every homing soldier and sailor for a time, was determined to beat the ration system and gorge on meat. It wasn't long before the black marketeers and the producers who supplied them, under the patronage of a public as contemptuous of OPA as were the rum runners' patrons of prohibition enforcement, had a big part of the country's meat supply running through filthy underground channels, and before long legitimate dealers were exhibiting empty shelves to plain citizens. The poor, who are now priced out of the meat market, say that present prices are higher than black-market prices were under price control.

That may be true; but, in the first place, the black-market gentry were just getting their system organized when the abolition of controls brought meat back into legitimate channels; and, in the second place, new inflationary forces have gone to work while the pressure of ready money, ready to meet any price, has not yet eased up.

Among other inflationary pressures on the price of meat (to leave other costs to the producer entirely out of account) is the higher price of grain. Speculation and hoarding play their part in these price increases. But the speculator and the hoarder are influenced by the corn shortage and by present and prospective Government wheat buying for export. But, in the last analysis, it is the free-spending, meat-hungry citizen who is himself the guilty party, and his name is legion. If I remember rightly, the Department of Agriculture reports that we are eating 156 pounds of meat per capita a year, as against 125 pounds before the war. Now multiply 31 pounds by the last population figure, translate that into grain if you know how (as I don't), consider that the money for this is still readily forthcoming from the average gainfully employed citizen—rolling into the market as fast as he outeats the production of meat—and can you still wonder why meat is high?

And who is now simple enough to imagine that the reestablishment of price controls, the re-creation of a paper dam, would do anything but discourage production and create a scarcity which the racketeers would at once exploit, to the total exclusion of the poor from the meat market? The American Government that could now make price control work to the advantage of the poor would have to have Soviet Russia's power to police the farmer and rancher and a hundred thousand secret agents. Then how much meat would you get? This talk of restoring price controls may be good demagogic politics, but as an appeal to the distracted citizen it is a cruel swindle.

The President's Civil Rights Program

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Monday, February 9 (legislative day of Monday, February 2), 1948

Mr. CHAVEZ. Mr. President, the Evening Star of today contains a statement made yesterday by Dr. E. H. Pruden, pastor of the First Baptist Church, of Washington, which I should like to have printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUMAN HEARS PRAISE FROM PASTOR FOR HIS CIVIL-RIGHTS STAND

President Truman yesterday heard praise from the pulpit for his civil-rights program which has been so bitterly attacked by southern Democrats.

Attending the First Baptist Church, the President listened attentively as Dr. E. H. Pruden, the pastor, asserted there is nothing in the civil-rights plan which cannot find support either in Scripture or the Federal Constitution.

Drawing an analogy between the furor created by the President and the storm encountered by Jesus' disciples as they crossed a lake in obedience to His command, the minister declared that those who pioneer in the social realm will always encounter contrary winds.

TRUMAN ARRIVES UNANNOUNCED

And Dr. Pruden commented that we sometimes meet severest opposition when we are doing what we believe to be the will of God.

Mr. Truman arrived unannounced, accompanied only by a secret-service guard, and took a seat always reserved for him in the middle of the church.

Dr. Pruden's sermon topic was "In the Night Christ Came Walking," and referred to His appearance among men in the midst of history's darkest hour.

In those days, the pastor said, social conditions were characterized by slavery and the dignity of man was not generally recognized. He observed that humanity had made little progress in reaching Christ's ideal for human relationships.

PRESIDENT GREETS PASTOR

Mr. Truman's civil-rights message last Monday called on Congress to see that guaranties of individual liberties and protection are not abridged in the United States. Part of these proposals were assailed as unduly raising racial issues involving segregation.

At the close of the service, President Truman greeted the pastor and asked "How is your mother? Give her my kindest regards."

The pastor's mother is Mrs. J. R. Pruden, of Chase City, Va. She is 71. Mr. Truman met her about 2 years ago.

Are We Crazy?

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop:

ARE WE CRAZY?

(By Frank C. Waldrop)

What fools we Americans are to think we can run the world. What idiotic vanity. Just look at these facts of life from a State Department bulletin, OIR, No. 4192, published in 1947:

"In spite of recent natural and man-made catastrophes, about 17,000,000 inhabitants (of the world) were added each year during the past decade."

Think of it.

We have been obsessed with news of death for so long that little or no public attention has been given to news of life.

The slaughters of war all over the globe have been the headlines of the past 10 years. Hitler, Stalin, Mussolini, Tojo, and all the other buzzards circling over the battlefields have held our attention.

But, as so often, we have been looking in the wrong direction. We should have been looking at the maternity records. The wars have hardly dented the rising curve of life.

There are now more than 2,000,000,000 people in the world. In 25 years, the merest clocktick of history, there will be half a billion more. How can the Marshall plan cope with that?

We are all very proud of our modest administration of Japan. What is the effect? The population is increasing at the rate of a million a year under our beneficent rule.

Puerto Rico is another sinkhole of humanity into which the United States taxpayers have poured millions of dollars for public health, until now there are 2,000,000 hungry beings swarming in an area that could hardly support a third as many in its natural state.

What is the result of our interference? In 10 years there will be 3,000,000 Puerto Ricans.

The faster we run, the farther we slide back.

Every spot in the world that we touch with our temporary and inevitably limited relief reacts with a burst of new life. People are born faster than they die off. The net effect upon the living standards of the survivors is something that has to be thought about. But more from the State Department survey:

"The world's present rate of population growth (about 0.9 percent) is probably the highest in history. If the present rate of growth is maintained, the twenty-first century will see the world with a total population about half again as large as it is.

"However, prospects for the immediate future suggest even larger annual population increments. The estimates developed in the present study, for example, indicate a world population total at the end of 1955 of some 2,438,000,000 people, an annual increment of almost 21,000,000 from now until then."

That means 21,000,000 more people at the end of each year than there were at the same year's beginning.

Can we honestly promise to underpin a standard of living for a mass of people growing at such a rate?

True, we have the world's greatest factory system and the world's most productive agriculture. True we once had one of the world's richest stores of minerals and timber.

But the depreciation of our minerals is now so serious that the secretary of the armed forces wants to obligate the taxpayers for $9,000,000,000 to find a substitute for natural oil, a liquid mineral that we have squirted away.

The problem is how to shift over from liquid oil to oil squeezed out of coal and other hard minerals. It is a big problem, it will cost a lot, and when we get it solved the world's population will still have continued to grow by 21,000,000 people a year.

Are we supposed to make this switch in oil, just for one, in an attempt to supply all those people whenever they cry to us for help?

Our factories can be worn out producing goods for the world, and still never make a real showing against that rising tide, if we produce for political rather than economic purposes.

Our soil can be worn out and washed and blown away in vain attempts at political rather than economic farming. Millions upon millions of tons of invaluable topsoil have already been wrecked that way. And the result? You see how we are headed in 1948.

It's all like the famous British loan of 1946. We were all told that just one little boost and our British cousins would be back on their feet. Were we told the truth?

The world's problems are many and difficult. They always have been. They always will be. Anybody who goes looking for other people's problems to solve will always have plenty to do.

But will he ever get any one problem solved?

You know from personal experience the answer to that one. You can waste your life trying to do too many things at once. Or you can concentrate on one thing at a time and maybe end up a little further up on the scale of human usefulness than you had expected.

The United States of America has been through a terrible war that cost us heavily in human and material wealth, far heavier than the politicians dare admit.

We have plenty of repair work to do right here at home to recover our own prewar living standard.

We can't honestly pretend we are able to be nursemaid to the Greeks, Japs, Chinese, French, British, Bulgarians, Rumanians, Italians—the list is as long as the world is wide.

Let's do our homework before we try to do the world's.

Reduced Number of Strikes Since Enactment of Taft-Hartley Act

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 9 (legislative day of Monday, February 2), 1948

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD an editorial from the Asheville (N. C.) Citizen relating to the reduced number of strikes occurring since the adoption of the Taft-Hartley Act. This tends to prove the contentions of the supporters of this measure that it would benefit labor, management, and the public, and all groups are constantly realizing its good effects.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THEN AND NOW

Last year there were 3,600 strikes involving 2,200,000 strikers and costing 35,000,000 man-days of working time. In 1946 there were 4,985 strikes involving 4,600,000 workers and costing 116,000,000 man-days.

These are figures from the Bureau of Labor Statistics, released in review of labor relations during 1947. In view of the continuing agitation over the Taft-Hartley Labor Act, we think that they are significant. That highly controverted law went into full effect last August 22. In the first 3 months afterward, the strike situation compared as follows with that in the similar period of 1946:

	1947	1946
Work stoppages	525	1,359
Workers involved	180,000	1,098,000
Man-days idle	4,550,000	16,080,000

What all of this proves is perhaps open to dispute. The plain facts show, however, that strikes decreased in 1947, a year which coincided with the passage of the Taft-Hartley Act and the establishment of a new, independent Conciliation Service. Too, the Conciliation Service averted one Nation-wide strike, that of the Western Union telegraph operators.

The Taft-Hartley Act may be a fiendish device to destroy the labor movement or it may be a monument to industrial statesmanship. We are not attempting to pass judgment. But we do wish to recall the long-winded yet pertinent declaration of policy under section 1 of this measure:

"It is the purpose and policy of this act, in order to promote the full flow of commerce, to prescribe the legitimate rights of both employees and employers in their relations affecting commerce, to provide orderly and peaceful procedures for preventing the interference by either with the legitimate rights of the other * * * and to protect the rights of the public in connection with labor disputes affecting commerce."

It was the plain intent of Congress and of the act to curb unnecessary strikes. That, evidently, is what has been done.

Kansas State Board of Agriculture Resolutions on Agricultural Problems

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 9 (legislative day of Monday, February 2), 1948

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the Appendix of the RECORD resolutions adopted at the seventy-seventh annual meeting of the Kansas State Board of Agriculture, on January 16, 1948.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

RESOLUTIONS ADOPTED AT THE SEVENTY-SEVENTH ANNUAL MEETING OF THE KANSAS STATE BOARD OF AGRICULTURE, JANUARY 16, 1948

As the official delegates from local units of organized agriculture representing more than 100,000 Kansas farmers and stockmen, we present the following beliefs and recommendations on problems of vital importance to the people of Kansas and of the Nation.

INTERNATIONAL COOPERATION

We reaffirm our pledge of full support to the United Nations and reiterate our desire that this Nation exert every possible effort and influence to help establish genuine agreement, understanding, and confidence among the nations of the world.

CONSERVATION OF FEED AND FOOD

As producers of food in one of the major agricultural States of the greatest food-producing nation, we pledge our cooperation in the program of conserving feed and food as one means of saving lives of people in other lands. We pledge most serious consideration of efficient feeding and farming methods, so that feeds and seeds may be used in such a manner as to produce the most human nutrition.

NATIONAL AGRICULTURAL PRICE POLICY

Our chief concern in regard to agricultural prices is not that of endeavoring to maintain prices at present extreme levels, but, rather, that of initiating practices and legislation which will stabilize the farm-price situation on a par with other industries. We feel the aim should be to insure farm incomes adequate for a reasonably good standard of living on American farms, and adequate, also, to allow farmers to take whatever measures are necessary for the conservation of our soil, the basis of all life, wealth, and civilization.

PRICE SUPPORTS

We look upon price supports not as a means of maintaining high agricultural prices, but, rather, as a means of preventing a recurrence of demoralizing agricultural prices such as those which followed World War I. Experiences of the past indicate that in times of economic recession, agricultural prices decline first and more drastically than those of any other industry, and that all other industries eventually suffer from an agricultural price collapse. We therefore urge that the Congress of the United States seriously study the agricultural price situation with respect to possible need for continuing supports of the Steagall amendment beyond the period provided for in the present law.

PARITY

We join with other agricultural organizations and groups throughout the Nation in

endorsing the principle of parity prices, to give equality of purchasing power between the respective segments of the American economic structure. We urge that the Congress of the United States study the parity formula carefully and modernize it to meet present world conditions. We feel that labor should be included in the parity formula, and especially request a careful study of this point in considering the subject of parity.

SUBSIDIES

We favor agricultural subsidies only as extreme emergency measures, and we urge that farm income be maintained at proper levels, insofar as possible, through fair prices for agricultural products rather than by payment of subsidies.

COST OF FOOD

We respectfully call attention to the fact that, although present living costs are extremely high, the American farmer is giving full value for the portion of the consumer's dollar which he receives. This is evidenced by the fact that latest figures on consumer expenditures for food indicate that the percentage of national income spent by consumers for food is no greater than in the prewar period of 1935 to 1939. For this same percentage of national income the consumers are actually obtaining and eating more and better food. Meat consumption, for instance, is 24 percent higher than in the prewar years of 1935–39. The consumers of this country are eating 27 percent more eggs, 31 percent more chicken, 58 percent more turkey, 31 percent more cheese, 19 percent more fluid milk and cream, 27 percent more citrus fruits, 38 percent more canned fruit, and 50 percent more canned vegetables, with many other staple food products showing similar increases in per capita consumption. The Nation's consumption of frozen fruits and vegetables is four and one-half to five and one-half times greater than in the immediate prewar years. We feel pride in the record of more and better food for the same percentage of national income. It proves that American agriculture has increased its efficiency and service to the Nation, even under inflationary economic conditions such as those now being experienced.

AGRICULTURAL SUPPLIES

We, the farmers of Kansas, join with the National Association of Commissioners, Secretaries, and Directors of Agriculture, in urging that Congress provide for the carrying of adequate reserves to level off production cycles which vary with weather conditions. Thirty-five percent of 1 year's normal production of each basic crop is considered adequate. This should help insure abundance of food without the accompanying scourge of reduced farm prices because of alleged oversupplies.

EXPANSION OF AGRICULTURAL MARKETS

We commend Secretary Anderson and the United States Department of Agriculture for their efforts toward a long-time program of finding foreign and other new markets for agricultural products produced in overabundance by American farmers. We ask that this program be continued as a safeguard against economic shock to this Nation's agriculture if and when domestic and foreign demand for food is drastically lowered.

RURAL ELECTRIFICATION

We commend those responsible for continuing the expansion of electrical services to rural areas of Kansas. We again point to rural electrification as one of the richest blessings ever to come to farm people, and we urge that the program for further expansion of rural electrification be encouraged in every way possible, by Congress, by the State legislature, and by all others concerned.

SOIL CONSERVATION

We take serious cognizance of the fact that all wealth and life springs from the soil and that the welfare of all classes of people is directly dependent on our soil resources. For this reason, the importance of soil conservation is a prime responsibility of this generation and merits universal interest and support of every citizen. In this connection we encourage the farmers and landowners of Kansas to give serious thought to the program of balanced farming advanced by Kansas State College for a more practical and more efficient agriculture. We especially recommend widespread encouragement of grassland farming with livestock and use of other practices which maintain and replenish the soil, coincident with production of food.

FLANNAGAN-HOPE ACT

We believe in the principles which led to enactment of the Flannagan-Hope Research and Marketing Act, and we are pleased that Kansas is to participate in both the research and the marketing phases of this work, with some constructive projects of material benefit to the State's agricultural industry.

SOCIAL SECURITY

This group is aware of the movement to extend Federal social security to cover many groups of people not now covered. We see considerable merit in the social-security program, but we feel that security for farmers can best be provided by parity prices in a long-range program that will assure the American farmer his just share of the national income.

AGRICULTURAL OFFICES

We agree with the National Grange that it would be highly desirable for all agricultural agencies in each count, to be housed at the same place, and for the United States Department of Agriculture to integrate its activities wherever possible.

COMMENDATION

We commend Gov. Frank Carlson and members of the 1947 Kansas Legislature for their part in enacting constructive legislation of benefit to Kansas agriculture, particularly the legislation on agricultural marketing, weights and measures, agricultural statistics, agricultural chemicals, and coyote control.

COOPERATIVES

We call attention to the fact that farm cooperative organizations are serving vital functions in many communities throughout the State of Kansas. Their services are valuable to the agricultural interests of Kansas and we, therefore, vigorously oppose legislation, either State or Federal, which is designed to cripple or destroy farm cooperatives.

LEGISLATIVE COMPENSATION

We join with the Kansas Farm Bureau and with other organizations and individuals in urging a change in the Kansas constitution to provide for adequate compensation to members of the Kansas legislature.

WILDLIFE PRESERVATION

We pledge wholehearted cooperation to those who are endeavoring to protect and preserve the State's beneficial wildlife. In like manner we call on all other citizens of Kansas to support this cause, and we respectfully suggest to the legislature of the State of Kansas that legislation be enacted to provide the following:

1. Provisions to strengthen present requirements that hunters obtain permission from farmers to hunt on their premises, and that the law shall provide a specific penalty for hunting on any premises without such permission.

2. That the farmer shall have authority to check the game taken from his farm by hunters, as regards to bag limits and other provisions of the law.

3. That consideration be given to the possibility of raising the price of hunting and fishing licenses to give the State fish and game department sufficient funds for adequate propagation, protection, and law enforcement.

UNIFORM DAIRY LAWS

As Kansas farmers and dairymen, we feel that satisfaction for producers and consumers alike is dependent upon uniform dairy regulations among the States. We urge, therefore, that every effort be made toward uniform regulations and that dual inspection on milk, cream and other dairy products be eliminated, and the authority for this inspection be vested with the State boards of agriculture of the various States, who are thoroughly familiar with agricultural conditions, so there will be no unnecessary barriers to hinder the movement of high quality dairy products from one State to another.

BUTTER SUBSTITUTES

Scientific research shows that butter contains essential nutritional properties superior to those of substitute products which are sometimes colored to resemble genuine butter. Because of this, we feel that the consuming public is fully entitled to protection from imitations which tend to undermine the natural market for butter and thus threaten the stability of this Nation's essential dairy industry. We urge, therefore, that our lawmakers stand firmly against any attempt to weaken present laws dealing with the coloring and sale of butter substitutes.

SCHOOL REORGANIZATION

As representatives of the rural areas of Kansas, we are intensely interested in all aspects of the program of school reorganization for this State.

Be it resolved, That we favor:

1. Retention of local control of school districts.

2. Such consolidation of rural districts as is necessary to meet educational standards.

3. Consolidation in accordance with the expressed will of the people residing within the districts affected.

Be it further resolved, That we oppose the county unit plan of school reorganization, because such plan contemplates the elimination of all existing rural grade and high school districts in the State of Kansas.

HIGHWAYS AND RURAL ROADS

In order to make living in the country more desirable and make available to rural dwellers one of the advantages enjoyed by all urban dwellers of Kansas, we urge that Kansas really be "taken out of the mud" by the surfacing of all of the mail and school bus routes in the State. We also urge the improvement of the State's primary highway system by an increase in the construction of concrete highways. We reaffirm the traditional Kansas policy of more than 20 years that "he who uses the roads and highways shall build and maintain them." As rural users of the primary highway system, we declare our willingness to pay our fair share of the costs of building, maintaining, and improving this system by taxes on highway motor fuel and fees. We strongly wish to reaffirm our opposition to the taxation of nonhighway motor fuel for highway purposes. We believe that local roads should be under local control and be financed, in the main, by local taxes. Good rural schools are impossible without good rural roads. We realize that a full development of rural mail and school bus routes will cost a lot of money, but we also realize that we pay for good rural roads whether we get them or not. Therefore, we declare our willingness to pay the increased local taxes necessary to build and maintain these roads.

To reimburse local road funds for the proportion of nonrural use we urge the maintenance of the State-county-township road fund. We further recommend that the fund be changed from its present fixed amount to a fair proportion of the State highway tax collections. We urge full cooperation among

all farmers in protecting the exemption to taxation of nonhighway motor fuel by rigid compliance with the State law covering such exemptions.

RESEARCH IN WEED CHEMICALS

We recommend increased financial support for agricultural education, research, and extension. Because of the rapid expansion in the fields of agricultural chemicals—fertilizers, growth-regulating substances, herbicides, and insecticides—we recommend a marked increase in the State appropriations for research in weed control, fertilizer use, insect control, and the place of growth regulating substances in Kansas agriculture.

UNITED STATES WEED OFFICE

We reaffirm our interest in the establishment of a weed office by the United States Department of Agriculture, for conducting research and education on weed control in cooperation with the various States. We reiterate, also, our feeling that Congress should enact suitable legislation to regulate the interstate transportation and sale of weed infested seed material, and to prohibit the importation of weed-infested materials from foreign countries.

4–H CLUB CAMP

This group feels that the State 4–H Club camp, now in its early stages of development, is a great forward movement for building of good Kansas citizenship. We call upon the people of Kansas to encourage and support this project.

TRIBUTE

We realize that the high position of Kansas agriculture in the Nation's economic structure is made possible not only through the wealth of Kansas agricultural resources and sturdy, progressive farmers, but also by progressive farm leadership in this State. We pay tribute, therefore, to Kansas State College, to the farm organizations of Kansas, to the Soil Conservation Service, and to vocational agriculture, 4–H Clubs and other youth activities. Our wholehearted cooperation is pledged to these groups.

PUBLICITY

Knowing that Kansas is a leading producer of many products of the soil and that the State is of much interest to tourists from every section of the United States, we desire to take every measure possible to increase the interest and enjoyment of those traveling the highways of the State. To this end, we wish to recommend that the newspapers of the State of Kansas cooperate in recommending and encouraging every city and town, large or small to erect a suitable signboard on each highway leading into that town; this signboard to state the name of the town, its population and its altitude. We deplore the fact that in many towns in Kansas the name can only be secured by asking.

MEAT CONTROL

Whereas all former efforts on the part of Government to control allocations of meat supplies through rationing and price ceilings have proven unworkable and altogether unsatisfactory; and

Whereas such attempts at control have diverted meats from retail stores and markets, established market centers, and agencies, into black-market channels where price is no consideration; and

Whereas present threats of rationing meats tend only to further reduce supplies, by creating uneasiness and hesitancy among producers with consequent reductions in meat-animal numbers; and

Whereas full production is the only known remedy for scarcity and for establishing equitable price levels: Therefore, be it

Resolved, That for the best interests of all concerned (producers, processors, marketing agencies, and consumers of meat animals and meat products), Government officials and agencies be urged to forget rationing of meats and refrain from further threats of rationing and price control, and allow the livestock industry to operate and produce in a normal manner so we may soon have abundant supplies of meat for our domestic needs and for assistance to the hungry people of other nations.

BRAND LAWS

We recommend that our present brand laws be strengthened in the enforcement phases and inspection increased as rapidly as possible.

LIVESTOCK SANITATION

Be it resolved, That the State board of agriculture urge and promote uniform national and State sanitary regulations in the interstate movement of livestock.

SEED LABORATORY

The facilities of the State seed laboratory are inadequate to take care of the demand for services expected by the citizens of the State of Kansas. We, therefore, recommend that the legislature take steps to improve this important service in order to meet the demand of the people of the State.

AGRICULTURAL HALL

We urge the legislature to appropriate funds for the completion of the agricultural hall at Kansas State College. The present facilities are inadequate to house the existing agricultural work at the college. The classrooms and laboratories are crowded and the extension service is housed in Army barracks.

STATE FAIR

Be it resolved, That the action of the Board of State Fair Managers in eliminating all gambling devices from the fairgrounds, be commended by this body.

APPRECIATION

An expression of gratitude is extended to those who have contributed to the success of this meeting. We thank the press and radio for their careful coverage, the city and State officials for their courtesies, the speakers for their excellent contributions, and Secretary Mohler and his staff for efficient planning and management of details.

SOCIAL WELFARE

Due to the fact that the social welfare load in some counties appears to be unduly high, considering the present era of prosperity in general, we do hereby urge the Congress to change the regulations in order that publication can be made of welfare clients and the amount of payments made to them.

United States Information Services in Austria

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, February 9 (legislative day of Monday, February 2), 1948

Mr. SMITH. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter to me, dated January 9, 1948, from the Honorable John G. Erhardt, our American Minister in Vienna, Austria.

This letter has to do with the pick-up and expansion in the work of the United States Information Services in Austria, due to the visit of the joint congressional committees to Vienna last summer. It gives some indication of the possibilities of the new program which we have recently given legislative authorization for by the passage of the Smith-Mundt bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

VIENNA, AUSTRIA,
January 9, 1948.

Hon. H. ALEXANDER SMITH,
United States Senate, Washington, D. C.

DEAR MR. SMITH: I was delighted to receive your letter of December 2, 1947, and send hereby sincerest thanks, in which my staff joins me, for the kind observations you made regarding the Legation's part in activities connected with your visit to this country on your recent trip through Europe.

It was a very stimulating and valuable experience for us to have you in Vienna, and there is no doubt that the effect of the visit of your committee was to lift the morale of all United States agencies here. For instance, it became apparent through your visit that Congress was eager to study the work being done by the Information Services Branch of the United States Forces in Austria—not only its newspaper and radio activity—but its longer-range information center, and its lecture and book-publishing programs. The visit brought home most effectively the realization that Americans, whether working in Washington or in Vienna, were all members of the same team. It was reassuring to hear this thought expressed by you in an interview with the press in Vienna.

Col. Sidney S. Eberle, Chief of ISB, has informed me that the visit specifically resulted in bringing to a conclusion the plan to purchase newsprint in the amount of $300,000 to supplement the indigenous allocation, thereby enabling the official United States paper in Vienna, the Wiener Kurier, to appear again in an eight-page edition, instead of the inadequate four-page edition. The criticism sometimes leveled at the Wiener Kurier that it was merely a propaganda sheet will thus no longer be valid. The Information Services Branch will also no longer be working under the disadvantage of competing with an eight-page Red Army pape , as was the case with a four-page edition.

The Red-White-Red radio network received greatly increased interest as a result of the attention given it, especially its "Voice of America" program, by the committee. It can now be considered as on a par with the Wiener Kurier both as regards influence and prestige.

Colonel Eberle advises us that the approbation given by your committee to the work being done in the information centers has led to an increase in the number of activities carried on by the staff. During the last 3 months the demands of 132,734 Austrians who visited the centers were handled. To cite one more example, 33 lectures in English and German on a wide range of subjects dealing with American life, customs, and institutions were delivered to enthusiastic Austrian audiences.

Many other effects not yet materially in evidence are confidently expected as the result of the demonstration of congressional support for the information program in Austria.

Again thanking you for your letter, I am,

Cordially yours,

JOHN G. ERHARDT,
American Minister.

Jewish Refugees en Route to Palestine

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, February 9 (legislative day of Monday, February 2), 1948

Mr. TAYLOR. Mr. President, I ask unanimous consent that an article by I. F. Stone, appearing in the New York newspaper PM on February 2, 1948, be printed in the RECORD.

The article presents some interesting information with regard to the origin of certain news reports appearing lately which have tended to discredit the character of groups of Jewish refugees attempting to enter Palestine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON.—If the New York Times had published a story about an individual like the story it published yesterday under a headline, "London insists Communists were bound for Palestine," it would be subject to suit for libel.

And if that story were unsupported by facts as yesterday's below-the-belt blow from London at a group of Jewish refugees, the New York Times would lose that suit and be subject to punitive damages.

I want to analyze the New York Times' story in the light of its own assertions.

The dispatch, by Herbert L. Matthews of the Times' London Bureau, said the Jewish immigrant ships *Pan York* and *Pan Crescent* "were carrying many Communist agents, according to official British sources."

"These statements," Matthews wrote, "are bound to cause dismay now that they are being made for the first time with authoritative backing."

I don't want to spread dismay in the London Bureau of the Times and among its New York editors but just 1 month ago, on January 1, on page 1 of the New York Times, under a two-column headline like yesterday's, there appeared a similar "special" dispatch to the New York Times from London making the same "authoritative," but unsupported charge.

The refugees, according to an Associated Press dispatch from Haifa on January 1, were captured that same day by the British on the high seas and taken to Cyprus, where they were searched, interrogated, and interned.

In the intervening month, the British had ample opportunity to bring forward proof of the original red smear by that "authoritative" source in London, if the allegation had any substance.

Instead the British significantly found it necessary to tone down their charges.

A month ago, the "authoritative source" in London told the New York Times correspondent that the refugees were mostly hand-picked Communists or fellow travelers, with links to the Stern gang.

But yesterday's story lowered the Red ante. It said, in case of the *Pan York* and the *Pan Crescent*, the Russian conditions are believed to have been that the ships would be released only if 1,000 Jewish Communists were included among the immigrants.

The January 1 story said there were 12,000 on the two boats. Yesterday's story gives the figures as 15,000. But instead of being mostly hand-picked Communists, we are now told that it is believed that the Russians insisted that 1,000 be hand-picked Communists.

What proof is given of this assertion?

NO EVIDENCE, BUT BRITISH ARE CONVINCED

We come to the most amazing statement of all in yesterday's Times dispatch, a statement which would have led any small-town editor to throw a local story of this kind into the wastebasket.

"The security precautions taken in advance by and on behalf of the immigrants of the *Pan York* and the *Pan Crescent*," said the dispatch, "were so thorough that British officials found it impossible to get direct positive evidence that any Russian-sponsored subversive elements were among the immigrants."

This is hardly cricket, as our British friends like to say. It is as if one were to accuse a man without proof of beating his wife, and then to give out a story saying that he must have beaten her very cleverly because "no direct positive evidence" could be found of any bruises.

"Nevertheless," the dispatch said, after this reference to lack of evidence, "the British have convinced themselves that large-scale Jewish immigration, far from being discouraged or prevented by Soviet satellite governments, has been deliberately encouraged by them."

But even if the British "have convinced themselves" that Soviet satellites are encouraging Jewish immigration to Palestine that is a long way from proof that these refugees are "mostly hand-picked Communists," or that 1,000 of them are.

While the dispatch says at the beginning "no direct positive evidence" was found, it declares later on that the British discovered among the effects of the refugees "membership cards of the Communist Youth in Rumania, the Rumanian Communist Party, the Lenin United Communist Association, the Union of Female Anti-Fascists, and the Universal Democratic Front." "All these bodies," it is asserted, "are militant Communist organizations. Moreover, a number of Communist handbooks were found."

This is puzzling. If advance precautions were as "thorough" as the dispatch says, why were membership cards in "militant Communist organizations" and "Communist handbooks" not destroyed?

Secret agents don't carry identification cards. Why don't the British give the number of cards and the number of persons who had them? Why don't they supply photostats to the correspondents in Cyprus?

There is something fishy about those cards.

The British seem to be so hard up for concrete allegations that they make much of the fact, according to the Times dispatch yesterday, that 1,000 of the 15,000 immigrants aboard spoke Russian. * * * Some may have been non-Jews and some had documents showing that they had served in Soviet forces during World War II, these sources say.

The fact that 1,000 of these refugees spoke Russian is not surprising.

These refugees were almost all Romanian Jews, most of them from Bucovina and Bessarabia, both taken over by the Russians before the Nazi-Soviet war begun.

Most Bessarabians, Jewish or non-Jewish, speak Russian; the province was Russian until the end of the First World War. Able-bodied Jewish refugees from areas taken over by the Russians during the war, Jewish partisans from that area before the Nazi-Soviet war began, and Jews lucky enough to flee from German territory into the U. S. S. R. did serve in the Red Army against the Nazis and many East European refugees are veterans of the Red Army and of the Polish Army.

While Arabs who served under Hitler are permitted to organize warfare in Palestine against the Jews, are the gates of Palestine to be barred against Jewish refugees who served in the Allied armies against Hitler?

ALL PIONEERS OR CHILDREN UNDER 12

The New York Times is guilty of unfair journalism, and British Government of malicious slander.

Early in December a full report on the refugees of the *Pan York* and the *Pan Crescent* was made by the Jewish Agency for Palestine to the State Department.

Except for 1,400 of those on board, all were chalutzim, trained Zionist pioneers, chosen by a board of selection representing all different parties of the Zionist movement.

The other 1,400 were hand-picked, but not for communism, as the British well know, for they interned them in Cyprus.

The 1,400 are children under 12, mostly orphan survivors of those Rumanian Jewish families who were driven by the Nazis in the winter of 1942–43 across the Dniester into Transnistria, where 200,000 died of hunger and cold.

I. F. STONE.

POSTSCRIPT—SOME FACTS

Some pertinent facts:

Jewish illegal immigration has been forced away from French and Italian ports by pressure on Paris and Rome exerted from the British Foreign Office and by Foreign Secretary Bevin personally.

The British in at least one case known to this correspondent (negotiations concerning compensation for British-owned mines taken over by the Yugoslav government) have offered actual financial concessions to Soviet satellite countries if they would take a hostile attitude toward Jewish immigration.

The new governments of eastern Europe and the military commanders of the Red Army (except in one case in Budapest under pressure from the American military attaché in Hungary) have refused to add to the unhappiness of these unhappy refugees seeking the new home promised them in Palestine by Britain's own Balfour declaration.

London and Washington would be gleefully ready to smear Moscow as anti-Semitic if any such steps were taken.

I. F. S.

Loans to Veterans

EXTENSION OF REMARKS
OF
HON. FRANK A. MATHEWS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. MATHEWS. Mr. Speaker, we in New Jersey are extremely proud of the job that is being done by the Division of Veterans' Services of the Department of Economic Development, which Division is under the directorship of Col. Warren S. Hood.

In the field of economic rehabilitation of the veterans of New Jersey, the results of the operation, as an instance, of the Bureau of Loans of the Division of Veterans' Services can be no better set forth than by quoting from the report to the Governor of the State of New Jersey showing the situation as of November 24,

1947, and I hereby set forth that quotation:

DIVISION OF VETERANS' SERVICES, BUREAU OF LOANS (OPERATING THE NEW JERSEY VETERANS' LOAN AUTHORITY)

The bureau of loans performed normal functions during the month.

	Number	Amount
BUSINESS LOANS		
Total loans approved to date	13,563	$31,092,647.02
Total loans withdrawn to date	1,288	2,850,184.90
Approved loans outstanding	12,275	28,242,462.12
Total loans disapproved to date	1,369	3,087,684.49
Total loans processed to date	14,932	34,180,331.51
Total defaulted notes purchased	317	537,458.75
Total loans repaid in full	1,186	2,348,788.00
HOUSEHOLD LOANS		
Total loans approved to date	3,825	2,280,350.00
Total loans withdrawn to date	151	93,000.00
Approved loans outstanding	3,674	2,187,350.00
Total loans disapproved to date	281	172,440.00
Total loans processed to date	4,106	2,452,790.00
Total defaulted notes purchased	5	1,896.24
Total loans repaid in full	69	36,520.00

There is a steady, though slight, decline in business loans and a sharp rise in household loans. The number of defaulted loans is increasing and is now about 2½ percent.

The number of loans being paid in full before maturity is increasing each month.

We may be a bit optimistic but from our experience so far it looks as though we will salvage about 60 percent of our defaulted notes.

Stand by Mr. Truman

EXTENSION OF REMARKS
OF
HON. CARL A. HATCH
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Monday, February 9 (legislative day of Monday, February 2), 1948

Mr. HATCH. Mr. President, in the Oregon Democrat appears an interesting article written by Mr. Richard L. Neuberger. I particularly call the attention of every Democrat to the last sentence of the article. I ask unanimous consent that it be printed in the Appendix of the RECORD. The title of the article is "Stand by Mr. Truman."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STAND BY MR. TRUMAN

(By Richard L. Neuberger)

The next President of the United States, unless death or illness should intervene, will be either Harry S. Truman or the 1948 nominee of the Republican Party. Henry Wallace has absolutely no chance to be elected; he himself admitted as much in the speech which announced his candidacy.

There can be only one net result of Mr. Wallace participating in the Presidential race. He might take enough labor votes from Mr. Truman to insure the election of the Republican candidate. What would that mean—inflation and higher prices, no veterans' housing program, restrictive laws against labor, reduction of power and reclamation projects in the far West, tax reduction for the upper income brackets.

This is what Mr. Wallace will be hastening if he goes onto the ballot. The great liberal Pulitzer daily, the St. Louis Post-Dispatch, stated editorially a few weeks ago: "Mr. Wallace should know that, in becoming a third-party candidate without any real possibility of winning the election, he is giving aid to those who have been his enemies all his life. He is drawing away support from those who represent whatever is left of the New Deal."

I listened to Mr. Wallace's speech of announcement. It was an able speech. Many of his criticisms of the Truman administration were valid. Yet I was struck by two points: (1) that Mr. Wallace offered no particular remedies for the shortcomings he assailed, and (2) that by running for President he actually will help those who, by implication, he criticized the most.

Mr. Wallace made much of the dreadful inflation which is sapping the buying power of so many people. He assailed the lifting of controls. But who lifted controls? Was it not TAFT, WHERRY, TABER, and the other Republican leaders? And by running for President, does not Mr. Wallace advance the opportunity of these men to take over the executive branch of Government?

It is easy to criticize. Mr. Wallace made a convincing case against Harry Truman. Yet I wonder whether a case could not be made against any American President, be he named Jefferson or Franklin Roosevelt. Political institutions are not perfect and neither are the human beings who create them. Any election is a choice between alternatives, and no alternative is beyond criticism.

But Harry Truman has been a good President. He fought to retain the controls which might have kept down prices. He vetoed the Taft-Hartley bill. He vetoed the Knutson save-the-rich tax bills, and twice made the veto stick. He appointed a commission which brought out the finest report on minority rights ever issued by the United States Government. He named David Lilienthal Chairman of the Atomic Commission, and he stood by the appointment.

Would you trade this for Senator TAFT? That is what you will be doing if you vote for Henry Wallace. Wallace has no chance of election. He can only take votes from the Democratic candidate, President Truman. Each vote taken from President Truman will in effect, be a vote for the Republicans. I can understand the desire of Communists to see the Republicans elected. There were probably more Communists in the United States in 1932 than at any time in history, for despair and unemployment breeds communism.

But liberals can have no stake in a Wallace party, for a Wallace party makes extremely possible a Republican victory nationally. At this critical period in world history, America cannot stand 4 years of Republican reaction. Raymond Gram Swing has pointed this out most succinctly. Although I do not agree with Harry S. Truman on every issue, I shall support him to the fullest of my capacity in this year of 1948, for I believe his continuance in office can best serve the welfare of mankind.

Experience of Tennessee Proves That Oleomargarine Taxes Do Not Help the Dairy Farmers

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. HAYS. Mr. Speaker, in 1931 the State of Tennessee adopted certain laws imposing heavy restrictions on sales of oleomargarine. Nine years later Mr. Oscar Johnston, president of the National Cotton Council, made a survey of the results of this effort to favor the dairy industries and products, showing an interesting comparison of conditions in the neighboring State of Kentucky. The States of Tennessee and Kentucky have similar conditions. They have about the same area, the same population, with approximately the same percentage differences between urban and rural populations. It was shown by Mr. Johnston that over a period of 9 years following adoption of the law, the Tennessee farmers producing butterfat for creameries did not receive a better price for their butterfat than the dairy farmers of Kentucky, nor was there any tendency for Tennessee conditions to improve relative to those of Kentucky. The following figures represent prices in cents per pound received by farmers for butterfat, as of January 15 of the indicated years:

	1932	1933	1934	1935	1936	1937	1938	1939	1940
Tennessee	21	18	14	27	31	31	31	23	25
Kentucky	20	19	12	28	30	30	31	22	26

Manifestly Tennessee secured no price improvement greater than that received by its sister State which maintained no barriers against margarine. The Tennessee margarine taxes brought no assistance to the dairy farmers whom they were supposed to benefit.

Mr. Johnston also developed the fact that manufacturers of creamery butter have not benefited substantially by reason of the tax. This is evidenced by the fact that the per capita consumption of creamery or manufactured butter did not vary materially during the 9-year period following the enactment of the law as between the States of Tennessee and Kentucky.

The existence of the laws did not benefit the consumer of creamery butter. This is evidenced by the fact that there was no substantial or appreciable change during the 9-year period between the price charged the consumer in Tennessee for creamery butter and the price charged the consumer in Kentucky for creamery butter.

I have recently secured the figures for subsequent years, and the results indicate that Mr. Johnston's observations apply with equal force to this period, as shown by the following figures:

	1941	1942	1943	1944	1945	1946
Tennessee	30	36	46	48	46	47
Kentucky	27	31	44	47	47	47

American Merchant Marine—"Don't Give Up the Ship"

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. BLAND. Mr. Speaker, Congress has recently received a bill (H. R. 4840)

designed to assist the recovery and rehabilitation of the nations of Europe. The basic purpose to be served by that legislation is laudatory. But in the bill are two sections which, if permitted to become law, would completely reverse our long range congressional policy relating to the American merchant marine. Enactment of those provisions would seriously weaken the defenses of our Nation at a time when world conditions are upset and the prospects of permanent peace apparently remote. Therefore, I urge that the shipping sections of the European recovery program, which authorize the transfer of 500 vessels to foreign nations, be eliminated. Congress must not be a party to the scuttling of our American merchant navy.

For over 20 years the Congress has developed a long-range policy for the maintenance of the American merchant marine. That policy has been based upon the self-evident fact that our merchant fleet is a vital adjunct to our Nation's defense. Therefore, Congress has over many years legislated certain benefits designed to protect and assist American ships to remain on the seas despite low-cost foreign competition. We have appropriated and spent hundreds of millions of dollars to this end. The wisdom of our long-range policy and the importance of our merchant marine to our national defense were forcibly proven during the recent war. In the acid test of actual combat, it was our ability to supply our forces abroad through the use of our merchant marine that made victory possible. Experience in these years showed that our shipping was the vital link in the chain between our production of war material and the utilization of our potential power on the battlefields in the far corners of the globe. As Secretary of War Patterson recently testified: "It can truthfully be said that shipping was the key to the war effort." I believe that if the United States had possessed an adequate merchant marine in 1914 and 1939, both World War I and II would have been avoided.

Conditions in the world today are such that we must continue to maintain our defense forces at an adequate level. Through the foreign-relief program we are attempting to bring about a peaceful solution to the present unsettled world conditions. But while we in good faith make this attempt, it would be foolhardy for us to lower our guard or to throw away our defense weapons. Congress would not vote at this time to advocate scrapping our Navy or our Army. Yet today the Congress is asked to approve a proposal to reduce our merchant marine to a size and potency far too small to fulfill its necessary functions as a part of our defense forces. Without being informed as to the inevitable result of the ship-disposal sections of the foreign-aid bill, Congress is now being asked to weaken one of the most vital links in our chain of defense to a point where, should war again arise, our entire efforts would be limited to the strength of that weak link. For that reason I urge that the proposals submitted in the European recovery program for the sale and charter of vessels to foreign nations be overwhelmingly defeated.

With the present unsettled condition of the world, we must maintain an adequate active American merchant marine ready and able to bear the impact should another war occur. Newspaper accounts have predicted that the future will see push-button warfare. Publicity given to air operations during the last war have given the false impression that through air power alone can our Nation be defended and our objectives won. But the recent Secretary of War, Mr. Patterson, has pointed out that, while these ideas have a superficial appeal, the defense of the United States would require the early and rapid movement of millions of men and millions of tons of equipment and supplies across the oceans. As Mr. Patterson stated, this can only be accomplished by ships. Despite the developments in air warfare, both Army and Navy representatives have recently emphasized that the requirements for shipping in any future major war would far exceed in volume the ship requirements of World War II. We know how difficult it was to get ready.

The proposals submitted by the State Department and presently contained in H. R. 4840, section 7 of that bill would authorize the administrator of the European recovery program to charter to foreign nations any merchant vessels owned by the United States which are in excess of the Maritime Commission's current requirements. That section further provides that vessels so chartered to a foreign country shall be considered during the charter period as though they were foreign vessels, surrendering their American documents. In addition to this charter program, section 8 of the bill would authorize the administrator to require the sale of American Government-owned vessels to foreign interests. The full scope and danger of these proposals appears not in the bill itself, but in the transmittal documents from the Secretary of State which accompanied it. In those documents, it is stated that it is intended to sell 200 vessels and to charter 300 to foreign nations should the proposed legislation be approved. Under the procedure suggested by the State Department, the Maritime Commission, consultation with the Secretary of the Navy, and the findings required by the Ship Sales Act as to the desirability of transferring a vessel to foreign control would be completely bypassed.

What would be the result if these procedures suggested by the State Department were to be approved by the Congress? It would be that for every one of the ships transferred to a foreign nation, an American ship, employing American seamen, and paying American wages and American taxes would be forced to suspend operations and go into the laid-up fleet. By the workings of the ordinary laws of supply and demand, that result is not only probable, but inevitable.

Operating expenses for American ships are far higher than those of similar type vessels sailing under foreign flags. Our seamen are paid a basic wage rate of $192 a month, which compares with the present basic wage of $96 a month paid aboard British ships and the smaller amounts paid by our other major competitors. When you figure the estimated total pay of seamen during the year 1947, we find an average of $290 a month aboard American vessels as compared to $103 a month paid by the British. In addition to these higher wages, American vessels must pay higher maintenance and repair costs, greater insurance expenses, and larger subsistence costs for the feeding of our seamen. Because of these high costs of operation as compared with foreign ships, American vessels have always been at a tremendous competitive disadvantage. As a result of their comparatively high operating costs, our American vessels are the marginal ships. As freight rates drop or as demand for shipping becomes less, these costs require their withdrawal from service prior to the ships of any other nation.

Today there is no shortage of dry-cargo ships; there is an ample number of these vessels to handle the needs of the European recovery program. But if we transfer one vessel to a foreign nation for use under this plan, we immediately must prepare for the withdrawal from operation of an American vessel. In recent months the number of American-flag vessels sailing the seas has been substantially reduced; 372 American-flag vessels previously in operation were withdrawn and placed in laid-up status during the last 6 months of 1947. If Congress were to approve the transfer of the 500 additional vessels, as suggested by the State Department's program, an identical number of American ships would be required to cease operation.

As justification for their program, the State Department offers the thought that certain dollar savings may be made if foreign ships and crews are used to handle relief supplies. They further advance the theory that we should build up the fleets of the recipient nations as a means of implementing their incomes. I favor economy and the rehabilitation of western Europe. But, looking at these arguments closely, I am convinced that neither will result from the enactment of the proposals of the State Department dealing with our American merchant marine. I am convinced that this program would, in the long range, cost the United States many, many millions of dollars more than the State Department's estimated savings.

According to the estimates which have been submitted by the President's Committee on Foreign Aid—the Harriman committee—which studied the possible transfer of ships to foreign nations, approximately $300,000,000 of the cost of the long-range European recovery program might be saved by transferring vessels to foreign-flag operation. But what the State Department and other proponents have failed to note is that, while there may conceivably be savings in the expenditures under the program itself, the over-all result to our Treasury and the American taxpayers will be a substantial loss rather than a saving.

Let us keep in mind that if these 500 ships are not transferred to foreigners they will be operated by American companies and will be required to employ American citizens. Both the companies, their owners, and their seamen will be required to pay taxes. Transfer these ships to foreign flag and these taxes will

not be paid. Remember further that in past years we have been required to spend millions to subsidize and build up our American merchant marine in order to keep it on the seas. Transfer these 500 ships to foreign flags and we would not only have to write off our past expenditures, but we would be required in years to come to spend untold amounts to rebuild an American merchant marine up to our defense needs. Transfer these 500 vessels and our country would be placed in the negative position of having to subsidize our own merchant fleet in the coming years to a greater extent than ever because of the tremendous subsidy which these transfers would give to our foreign competitors. Think also of the huge amounts which we have spent to train our seafaring personnel. Transfer these ships to foreigners, throw American seamen out of work, and write off as a complete loss the amounts which have been expended in their training. If these vessels are chartered to Americans, our Government receives both charter hire and a large share of such profits as eventuate. Transfer them to foreign nations and all we receive for the vessels is money, which we give them, for their purchase and charter. To give you concrete losses in terms of actual dollars and cents which would result from these transfers is impossible. But it is obvious that the loss in taxes and charter revenues, plus the increased expenditures which will be required in the future to maintain our merchant marine, will be infinitely greater than any possible savings of the moment through transfer of vessels to foreign ownership and control.

Not only will the ultimate cost be greater, but the damage to our national defense will be incalculable. We have spent and will spend in the coming years billions of dollars to maintain our defense installations and weapons. Should these ships be transferred we will be faced with either a ruinous weakening of our defenses or we will be required to heal the resultant breach by building up other armaments to compensate for the loss of our merchant marine. I think that the question of cost and ostensible savings to be accomplished by the foreign transfers was excellently summarized by the President's Committee on Foreign Aid which, in discussing the alleged savings in dollars, stated that—

> The limited financial savings are not sufficient to justify the drain on United States resources for national defense which such transfers would involve.

We must not, in my opinion, give way to a philosophy of opportunism. We must not attempt to save money which, over a period of time, must be paid for many times over. It is necessary that we look at the long term and not at the moment. And when we look at the long term, the economic justification advanced for the transfer of these ships to foreign flag becomes both an illusion and a delusion. We must not here be penny-wise and pound-foolish.

The only additional justification other than supposed savings of dollars for the transfer of these ships to foreign nations is that such transfers may assist in rebuilding the economies of the 16 nations to be aided under the proposed program. True it is that obtaining these vessels will assist them. But it will assist them only at the expense of the United States, its defenses, its merchant marine, and the thousands of merchant marine personnel who will be thrown out of work. We are interested in building up the economy of these nations and reviving their industry. But I do not feel that we owe them an obligation to build up their industries above their prewar status. While their steel, coal, and other industries may be far below their prewar status, the merchant marines of the European nations are in an extremely healthy condition. At the end of 1938 total fleets of the 16 countries involved aggregated 48,300,000 deadweight tons. As of the end of 1947, that combined fleet was estimated at 44,400,000, or less than 10 percent below its prewar capacity. Under the plans formulated for the development of the merchant marine of these nations during the next few years, it is estimated that by the end of 1951 they will total 55,400,000 deadweight tons, or an increase of 7,100,000 tons over their prewar status. This amount is in addition to another almost 4,000,000 tons of ships which the European nations may or may not retire. Having these figures in mind, it seems to me difficult to justify the transfer of 5,000,000 tons of merchant ships to these 16 nations. Where is the justification for rebuilding the merchant marines of these nations above their prewar level, when such rebuilding inevitably must result in a contraction of the American merchant marine by an equal amount?

Yet we are asked to vote this transfer of 500 vessels. No mention is made of the fact that as of June 30, 1947, we had already transferred 670 vessels of 6,900,000 dead-weight tons to the 16 nations to receive aid under the Marshall plan. No mention is made that since that date, when the recipient nations themselves stated that their shipping needs amounted to but an additional 4,000,000 tons of shipping, we have transferred to them over 2,000,000 more tons of ships. The State Department now asks us to transfer an additional 5,000,000 tons, or two and one-half times the remaining amount of tonnage that the recipient nations themselves have stated they require to meet their needs, despite the fact that 372 American ships have been forced from operation during the last 6 months. In short, the State Department, in its overwhelming generosity with our merchant marine, has asked that we retire 500 more American ships in order to give 500 similar vessels to Europeans for operation by low-cost foreign labor in competition with our American vessels and American seamen.

Nowhere can it be found that there is a shortage of dry-cargo ships. Nowhere will it be found that the 500 ships proposed for sale and charter to foreigners are required to carry Marshall plan goods. Quite the contrary, these transfers are not for the purpose of doing a needed job, but rather for the purpose of assisting the European merchant marines to compete with our own. An examination of the present use of ships now owned by the recipient nations show that they maintain a large number of their vessels in routes other than those which will carry relief supplies. In other words, they are maintaining their competitive position in these routes, rather than divert any of their shipping to the actual carriage of relief cargoes. Put another way, the State Department's proposed transfer of vessels would merely permit European countries to maintain vessel services on nonrelief routes and still carry relief cargoes from this and other Western Hemisphere countries to their destinations in Europe.

While I favor aid to Europe, I do urge most strongly that the Congress not support such aid as will serve no function for the recipient European nations except to enable them to drive the American merchant marine to the wall. I have labored too long for the maintenance of an adequate American merchant marine to see this happen. I have seen too recently how necessary it is for us to maintain an American merchant marine if we are to maintain an adequate defense force for me to vote for any scheme which would crucify American shipping and America's defense for the sole purpose of assisting European nations to build up their competitive shipping position.

There are certain other aspects of the State Department's shipping proposals which I find to be highly objectionable. First and foremost is that by giving foreign operators merchant ships without cost, they place the American operator who must pay for and amortize his vessels at an even greater competitive disadvantage than under normal operating conditions. While a purchase price for these vessels might be met, in actual fact the money used by the foreign interests to procure them will be money given by this country under the Marshall plan. If charter hire is paid for their use, that too will be money granted by Uncle Sam. And that, too, will constitute unfair competition with American ships.

In the Harriman committee and other reports dealing with the transfer of ships to foreign flag, it has been emphasized that such transfers should be permitted only as a condition to the foreign nations cutting down the ship-construction programs which they have presently undertaken. The reasoning behind that suggestion is that it is ridiculous to transfer American ships and at the same time permit the foreigners to complete additional vessels requiring additional American steel in amounts up to 5 percent of the total steel to be supplied under the relief program. To permit such foreign shipbuilding to continue and to supply the steel for this purpose means that we are doubly assisting foreign merchant fleets. Yet in spite of the recommendations of the Harriman committee that transfers be permitted only on condition that foreign shipping building programs be curtailed, the State Department's program mentions nothing of this. As far as I can see, the State Department contemplates giving these ships without any restrictions on their shipbuilding programs. The result can only be that not only will these transferred ships eliminate 500 American vessels, but that additional American vessels will be

put out of service as new foreign ships come out of their yards.

The estimates of savings which would result from transferring these vessels foreign are based, as I understand it, on the Marshall plan being carried out in accordance with the original recommendations. Now it appears probable that these estimates will be substantially curtailed. If this is the fact, the amount of dollar savings will be less. But in addition, if the aid to be furnished under the pending bill is reduced, the amount of cargoes available will be far less. Under these circumstances the transfer of these 500 vessels to foreign flag will be an even more severe blow to the American merchant marine. For in addition to having to lay off 500 American ships because of the transfer of an equal number to foreign nations, American operators will be forced to lay up an additional large number of vessels because of the shortage of cargo. In considering proposals of the kind here suggested by the State Department, Members of Congress must constantly keep in mind that because of the marginal nature of the high-operating-cost American ships every drop in available cargo means an American ship must be taken from the seas. Unfortunately the foreign-flag vessels can continue merrily on their way.

The suggestion that vessels be transferred to foreign nations is not a new one. The Committee on Merchant Marine and Fisheries considered the question during 18 months of hearings on the bills which ultimately became the Merchant Ship Sales Act of 1946. That act permits vessels to be transferred to foreign nations but establishes very definite safeguards which must be met as a condition precedent to such transfers. Under that act we have already transferred almost 9,000,000 dead-weight tons of war-built ships to the nations covered under the pending relief bill. In committee we considered the entire question of charters to foreign nations; after most deliberate consideration it was determined that permitting such charter would be detrimental to the best interests of our merchant marine and of our Nation. Yet today this same proposal is being made again by the State Department as an incident to a broader purpose. Members of the Congress must not permit themselves to follow this misguided effort to revive a procedure long considered and found wanting in merit.

Let me emphasize one further point. That is that the transfer of these 500 ships as proposed by the State Department would throw out of work over 30,000 additional trained Americans now employed to service American merchant ships. During the last 6 months of 1947, 16,000 American seamen were thrown out of work by the withdrawal from operation of 372 American flag vessels. With the withdrawal of the additional 500 American flag vessels which would inevitably result from the transfer of this number of ships to foreign flags, approximately 22,700 officers and seamen, almost all American citizens, will be placed upon the beach. Over 10,000 Americans engaged in ship-repair work and other shoreside maritime industries will similarly lose their means of livelihood. America will lose the services of this large number of trained personnel. And America will lose the benefits of having an active fleet, rather than a laid-up fleet, as a part of its national defense.

Not only would this program take away the livelihood of over 30,000 Americans and their families, but it would take from the Government both the benefit of their training, the value of the taxes they pay, and the cost of their training during recent years. All this on the theory that, for the moment, a few dollars will be saved. All this on the theory that Europe's recovery should be aided. All this because the State Department has in its recommendations on shipping closed its eyes to the needs of America, seeing only the needs of Europe. All this because of the State Department's attempt to establish a world merchant-marine policy without consideration for the American merchant marine.

For many years I have known that my interests and those of my colleagues here in the Congress have primarily been to advance the welfare of our Nation. To advance that welfare and to insure its defense, we in the Congress have consistently voted a policy for the maintenance of an American merchant marine and the development of a trained force of American seamen. Our efforts have been to obtain the maximum result at a minimum cost. Today I see all of our efforts toward this end likely to come to nought because of what I believe to be a misguided and uninforced policy conceived by certain members of our State Department.

Let me invite the attention of this Congress to a determination made by the Congress of a few years ago after many months of study, hearings, and debate. Twelve years ago, the Congress made a determination which has been the keystone of American merchant marine policy and which has been set forth as the preamble to the Merchant Marine Act of 1936. In that preamble the Congress stated:

> It is necessary for the national defense and development of its foreign and domestic commerce that the United States shall have a merchant marine (a) sufficient to carry its domestic water-borne commerce and a substantial portion of the water-borne export and import foreign commerce of the United States and to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign water-borne commerce at all times, (b) capable of serving as a naval and military auxiliary in time of war or national emergency, (c) owned and operated under the United States flag by citizens of the United States insofar as may be practicable, and (d) composed of the best-equipped, safest, and most suitable types of vessels, constructed in the United States and manned with a trained and efficient citizen personnel. It is hereby declared to be the policy of the United States to foster the development and encourage the maintenance of such a merchant marine.

Let us not forget that policy. Let us not change that policy merely to save for the moment a sum of money which we will be required in the future to pay for many times over. Let us not forget the needs of America, the American merchant marine, and the American seamen merely to assist in the rehabilitation of Europe. In short, I urge the Members of Congress, and particularly the membership of the Committees on Foreign Affairs of the House and Foreign Relations of the Senate, overwhelmingly to defeat the present proposals relating to shipping contained in H. R. 4840.

Supplementing what I have said here, I ask careful reading of the speeches appearing in the RECORD made by Representative BRADLEY, of California, under the following dates, January 13, 1948, and January 20, 1948, and an extension of my own on January 30, 1948, in the Appendix of the RECORD.

Congress Treading on Dangerous Ground

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. SHAFER. Mr. Speaker, Congress is treading on dangerous ground if it ever flouts the will of the great masses of the church people in the United States and, at the same time, helps to increase schism between the Negroes and the whites of the United States. Yet, we as a party will be doing both of these things if we pass the so-called universal military training legislation now in the Committee on Rules, where it should stay until it is recommitted to the Committee on the Armed Services for further hearings and study.

As we all know, the church people of the United States are almost unanimously opposed to the legislation, as it is now offered in H. R. 4278, the so-called Towe bill. No opportunity was given for these groups, composing the finest of our American culture, to be heard. Likewise as we know, the bill would authorize by statute the War Department to segregate the various soldiers who would be inducted under the provisions of the proposed legislation. This, to me, is a notable and important failure of the bill, and, if the bill were to be passed in such a form as it was reported out by the Committee on the Armed Services, the Republican Party would be blamed by millions of voters throughout the North.

In this connection, I have received a letter from an important Negro leader of New York State. I submit it for inclusion in the RECORD, under leave to extend my remarks, and I hope that my colleagues will give it the study and consideration it deserves:

> I write this letter, not as national chairman of the Emergency Committee Against Jim Crow in Military Service and Training—comprised of over 200 top Negro leaders. Rather, I write as a Republican.
>
> Briefly, I do not wish to see our party commit political suicide among Negroes in 1948 by enacting a permanent Jim Crow military draft. That is exactly what H. R. 4278 in its present form boils down to.
>
> In a recent conference Chairman Walter G. Andrews told A. Philip Randolph and me that the War Department plans segregated white and Negro battalions under any UMT

legislation that Congress may pass. Next November, and thereafter, every Negro of voting age would hold the Republican Congress, not the Truman administration, responsible for any such permanent compulsory segregation.

A prominent Negro New Dealer on the Federal pay roll once said: "I was a Negro before I was a Democrat." That is my position within the Republican Party. Neither I, nor any other Negro Republican, next fall could possibly explain away a Jim Crow draft for every 18-year-old Negro youth.

May I therefore urge:

1. Recommittal of H. R. 4278 to the House Armed Services Committee. Full opportunity for Negro veterans to testify before the House committee.

2. Insertion while the bill is in committee of unequivocal antisegregation amendments.

Prologue to a Political Year

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article contributed to the January 1948 issue of Survey Graphic by Mr. Irving Dilliard, an outstanding member of the editorial staff of the St. Louis (Mo.) Post-Dispatch.

Mr. Dilliard's article follows:

PROLOGUE TO A POLITICAL YEAR

(By Irving Dilliard)

Are the American people and their two-party system of self-government equal to the test which lies ahead in this Presidential campaign year of 1948?

Here is a question not simply to be asked rhetorically or pondered by a few who teach or study government. It is a practical question of the first magnitude which demands to be answered by the entire Nation in one way only—with the clearest, most earnest, most determined yes.

There is no guarantee at all that we shall answer it in this way. But the answer, whatever it is, will have to be written in acts. Words count for zero. What we think in our hearts or what we tell others will not make the slightest difference unless confirmed by what we do.

Solemn talk, you say. But, in fact, all of us may gain from a reminder that this is not to be called merely a year of stress. This is a world crisis, and using any one of half a dozen issues now facing Congress as a partisan plaything is simply playing with dynamite, or as the saying goes in 1948—atoms.

Never in the 160 years since the founding fathers compromised their differences to produce the Constitution has it been more true that, in Cleveland's stanch phrase, it is a condition which confronts us—not a theory.

What is the condition?

What is the test?

What can we do to meet it?

First, an estimate of the situation. The initial fact is that the calendar has brought us around again, as every 4 years under our pattern of fixed elections, to a period in which we all divide into Republicans and Democrats, and single-mindedly undertake to hold or capture for our party the highest office in the land.

Traditionally we go to any lengths for our side. We become extremely careless with the truth even if we do not ignore it altogether. We say things we would never think of saying under other circumstances. We make promises we cannot keep or else have no intention of keeping. We engage in trades and deals which we know are beneath us. We blind ourselves to clear facts which at other times we should recognize as compelling.

All this we do to one paramount end—to get votes for our candidates, to possess the political prizes in State and Nation.

This year we have not only the general fact of a Presidential election and all that goes with that. We have it set in the most adverse circumstances, politically. And we have the coincidence of some of our toughest questions of policy coming up for decision immediately, not to be postponed beyond the election—with frightening consequences for muffing them.

With the present term completed, the Democratic Party will have been in control of the executive branch of the Government for 16 years. This is twice as long as the party, as we know it today, has ever before held control at one stretch. Indeed, it is a span which equals the total of its previous years of control since the Civil War—8 years of Wilson and 8 years of Cleveland.

Power held so long gets to be a habit. Those in control are so accustomed to authority and patronage that they shrink all the more from the idea of change. At the same time, those out of power grow the hungrier for influence and advantage.

Looking back, we see that there has not been, in these 16 years, a single Presidential campaign which produced a real contest. For his fourth term, Franklin D. Roosevelt overwhelmed Gov. Thomas E. Dewey in the electoral count, 432 votes against 99, and no other Republican had done so well against him. The last four Presidential elections were runaways for the Democrats.

Then something happened in the midterm congressional election of 1946. Roosevelt, tired and spent, had died. In his place was Harry S. Truman, a relatively little-known product of the Pendergast machine, in which tenure and patronage, personalities and friendships counted for more than public issues.

Although there were creditable entries in his senatorial record, this new President was lacking in progressive conviction and prestige. He had the country's sympathy and good will but little of its respect.

In short, Harry Truman was an almost nondescript, pretty much bewildered man, lifted suddenly to a post beyond his powers. The country remembered his great predecessor as warm and appealing, optimistic, imaginative, resourceful, and boundlessly energetic. The contrast, to many, was appalling.

Moreover, formal hostilities had ended in both Europe and the Pacific and postwar disillusionment had set in. With the defeat of Germany and Japan, differences long held in check began to come out. Large ones made their appearance at conferences of the victorious Allies. Lesser ones took shape at home. When the congressional elections came around, a thousand and one discontents and grievances went to the polls and the Republicans, out of power since Hoover's midterm, not only swept the House but surprised themselves by taking the Senate as well.

How crushing this defeat was still is not realized. Here is one way to measure it: From Pennsylvania straight west all the way to Colorado, there is now only one Democratic Senator—SCOTT W. LUCAS, of Illinois. Every other administration Senator in this agricultural-industrial heart of the country was turned out. Even Missouri, the President's usually Democratic home State, now for the first time in its history has two Republican Senators.

This overturn suggested at once that an important law of American politics was again at work, namely: the party which takes control of Congress in midterm will win the Presidency 2 years later. That has been true over more than half a century. Switches in House control in 1894, 1910, 1918, and 1930 anticipated party changes in control of the Presidency in 1896, 1912, 1920, and 1932.

This precedent is not unbreakable. It can be broken just as was the anti-third-term tradition. But as the University of Oklahoma political scientist, Cortez A. M. Ewing, writes in his highly informative study, "Congressional Elections: 1896-1944," this law, until it is broken, remains "a fairly reliable criterion for the interpretation of American politics."

And so for several months after the 1946 election, the Republican victories appeared as the handwriting on the wall for 1948. The message read, or at least seemed to say, that the GOP would have an easy time in the Presidential election, pretty much regardless of its nominee.

But in came the new Congress with the Republicans in control. It is unnecessary here to review the struggles over governmental expenditures, tax reduction, labor policy, and other issues; the record of special messages, independent action and no action, vetoes and the overriding of vetoes. That is fresh in the memories of us all. Notwithstanding constructive agreements in the field of foreign policy, we have seen that fears of a stalemate in a politically divided government are fully justified.

All the while the cost of living mounted in the inflationary spiral of higher wages, higher prices, then higher wages and again higher prices. Enthusiasm for the Republicans has cooled. In 1947, special elections to fill vacancies in the House were held in five districts which the Republicans carried in 1946. In each, the Republican majority was lowered, and in one the GOP margin was down 12 percentage points.

This countertrend was confirmed by the municipal elections in November in politically sensitive Indiana—a State with a Republican governor and two Republican Senators. The Democrats won mayoralties right and left and ousted Republicans in several of the larger cities.

The upshot of all this is a Presidential horse race. That is what 1948 opens on, 10 months in advance of election day. The prospect is for the tightest contest since Wilson edged out Charles Evans Hughes 32 years ago in a battle whose outcome was not determined until the final delayed returns came in from rural California.

The normal course the first 6 months of this presidential horse race is through the halls of Congress. Election year after election year it has been this way. Each party has sought to use the Congress to embarrass the other, as a means to rival political ends. In such a situation, the politicians, cautious men by profession, commit themselves as little as possible. At best the public welfare marks time.

When one party has held the presidency in presidential years and the other controlled Congress, the resulting deadlock has shunted the needs of the rank and file of people out at the little end of the horn. Such an instance followed the Democratic defeat in 1918. Senators William E. Borah and Hiram W. Johnson set about to even their score with Wilson. Abetted by Henry Cabot Lodge they blocked the peace treaty, kept the United States out of the League of Nations and out of its rightful role in world affairs. A strong case could be made for the proposition that a direct consequence of this was Hitler and nazism and the new war they waged.

The high cost of living was an issue in the 1920 session of Congress, preceding the Harding-Cox campaign. Wilson asked for legislation to combat the price spiral. Looking to the election, the Republican Congress gave the Executive little aid. The leaders

preferred to blame living costs on the administration's expenditures and its insistence on keeping taxes high—identical complaints today.

The sessions which followed the 1910 and 1932 midterm overturns for the most part also were given over to political jockeying, to pulling and hauling intended to discredit the other side.

Left to its own devices, the second session of the Eightieth Congress, now assembling, would be no better—probably worse. As the basis for such a forecast, we have the recriminations and frustrations of the first session and of the special session last month.

But in 1948 "no better" will be not nearly good enough. The elected representatives of the American people along with the President, have got to find the way to something better. For there is a fact of graver moment in 1948 than the prize of the presidency, and that is the state of the world. We cannot gear ourselves blandly to the lesser concern when our fate is tied to the larger. This is the crux of the meaning of 1948 for the United States of America.

Congress in the new session faces a whole series of issues, any one of them a heavy burden for any preceding session.

European relief is the basic factor today in the lives of more than 200,000,000 persons abroad, and the foundation of a sound foreign policy for us. It represents the ultimate in renunication of isolation—yet many Members of Congress still would vote isolationist if they thought the times would give popular support to their stand.

Communism is changing from a challenge to democracy to a threat and relations between the United States and Russia, as a consequence, have deteriorated from month to month. Yet unless we accept a counsel of despair we must continue to work for an understanding which can be the basis for peace.

The United Nations has not measured up to our hopes; yet we have no choice, actually, but to strive even harder to make it the instrument for good will and harmony which we had envisioned it would be.

Then there is the problem of revenue to pay for vast and unavoidable Government activities. In a time of high national income and of unprecedented national debt, there is the clearest indication of high taxes in order to reduce that debt—with the anomaly of a serious drive to cut taxes. Tied to this is the threat of inflation and the need to control it.

More than 2½ years after VE-day, our gates are still closed to the displaced of Europe, hundreds of thousands of whom are even now huddled in cheerless, frustrating camps, yet Congress here continues to shirk a duty which could not be plainer.

The list of waiting decisions could be long extended: loosening the tariff bonds on world trade without which there can be no world recovery; long overdue housing for veterans and their families; protection and extension of civil rights for all citizens; provision of personnel adequate to discharge our obligations and meet our opportunities in Germany, Japan, and Korea; enlargement and perfection of the Voice of America broadcasts and the Government information service as an encouragement to friends behind the "iron curtains"; aid for education without infringing the fundamental separation of church and state; provision for enforcement of mine safety inspections; planning to meet an always possible curtailment in employment or a break in our none-too-healthy prosperity—these and many other issues are serious and could become critical.

Such issues deserve handling on their merits. They also command attention now as the very substance of representative self-government at work in a world which is hearing, from a vast propaganda machine day after day, that democracy is weak and fumbling and incompetent. When, for example, Congress fails to pass the Stratton bill to admit 100,000 carefully screened DP's each year for 4 years, the loss is much more than the bill and the worthy cause which it embraces. The whole practice of democracy is weakened by that much.

This is the condition. Here is the test. What can we do to improve our prospects?

This is no time to talk of long-range changes such as constitutional amendments to lengthen the term of House Members, to establish the parliamentary system with the Cabinet sitting in Congress, to prevent the President from succeeding himself as a check on his political activity. These proposals have no relevance now. What we do must be done in the weeks that are rushing at us in 1948.

The times are too urgent for inaction. The stakes are too great for a round of political charges and countercharges—and do-nothingism. How can we sufficiently impress these self-evident truths on the men we have sent to Washington? That is the question.

The first requirement—being severely practical—is for the American people to resolve that this session shall not fall to the level of those others degraded into curtain raisers to presidential campaigns. This resolution is absolutely necessary. Without it we merely relive the past and stumble into well-known pits.

Not every last one among our 140,000,000 people need to resolve. That ideal, of course, is utterly beyond attainment. But throughout the country, east and west, north to south, in every State and every congressional district, there must be men and women aroused and determined that the old frustrations shall not be repeated in this crisis year of 1948.

The second requirement is that this resolution be promptly and effectively translated into action, impressive to both President and Congress. The action is equally necessary; the resolution is a joke without the action.

We have the machinery for this at hand in the highly organized condition of the American society. Parts of this machinery have been used many times by special interests to impress White House and Capitol Hill. It can be used now as never before to impress the larger view, not that of special interests, but the interest, if not the lift itself, of our country in relation to the peace of the world.

This mobilized public opinion, this means to action, needs to stand above even the appearance of partisanship.

What can be read as Republican criticism of the Democrats will only cancel out what is, or appears to be Democratic criticism of the Republicans. The one way to lift this public opinion above partisanship is to participate in organizing opinion that is fair, balanced, evenhanded—and positive.

The chamber of commerce or the professional association which condemns a presidential pardon for a convicted mail fraud crook like Boss Curley must also hold Congress to account for a tax reduction bill, advocated not because Congress believes in reduction at a time of inflation and tremendous debt, but because Congress thinks a cut will make votes.

The trade-union or the voters' league which checks it up to the majority leader of the Senate when he charges "bad faith" in a presidential attack on the spiral of high prices can show its balance by checking it up to the executive who would wangle a high appointive post for an untrustworthy crony. After all, an administration that insistently included in its official family a "profiteer in human misery" should not be considered immune to being carefully watched in the future.

The thousands upon thousands of service luncheon and supper clubs which meet every week in communities ranging from the largest cities down to small towns and villages can profitably make this resolution and this action a prior order of business. The many thousands of veterans' posts, fraternal orders, women's clubs, medical and bar associations, engineering societies, and other organizations can do the same thing.

Letters and telegrams and formal statements should pour in upon the President and the Senators and Representatives. The word should go in longhand on penny postcards written on kitchen tables after a day's work; from secretaries who hasten to wire the declared conviction of large organizations; by word of mouth; by the newspapers and on the radio.

The message to send is not that politics is adjourned, but that politics this year must be on a high and responsible plane. The word is that political discussion and education are as much in order as ever, but that political trickery, misrepresentation, and deceit are ruled out. It should serve notice that the people have taken charge. It should be as quick to applaud the good as to oppose the bad.

Let this happen and the United States of America will have its new awakening. Democracy will be in fact a vital, vibrant, shining way of life, one which we are proud to display before the world, which will give new heart to distant friends risking their lives to plead the cause of liberty where oppressors rule.

This is not impossible. It is not more than we can do. We elected this Congress and we can turn it out of office in November. In the months ahead we can require it to serve us.

We sent Harry Truman to the executive branch. Ten months from now we shall say whether we want him to continue. In the interval we can require him to serve us.

This year 1948 is no time to blame our ills on the President—or on Congress. The occupant of the White House is all the President we have until he is replaced. This Congress is our latest screening of the American people to produce the most representative body on earth. If we discredit the President and Congress we discredit ourselves. That we do at our own peril.

It is up to the vast rank and file of citizens. It is in their hands—our hands. They—we—can make all the difference.

The alternative is to waste six precious months next ahead of us in a game of political tag in which everyone, including innocent onlookers growing weaker day by day on starvation diets, will lose. The alternative is to fumble in what may well be one of the greatest lost chances in history.

Now is the time.

The place is everywhere—Maine, Indiana, Texas, New York, Illinois, Wyoming, Virginia, Missouri, Oregon, Kentucky, California—everywhere throughout the length and breadth of our country.

This is asking a great deal—of the American people, of Congress and the President, of the individual citizen, of me the writer and you the readers of this article. It is asking that we break for once with the settled habit of taking a fling every 4 years. It is asking that we accept the role of positive responsibility for our political behavior. It means foregoing a great deal of election-year fun, taking on a great burden of serious concern. Such an idea requires justification, and it is in this case the simple alternative which leads to the edge of disaster—for the world, and ourselves, too.

Is the Almighty Dollar an Honest Dollar?

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. HORAN. Mr. Speaker, on a number of previous occasions I have called

the attention of the Members of this House to the fact that we cannot hope to achieve stabilization of the economy of either Europe or our own Nation if we do not first return to a policy of fiscal sanity in our national and international finance operations.

At this time I should like to introduce into the RECORD a discussion of the United States monetary situation by Mr. Frank Lilly, a prominent mining research authority of Spokane, Wash.:

IS THE ALMIGHTY DOLLAR AN HONEST DOLLAR?

(Address to the Mining Bureau of the Spokane Chamber of Commerce by Frank Lilly, February 2, 1948)

With the monetary systems of the world crashing all around it is logical to ask, Could this happen here? It goes without saying that we do not want this to happen here; and the best way to prevent such a happening here is to look facts in the face and take such preventive action as the situation seems to require.

Is our almighty dollar an honest dollar in the truest sense of the word? In other words, does it have a true unvarying permanent value and is it safe? Let us look the facts in the face.

In the first place, we will find that we have several kinds of dollars to consider. They are as follows: (1) The silver dollar; (2) silver-certificate dollar; (3) United-States-note dollar; (4) national-bank-currency dollar; (5) Federal-Reserve-note dollar; (6) bank-check dollar.

The silver dollar: The silver dollar, of which there are now only 337,000,000 in the United States Treasury, where they are backing silver certificates, and 154,000,000 in circulation, is the only hard money we have, except subsidiary coins that conform to the provision in the United States Constitution which reads: "The Congress shall have power to coin money." There is nothing in the Constitution about paper currency, possibly because the founding forefathers had learned from practical experience with the continental currency that only coins should be recognized and used as money.

The silver dollar was an honest dollar containing as much or more than a dollar's worth of silver until in 1873 silver was demonetized at the behest of British international bankers. Its position in the monetary system was restored in 1934, but Congress failed to make it an honest dollar with a dollar's worth of silver in it. As matters stand today with the Treasury price of silver at 90.5 cents an ounce, there is only about 70 cents worth of silver in the dollar. Thus, through no fault of its own, the silver dollar falls short of being an honest dollar in the full sense of the word, although it is the only dollar we now have that is acceptable anywhere in the world.

The silver certificate dollar: Instead of coining all silver in accordance with the obviously expressed intention of the Constitution, Congress provided for the issuance of silver certificates against bullion silver acquired under and through the Silver Purchase Act and silver dollars in the Treasury.

These silver certificates fall short of being 100 percent honest dollars because they are issued against silver on the basis of $1.29 an ounce, when as a matter of fact, the Treasury price for silver is only 90.5 cents an ounce. Not only do they fall short in this respect, but at least one-fourth of the 1,850,000,000 ounces (approximately) of silver against which silver certificates have been issued has been lend-leased to foreign countries and is not, therefore, available on demand. All of this may be returned eventually, but no less a person than United States Senator PAT MCCARRAN told me that he doubted if any of it will ever get back in the Treasury.

United States note dollar: The United States note constitutes a comparatively small amount of our currency, totaling only $322,000,000. These Government notes were first authorized in February 1862 during the Civil War as a war measure and were at that time called greenbacks. They bear no interest and have no hard money or other collateral backing. Despite the fact that they were a promise of the United States Government, United States greenback notes sold as low as 36 cents on the dollar in gold and/or silver specie during the reconstruction period after the Civil War. Nevertheless, I consider the present United States note the most nearly 100 percent honest money this country now has, because being a non-interest-bearing Government issue it does not indirectly filch a private profit from the unsuspecting citizen as is the case with national currency and the Federal Reserve note.

The national bank currency dollar: This dollar originated as a result of legislation passed by Congress in 1863 that provided for the issuance of a so-called national currency by national banks against Government bonds owned by these banks, which, although called national banks, were and are actually privately owned. Subsequently, these banks were permitted to issue currency against other public indebtedness and even in certain instances, private indebtedness. This currency is now being retired and at the present time there are only about $100,000,000 of such notes outstanding. As notes they were and are no better and no worse than a promise to pay, and while not intentionally dishonest they do not measure up to the requirements that would make them fully 100 percent safe and honest.

Federal Reserve note dollar: In December 1913 Congress passed legislation creating the Federal Reserve bank system out of a group of privately owned national banks and provided for the issuing of currency by these banks on about the same basis as it had been issued by national banks, except that the Federal Reserve note was required to have a 40 percent gold backing.

The Federal Reserve System, by the way, was created because gold was not at that time being produced at a rate sufficient to provide the money this coutnry needed to maintain a smooth-working economic system. These notes of the Federal Reserve bank were originally in the form of national currency, but were later issued as notes redeemable in gold on demand until the gold standard was abandoned in 1934. However, the 40 percent gold reserve backing provision was retained until 1945 when it was reduced to 25 percent.

Thus the gold which is not actually owned by the Government, although theoretically under its control, is not in fact money in the truest sense of the word. Incidentally, the commercial bank that owns the gold can use it to create $245 of new money for each ounce of gold it obtains at $35 an ounce.

The Federal Reserve note, being a note based upon a promise-to-pay credit, and with no more than a small and wholly theoretical gold backing, cannot logically be considered as being 100 percent safe and "honest." If, for example, a critical debt-credit situation should arise such as did come about during the depression of the early thirties when the Federal Reserve banks were operating, it is entirely possible that much of the "promise to pay" against which the Federal Reserve has issued its notes could crumble into mere promises and no pay.

Bank check dollar: The modern bank check dollar is the dollar with which most of the business of the United States is done. It is convenient but it is not money in the real sense of the word. One money dollar deposited in a bank is in the process of banking and customer checking converted into many check dollars, and everybody is happy until, through a combination of circumstances over which neither the bank nor the depositor has control, the bank cannot pay money dollars. Remember the so-called "bank holiday."

It is only fair to point out that the bank-check dollar is safer today than ever before because of the Government guarantee covering deposits up to $5,000, but, although this type of dollar expedites business and is in many respects essential, it lacks the safety factor essential in an "honest" dollar.

The total supply of all the foregoing kinds of dollars is estimated at $111,000,000,000, or about three times the prewar volume. Of this total only the silver dollar, silver certificates, and United States notes amounting in all to about $2,500,000,000 are not more or less based upon interest-bearing debt with the profits accruing to non-Government powers who create the currency under the powers and with the privileges delegated to them by Congress.

Thus, we have stumbled step by step into a muddled debt-based monetary situation in which the real nature and purpose of the dollar has been lost sight of. To serve merely as a medium of exchange and as a measure of value is not enough—the dollar should be a safe, unvarying, and permanent storage of value which an interest-bearing debt-based money cannot provide.

This can be achieved by basing our monetary system on a gold and/or silver hard money foundation. The dollars of such a system could neither be inflated or deflated, and, incidentally, no country has ever gone "busted" because it had too much gold and/or silver.

The United States now has nearly $23,000,000,000 of gold on the basis of $35 an ounce, and approximately $3,500,000,000 of silver, including minor coins, or a total of $26,500,000,000. If this dollar total along with our check dollar, on which the bankers can get along very well without the added profit on Federal Reserve notes, does not provide sufficient money value to meet the needs of our economic system the value of gold and/or silver can be regulated as the Constitution clearly indicates is the duty of Congress.

Congress should act immediately in this matter, because in the well-chosen words of John McBride: "An unsound monetary system is more fruitful of human misery than war, pestilence, and famine, and has brought more injustice than all the bad laws ever enacted. Until a sound monetary situation is adopted by the United States all the present frenzied efforts for permanent peace, recovery, full employment, full production, and a balanced budget are just so much sound and fury signifying nothing."

Most insistent among the suggestions made in this connection is restoration of the former gold coin standard and the right of a citizen to own gold and to buy or sell same in a free market. In this connection it is pointed out that it is not in the pockets of citizens, but only in the hands of banks that values based on gold can be inflated. Opposition to silver in the monetary set-up is far less than at any time in recent years and the chance of teaming silver with gold to provide a money system with truly honest dollars is promising. Hasten the day.

The Worthington Plan—A Proposal by Which People Everywhere Can Do Something Practical for Peace

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I desire to call attention to the unique plan for

peace originating in Worthington, Minn. The following radio address which I prepared for use on the radio in Worthington, Minn., gives a brief description of the Worthington plan. Those desiring further information should write Mr. Charles Cashel, of Worthington, Minn., or the editor of the paper in Worthington.

Good friends of Worthington, Minn., about 20 years ago, when I was a student in Columbia University working on an advanced degree in education and serving as superintendent of schools of a small South Dakota community, we had an instructor who was a firm believer in the opportunities of life and education in America's smaller towns and cities. Almost every day he used to encourage us by repeating this impressive and very truthful slogan: "You don't have to live in a big town to do big things in education."

In this broadcast of greeting and congratulations to the people of the Worthington community who are really just good neighbors of mine, since Worthington, Minn., and Madison, S. Dak., are not very far apart, it seems to me that a paraphrasing of that old educational slogan might be highly appropriate.

Certainly, Worthington, Minn., better than any other community in the whole United States, has proved with definite finality the axiomatic accuracy of this statement: "You don't have to live in a big town to do big things in the promotion of a permanent peace."

Worthington, Minn., has today become a phrase which is literally known around the world. In Washington, in New York, in Ohio, and in Europe I have heard people talking about the Worthington plan with almost as much familiarity as they demonstrate in talking about the Marshall plan.

Truly, your Worthington plan of establishing people-to-people contacts and friendly associations with the residents of a city in a former enemy country through the unique procedure of adopting that foreign city as a sort of political ward of yours is both unique and contagious. Many other communities in America, and some in England, are now in process of following your example. They have seen the vision in the sky reflected from the working mechanism you have established in Worthington for substituting the helping hand of friendship for the clenched fist of conflict. They have learned from your example that a wise and successful victor seeks not to perpetuate the bitterness of war but to build for the future through creating areas of understanding and good will to replace the fox holes of hatred which form a part of any war. Since permanent peace is the goal of military victory, the Worthington plan if extended to 500 foreign communities by 500 inspired American cities adopting political and economic municipal wards in every region of the earth could well do more to create and maintain a permanent peace than all the armies and international organizations and formal Marshall plans that the mind of man could possibly conceive or the great purse of America could finance.

While I was in Germany last September and October I took special pains to inquire about the reaction of foreigners to your municipal Worthington ward of Crailsheim, in the western part of Bavaria, Germany, located just 40 miles southwest of the seat of the Nuremburg trials. Crailsheim, I found, to be a new symbol of hope and of peace not only in Bavaria and in Germany but throughout much of Europe as well. The Worthington plan and the reaction of the people of Crailsheim was widely publicized in an article I saw in the Paris edition of the New York Herald Tribune. Another article publicized your program all over in Europe through the European edition of the Stars and Stripes. It was written up in Rome American, an English language newspaper published by some ex-GI's in Italy. The little ripples of freedom and friendship which you Worthington folks have originated by your assistance and counsel to the people of Crailsheim are sweeping over Europe with ever-increasing strength and in a steadily expanding circle of good will.

I found our American occupation authorities in Berlin not only interested but actually enthusiastic about the potentialities of the Worthington plan, and they expressed the sincere hope you would make it at least a 5-year program with a steadily expanding interchange of correspondence, of products, of pictures, and eventually of students, teachers, city officials, and visitors between Worthington, Minn.—the parent of freedom—and its political and economic ward, Crailsheim, Germany, which hopes to become an oasis of democracy in what was formerly a hopeless desert of Nazi tyranny and belligerent nationalism.

About 2 weeks ago, when Gen. Lucius B. Clay and Ambassador Robert Murphy were in Washington, having just flown in from Germany to testify before our House Foreign Affairs Committee on conditions overseas, I took the occasion to ask General Clay, as the commander in chief of our occupation forces in Germany, some questions about the success and significance of the Worthington plan of substituting assistance for animosity.

Let me read you now some of the official testimony as it appears in our congressional hearings:

"Mr. MUNDT. General Clay, both you and Ambassador Murphy, I am sure, are familiar with the so-called Worthington plan which I discussed with you in Berlin last fall. Worthington has adopted a little German city. Other American communities are getting interested in that kind of thing. Because I was identified with the Worthington plan from the start and helped select the location in Germany through the State Department and a member of your staff, I get a lot of correspondence on the plan. Should we discourage or encourage other communities from entering into that kind of experiment.

"General CLAY. No, sir; I think it has been a very helpful thing. That type of thing and the contribution of the individual which reaches Germany makes the German feel that he has not been completely forgotten in this world, and it has, I think, more effect in molding him to our way of thinking and to a belief in democratic processes than almost anything that we can do. The more of it that can happen the better.

"Mr. MUNDT. You will be happy then to cooperate and further such cases?

"General CLAY. Very much so indeed."

That, good people of Worthington, is the testimony of General Clay in tribute to the patriotic and far-sighted program in which you are now engaged for building the precepts of enduring peace in an area which has so often served as the cradle for war. It is a tribute which you Worthington "peace pioneers" richly deserve and one which I am mighty happy to convey to you.

Inasmuch as I was once the district governor of the Minnesota-Dakotas district of Kiwanis and the Worthington Kiwanis Club was for a time under my jurisdiction, I am especially glad that the Kiwanis Club of Worthington is one of the groups now sponsoring the supporting of the Worthington plan. Many other organizations have joined together, I am sure, in this great cooperative and constructive enterprise and I salute and congratulate them all as well as the progressive community which they serve.

Since it was my old friend Charles Cashel who first enlisted my interest and assistance on the Worthington plan I want to extend a special word of commendation to him, since I am sure he must have been one of the idea men behind this new world-famous project. You will be glad to know that the State Department thinks so highly of the Worthington plan that under the provisions of my so-called Voice of America bill which was recently signed by the President, a special office is being set up for the purpose of bringing other communities together and for facilitating the exchanges of personnel and products which it is anticipated will develop from such international contacts and associations.

In conclusion may I extend the personal hope that the Worthington plan will continue not only for the 5-year period originally expected of it but that it will eventuate in a permanent series of contacts between Crailsheim, Germany, and Worthington, Minn. I also hope that some individual or committee in Worthington will prepare a little pamphlet discussing the origin, the development, and the hopes of the Worthington plan, since many in America would like to know more about it. In fact, one of the editors of Pathfinder magazine, published here in Washington, was in to see me today to get some information on your project. You have a grand idea which is off to a good start, and by describing it in an attractive booklet you can add new laurels to your crown as well as help other communities to follow in your footsteps.

As I told Charley Cashel when he first solicited my cooperation in what has come to be known as the Worthington plan, I hope you will extend its functions far beyond the contribution of supplies to the needy of Crailsheim and the interchange of letters, pictures, and literature between the students and adults of your two communities.

Men and women of Worthington, you have started a snowball of peace which has far greater potentialities than that. I hope you will be able to raise funds through cooperative efforts like home talent plays or community suppers, or tag days, or what have you, so that eventually you can finance the trip of your mayor, or your superintendent of schools, or your chief of police, or some other prominent citizen or group of citizens to visit Crailsheim and do on-the-spot guidance to help that far-off German city learn better the methods of democracy, the values of free universal education, and the functions of freedom. I hope you can also finance in time—and the sooner the better—a visit to Worthington on the part of the burgomaster of Crailsheim, or its superintendent of schools, or somebody selected in that city to get the valuable first-hand impressions of our American way of life which could be so simply demonstrated in a month's visit to Worthington, Minn. I hope, too, you can arrange for one of your good school teachers to spend a year in the schools of Crailsheim teaching the school children there to speak the English language and to understand American history and our American economic and political system. Likewise I hope you can arrange to exchange such a Worthington teacher for a year for a German instructor who will teach children in Worthington courses in German or chemistry, or physics, or music, so that through increased mutual understandings the inspiration of freedom as it functions in America can help create a solid beachhead of democracy on the European Continent.

The State Department stands ready now to help facilitate all such exchanges of personnel and products. The American occupation forces in Germany are eager to cooperate fully in developing the Worthington plan to its optimum and maximum possibilities. Whatever more help I can personally provide will be yours for the asking. You are perhaps building better and greater than you realize, but the eyes of the world are upon Worthington and everywhere the wish is that you will not stumble, or falter, or grow weary with your efforts. Your success will light a torch of freedom and set in action a chain of peace-preserving reactions which can help mightily to put an end to future war. In closing I salute you as one who is proud to be a neighbor of the city of Worthington.

United States and Great Britain Plan Military Defenses

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, it is now revealed under a London date line of February 7, that the United States and Great Britain have laid broad plans for linking defenses of the Marshall-plan nations. Only too few people in the United States have understood the implications involved in the Marshall plan, but now they stand revealed to everyone. Is this the first step in imperialism? Time will tell. Under leave to extend my remarks, I am including the article which appeared in the Washington Post as of Sunday, February 8, 1948:

UNITED STATES AND BRITAIN PLAN UNIFORM DEFENSES FOR MARSHALL NATIONS

(By Arthur L. Gavshon)

LONDON, February 7.—Qualified British military informants say broad plans are nearing completion for linking defenses of the Marshall-plan nations.

Anglo-American chiefs of staffs, according to these informants and diplomatic sources, will submit to 15 European countries proposals to standardize a wide range of military equipment and training as the basis for a program of military self-help. Standardization will be on the basis of American and British patterns and methods.

These sources emphasized that the plans are to be regarded neither as part of the Marshall program nor as excluding states outside its focus. They are primarily intended to establish military cooperation among nations which some day may have to fight as allies.

Foreign Secretary Ernest Bevin broadly hinted such measures are contemplated in his address to Commons on international policy. Bevin said Britain's military alliances, as well as her political ties, with the countries of western Europe are to be tightened.

The informants expressed confidence that the standardization principle would be accepted readily in western Europe, since most of the countries already depend almost exclusively on the United States and Britain for military requirements.

Asked to confirm these assertions, spokesmen of the British Foreign and War Offices gave cautious "no comments." The War Office spokesman, however, disclosed that Gen. G. M. J. Revers, chief of the French General Staff, has visited British military establishments and has been in consultation on technical and training matters with the Imperial General Staff.

Every care will be taken to avoid the impression that the Anglo-American arms and strategic program involves "ganging up militarily" on Red Europe, diplomatic and military informants insisted.

MERE PROJECTION

Disclosure of the plan came as the United States swung into a detailed study of the report of the Paris Conference which answered Secretary Marshall's call for a European recovery program.

The Paris report specifically stressed the desirability of streamlining continental economic recovery by standardizing basic items of industrial equipment.

The sources—who ranged from British military planners to Ambassadors of western European countries—pointed out that a program of arms standardization is just one stage removed from the principle of industrial standardization.

Most of the 16 states sooner or later must face the question of whether their armies are to be equipped with weapons forged in the west or in the east, they declared.

The standardization program was generally seen to be essentially gradual, to be put into effect over a period of at least 10 years, barring emergencies. Many of the Marshall-aid countries already are in close military liaison, the informants added.

War Office sources said that at least 11 Marshall-aid states have sent officers and men to Britain for training in the last year. The exceptions are Austria, Switzerland, Iceland, and Sweden.

Sweden recently placed the second of two large orders for an unspecified number of Vampire jet fighter planes with the DeHavilland Co., an official statement announced. Technicians of the Swedish air force are expected to come here for jet propulsion training at the DeHavilland factory.

British training missions have gone to most western European states to train and reorganize their war-battered armies on the spot. The Italian Army, said an Italian diplomat, has been reorganized from top to bottom on the British model since 1943, when Mussolini fell. He said Italy had five British equipped and trained divisions in the field when the war ended.

UNITED STATES DIVIDING SURPLUS

Similarly the United States has large missions in Greece and Turkey, training, reorganizing, and equipping their armies. Surplus American military stores and equipment are being disposed of in several other countries, including France, Italy, Austria, and the Low Countries.

Britain has supplied France, Belgium, Holland, Luxemburg, Norway, Denmark, Sweden, Italy, Greece, Portugal, Turkey, Eire, and Iceland with radar equipment, aircraft—including jet-propelled machines—and armaments since the war ended. Troops of several of those countries wear British uniforms.

Turkish technicians were instructed in jet propulsion at the DeHavilland works. The French and Belgian chiefs of staff have visited British battle schools.

France last year purchased guns, aircraft, transport, and all the other material necessary to equip a full air-borne division 16,000 strong. She has purchased many naval vessels since.

Meanwhile the sources saw significance in Lord McGowan's visit to Portugal and Spain late last year. The chairman of Imperial Chemical Industries—largest industrial concern and arms works in Britain—called on Portuguese and Spanish political and banking chiefs, although he did not see Generalissimo Franco.

British officials stressed that there is no direct intention of strengthening the armies and defensive resources of the countries taking part in the Marshall plan. But one source who is in a position to know how Foreign Secretary Bevin's mind works said Britain "views with understanding" an already expressed American desire to promote military self-help among the 16 states.

He was referring to United States Defense Secretary Forrestal's statement to the House Foreign Affairs Committee that he hopes his Department will be given the job of integrating the armed forces of the Marshall-aid countries.

LIKE LATIN PLAN

American peacetime plans for building a unified defense of western European states—common arms, air bases with equipment and techniques known to all the partners, and training which would allow military units of one country to be blended with those of another—were seen to follow a pattern already set for the Western Hemisphere.

That program was laid before Congress in the closing days of the 1947 session, tagged with a "must" label by Marshall, Army Chief of Staff Eisenhower, and ranking War and Navy Department officials.

Under its terms the United States would help other Western Hemisphere countries develop military, naval, and air bases for their common defense if attacked.

High British officials ruled out the possibility of any full-scale merger of Anglo-American armed forces in the foreseeable future. But they said they are aware of—and back—the United States desire to standardize the arms of several foreign countries to prepare herself for any emergency that might emerge from east-west rivalries.

The year-old Anglo-American agreement for the exchange of 100 officers between the RAF and AAF for training is working out "most successfully," an Air Ministry spokesman said. He remained tight-lipped when asked whether RAF officers in the United States are being instructed in the technique of atom-bomb warfare.

Other authoritative sources said, however, that this and several additional aspects of up-to-the-minute scientific developments are included in their training as a matter of course.

British officials said they expect that the United States and British Governments will maintain at least indefinitely, if not permanently the Washington-based, wartime-created Combined Chiefs of Staff Board. Both countries continue to exchange information on military equipment, weapon and munition developments. American observers regularly attend conferences of British Commonwealth army specialists and planners.

It is unlikely that plans to coordinate the forces of the western European countries will be accompanied immediately by a full exchange of top-secret information.

SMALL-ARMS CHANGES

The new standardization plan means that Britain, France, and other Marshall-aid countries will be able to order most of their military requirements from the United States in future emergencies, the officials said. It does not mean that the countries of western Europe will give up arms production themselves.

Precise details of what weapons would come under the standardization program could not be learned at once. However, informants said that the British .303-inch rifle would be redesigned to the United States .30-caliber, that other small arms will be changed to the United States pattern and that cartridges will be grooved instead of rimmed.

Some continental countries already are using the same designs as the Americans in their weapons. The French artillery, for example, uses 75, 105, and 155 mm. rifles (guns). So does the United States Army.

Kirwan Named

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks I desire to include an article from the Washington Post of February 8, 1948, written as a part of the column Gallery Glimpses by Robert C. Albright.

The article follows:

Amid all the dark talk of a Dixie rebellion, congressional Democrats for the first time in history have chosen a liberal Yankee to lead their fight to recapture the House.

Southern Democrats, who heretofore have always put one of their own in the key campaign spot, surprisingly went along with the choice, Georgia's EUGENE COX even seconded the nomination.

The new chairman of the Congressional Democratic Campaign Committee, whose job it is to put Democrats in Republican seats, is 61year-old MICHAEL JOSEPH KIRWAN.

KIRWAN is a Youngstown, Ohio, Irishman, with a brogue as thick as Washington weather. He has worked at every job from driving mules in a mine to braking on a train. In World War I he was a machine gunner. Before he came to Congress he was a member of the Youngstown City Council.

SUCCEEDS VIRGINIAN

But the most surprising thing about KIRWAN, and his election-year choice by a split party, is this: "He's a 99.4-percent Roosevelt Democrat, of the vanishing New Deal variety. How he gets along with Southern Democrats is his own secret, but it has something to do with that brogue.

KIRWAN succeeds the late Patrick H. Drewry, of Virginia, who knew how to clock elections but frankly had his doubts about the New Deal. Before Drewry there was Tennessee's Joe Byrnes, Arkansas' William Oldfield, and Virginia's Hal Flood. By some sort of unwritten rule, the chairmanship always stayed in the South.

House Democrats went North this time for a very practical reason. Southern seats are sure. Outside the deep South, Democrats must pick up at least 31 Republican seats in order to control the next House.

KIRWAN thinks he knows how to do it. In 12 years he has transformed his own traditional Republican district into undisputed Democratic territory. Two Republican Presidents—Garfield and McKinley—once represented his district in Congress. Until KIRWAN came to Congress, it had never elected a Democrat.

A WALLACE RIVAL

Another explanation: Henry Wallace will enter third-party candidates in many a northern congressional district. KIRWAN can appeal to the liberals, has a Roosevelt record that even Wallace can't challenge.

The Youngstown Democrat plans a few variations on the usual direct-the-fight-from-headquarters congressional campaign.

Accompanied by Victor Hunt Harding, committee secretary, who generally does all of the cruising, KIRWAN will enter each State, from Massachusetts west, as soon as party nominees are chosen.

He's already made up his mind about issues.

Listen:

"They're going to be peace and food—the two biggest things in life."

By peace KIRWAN means the No. 1 Democratic issue is going to be the Marshall plan, its contribution to world peace and what the Republicans do to it and other international measures in Congress.

He also plans to light into the Republican record on national defense—charge the GOP with failure to support a military establishment adequate to preserve peace, from the Guam fortification test down. Only two Ohio Congressmen voted to fortify Guam. KIRWAN was one of them.

POCKET OR PAUNCH

Like peace, KIRWAN's second issue—food—covers a lot of territory. He uses the word interchangeably with "stomachs," "bankroll," and "savings." And what he means all the time is that inflation is driving prices out of the average man's reach, cutting into his savings and making him take in his belt.

"When you touch a man's bankroll, you've made an enemy," says KIRWAN. "During the war nearly everybody saved money. Now, in peacetime, they've used up their savings and can't make their salaries stretch. Who's to blame?"

For Democrats and Republicans alike, that's the jackpot question. The answer will determine the political complexion not only of the next national administration but probably of the next House and Senate.

KIRWAN insists the country has already made up its mind.

"It's just the reverse of 1946," he says. "They don't blame the President any more. They blame the Republican Congress."

"Wise Subordination of the Military to Civil Power"—Eisenhower

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. CASE of South Dakota. Mr. Speaker, on Friday last, Gen. Dwight D. Eisenhower stepped out as Chief of Staff, United States Army, to begin a new career, and his successor was sworn in. A few days earlier, January 26, General Eisenhower issued a statement which stirred the Nation. It was a statement in keeping with the finest in American history on the "wise subordination of the military to the civil power." The thought was akin in principle to what I tried to say only the week before on the growing tendency to use military career men in the executive branch of the Government. General Eisenhower's statement should be not only preserved in the CONGRESSIONAL RECORD, but widely disseminated and frequently read. Under permission heretofore given, I place it in the RECORD at this time:

The text of General Eisenhower's letter to Leonard V. Finder, New Hampshire newspaper publisher, regarding the Republican Presidential nomination follows:

DEAR MR. FINDER: Your letter and editorial have been on my desk for more than a week while I pondered the reply merited by your obvious concern for the Nation's welfare, and from a personal standpoint, by the honor you had done me. Months ago I thought that unqualified denial of political ambition would eliminate me from consideration in the coming campaign for the presidency, because that office has, since the days of Washington, historically and properly fallen only to aspirants.

That some few would misinterpret or look for hidden meanings in my past expressions was expected and discounted, but my failure to convince thoughtful and earnest men such as yourself, proves that I must make some amplification. This will necessarily partake of the laborious, due to the complexity of the factors that have influenced me to say no more than I have, but which dictate my decision that I am not available for and could not accept nomination to high political office.

I have heretofore refrained from making the bald statement that I would not accept nomination, although this has been my intention since the subject was first mentioned to me.

This omission seems to have been a mistake, since it has inadvertently misled sincere and disinterested Americans. But my reticence stemmed from cogent reasons. The first was that such an expression would smack of effrontery. I had and I have no desire to appear either as assuming that significant numbers of our peoples would actively interest themselves in me as a possible candidate, or to appear as lacking in respect and regard for the highest honor American citizens can confer upon one of their own body.

A second and even deeper reason was a persistent doubt that I could phrase a flat refusal without appearing to violate that concept of duty to country which calls upon every good citizen to place no limitations upon his readiness to serve in any designated capacity. On this point it is my conviction that, unless an individual feels some inner compulsion and special qualifications to enter the political arena, which I do not, a refusal to do so involves no violation of the highest standards of devotion to duty.

It was only the possible misinterpretation of my attitude that caused me concern and so long as I could believe that mere denial of political ambition would prevent serious misunderstanding and misdirected effort, I was reluctant to say more. It would seem almost superfluous for me to add that as long as I live I shall hold myself in instant readiness to respond to any call by the Government to military duty.

In full awareness, then, and not in violation of my own sense of duty, I have developed the following conclusions which are responsible for my negative decision.

It is my conviction that the necessary and wise subordination of the military to civil power will be best sustained, and our people will have greater confidence that it is so sustained when lifelong professional soldiers in the absence of some obvious and over-riding reasons, abstain from seeking high political office. This truth has a possible inverse application. I would regard it as unalloyed tragedy for our country if ever should come the day when military commanders might be selected with an eye to their future potentialities in the political field rather than exclusively upon judgment as to their military abilities.

Politics is a profession—a serious, complicated, and in its true sense, a noble one.

In the American scene I see no dearth of men fitted by training, talent, and integrity for national leadership. On the other hand, nothing in the international or domestic situation especially qualifies for the most important office in the world a man whose adult years have been spent in the country's military forces. At least this is true in my case.

I am deeply regretful if a too simple faith in the effectiveness of a plain denial has misled any considerable number concerning my intentions and so allowed them to spend time and effort under erroneous impressions. At the risk of appearing pompous, I must say that the honor paid me cannot fail to spur me in future years to work the more diligently for America, her youth, her veterans, and all her citizens, and for the continuance of peace.

I trust that this rather lengthy explanation will convince you that my conclusions are not only sound but have been arrived at objectively and have not been unduly influenced by my own desires and convenience. In any event, my decision to remove myself completely from the political scene is definite and positive. I know you will not object to my making this letter public to inform all interested persons that I could not accept nomination even under the remote circumstances that it were tendered me.

With warm personal regards,

Sincerely,

DWIGHT D. EISENHOWER.

United States Interests in East Endangered by Conflict in Policies

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, I am calling attention to two important articles dealing with the present situation in Palestine which appeared in the Washington Star on Sunday, February 8, 1948. One article is by Mr. Leigh White from Tel-Aviv, Palestine, and the other is by Phillips Talbot, both writers for the Chicago Daily News. These men have been in Palestine and frankly set forth herein their observations and views.

Mr. Speaker, no situation is quite so acute as this one. Immediate steps should be taken by President Truman to compromise the difficulties between the Arabs and the Jews. If he fails in this respect, war is bound to result.

UNITED STATES INTERESTS IN EAST ENDANGERED BY POLICIES—RUSSIA ALONE STANDS TO GAIN AS ARAB NATIONS FEEL BETRAYED; ASIATIC PEOPLES LIKEWISE LOSING FAITH

(By Leigh White)

TEL AVIV, PALESTINE.—Much to the delight of Russia, the whole structure of American foreign policy is beginning to crumble in the Middle East.

By taking a leading part, against the wishes of the Arab League, in pushing the partition of Palestine through the United Nations, the United States has aroused the suspicion—and thereby the potential enmity—of every Arab leader of whatever political complexion.

The United Nations' action, in which Russia sided with the United States, sets up a Jewish state in the Holy Land.

Every educated Arab with whom I have spoken in Iraq, Palestine, and Egypt feels that his people have been betrayed in the interests of a Jewish minority in the United States.

Arab spokesmen maintain that the persecution of the Jews is a purely western problem that has nothing to do with the Middle East. Westerners have no right, they say, to force easterners to suffer the consequences of the westerner's refusal to make room for Jewish refugees.

ONLY MILLION NATIVES

They insist that only native Jews have a right to concentrate in Palestine and that foreign Jews have no more right to do so than Italians had a right to occupy Albania or Ethiopia.

Even if all of the world's 10,000,000 surviving Jews were supporters of Zionism—which is not the case—not more than 1,000,000 Jews are natives of the Middle East.

No Arab ever will be convinced that a decision in favor of 1,000,000, or even 10,000,000, Jews against the wishes of 70,000,000 Arabs has anything to do with the principles of justice which the United States says it is defending.

And it is important for Americans to remember that Palestine, to the Arabs, is an integral part of the Arab nations. It is to the Arab world roughly what Delaware is to the United States.

To the Arabs, the forcible establishment of a Jewish state in Palestine is equivalent to an armed invasion of the Arab world. Anyone supporting such an armed invasion will sooner or later be treated as an enemy.

MILITARY AID SOUGHT

Americans may not know it, but officials of the Jewish agency are counting on the United States to provide them with the weapons needed to enforce the Palestine decision. In other words, the United States now is involved in a military adventure.

The Arabs in turn, by resorting to force, have made impossible the peaceful achievement of the Jewish agency's maximum aims. If those aims ever are to be achieved, they now will only be achieved by force.

The only hope of a peaceful settlement—and it is waning as the violence in Palestine increases—is a compromise based on minimum rather than maximum Jewish aims.

Arab leaders with whom I have spoken hint that an autonomous Jewish republic inside a greater Palestine will be acceptable, even with increased immigration, provided a quota is imposed to insure that the proportion of Jews to Arabs is not increased beyond 30 or 35 percent.

Unless there is a compromise, American observers feel, there will almost certainly be a holy war, against Americans as well as Jews—a holy war that only the Soviet Union can win.

WE LOSE GOOD WILL

American policy in the Middle East has long been based on the assumption that we could win, and hold, the respect of the Arab world.

We are losing that respect and friendship today because of our stand on Palestine in the United Nations.

The forcible creation of a new Judea, in the opinion of our best-informed observers, probably will make it necessary for the United States to send troops to many Arab countries in order to protect our stake in the oil production of the Middle East.

Our position would then be that of an invading power, and the Arabs would become more and more susceptible to the offers of Soviet assistance that woud promptly be forthcoming. The holy war against Zionism would gradually be converted into a holy war against Anglo-American imperialism.

Any benefits accruing from the Marshall plan in Europe would thus be more than offset by the resulting turbulence throughout the Middle East. Greek, Turkish, and Iranian resistance to the Soviet war of nerves would be gravely weakened in consequence, and the Moslem leaders of Pakistan, already tempted, would be more than ever likely to make common cause against us with the Moslem republics of the U. S. S. R.

These are the reasons why American representatives throughout the Middle East are almost unanimous in regarding our Government's action in Palestine as folly. They are hoping against hope that it will be corrected before it is too late.

—

(By Phillips Talbot)

While the United States concentrates on saving Europe, its prestige in Asia is skidding dangerously.

Asians think Americans do not realize that the big eastern continent is growing up fast. They resent appearances that United States policy in southern colonial Asia is dictated by our interests in the European mother countries.

Yet take a look at the record, they argue:

1. The Arab countries were released from Ottoman rule in the First World War, then fell mostly under British and French influence. Now all are independent except Palestine, whose case is on the anvil.

2. India (with Pakistan) finally gained freedom after generation-long campaign sparked by Mohandas K. Gandhi and, among the Moslems, by M. A. Jinnah.

COLONIALISM COLLAPSING

3. Southeast Asia was politically asleep a generation ago. Now Siam, the Philippines, and Burma have become independent, while Ceylon is almost self-governing, Malaya and Singapore have new constitutions in sight, and struggles for self-rule are going on in Indonesia and Viet Nam.

Asiatic colonialism, in short, is collapsing far faster than feudalism broke up in western Europe earlier.

New states, new forces, new ambitions are appearing from the Mediterranean to the Pacific.

This eruption has not been peaceful. But these disturbances also underline the necessity of a realistic United States policy in southern Asia—one that counts the new forces and thinks in terms of the millions of humans who live in that zone.

Recently an American consul general was stationed in Java. One of his main tasks was to report on relations between the Dutch and the Indonesians.

He was extremely popular with the Dutch. He even contributed a foreword to a Dutch propaganda pamphlet published last July.

But the Indonesians interpreted that officer's presence in Java as evidence that the United States was interested in Holland but not in the Far East.

The Indochina American foreign service officers were reluctant to associate with Viet Nam nationalists.

By indirect evidence, also the newly emerging forces in Asia think that the United States is against them. Dutch troops in Java and Sumatra and French troops in Indo-China both sport American military equipment in their campaigns against nationalists.

UNITED STATES POLICY CONFUSING

"It is difficult for us to understand America," a Southeast Asian nationalist said to me last fall. "We want her friendship and need her help as much as the European countries do.

"But we believe that her interests as well as ours make it important that the United States should no longer consider us just as possessions of European countries.

"Political peace in Southeast Asia means more rubber and other tropical products available quickly for the world, and the United States is one of the biggest buyers."

This country must be ever vigilant to balance the new forces with the old ones in making foreign policy.

Cashing In on Foreign Trade Zones

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I am inserting the following article which appeared in the December 30, 1947, issue of the bulletin of the Research Institute of America:

CASHING IN ON FOREIGN TRADE ZONES

Foreign trade zones—those United States port areas where goods can be stored and processed completely free of customs regulations—will offer new opportunities for profits and savings in 1948.

New zones on the west coast are likely to be added to the two areas already established in the East and South. Recent policy changes will expand the zones' general use. As a result, it's more important than ever for foreign traders to look into the possible advantages.

HOW THE ZONES WORK

Congress authorized foreign trade zones in 1934. Rules and policies governing their operation are set by a Foreign Trade Zones Board, composed of the Secretaries of the Treasury, War, and Commerce. The zones are administered by corporations authorized by the Board.

The zones are run on a straight profit-and-loss basis; the managing corporations' income is based on dockage, storage, and service charges paid by companies using the facilities.

There is no limit to the number of zones which may be established, but the Board has so far been leery of handing out authorizations except where there seemed a real economic need. Using this yardstick, zones have been set up successfully in New York and New Orleans; one failed to work out in Mobile, and one in San Francisco is now awaiting final approval.

Four key rules govern use of the zones:

Any goods may be stored in the zones indefinitely, without bond and free from payment of all customs duties.

While stored in the zones, goods may be cleaned, graded, repacked, reconditioned, and otherwise manipulated, without Government intervention or control.

Goods may not be exhibited for sale, but bona fide buyers are allowed to examine the merchandise under customary trade conditions normally employed for showing the specific commodity.

No goods may be manufactured within the zones.

Recent rulings by the Foreign Trade Zones Board have greatly increased the trade possibilities of the zones. The phrase "manipulate" has been broadened to include many activities formerly banned as "manufacturing."

Illustration: Contrary to previous interpretations, it is now held that the assembling of watch movements into cases and the attaching of wrist bands to watches do not constitute manufacturing. Similarly, the screwing of bulbs into flashlights, the blending of olive with vegetable oils, and the mixing of sugar and flour to make a prepared baking mix no longer fall under manufacturing.

More such rulings are expected. For instance, the dyeing of piece goods will probably be made permissible.

SEVEN WAYS TO BENEFIT

Check on whether the zone set-up can help you hold down operating costs when importing goods:

1. You can avoid paying duty on shrinkage by storing merchandise subject to evaporation or seepage in foreign trade zones until ready for marketing. This can mean big savings to importers of tobacco, liquor, nuts and other commodities subject to weight loss in inventory.

2. It is often possible to process goods into a class subject to a lower rate of duty. For example, certain fruit juices may be combined with domestic flavoring while in the zone, and then brought into the country at a lower duty than if imported in the original form. Similarly, foreign rugs can be imported at lower duty rates by removing excess fringe while in the zone.

3. You can also avoid duty losses by using the zones to sort out materials which fail to meet United States market standards. Often such substandard material can be reexported to countries where market requirements are lower. Use of the zone for this purpose means minimum United States customs expense and red tape.

4. Operating expenses, and particularly the cost of maintaining inventories, can be whittled down by storing goods in foreign trade zones. No duties or excise taxes need be paid as long as the goods are held there.

Moreover, the importer can borrow against warehouse receipts issued for goods stored in the zones, without posting any bond. (Where receipts are issued for goods stored in a bonded warehouse, there is the extra expense of arranging for a bond equal to twice the amount of duty.)

5. Insurance costs are lower. Where goods are entered through customs and then stored, insurance must be carried on their duty-paid value, plus any other taxes that may have been applied. Where goods are stored in a foreign trade zone, the charge will only be on the value of the goods.

6. You can save handling and office expenses. There's a minimum of customs red tape, and goods are always under the owner's control. (In a bonded warehouse, of course, you may be hamstrung by the requirement of customs supervision over any handling—at your expense.)

7. The zones are usually more convenient for storage purposes. You can keep goods there indefinitely, and in any sized package, while goods may be withdrawn from a bonded warehouse only in an entire bale, cask, or box, and only in the original package unless repacking is necessary for the goods' protection.

EXPORTERS GAIN, TOO

Foreign trade zones offer important advantages to exporters—especially in the case of reexporting. Customs formalities are held to a minimum. Since no duty is paid as long as the goods are in the free zone, you have no problem of draw-backs. Also, like the importer, the exporter may clean, recondition, repackage (with his own brand name), assemble, mix with domestic goods and ship—all with a minimum of paper work.

In some cases savings are even possible on straight exports. For instance, where domestic flour is packed in imported bags and exported, you get a draw-back on duty paid if the packing is done within a foreign trade zone.

Recommendation: Think about cashing in on a foreign trade zone now. Few businesses are sufficiently aware of the potentialities. If you believe your line is one where use of a zone might mean greater savings, you should contact the New York zone by addressing inquiries as follows: New York Foreign Trade Zone Operators, Inc., 17 Battery Place, New York, N. Y. For the New Orleans zone, address queries to Foreign Trade Zone No. 2, New Orleans 15, La.

Increased Subsistence Allowance for Veterans Pursuing Educational Work Under Servicemen's Readjustment Act

EXTENSION OF REMARKS
OF
HON. MELVIN C. SNYDER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. SNYDER. Mr. Speaker, I favor the passage of H. R. 4212, providing for increased subsistence allowance for veterans pursuing educational work under the Servicemen's Readjustment Act.

During the past summer, I availed myself of the opportunity of visiting some of the colleges in West Virginia and made particular inquiry about the GI students, how they were getting along from an academic standpoint and whether or not their subsistence allowance was sufficient to meet current necessary living expenses. I know you will receive satisfaction in learning that the report on the GI's academic work was very favorable. This seems to be true not only in West Virginia, but from all information it is universally true throughout the United States.

On inquiring as to whether or not the subsistence allowance was sufficient, the replies were unanimous by all school officials that they were not, in view of the high cost of living.

Recently I noted where a survey had been made by a committee of the American Council on Education, financed by the Disabled American Veterans, on the sufficiency of subsistence payments. The committee found that the average total monthly expense of single veterans in college is $106.13, or $43.13 more than the $65 allotment. Married students spent $175.38, but received only $90, making a difference of $85.38.

To make ends meet, the committee reported that many veterans worked during school terms or summer vacation. Of the more than one-third employed, 92 percent earned from $10 or less to $30 in a term. Earnings of the remaining 8 percent range from $31 to $105. Wives of 56 percent of the married students worked to supplement their husband's incomes.

Many of the schools in which the 1,250,000 veterans are enrolled are located in small towns where it is impossible for the veteran to get employment to supplement his Government allowance. Consequently, the veteran is in a position of either living on his allowance or withdrawing from school. Unfortunately, in many instances, the veteran has had to give up his school work.

The provisions of this bill, while inadequate to take care of the entire expense, in many instances, will give substantial relief.

The Veterans Economic Development Corporation Act

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. KEFAUVER. Mr. Speaker, a great deal of interest has been manifested in the Veterans Economic Development Corporation Act, which is being sponsored in the Senate and House by a bipartisan group including such distinguished Senators and Members of Congress as Senators BRIDGES, BARKLEY, FERGUSON, FULBRIGHT, HAWKES, and HILL; and in the House by Representatives WOLCOTT, SPENCE, ROGERS of Massachusetts, and KEARNEY. The bill which I have filed in the House is H. R. 521.

One of the real concerns of the Nation today is giving veterans and small businessmen a better economic opportunity. That is the purpose of this bill. It establishes a corporation similar to the RFC to furnish technological assistance and funds where they are not available from private sources to veterans and

small businessmen who wish to establish sound and profitable businesses of their own.

Recent reports indicate that $3,000,000,000 has already been paid out in readjustment allowances to veterans. About 500,000 veterans have already exhausted their allowances, and about 700,000 are drawing their readjustment allowances at this time. It is in the interest of economy, as well as to the benefit of veterans and small businessmen to assist them in getting started in their own businesses, where they have a sound proposal that would succeed.

Many veterans groups are supporting this legislation on the basis that a chance to have their own business is the great desire of members of their organizations.

Under leave to extend my remarks, I include a letter to me from Ray H. Brannaman, commander in chief of the Veterans of Foreign Wars:

VETERANS OF FOREIGN WARS,
Washington, D. C., January 5, 1948.

Hon. ESTES KEFAUVER,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN KEFAUVER: It was a particular honor to have you attend our luncheon Saturday in Washington given for distinguished Members of Congress, for ambassadors and for representatives of nations under the Marshall plan, of China, of the Philippines and representatives of the American Legion, the Disabled American Veterans and the American Veterans of World War II.

In The Veterans Plan To Win the Peace, that I announced over the NBC national network and at the luncheon, your "Tennessee plan" can serve to implement plans in the other 47 States. We wish to compliment you on your plan as it will help the people of the communities, including veterans, by bringing new industries to the communities, expanding present businesses, modernizing agriculture and by creating new industrial uses for agricultural products.

We find that experts from other nations are interested in developing programs similar to the "Tennessee plan" to enable their people to prosper and to hold the line against communism and war. It is not an overstatement to say that if applied here at home and abroad, such a plan would help win a bloodless World War III before the shooting starts.

Your championship in Congress of small business in the United States and the establishment of veterans in businesses and profitable careers has our support. The bill that you introduced in Congress, on January 6, 1947, H. R. 521, entitled "The Veterans Economic Development Corporation Act," will enable millions of veterans to catch up with the economic parade at home and abroad. Your bill will interest the taxpayers particularly as no appropriation of taxpayers' money is contemplated. In addition, it is estimated that it will reduce taxes as it will save a billion dollars a year of the present cost of government.

The bipartisan support of your bill and its early passage is indicated by the companion bills introduced in the House by EDITH ROGERS, of Massachusetts, chairman of the important Veterans' Committee, WOLCOTT, of Michigan, an authority on finance and chairman of the Banking and Currency Committee, and past Chairman SPENCE, of Kentucky, by Congressmen KEARNEY, of New York, and VAN ZANDT, of Pennsylvania, both former commanders in chief of the Veterans of Foreign Wars and members of the American Legion.

The unusual support of your bill in the Senate is shown by the introduction on July 17 of companion bill, S. 1652, by Senator BRIDGES, of New Hampshire, chairman of the important Appropriations Committee on his behalf and on behalf of Senators BARKLEY, of Kentucky, BUTLER, of Nebraska, chairman of the Public Lands Committee, REVERCOMB, of West Virginia, chairman of the Public Works Committee, FLANDERS, of Vermont, of the Committee for Economic Development, MORSE, of Oregon, chairman of the Veterans' Committee of the Committee on Labor and Welfare, and Senators CAIN, of Washington, CAPEHART, of Indiana, DWORSHAK, of Idaho, FERGUSON, of Michigan, HAWKES of New Jersey, KNOWLAND of California, JENNER of Indiana, MARTIN, of Pennsylvania, JOHNSON of Colorado, FULBRIGHT, of Arkansas, EASTLAND, of Mississippi, MAYBANK, of South Carolina, and HILL, of Alabama. In addition to the approval of your bill given by President Truman, it is significant also that small business associations and others are enthusiastic about the prospects of your bill's helping to enrich the people in the communities.

As our veterans economic development corporation bill helps others as well as veterans, it should implement your Tennessee plan as a new milestone in the illustrious history of Tennessee and of the Nation. More power to you and we veterans are behind you.

Best wishes,
Sincerely,

RAY H. BRANNAMAN,
Commander in Chief.

In his letter, Commander in Chief Brannaman refers to the Tennessee plan. It is the desire of the sponsors of the legislation to utilize the information and assistance of local groups in every possible way. State and local planning commissions would be called upon to render assistance in resource uses and in giving counsel as to the types of enterprises in the various communities which would succeed. In areas where the Tennessee Valley Authority operates the information secured by the TVA as to the economic opportunities would be of benefit.

Col. Richmond Harris, a native Tennessean, who is serving as technical consultant in connection with this legislation, together with other experts, has prepared tentative State plans for a number of States, including New Hampshire, Delaware, Maryland, Idaho, and Tennessee. The tentative proposal for Tennessee as prepared by him is as follows:

TENNESSEE PLAN

The Tennessee plan is designed to develop the resources of the State to promote the prosperity, welfare, and health of all its people. Career opportunities for veterans as well as continued full employment for others would be fostered through the development of needed new businesses, the modernized productivity of agriculture, the utilization of unused natural resources and the implementation of needed self-liquidating public projects.

Planning activities would be on a State, county, regional, or community level. The State planning board, with the assistance of a know-how committee composed of technical experts, would plan for the physical development of the State, cooperating with other State agencies in the preparation of programs. It would also assist regional and county committees (which would plan for county and regional projects) and community planning boards, giving technical advice and assisting in the coordination of State, county, and community plans. It would further extend technical assistance to individuals, new businesses, and projects.

Since the Tennessee plan is essentially a grass-roots plan—designed to serve small business and industry and agriculture in the community—emphasis on planning would be on a community level. Thus, while the State planning board and know-how committee would engage in planning on a State-wide basis, their primary function would be to serve the interests of the communities and to bring to bear the cooperation of the Federal Government on local projects whenever advisable and necessary.

Because of this emphasis on local planning, the following outline on State and community planning will list specific opportunities for development and expansion under the section on community planning.

COMMUNITY PLANNING

1. Local planning board established, representing industry, finance, business, labor, sciences, the professions, veterans, religious groups.

2. Planning board sets up a know-how committee.

3. Planning board outlines program of activity, receiving assistance in organizing and formulating programs from State planning commission or State know-how committee:

a. Inventory to determine present and future economic needs, including preparation of town and agricultural maps on the following:

(1) Population distribution and trends.
(2) Property tax surveys.
(3) Land use.
(4) Zoning ordinances.
(5) Traffic studies.
(6) Recreational facility requirements.
(7) Health and welfare survey.
(8) Community center redevelopments.
(9) Highway maintenance.
(10) Fire protection.
(11) Water supply.
(12) Housing.
(13) School system.
(14) Farming.
(15) Utility services.
(16) Transportation service—airport, etc.

(a) Uses facilities of Federal, State, and regional agencies for fact finding and making projective studies.

4. Opportunities for development and expansion:

a. Local industries:

(1) Needed expansion of existing industries.

(2) Needed new industries:

(a) Research for new products.

(b) Use of captured enemy patents and new processes.

(c) Use of natural resources.

(d) New industrial uses for agricultural products.

(3) Processing plants for local products.
(4) Assembling plants for local markets.
(5) Service industries.
(6) Retail trade.

b. Land use:

(1) Land conservation:

(a) Irrigation—surface and underground water resources.
(b) Reforestation.
(c) Erosion control.
(d) Soil treatment.
(e) Fertilizers.

(2) Water-power development:

(a) Utilities.
(b) Industrial uses.
(c) Agricultural purposes.
(d) Home.

(3) Agricultural practices:

(a) New methods of farming and livestock improvement.

(b) New crops and expansion of present acreage.

c. Commerce:

(1) Sales development—new market centers in growing communities.

(2) Farm cooperatives.
(3) Export development opportunities.
(4) Shipping:
(a) Assembly, processing, and warehousing facilities.
(b) Harbor improvements; feeder lines.
(c) Inland and ocean-going ports.
(5) Air transport.
(6) Trucking.
(7) Freight.
d. Mining:
(1) Geological surveys.
(2) Development of mineral products.
e. Tourist and recreational areas:
(1) Beaches and artificial ponds and lakes.
(2) Wood trails and roads, camping areas.
(3) Sports, fish and game stocking.
(4) Restoration of historical areas, scenic improvement.
(5) Hotels, cabins, and restaurants.
(6) Stream and pond pollution control.
(7) Handicrafts.
f. Public service (self-liquidating):
(1) Utilities and power development.
(2) Transportation of passengers:
(a) Bus.
(b) Streetcar.
(c) Train.
(d) Air travel.
(e) Boat.
g. Public health and welfare (self-liquidating):
(1) Medical clinics.
(2) Fire prevention.
(3) Sanitation.
(a) Stream pollution abatement.
(b) Sewage disposal.
(c) Garbage disposal.
(4) Hospital (improvement and/or expansion).
h. Public works and public improvements (self-liquidating):
(1) Housing:
(a) Multiple low rental units.
(b) Prefabricated and industrial housing.
(2) Toll roads and toll bridges.
(3) Parking areas and buildings.
(4) Municipal projects.
i. Education (self-liquidating):
(1) Colleges, professional and trade schools (improvement and/or expansion).
(2) Housing to accommodate veteran students.
(3) Community recreation centers.
(4) Vocational and social guidance.
(5) Rural school program, consolidation, and transportation.

STATE AND REGIONAL PLANNING

1. State planning board established, representing industry, finance, business, labor, sciences, the professions, veterans, religious groups:

a. Supplements and implements work of existing State planning agencies.

b. Cooperates with and serves community planning boards.

2. Planning board sets up a State know-how committee composed of technical experts in various fields:

a. Know-how committee gives technical advice to planning board, to community know-how committees, to county or regional committees, to individuals, to new businesses and projects.

3. Planning board outlines program of activity, receiving assistance in organizing and formulating programs from State know-how committee or State planning commission:

a. Takes inventory to determine present and future economic needs of State and geographical area, preparing State, regional and county maps and statistical studies:

(1) Uses facilities of Federal, State, and regional departments and agencies for fact-finding and making projective studies.

4. Planning board relates county, community and intrastate regional plans to one another, thereby eliminating overlapping, confusion, and unprofitable enterprises and projects.

5. Planning board cooperates with other States on regional projects in same geographic area, such as power developments, land conservation, etc.

(Specific opportunities for development and expansion outlined in detail in section on community planning.)

With our diversity of industry and agriculture in Tennessee, plus the benefits and information already available through the TVA and the State planning commission, ours is a strategic State to show how this act can be made to operate for the benefit of every business and agricultural community in the State.

For example, there are the new scientific processes, trade secrets, and patents that our veterans have captured from enemy countries, which can be of commercial profit to small new industries in our communities. John Webster, of the Department of Commerce, who was sent to Germany to evaluate and codify this material, informs me that its value to American businessmen is estimated to be as high as $20,000,000,000. Much of the goods that people of our communities buy from other States and other countries can be produced by themselves to bring and keep more wealth in the communities of Tennessee.

In an area of such potential wealth, there are many factories still to be built, many new jobs to be had from developing Tennessee's dormant resources. There are great areas of land to be restored to full productivity through soil treatment and modernized agricultural methods. There are houses, roads, schools, hospitals, and parks to build, utilities to install, oil and gas exploration and developments to be made, mineral resources such as limestone and phosphate and coal to be developed, our output of lumber to increase.

This program is designed to enable our veterans and other people to participate in the tremendous economic possibilities which lie in the field of peacetime uses of atomic energy. These will include the design, development, and manufacture of many special types of equipment, structural materials, and instruments. The expansion of uses of radio isotopes in medicine, agriculture, and in industry will also bring demands for special types of equipment and instruments and will itself be an important field of technical activity. The future development of useful power from nuclear fuels will create a demand for entirely new types of equipment and will open a new field of engineering.

Much of the work can be immediately accomplished under the executive order by the President or by amendment of existing legislation. In teamwork with technical experts and community leaders, veterans, and others can benefit from this plan, which will be implemented also under the provisions of the Veterans' Economic Development Corporation Act, which we have introduced in the Eightieth Congress.

Our Congress

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the editorial which appeared in the Daily Mirror, New York City on Monday, January 12, 1948, entitled "Our Congress":

OUR CONGRESS

O for the good old days when Congress delivered grandiloquent addresses on the tariff and similar simple matters!

Nowadays each Senator and Congressman must be an expert on the state of some 50 countries.

He must know the policies and purposes of Ibn Saud and Tito, of Pauker and Hoxha, of Chiang Kai-shek and Mao Tze-tung. He must know the geography of Pakistan and Turkestan, of Iran and Iraq, of France and Greece.

He must be a walking State Department and he needs to be able to discover when an employee of the Government of the United States is practicing diplomacy on him—diplomacy being the gentle art of lying about trivialities and fabricating about major issues.

He must be a super FBI to discover the wiles of the hired hands who pad the payrolls and other Government expenses.

He must know that the teeth of the children of Georgia require dentistry and that hoof-and-mouth disease threatens our food supply. He must know the value of a super air fortress over a submarine.

And so the Senators and Members of the House of Representatives no longer come to Washington for a few weeks each year. They have an all-year-round job.

Those who take their committee appointments seriously never finish their work. It goes on and on.

And when smart alecks talk about congressional junkets to Europe or Asia or South America, they give the impression that these representatives of the American people vote themselves fancy vacations.

It is precisely the opposite.

This year more than 100 Members of Congress traveled in Europe and out of it came, for one thing, the work of the Herter committee—the most solid study of the so-called Marshall plan.

It is no longer possible for the little fellows in the State Department to bluff the Congress by hiding reports and not knowing how to answer questions. Plenty of Members of Congress are better informed than plenty of so-called experts.

An excellent example of that was on the Town Meeting of the Air a few days ago. William C. Bullitt and Congressman WALTER H. JUDD were debating Owen Lattimore and Richard Lauterbach on the subject of China.

Lattimore is one of the smart experts close to the White House in Roosevelt's day; now director of the Walter Hines Page School of International Relations at Johns Hopkins University.

What Congressman Judd did to Lattimore in this debate should not happen even to one who is not an expert.

Judd knew. Lattimer opinionated.

Judd hurled facts at Lattimore which he and Lauterbach dodged. And when Bullitt hit an intellectual solar plexus, you could hear it all the way between New York and Nanking.

The American people are to be congratulated on their Congress. No harder working men exist anywhere. And they are truly representative of the varieties of Americans.

Maybe, some New Yorkers do not like some Congressmen who come from the South and West—and it is certain that lots of folks in the South and West dislike some New York Congressmen. But that is the kind of people we are and the Congress mirrors the nature and character of our people.

Maybe, the good old times were easier or even better—but for what we face today, it is sound to put your trust in Congress.

Decentralize for Liberty

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1948

Mr. KEFAUVER. Mr. Speaker, I would like to call attention to a recent important book which, in my opinion, should be studied by every Member of Congress, and, indeed, by every thinking person in the country, Decentralize for Liberty, by Thomas Hewes. Everywhere throughout the country business leaders themselves are growing more and more concerned over the great concentrations of power which have come to dominate our economic world. For many years it was only the college professors, commonly called crackpots, who constantly warned us of the dangerous growth of monopoly. But now we find that business leaders are seeing the handwriting on the wall. Within the past few years a number of books have appeared, written by businessmen or lawyers for prominent business firms, in which drastic and immediate action is urged to reverse the trend toward monopoly. The book by Mr. Hewes, senior partner of the well-known law firm of Hewes & Awalt, belongs in this group and is, to my way of thinking, one of the best works ever to appear on this whole subject.

Backed by 35 years of active experience in practicing law, Mr. Hewes has arrived at his conclusions, not from the books of abstract theoreticians, but from actual first-hand experience. Although one may have some reservations concerning some of the details of his program, his description of the broad outlines of the problem and his recommendations as to the general direction in which public policy must move are, to my way of thinking, beyond criticism.

Mr. Hewes' work forcibly points to the moral, which has constantly been urged on its business readers by no less an authority than Fortune magazine, that every true conservative should be a zealous supporter of the antitrust laws and a stanch opponent of monopoly and centralism. That they are not so, may probably, more than anything else, be the cause of their own undoing.

Because of the timeliness and the importance of Mr. Hewes' work, particularly in regard to many of the legislative proposals facing the Congress today, I would like to add part of a review of the book written by Mr. Joseph Lalley, the distinguished critic of the Washington Post, which appeared in Human Events in October 1947:

DECENTRALIZE FOR LIBERTY, BY THOMAS HEWES

The great social dilemma of our time might, I believe, be logically stated thus: (a) In an industrial society the mass of mankind cannot have both economic security and liberty; therefore (b) if we choose security, we must sacrifice liberty; or (c) if we choose liberty, we must accept insecurity. Is it possible to escape this dilemma? I think it is a rule of logic that dilemmas cannot be evaded, that the only hope of the disputant who finds himself trapped in one is to demolish the major premise from which the horns, or unhappy alternatives, have been projected; in other words by proving that it is not a real or valid dilemma. This in effect is what Mr. Hewes has attempted; he wishes to show that liberty and security (as we use the term today) are not necessarily irreconcilable and that we are not obliged to choose between democracy and wage-slavery on the one side and socialism and State slavery on the other. He offers a third choice the nature of which is sufficiently indicated by the title of his book.

Still, it might be well to rehearse the argument whereby the major premise of our dilemma has been established. Under the conditions created by the industrial revolution and by the mechanisms of finance capitalism the inevitable tendency of unregulated competition is toward monopolies which are themselves destructible of free industry and free competition. That is to say power machinery and the new division of labor enabled the factory owner to eliminate the individual producer, the large industry to absorb the small one, the powerful industry to extend its operations into other fields. As the scale of these operations enlarges the domination of industry passes to a few bankers and financiers. This process whereby ownership and economic power are concentrated into progressively fewer hands is necessarily accompanied by the multiplication of a class which, possessing no capital, has nothing to sell but its labor, in short a proletariat.

The cumulative psychological and moral wreckage of this process, which is destructive of all tradition, engenders a revolutionary spirit. The workers, aware of their individual impotence against the monopolists, seek power in collective action. But here again the monopolistic tendency asserts itself. The trade unions follow the same pattern of expansion and unification, and presently the control of striking and bargaining power passes to a handful of individuals. The control of a vast and powerful union may even lead in the end to the virtual control of a basic industry by a single individual. Meanwhile, the increasing insecurity of existence for an increasing proportion of the population gives rise to a demand for Government intervention and for amelioration in such forms as social insurance and guaranteed employment; but it is soon evident that these require a planned economy and that a planned economy means rigidly controlled economy.

Such is the dilemma Mr. Hewes has here undertaken to demolish. He presents a plan of action, applicable under American conditions, which will preserve capitalism while eliminating the social maladies to which it has given rise.

Veterans Speak Up on Army Waste

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. ENGEL of Michigan. Mr. Speaker, on January 22, 1948, I spoke on the floor of the House on Army waste.

I am including in these remarks excerpts from a few of the many letters I received since then. I presume that the Army will as usual investigate itself and find itself not guilty by applying as usual a liberal supply of whitewash.

By coincidence the first letter I quote is from the same captain who conferred with me at Karachi, India, during the inspection trip of my committee. He was the one who stated, as I explained in my recent speech, that the Army had promised the men at Karachi that they would have opportunity to talk with my committee, that the officers and enlisted men would each be allotted an hour with my committee. He got me aside complaining we were being rushed along so the interview could not take place. Thanks to this captain I insisted the men be heard. After reading an account in a newspaper of my recent speech, this man, Morris H. Dresner, 19367 Cherrylawn, Detroit, now enjoying the freedom of the American civilian, writes me as follows:

I was the captain in Karachi, India, who induced you to stay over and listen to first the officers' complaints and then the enlisted men's complaints.

I read your charges and I am happy to say that I hope you stick with it until you make them crawl for cover. After you left Karachi I had inspectors general from Washington, New Delhi, and Calcutta in to take my testimony. I was definitely persona non grata after that, but I didn't care. Make your charges stick.

Here are excerpts from a handful of the hundreds of other letters I received, mostly from ex-service people, in response to my speech, all telling the same story:

From Brooklyn, N. Y.:

On Guam, which is in the Tropics, came loads of winter underwear. Was it returned as a mistake or sent to needy people? No; it was put in the dumps—a most useful place for everyone to look for what they needed. The underwear was used for greasing and cleaning planes and machinery. Also when someone wanted a refrigerator, one could be found at the dump. Many cans of food were dropped by the wayside over the rough roads, never to be retrieved. But the natives knew where to look and sort out these cans, always near a rough spot in the road. Persons who worked there on the clerical staff were shocked at American waste (being from Australia and New Zealand, where there was such a lack of things that "went over the cliff").

From a former pilot in the China-Burma-India area:

As a hump pilot who was stationed in Assam for a year and flew a full share of unnecessary trips to China, I was glad to see some of this information made a public record. Flying Louisiana rice to China seemed a little like carrying coal to Newcastle at the time. However, we're taking coal to Newcastle now and it may be that those hump boys were just a little ahead of time. I could talk for hours about flying useless cargo to China, but I think you have a good start. I hope that some of the news services picked it up so that some of the other hump boys can have the same satisfaction I enjoyed.

From San Francisco, Calif.:

Some billions of dollars worth of guns, vehicles, machinery and utensils of all kinds were shipped into this area, San Francisco, from eastern points for reshipment to the armed forces in the Pacific theater of war. This material was incased or crated with high-class lumber and came into depots for

transshipment, by ocean carrier, to destined points. When it arrived at the depot it was uncased and uncrated "for inspection" and then recrated and reincased for the ocean transports. All well and proper. The lumber from these crates and cases could have been sold for some millions of dollars. Lumber was scarce. It was rationed and almost impossible to get. It was burned on the shore of the bay, in a perpetual fire, always under a military armed guard. No sale was ever permitted and none of the lumber was used for recrating of the war implements. There might have been a reason for this waste but the military guard could offer no explanation, it was just "orders."

From San Carlos, Calif.:

Andrew J. Rogers of Grass Valley called on me one evening and showed me data he had gathered. He is a carpenter and worked in army camps here in California. He told me about lumber that would be hauled in and crews would work, pulling out the nails, then the lumber would be hauled to piles and burned.

From Jackson, Mich.:

My nephew, who served in the armed services and lived near here, reports that in a southern camp large numbers of brand new radios were smashed and covered over by tractors. On his way home by ship, he and a number of others were ordered to throw overboard many barrels of best-grade machine oil as well as a large consignment of new radios. All this went overboard before the ship reached the New York harbor. Names, dates, and places can be furnished you if desired.

From Allred, Tex.:

One man who was stationed at Dutch Harbor, Alaska, came home on furlough during the time tires were the scarcest for civilians and stated that one could walk for 25 miles on new tires that had never been unwrapped but that were floating along the shore.

From Port Orchard, Wash.:

I was employed by the Army in Alaska on a tug boat. It's just one big holiday to be a member of these crews. While Army parkas and clothing, as well as machine guns and equipment were being destroyed, coke bottles were being transported back to the mainland.

From a former ATC pilot now residing at San Mateo, Calif.:

I have some 20 to 30 very clear pictures of both Army and Navy dumps in Guam which include close-ups of material which, after it had been allowed to deteriorate in the weather, was burned or hauled out to sea and dumped. Much material was readily convertible to civilian use as, for example, Prestone, which is still hard to obtain, wool-lined leather flying jackets, boots, trousers and gloves. Also boxes upon boxes of hardware such as bench vices, drills, etc. There were uncountable tons of new aircraft parts and equipment of every description, including new Pratt & Whitney motors whose protective plastic bags had been cut open, the dehydrating plugs unscrewed from the cylinder heads and dropped in the mud and the motors allowed to ruin in the weather.

Much of this was, of course, unavoidable due to the stress of war but after the war was over I was horrified to see material, literally by the acre, hauled out of the warehouses and dumped in the open. And this at the very time that the United States taxpayers were sending millions in relief to China, the ships passing almost within hailing distance of Guam where perfectly good, warm clothing, sleeping bags, etc., were being dumped and burned. Obviously something is wrong with the Army system of handling a surplus. And the Navy is just as bad.

B'nai B'rith Commemoration of the One Hundred and Sixtieth Anniversary of the Formation of the Constitution of the United States

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the portion of a program held under the auspices of the B'nai B'rith Lodges of Berkeley, Eden, and Oakland, Alameda County, Calif., commemorating the one hundred and sixtieth anniversary of the formation of the Constitution of the United States.

At this dinner Gen. Mark Wayne Clark, United States Army; Dr. Robert Gordon Sproul, president of the University of California; and Chief Justice Phil Sheridan Gibson, of the Supreme Court of the State of California, were given citations in recognition of their work in the field of group cooperation.

Mr. Monroe Friedman, past grand president of B'nai B'rith and distinguished member of the bar, Oakland, Calif., acted as master of ceremonies.

A part of the program follows:

Mr. FRIEDMAN. General Clark, Dr. Sproul, Mr. Chief Justice Gibson, Dr. Deutsch, distinguished guests, members of B'nai B'rith, and friends: In May of this year, in Washington, D. C., were given awards by B'nai B'rith to three great Americans—General George C. Marshall, Secretary of State; Mr. Justice Robert H. Jackson, of the United States Supreme Court; and the Honorable Robert P. Patterson, former Secretary of War.

Tonight, citations for merit for outstanding work in group cooperation are being awarded to three great Americans—General Mark Wayne Clark, United States Army; to Dr. Robert Gordon Sproul, president of the University of California; and to Chief Justice Phil Sheridan Gibson, of the Supreme Court of the State of California.

That General Clark is a great military commander is well known to all of us; but that is not why B'nai B'rith humbly desires to pay tribute to him. His record for over 30 years shows a deep appreciation of the American principles of fair play and justice. Far beyond the official reports, we have learned of his conduct and attitude toward the very large number of different peoples, races, and religions in Italy, both in his capacity as military commander and as an administrator. Far beyond the official reports, we have learned of his administration with respect to displaced persons of all religious faiths in Austria.

The presentation of the B'nai B'rith Citation of Merit to General Clark will be made by a past president of B'nai B'rith, who was an officer on General Clark's staff in Europe during the recent World War. It is with great pleasure that I now present to you Col. David V. Rosen. [Applause.]

Col. DAVID V. ROSEN. I consider it a great personal privilege to be permitted the honor of presenting this citation, which reads as follows:

"B'nai B'rith Citation for Merit to Gen. Mark Wayne Clark, United States Army."

[General Clark arose and stood at attention.]

"One of the great military commanders of history; in his command, there fought side by side units of many countries, races, and religions; large forces of Americans, white, black, and yellow; Christian, Jew, and Moslem; British, Indian, Polish, Brazilian, Canadian, Australian, New Zealand, South African, Italian, Palestinian, and French—all served in harmony under the distinguished leadership of General Clark.

"An able administrator in occupied territories, including Italy and Austria, he supervised the repatriation and maintenance of hundreds of thousands of displaced persons with integrity-forwardness, deep understanding of the problems of humanity, and abiding faith in democracy.

"General Clark's Army record and his many decorations indicate the greatness of his career, but it is not for those things alone that we offer this citation. We pay tribute to a splendid American, Mark Clark, one who has walked among the great, yet retains the common touch.

"B'nai B'rith therefore presents this citation to Gen. Mark Wayne Clark, United States Army, for his historic contribution to the advancement of unity among peoples, world justice and humanity."

(The assembly rose and applauded vigorously as General Clark received the scroll containing the citation.)

Gen. MARK WAYNE CLARK. Mr. Chairman, members and friends of B'nai B'rith: I deeply appreciate the distinguished award which you have just bestowed upon me. It is a pleasure, indeed, to be honored by an order whose traditions and ideals of humanitarian service are known throughout the world. I humbly accept this award, not for myself alone, but for the American men and women and those of our allies who formed the Fifth Army and the Fifteenth Army Group in Italy and United States forces in Austria and who defeated the Nazi and wiped out nazism within their sphere of activity. I have previously stated, and I again repeat, that I hope the United States of America will do its part in bringing displaced persons out of the misery of Europe and into the sunshine of democracy. No one here tonight forgets the martyrs of Dachau and Belsen, men and women, and children who suffered torture and death, rather than to compromise with the principles of human freedom.

Having been victorious in a world-wide war against arrogant tyranny and discrimination, it was reasonable to expect that mankind might enjoy the peace for which we all so desperately fought. We had hoped and prayed that in the new democratic world dictatorships would be a thing of the past. Unfortunately, today, in spite of our hopes, the insidious forces of another totalitarian dictatorship are increasingly active. I refer to the forces of communism, acting in some cases openly and with the sanction of foreign governments; acting in other cases in the clandestine and secretive manner which all of us have come to recognize only too well.

That war has been won, but the victory will be a hollow one indeed unless a true and lasting peace is made. The gains which have been secured at such a tremendous expenditure of life must be consolidated. They must be consolidated now—now, while we still have the united determination and material resources to defend our way of life against any aggressor who would profit by our show of timidity.

So again, permit me the privilege on behalf of these fine American men and women and those of our allies that I commanded in Italy and in Austria to thank B'nai B'rith for its recognition of the American contribution to world justice and to humanity as exemplified in the Army of the United States that won the war in Italy, with the aid of its

Allies, and that has acted in Austria in such a manner as to truly represent our democratic Nation. (The assembly rose and applauded unanimously.)

Mr. FRIEDMAN. I will now read a letter which was written in May of this year by the President of the United States addressed to Mr. Frank Goldman, the supreme president of B'nai B'rith:

THE WHITE HOUSE.

MY DEAR MR. GOLDMAN: Please convey my greetings to B'nai B'rith upon the occasion of its triennial convention. I am confident that the deliberation of the delegates will be fruitful of results fully in accord with the high standards of community service your order has rendered in the 104 years of its existence.

In common with your wide membership, I share a sense of regret over the passing of your distinguished president, Henry Monsky, whom it was my pleasure to meet a little more than a year ago to discuss veterans' welfare.

His long efforts in behalf of humanitarian causes should be a stimulation to continued vigor of B'nai B'rith broad program of benefactions, youth-character building, Americanism, and the promotion of mutual understanding among all religions and racial groups.

The patriotic and public-service character of such organizations as B'nai B'rith contribute much to the maintenance of that freedom and democracy which are the salvation of our Nation.

You have my best wishes for the success of your convention.

Very sincerely yours,

HARRY S. TRUMAN.

[Applause.]

I will now read a letter from the Governor of the State of California.

GOVERNOR'S OFFICE, *Sacramento.*

To the Members of B'nai B'rith and Their Distinguished Guests:

I regret very much that because of prior commitments I am unable to join tonight in the ceremonies commemorating the birthday of our National Constitution.

I am happy to know that you are paying honor to this great document outlining a form of government which, because of its outstanding guaranties of freedom for the individual, remains unique in the world today. It is particularly important that at this time we should rededicate ourselves to the philosophy of the way of life upon which our Constitution is based. The spiritual strength and inspiration which we gain by doing so will fortify us to meet the problems of a changing world as squarely as our founding fathers met them 160 years ago.

With best wishes for a successful meeting, I am

Sincerely,

EARL WARREN, *Governor.*

[Applause.]

The B'nai B'rith Citation for Merit for outstanding work in group cooperation will be presented to Dr. Robert Gordon Sproul, president of the University of California, by a past grand president of B'nai B'rith, a graduate and a former regent of the University of California, Hon. Edgar C. Levey. [Applause.]

Mr. EDGAR C. LEVEY. A great institution of learning looks out to the west, facing the Golden Gate, through which pioneers of the past streamed in the years gone by to seek fortunes and to build a mighty empire on the shores of the Pacific. Outstanding among their accomplishments was the founding of the University of California, destined to become the world's largest university and one of its greatest fountains of education.

One of its products was a young man of keen ability, high scholarship, and profound devotion to youth and its endeavors. Following his graduation he became associated with the business administration of his alma mater. It was my pleasure to first meet him in the capitol at Sacramento, where, as speaker of the assembly of our legislature, I had frequent contact with him, for he came there as the university's sponsor of legislation which through his efforts received favorable consideration and made possible the wonderful expansion which now distinguishes his college and mine. A vacancy occurring several years ago in the presidency of the University of California, the board of regents, of which I was then a member, chose Robert Gordon Sproul to be its executive head. The wisdom of the regents' choice needs no comment from me. Dr. Sproul has brought to himself and the institution which he heads great honor and great acclaim. Men talk long and well of his sagacity, his kindliness, his ease of approach, his joviality, and above all, his efforts on behalf of all humanity. To more concretely express the appreciation of good will of his neighbors and fellow citizens, the East Bay Lodges of B'nai B'rith, sponsor of the Hillel Foundations at 176 universities, presents to Dr. Sproul this Citation for Merit, which I am now privileged to read.

"B'nai B'rith Citation for Merit to Dr. Robert Gordon Sproul, president, University of California:

"A rare spirit, a scholar of renown, a nationally recognized educator, a sturdy servant of public service as an ideal; Dr. Robert Gordon Sproul, president of one of the largest institutions of learning in the world, has demonstrated full well his belief in a living, dynamic democracy. Loyal, fair, independent, wise, scholarly, courageous, indefatigable in righting wrongs and, above all, infinitely kind.

"He has never paid mere lip service to the American ideal that all persons, regardless of religion, racial origin, or antecedents, are entitled to equal consideration; his actions show a constant reaffirmation of faith in fundamental human rights; his valiance has taught us all a lesson in persistence and fortitude; his great ability is enhanced by his personal charm, his devotion to processes of reason, and his understanding of people, so that all who know him come to regard him as a personal friend.

"We, who are the People of the Book, honor him as a great educator, but more than that, we pay tribute to Robert Sproul, a chivalrous and gallant American gentleman."

(The assembly rose with loud applause, as Dr. Sproul received the scroll containing the citation.)

Dr. ROBERT GORDON SPROUL. Mr. Chairman, members of B'nai B'rith, and friends: I have an intuition that I should be deeply appreciative of the honor which B'nai B'rith has so generously conferred upon Robert Gordon Sproul. The name is my own, of course, but I have a feeling that it is a namesake rather than myself that has been characterized. I think, on the whole, I would like to know this namesake better, for I might, perhaps, be briefly stirred to emulate the virtues imputed to him, even though to do so would require days of toil and nights filled with sober reflection throughout the rest of my life. It is a stimulating experience for youth, and a solace for maturity, to feel a kinship with the great or near great around us, to recognize traits in them to which we, too, may lay modest claim. I feel that way about the Sproul whom you have described, but any resemblance between him and me, is, I fear, purely coincidental, and as tenuous as that between a man and the shadow he casts when the limelight is upon him. Given the proper lighting angle, such a shadow can appear truly imposing. Nevertheless, I am conscious of a sincere gratitude to B'nai B'rith for the glimpse it has given me of myself as some others see me. For the man who must perforce, live much in the distortion of the limelight comes inevitably to be heartened by the kindly judgment of his public, and inspired thereby to continue in the arduous task of converting, Pygmalion-like, his dreams and aspirations into reality.

To my mind the spiritual uplift, which has tonight been accorded me, epitomizes B'nai B'rith's great purpose and its many accomplishments in the past 104 years. My knowledge of B'nai B'rith's labors has been gained most intimately through Hillel Foundation at the University of California, which is, of course, but one of a multitude of activities in which it is interested. That one activity, however, has been enough to convince me that B'nai B'rith is, beyond question, one of the great fraternal organizations of the modern world. Conceived in a transcendent spirit, it has continued to maintain itself on an exceptionally high plane, kept scrupuously free from politics and religious dogma. It exists that men may better live, men of every race, in every clime, and every nation.

Modern civilization is too full of precepts of conduct and too empty of their performance. Between the ideals that we praise in the abstract, and the men whom we reward in the concrete, there lies normally the void of a great disparity. The strongest man, if he tries to stand alone against the world may well weaken in his highest resolves and conform his code of conduct to fit the expediencies of the moment. Such a one may even lose the clarity of his concept of God. And should he possess the strength of character to retain his convictions, he can scarcely escape a deep sense of futility as he struggles against man's inhumanity to man, and contemplates the long, hard road toward the ideal which faltering mankind has yet to traverse. It is only by banding together with men of like mind and spirit that each of us can sustain his own faith in the eventual triumph of justice over injustice, of tolerance over prejudice, and of decency over bestiality. The churches provide one rallying point, regardless of their faith or sect. But to many in these times, the churches do not suffice. For them, the answer to our ethical and moral problems must be found in well established secular judgments, human not divine. Herein lies the great contribution that B'nai B'rith makes, not only to people of Jewish faith, but to the people of the world. It provides a secular standard to which men of conscience may repair. Its humanitarian activities, great and numerous though they are, represent merely the outward expression of its inner purpose, which concerns an attitude toward life. It is in preserving that life attitude within the hearts of men that B'nai B'rith makes its highest and most lasting contribution.

The term "indoctrination" has come into bad repute during recent years. We have had all too convincing demonstrations of its effectiveness for evil in all too many countries of the world. We have learned that men will come not only to believe in, but also to fight and die for, the most perverted of philosophies if they have had that philosophy drilled into them by never ceasing propaganda. We recoil from these tragedies and consequently revolt against the indoctrination and propaganda that would seem to be their cause. Yet the processes of indoctrination and propaganda, if we but think about it, cannot be either inherently bad or inherently good; but, rather, the good or evil lies in the uses to which they are put. Human beings cannot live in vacuum devoid of all moral, ethical and spiritual content. Men must have choices of belief; they must be given definite objectives among which they may choose, if they are to recognize any purpose in life above eating, sleeping and procreating their kind. It is not enough to

see that gasoline is kept out of the fire buckets. They must be filled with something else, for they are of no use empty. Even so, it is with the hearts and minds of men. Not only are they of no use empty—they will not remain empty. Men will fill them from one source or another, even though it be from the mouth of Hell. To speak of avoiding indoctrination is merely to bandy words. Man was given almost from his very beginning the power of choice between good and evil. Consciously or unconsciously, the founders of B'nai B'rith must have recognized that truth. They were wise men, and they gave wisdom to the world. I salute them, and I salute those who have carried on the torch that they kindled. It is a privilege to be here, and a greater honor than I can express, to receive the citation which you have so generously worded. May your good work continue and increase in power and stature with each passing year.

(Prolonged applause as the entire assembly rose.)

Mr. FRIEDMAN. The B'nai B'rith citation for merit for outstanding work in group cooperation to Chief Justice Phil Sheridan Gibson, of the Supreme Court of California will be presented by a past grand president of B'nai B'rith and a member of the profession from which Mr. Justice Gibson came—Mr. Howard H. Desky. [Applause.]

Mr. HOWARD H. DESKY. Mr. Chairman, distinguished guests, friends of B'nai B'rith, the Order of B'nai B'rith has become generally recognized throughout the civilized world as dedicated to the service of democracy, humanity, liberty, human rights, and the American way of life. This is the America of all of the people, coming from many lands, holding many faiths, speaking many tongues, descendants of Plymouth Rock and of Ellis Island, alike sharing the rights and duties of our democracy and freedom. This is the America of the Declaration of Independence and of the Constitution of the United States with its Bill of Rights. Only he is a true American who believes in freedom for all and who defends the sacred right of every human being. That is the America of the eminent Phil Sheridan Gibson, chief justice of the Supreme Court of California, who has courageously and with fortitude demonstrated by his conduct, his actions, and his judicial decisions that he believes in the constitutional safeguards and freedoms expressed in our fundamental law.

To Phil Sheridan Gibson, our Constitution contains plain and simple truths, and guarantees to everyone fundamental natural rights—the right to work and to earn; to have and to keep the fruits of one's toil; to learn and to teach; to think and to speak; to write and to publish; to create art, music, poetry and song; to heal the sick; to speak for justice in the courts; as priests, ministers, and rabbis, to lead in prayer in church and synagogue; in short, the sum total of the human right to live and to be, regardless of origin, race, or creed. Mr. Chief Justice, B'nai B'rith recognizing your fighting spirit in defense of these rights and that your life and deeds are expressions of these noble attributes, presents to you this citation for merit, which reads as follows:

"B'nai B'rith citation for merit to Phil Sheridan Gibson, chief justice, Supreme Court of California:

"A loyal citizen, a courageous man with sincere convictions, a distinguished jurist; Phil Sheridan Gibson, chief justice of the Supreme Court of California, has never violated, either in letter or in spirit, the equal rule of law, which is the basis of our society. He has always reconciled liberty with equality, and both of them with order. He has always harmonized the claims of stability with those of progress. He has always respected the rights of the individual, but he has not pressed them to the point at which they threaten the welfare or the security of the many. His deeds shout that law shall be made true to its ideal of justice; that the American rule for the equality of all citizens, of all groups, of all religions, shall not be violated.

"A kindly man, not coldly intellectual, but most human, with the precious gift of humor. We respect him for his work as the head of the judicial system of the State of California, but it is not for this alone that we offer this citation. We pay tribute to Phil Gibson, a champion of the right of all people to live in human decency."

(The entire assembly rose and applauded unanimously.)

Chief Justice PHIL SHERIDAN GIBSON. I am deeply sensible of the honor you have conferred upon me, and I am most grateful for the generous tribute contained in the testimonial certificate. The citation is the more impressive since it comes from this hundred-year-old organization, which has played such an important role in the history of American Jewry, and which is now valiantly engaged in fighting the peacetime war for freedom, tolerance, and humanity. Any American who has kept his eyes open in recent years knows that freedom and tolerance, even in this country, cannot be taken for granted, and he must welcome, as I do, the opportunity to stand up and be counted among those who are defending our country's heritage with all their physical and spiritual strength. In responding to your invitation, and in accepting this honor, I feel that I am here not as an individual but rather as a member of the judicial branch of our government. It cannot be too strongly emphasized how important is the function of the judiciary in safeguarding the civil liberties of our people. When the recent history of this Nation is recorded, it will disclose an admirable and remarkable picture of sanity and balance, of progressive thinking, and of liberal statesmanship, on the part of our judges during these crucial years. By and large, the bills of right in the Federal and State constitutions, and the elementary rules of fairness in judicial and administrative proceedings, stood up well throughout the war and post-war period. Excesses, whether of military or civil officials, or of lawless individuals, received no sanction in judicial decisions of the higher courts.

There were times when we might have benefited from the wise leadership and counsel of Holmes and Brandeis and Cardozo, but these men did not, in passing, take their principles with them, and the lessons taught by them remain a source of strength and inspiration for those charged with the duty and responsibility of protecting the civil rights guaranteed by our Constitution. When economic crises occur in modern democratic countries, there is a tendency to think in terms of "strong leadership," of uniform beliefs, and of the suppression of dissenting ideas and practices. There are those self-styled patriotic organizations which appear out of nowhere to demand the punishment, the isolation or the exclusion of every group which fails to conform to their ideas or specifications. We hear strange things about some of our fellow Americans; they are characterized as being racially undesirable, or incapable of assimilation, or of alien extraction and beliefs. These are notions which the freedom-loving, freedom-seeking founders of this Nation would never have countenanced. There are not, and there cannot be, racially or nationally undesirable groups in this country. Racial and national origins are not a bar to assimilation. Israel Zangwill truly described America as a melting pot, a country ceaselessly engaged in blending the characteristics and characters of many peoples from every part of the globe. These groups may exhibit minor differences of speech and manner, and habits of eating and dress, and may differ also in intellectual processes, or even in political and economic views; but these matters are as nothing when compared with the all important thing upon which everyone should agree: That freedom and justice can be attained and preserved for all under a democratic state.

In a struggle against intolerance and hatred, and for the rights of minorities, it is no surprise to find Jews and Jewish organizations in the front lines. They have been the victims of persecution in countless places and unnumbered ages, and they know that you cannot either achieve or preserve freedom without fighting for it. But it is surprising, and indeed shocking, to find how many people think that this is the Jews' own battle—people so ignorant of history as to think that the Jews have been the sole victims of the torture and misery which strong groups of men are able to inflict on weaker groups. They should read the story of the past and discover how every civilization has developed its oppressors, and every era has had its iniquitous record of persecuted minorities.

This country was founded by people who fled from injustice, and there is scarcely a section of America today in which there is not a group whose ancestors were hounded and tortured in some part of the world. This truth becomes vitally important when we recall the events of the past decade. I say "recall," for no one here needs any recital of the facts so fresh and painful in our minds. But though we may grow tired of reciting those monstrous facts, let us take care never to grow tired of reflecting on their significance. The Nazi and Fascist dictatorships, along with the Japanese feudal empire, have fallen; the concentration camps have been closed, the gas chambers and the fiendish instruments of torture have been destroyed; and a handful of the more vicious of the criminals have been punished. This is good; and we must not be cynical or indifferent to the great victory, gained at such a colossal cost. But is dictatorship dead? Are the people of small nations now completely safe to follow, if they will, the pattern of political democracy? Are minority groups—racial, religious, social, national—certain of the protection of their civil rights throughout the world? Is freedom of speech and of the press an accepted fact everywhere? If the answer is "no" to these questions, then it follows that we are not through fighting; we have won a battle, but not the war.

Where in this picture is there comfort for those who think that the great cause of social justice is only a Jewish problem? The evil forces of hatred and oppression, on the march today as always, do not spend themselves on one object; there are always fresh fields in which the poison may work, new groups to be singled out and persecuted because of their wealth, or their intelligence, or their religious beliefs, or the color of their skin or hair, or their language or manner of speech, or their peaceful disposition, or their civilized habits. No; this is not a battle for Jews alone, nor for any other minority group. It is a struggle in which all civilized peoples must stand together to protect their common ideals and interests. The Jews are not the first, nor will they be the last, racial, religious, national, or social group to be the victims of persecution. And nature has a habit of turning yesterday's majorities into today's minorities. If our consciences do not sufficiently spur us on, we may well be urged on by the necessity of self-preservation. In this great struggle we shall all have a common object: To achieve a world order in which special testimonials of the kind conferred tonight will be unnecessary and unknown—a world in which the invisible badge of tolerance will be worn by all.

[Enthusiastic applause as assembly rose.]

Rules on Disclosure of Information by Civil Service Commission

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. CASE of South Dakota. Mr. Speaker, under permission to extend my remarks heretofore granted, I place in the RECORD, for the general information, a letter from the United States Civil Service Commission, setting forth the rules and regulations which the Commission has adopted with respect to disclosure of information:

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., December 11, 1947.
Hon. FRANCIS CASE,
House of Representatives.

DEAR MR. CASE: Reference is made to your communication of November 28, 1947, transmitting clipping from the Washington Post regarding the payment of annuities to Members of Congress.

There is no provision of law mandatorily prohibiting the disclosure of information regarding the retirement or annuity status of Members of Congress. However, Congress has delegated to the Commission the authority to make such rules and regulations as it deems necessary and proper in the administration of the retirement law. Any such regulation made under authority of the statute necessarily has the force and effect of law.

The Commission's regulations with respect to disclosure of information are quoted below. These regulations are applicable to all members of the system and no exception is made as regards Members of Congress.

"11. (a) Files, records, reports, and other papers and documents pertaining to any claim filed with the Civil Service Commission, whether pending or adjudicated, will be deemed confidential and privileged, and no disclosure thereof will be made except as provided herein.

"(b) Disclosure of information from the files, records, reports, and other papers and documents shall be made to a claimant or to his duly authorized representative in matters concerning himself alone when such disclosure would not be injurious to the physical or mental health of the claimant or be regarded as a breach of confidence.

"Determination as to when disclosure of information would be injurious to the physical or mental welfare of a claimant will be made by the Medical Division.

"(c) By 'a duly authorized representative of a claimant' is meant any person who has satisfied the Commission of his authority to act.

"(d) The name or address of a beneficiary designated by an employee or annuitant will, during the life of the employee or annuitant, be furnished only to the designator when request therefor is made in writing over the signature of the designator.

"(e) Such information as may properly be disclosed to a claimant personally shall, in the event of his death, be disclosed upon proper request to the duly appointed representative of his estate, or to such person as may be designated by such representative, or to a duly designated beneficiary. Where no representative of the claimant's estate has been appointed, the claimant's next of kin shall be recognized as the representative of his estate.

"(f) Where copies of documents or other records are desired by or in behalf of parties to a suit, whether in a court of the United States or in any other court, such copies shall be furnished to the court only, and on an order of the court of subpoena duces tecum, addressed to the President, United States Civil Service Commission, requesting the same.

"(g) Where a process of a United States court or other court requires the production of documents or records contained in the retirement files of a claimant, such documents will be produced in the court out of which the process has issued. Where original records are produced, they must remain at all times in the custody of a representative of the Civil Service Commission, and if offered or received in evidence, permission should be obtained to substitute a copy so that the original record may remain intact in the file.

"(h) The address of a claimant as shown by the Civil Service Commission records may be furnished to duly constituted police or court officials upon proper request or the submission of a certified copy either of the indictment returned against the claimant or of the warrant for his arrest.

"(i) Disclosure of the amount of annuity or refund to any claimant may be made to any National, State, county, municipal, or other publicly recognized charitable or social-security administrative agency.

"(j) Subject to the limitation contained in paragraph (d) hereof, all records or documents officially required by any department or other agency of the United States Government shall be furnished in response to a proper request, and Senators and Representatives of the United States in their capacity as Members of Congress of the United States shall be furnished for their official use with such records, documents, or other information as may be requested for such use.

"(k) Copies of papers, records, etc., the furnishing of which would be prejudicial to the interest of the Government; copies of reports of examining surgeons; reports from the War Department; or copies of records of other departments and other confidential matters, will not be furnished."

The Commission receives on numerous occasions requests for lists of annuitants and other similar information which information is desired for solicitation purposes or to satisfy idle curiosity. It is obvious that such information should not be disclosed generally and the Commission has consistently refused to comply with such requests.

With the exception of the name of the beneficiary designated by the employee or the annuitant, the Commission's regulations do not prohibit furnishing Members of Congress for their official use information otherwise considered confidential.

Statistical information of public interest regarding the operation of the retirement system is at all times available and will be furnished generally by the Commission upon request.

Sincerely yours,

WM. C. HULL,
Executive Assistant.

Abraham Lincoln, 1809-1865

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. CASE of South Dakota. Mr. Speaker, under permission heretofore granted, I place in the RECORD for this anniversary week of the Great Emancipator's birth, a tribute written by O. E. Harper, of Hot Springs, S. Dak. Mr. Harper is a veteran of the Spanish-American War who spent many years in Government service and is an ardent student of United States history.

ABRAHAM LINCOLN, 1809–1865

Child of poverty, and son of want:
Destined to play a mighty part in the making
of a nation's history,
Yet ill prepared for that great task. A few
short months in school;
Just able to read, to write, to cipher.
To read: ah, that was difficult indeed; to
you, each word
Was symbol of a thought, each thought part
of a human soul.
And so you studied hard to understand aright
the words of those
Who suffered, sacrificed, yea, even died to
give a nation birth.
At last their meaning came to you, clear as
the noonday sun:
Freedom; union; justice.
Freedom to worship God as you saw fit, to
speak your thoughts,
To praise or criticize; to work, to save, to
care for you and yours.
Union for strength, for safety, for defense;
For though the several States would have
problems of their own,
Yet each was interested in the other's welfare
As members of one family.
Justice for all, without regard to race or
creed,
To wealth or poverty, and yet to be administered with sympathy
And understanding of man's weakness.
And when you understood these things, you
did what every citizen
Should do, resolved to do all within your
power to preserve this
Precious heritage, to pass it on untarnished
To generations yet to come.
Your youthful years soon passed and you
assumed the duties of a man,
And like your neighbors, toiled to earn your
daily bread.
Sometimes dame fortune smiled on you,
sometimes she frowned.
You loved and lost and loved again.
Yet all the while your eyes could see the
gathering
Clouds of coming storm. Therefore you traveled up and down the land,
Spoke to your fellow men, did all you could
to avert impending danger:
But all in vain, for fate had otherwise decreed.
Soon the storm broke, the lightning struck,
and in the Nation's
Darkest hour she turned to you for guidance.
Humbly, but sustained by faith, you took
upon your shoulders
That massive burden. For two long years it
seemed that all was lost;
Then came the faint light of coming dawn,
and Gettysburg,
And there, in simple words, you bared the
Nation's soul.
Slowly the sun arose and at last came victory
and peace,
But with the close of strife you too were laid
a last
Great sacrifice upon the Nation's altar.
And I said you were ill prepared. I had forgot that you were taught
In nature's school, the school of bitter struggle to obtain
The bare necessities of life. The school of
rolling fields
And quiet woods, and there you learned your
first great lesson,
That all of life, whether bird, or beast, or
man, was created
By the same Almighty God, each entitled to
his chance in life
As he had been given talent. And in that
school there was taken
From your heart all thought of malice,
hatred, envy,
And in their stead were placed the precious
jewels of
Friendship, brotherhood, sympathy.
Dear God: if only man-made schools might
teach as much.

Many years have passed, your body has long since returned
To mother earth from whence it sprang, and in your memory men have
Built great buildings; erected many monuments; yea, your rugged face
Has e'en been carved in granite on a mountain top.
It is well that this is so, and yet in countless centuries to come
These all shall be destroyed by nature's elements,
Shall slowly crumble into dust and make their bed with thee.
Yet rest in peace, kind soul:
Your true monument can never be destroyed.
Your memory will live forever within the hearts of men.

Pay Increases for Postal Employees

EXTENSION OF REMARKS
OF
HON. FRED A. HARTLEY, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. HARTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and article from the Newark Evening News of January 26, 1948:

NEW JERSEY AFFILIATED
POSTAL EMPLOYEES,
LEGISLATIVE COMMITTEE,
East Orange, N. J., February 4, 1948.

Hon. FRED A. HARTLEY,
Chairman, House Labor Committee,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: I am writing to you in the name of 10,000 postal employees in New Jersey which the above legislative committee represents on the question of pay increase for all postal employees. In their behalf I strongly urge you to do all you can in the House to have early hearings by the House Post Office Committee and that this committee reports a bill at an early date to adjust the pay of postal workers.

As the present Chairman of the House Labor Committee and as former member of the House Post Office Committee for many years, you are fully aware of the high cost of living in this present day and the meager wages of the postal employees. You have always been our champion in the House committee to alleviate these conditions. We in New Jersey look to you to come to our assistance in these days of skyrocketing prices of foods, fuel, and clothing.

I am enclosing a clipping from the January 26, 1948, Newark Evening News which shows the steady increase in the cost of living in New Jersey. This article quotes the New Jersey Department of Agriculture stating that the purchasing value of the consumer dollar is now 57.4 cents compared to a full dollar in June 1939.

We look to you to help us and hope for early and favorable action by the House on the question of pay increases for all postal employees.

Sincerely,

THOS. F. FLANAGAN,
Publicity Director.

[From the Newark (N. J.) Evening News, of January 26, 1948]

JERSEY RECORD SET ON COST OF LIVING—BUYING POWER OF CONSUMER'S DOLLAR REPORTED AT 57.4 CENTS

TRENTON.—The cost of living soared to an all-time high in New Jersey last month, reducing the purchasing value of the consumer dollar to 57.4 cents, compared with June 1939, the State agriculture department said today.

Federal income taxes, which absorb between 8 and 10 percent of the average family's gross earnings, are excluded from the cost-of-living studies of the department, which are made on a bimonthly basis.

The average cost of goods and services, such as food, clothing, housing, fuel, light, furniture, house furnishings, and miscellaneous items during December was 2.1 percent higher than during the previous pricing study in October, the department said. Those items cost 10.2 percent more than in December 1946 and 74.3 percent more than in June 1939.

DROP OF 5.6 CENTS

The purchasing value of the consumer dollar was 63 cents in December 1946, or 5.6 cents more than last month.

The advance in the cost of housing paced all other items in December. The survey showed housing cost 5 percent more on the average than in October. Average December price for houses without heat was 23.9 percent above the June 1939 rentals.

The department said that new rent units, not subject to governmental regulation, are being leased at higher rents than others under control, forcing up the average. The 15 percent maximum increase allowed by law for older housing is becoming more prevalent.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from John C. Tulloch, Esq., of Ogdensburg, N. Y., who is the secretary of the Northern Federation of Chambers of Commerce. The Northern Federation of Chambers of Commerce is a fine organization. They have worked long and hard for the St. Lawrence seaway on the basis that it is a good thing for the country. I heartily agree with them.

THE NORTHERN FEDERATION
OF CHAMBERS OF COMMERCE,
Ogdensburg, N. Y., February 6, 1948.

Hon. CLARENCE KILBURN,
House of Representatives,
Washington, D. C.

DEAR SIR: I am secretary of the Northern Federation of Chambers of Commerce and this federation has been striving to help in every conceivable way with the St. Lawrence seaway and power project. We have sent men to Washington recently and know about what the situation is, but there is one particular thing to which I desire to call your attention and that is the argument on the diversion of traffic. We all know that the Welland Canal is now a seaway canal with its 27 feet over the sills.

I secured from the superintendent of transportation of the Welland Canal upon request, a statement as follows:

Total ships locked through one way in 24 hours, 28 (you must remember that these 28 have to be locked back, so that is 56 per day. This figure occupies every minute of the 24 hours. This is physically impossible and always has been, but granted they can lock through 28 one way per day and they were all 4,000-ton boats, it would be 112,000 tons per day, or 3,360,000 tons per month, and for 7 months 23,520,000 tons. Because this is an international canal, Canada is entitled to one-half, or 11,760,000 tons). That is the utmost that the seaway can carry because that is the greatest amount that can be locked through the Welland Canal which is a seaway canal now. They are carrying about 8,000,000 tons at the present time, so where does the argument on diversion land?

This seems to me to be one of the most convincing arguments that we have and should be made use of and published widely.

Very respectfully yours,

JOHN C. TULLOCH, *Secretary.*

International Monetary Fund

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Melchior Palyi, from the Toronto Northern Miner:

MUST REVAMP FUND OR SCRAP IT—IF MONETARY SANITY IS TO BE RESTORED TO WORLD—ITS PRINCIPLES GONE WITH THE WIND

(By Melchior Palyi, Chicago)

During and after the war, up to a year ago, the instrumentalities of official propaganda have been trumpeting that the Bretton Woods institutions are all that is needed (plus a few little things like the British loan, UNRRA, etc.) to provide freedom from want everywhere. Showing such bad judgment disqualifies its authors intellectually, but they should be disqualified morally as well, if for a different reason.

The International Monetary Fund was put up for the avowed purpose of bringing about stable exchange rates, and especially to eliminate multiple currencies. Its statutes abound with assurances, as did the propaganda line which accompanied the Bretton Woods program, to the effect that the very purpose is to prohibit arbitrary exchange manipulations and to nip in the bud such vicious multiple monetary systems as had been perpetrated by the Nazis. Multiple currencies are to be outlawed so far as the members of the Fund are concerned. Whether it is the French franc, the Argentinian peso or the Greek drachma, no member's currency was supposed to consist of more than one kind of money in terms of exchange rates. The idea was that the Nazi technique of having one kind of exchange rate for exports and another for imports, and a third, a fourth, and a tenth, each for some other purpose, should not happen again.

MULTIPLICITY OF VALUES

In reality, the policies of the Fund have not only permitted but even fostered the maintenance of old, and the creation of new currency chaos. Directly or indirectly, it has greatly contributed to the spread of monetary delinquency and condoned it. Officially, each country's currency can have only one value against gold and foreign currencies. Actually, the majority of the members have developed and retain a multiplicity of foreign exchange values for their respective currency units, and do so in many cases quite openly. Most Latin-American countries have different official prices for exports and imports. In the Argentine, as an example, the exporter gets one price in pesos for the dollar proceeds of his sales to the United States, while the domestic importer has to pay quite another price for dollars he needs to buy goods in this country. Often there is an upper and lower price for each, the export

and the import currency, and special prices on top of that. These clear violations of the Fund statutes—of its very purpose—are accepted without as much as a verbal spanking of the culprits. The Fund maintains a sanctimonious attitude by insisting on its principle while at the same time hypocritically tolerating its violations. But multiple currencies are practiced also in countries which deny their existence. Canada has two kinds of dollars. Officially, there is only one price for the pound, the par ($4.03 to the pound sterling). However, there is an unofficial market in pounds, too, which is recognized by the Bank of England in a left-handed manner. For example, you are permitted to take with you a certain number of pounds if you go to Britain as a tourist even though you bought them outside the official market and at a price some 10 to 15 percent below par. Similarly, if you buy British Government bonds, the Bank of England will permit you to pay in pounds acquired at the gray market rate, and may not even ask whether you bought them on a black market where the price runs as low as $2.50 to the pound.

FRANCE ACTS CONTRARY TO RULES

France is one of those countries that lives against the rules of the Fund without losing its membership rights, as it should according to the statutes. Officially, there was only one par value for the franc in terms of the dollar or gold, but the French Government tolerated and quietly recognized unofficial prices, especially for gold. It even publishes "black market" quotations. Now, France has acted to devalue its currency—raised the gold price—for the fourth time since the last war began, and to introduce on this occasion three kinds of francs. Characteristically, the Fund management did not quite know what to do about it.

Why this weakness, this inability to follow a clear-cut line of policy that was to be imposed upon the members? From the outset, the Fund has accepted the rule that for a transitional period of 5 years the members could retain their wartime foreign exchange restrictions and even introduce new ones; later on, they can do so with the consent of the Fund. Since the majority of the members practice exchange restrictions, the decisive vote in the Fund management is bound to be always in favor of permitting those practices. But foreign exchange restrictions necessarily create multiple currencies, a fact ignored by the international planners who drew up the Bretton Woods plans. Once a government is given the power to manipulate its money by permitting one kind of foreign transaction and forbidding another kind, the market reacts by attaching different values to each portion according to the greater or lesser ease with which it can be used. And once such market values are established they are bound to become part and parcel of the system. Sooner or later they must be recognized by the government itself. Exchange restrictions lead to multiple currencies, and it is nonsensical to forbid the latter if the former are permitted. To restore monetary sanity in the world we will have to revamp the International Fund, body and soul—or to scrap it altogether.

Government Should Set Example

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Wayne Journal-Gazette:

GOVERNMENT SHOULD SET EXAMPLE

The Government in Washington has had quite a bit to say about cutting prices.

All of us would like to see lower prices, because we do not enjoy paying high ones and we do not like inflation.

But the Government would be performing a public service if it would take the lead and reduce the cost of its own operations. That would be a good example for the entire country.

The Federal budget and Federal taxes ought to be cut. Business and the individual are entitled to relief.

Everybody agrees that there are a lot of frills to Government today and they all cost money. But frills are not essential and they can be trimmed away without really hurting anyone.

The spending habit got pretty strong in Washington during the war. We were not counting the cost then. Everybody's first thought was of winning regardless of expense.

Now the war is over and we cannot afford waste, so the word "economy" will have to be brought into use again.

Cut the budget, see that the waste is eliminated, and the country will gain, not suffer, in the process, if good judgment is used in the pruning.

Brand Reports on War Crimes Trial

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. ANGELL. Mr. Speaker, I include as part of my remarks a brief report on the work of the military tribunal at Nuremberg by James T. Bland, associate justice of the Supreme Court of Oregon, which appeared in the Oregon State Bar Bulletin for January 1948.

Judge Bland is an eminent jurist of the State of Oregon and served as a presiding judge of the military tribunal constituted for the trial of major war criminals of the European Axis. He was appointed by the President of the United States and assigned to his post by General Clay.

The report follows:

BRAND REPORTS ON WAR CRIMES TRIAL

(By James T. Brand, associate justice, Supreme Court of Oregon)

The request of the editor of the Bar Bulletin for a report on the work of the military tribunal at Nuremberg comes as a call of duty. While on leave of absence from the supreme court, I have served as the presiding judge of a military tribunal constituted for the trial of major war criminals of the European Axis. Having been loaned by the authority of the State legislature for this purpose, I acknowledge the duty to the bar and to the people of Oregon to report upon the results.

The judges of the Nuremberg Tribunal were appointed by the President of the United States and assigned to their respective positions by General Clay. To Tribunal III was assigned the duty of conducting the trial of the members of the Ministry of Justice and of certain judges of the "Terror Courts" under the Nazi system. Fifteen defendants were tried before a tribunal consisting of three judges. The actual trial was commenced on March 5, 1947, and was concluded on December 5. In addition to a transcript of more than 10,000 pages, 2,000 exhibits were received. The entire record of the case comprising 10 bound volumes is en route somewhere between Nuremberg and Salem, Oreg.

To boil down such a record in a few short pages is, of course, impossible. I shall venture only the briefest outline of the law and procedure which governed this and the other Nuremberg trials. A reasoned discussion of the great issues involved must await fuller opportunity. Among those issues which were peculiar to the trial of the Justice case, lawyers will identify questions of judicial immunity for acts performed pursuant to local law, the defense of superior orders, the bearing of the doctrine of national sovereignty, questions of constitutionality, the nature and content of international law and its relation to domestic law, the applicability of the ex post facto principle in international law and many other issues that stagger the mind and yet demanded an answer.

The acts creating and defining the jurisdiction of the tribunal were (1) the London Agreement of August 8, 1945, with the Charter of the International Military Tribunal annexed thereto; and (2) Control Council Law No. 10 enacted by the representatives of the United States, England, France, and the Soviet Union. The indictment was drawn pursuant to the provisions of Control Council Law 10 which is similar but not idential to the Charter. Thus it will be seen at the outset that the Nuremberg tribunals were based upon international authority. Although the judges on Tribunal III all came from the United States, Russian, English, or French judges could, under the law, have been appointed on this tribunal.

Control Council Law 10 defines acts in general terms, each of which is recognized as a crime, namely, (a) crimes against the peace (the waging of aggressive war), (b) war crimes, (c) crimes against humanity, and (d) membership in criminal organizations. The indictment in the Justice case charged the commission of war crimes, crimes against humanity, and membership in organizations declared criminal by the decision of the military tribunal in the case against Goering et al. There was no charge of waging aggressive war.

Most of the defendants were charged with war crimes, i. e., violations of the laws and customs of war. In substance, the statute adopted and incorporated the rules of international law as the rules by which war crimes were to be identified. This legislative practice is not unknown in the United States. See *Ex parte Quirin*, 317 U. S. 1. For a determination of the issues upon this count of the indictment, the tribunal was required to seek the guidance of textbooks, treaties, the decisions of international tribunals and, above all, the Hague Convention by which limitations were imposed upon the conduct of belligerents while in occupation of hostile territory. The wording of Control Council Law 10 (too long for quotation here) disclosed that the term "war crimes" was employed to cover acts in violation of the laws and customs of war committed against non-Germans and did not include atrocities committed by Germans upon their own nationals. The Charter referred to acts against civilian population of or in occupied territory.

Typical of this type of crime were the atrocities committed under the infamous "nacht and nebel" decree whereby upon Hitler's order thousands of persons accused of resistance to German authority were spirited away in night and fog out of France, Belgium and Holland, never to be heard of again. They were taken to Germany, secretly tried before German courts in a language strange to them, sometimes without counsel and often without witnesses for their defense. Frequently they learned at the trial

for the first time the nature of the charges against them. The results of the trial were unimportant to the defendants. Some were executed, others sentenced to brief terms of imprisonment, others acquitted; but, with few insignificant exceptions, none ever returned to their homes. If acquitted or if their terms of imprisonment expired, they were sent to concentration camps, a punishment worse than death. The declared purpose of the night and fog decree was to spread terror in the hearts of the people in the occupied countries by reason of the disappearance of their loved ones and neighbors. Several of the defendants in the Justice case were found guilty of participation in this criminal program.

Other violations of international law occurred in connection with the extension of German law into occupied territory contrary to the provisions of the Hague Convention which requires the occupant "to insure, as far as possible, public order and safety while respecting, unless absolutely prevented, the law enforced in the country."

Among other cases of war crimes which were held violative of international law, mention should be made of prosecutions conducted by Germany against Poles, who, before the war, had caused the prosecution in Poland of Polish nationals who were racial Germans. After the invasion, the Polish prosecutors were apprehended and charged with treason against racial Germans although there was no law covering such a case. Other Poles were tried and executed on the charge of treason because they attempted to flee into Switzerland and thus escape from forced labor in Germany, "thereby malevolently leaving his important agricultural job." It was claimed that these Poles intended to join a Polish legion in Switzerland. The legion had been interned by Swiss authorities, but the Germans considered this circumstance immaterial because the interned Poles might be used on the side of the enemy in the event of German troops invading Switzerland. Other Poles were accused of "separating from the Reich, territory belonging to the Reich." The territory in question constituted portions of Poland which Germany had attempted illegally to annex. On such trumped-up charges, Poles were convicted of high treason and executed.

The third count of the indictment involved questions of profound difficulty. The charges were based upon the provisions of control council law 10 which defined as criminal "atrocities and offenses, including but not limited to murder, extermination, enslavement, deportation, imprisonment, torture, rape, or other inhumane acts committed against any civilian population, or persecutions on political, racial or religious grounds whether or not in violation of the domestic laws of the country where perpetrated."

The clear purpose of this section was to include within its condemnation acts which did not constitute violations of the laws and customs of war or of the Hague Convention. As distinguished from war crimes committed against the civilian population from occupied territories, this section provided for the punishment of atrocities against any civilian population and declared in substance that compliance with German law should be no defense. Thus it was that German officials were tried and convicted because they participated in the persecution of German nationals on political, racial or religious grounds.

It is literally true that, pursuant to German laws and decrees, millions of Poles and Jews were exterminated. The story of this, the greatest crime of the ages, cannot be told here. Several of the defendants in the "Justice Case" were convicted for participation in the international crime of genocide, a governmentally organized program for the extermination of racial minorities. In support of our conclusion on this issue, we cite the recent resolution of the General Assembly of the United Nations which—

"Affirms that genocide is a crime under international law which the civilized world condemns, and for the commission of which principals and accomplices—whether private individuals, public officials or statesmen, and whether the crime is committed on religious, racial, political or any other grounds—are punishable."

The evidence of atrocities by the officials and judges of the ministry of Justice in the name of law was overwhelming and devastating. It raised the gravest questions as to the essential character of a people who could develop or even tolerate so cruel a system.

The trials were conducted in two languages with simultaneous translation of every word spoken, from English to German and German to English. Through his earphones, each listener in the court room heard the testimony in the language which he understood. Every possible assistance was given to the battery of German lawyers who put up a capable and exhaustive defense collectively and separately. The tribunals did not apply Anglo-American rules of evidence with which the German lawyers were unfamiliar. The only test imposed by the governing statute was that of the probative value of evidence offered. More than 850 people in the Palace of Justice alone were employed in support of the work of the tribunal. The evidence consisted chiefly of captured German documents, the authenticity of which was admitted. The defendants enjoyed the benefit of the presumption of innocence and were convicted only if found guilty by proof beyond reasonable doubt. The Nuremberg trials must be distinguished from the "Who Done It Cases," which were prosecuted at Dachau and elsewhere for the conviction of the human butchers who, under Himmler, operated the camps for mass extermination of Jews, Poles, and political opponents of the Nazi system.

The twelve cases which were assigned for trial at Nuremberg were selected for that purpose because they involved the establishment of legal precedents for the future, and because, in the trial of those cases, the facts concerning the Nazi tyranny could be judicially established and recorded for history. The "Justice Case" was in truth a trial of the Nazi judicial system. The evidence conclusively demonstrated the perversion of the judicial system, the destruction of judicial independence and the consequent loss of personal liberty, freedom of speech and every right dear to the heart of a free people. This evidence constitutes the strongest argument ever made for the separation of powers, judicial independence and a government of laws and not dictators.

If this skeleton outline of the bare issues involved has stimulated an interest in the minds of the lawyers of Oregon, it will have accomplished its full purpose.

Travel Allowance of Railway Postal Clerks

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. BUTLER. Mr. Speaker, I have introduced a bill today to increase the travel allowance for railway postal clerks assigned to road duty. No increases have been granted to these worthy employees since July 1, 1945, although everyone is well aware of the fact that the high costs of hotel rooms and meals in restaurants and other traveling expenses have increased a great deal since that time.

Railway postal clerks assigned to road duty are allowed not to exceed $4 per day for expenses during the time they are away from their initial terminals, on duty, and while at their outer terminals. This bill will raise this allowance to not to exceed $6 per day, and I trust it will receive the favorable consideration of the committee and of the House.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over station WHBF on February 7, 1948:

Dear friends of the Triple Cities and my congressional district, today I received a pouch full of lapel buttons which read, "Dewey for President."

They were sent to me by my good friend, Dr. Charles A. Earl, mayor of the city of Oneida, which as you know is in our district.

I am distributing these buttons among my fellow Members of the House, urging that they be displayed.

My thanks go to my staunch supporters of many years, the good ladies of the Broome County Women's Republican Club. I also wish to acknowledge their message assuring me of their desire that my legislative program in Congress for 1948 will be carried out.

I have written to Mrs. Marjorie Brownfield, their secretary, who sent me this welcome testimonial, expressing my appreciation for such valued assistance.

To you veterans, whose participation in on-the-job training and higher education under the GI bill of rights make this subject interesting, I wish to read the speech I made in the House this week as I voted to increase your allowances:

"Mr. Speaker, the bills we pass here today which provide increases for veterans' allowances and compensation embody the proposals I made at the beginning of this Congress over a year ago.

"At that time, I introduced H. R. 866, a bill entitled 'to increase the monthly maximum allowed to veterans receiving both compensation for productive labor and subsistence allowances for education.'

"Everybody knows veterans have been crying for these increases for over 2 years. In my opinion, action is long overdue, and I think our leadership is wise indeed to allow the passage of these remedial measures now.

"From now on the average veteran taking on-the-job training will be able to meet more easily the high cost of living. His preparation for a better job will not be impeded. Employers of such veterans will likewise benefit, because such training will remain attractive.

"From the standpoint of education under the GI bill, students who are veterans have found it well nigh impossible to live on subsistence allowances. I remember talking to a group of veterans attending one of the several colleges in my district a few months ago.

"One and all, these young veterans had the burning desire to regain their lost years by taking advantage of the higher learning offered them. But, tragically enough, they

were up against rising food costs and other mounting expenses. They asked me when Congress would wake up to their dire circumstances and give them a helping hand. They said frankly many of them would find it necessary to leave school unless we come to their rescue.

"As one who proposed universal college education of the GI several months prior to its inclusion in the original GI bill, I am anxious to see veterans' opportunities in the field of higher learning increased, not decreased. Perhaps there are some who mockingly refer to this as a noble experiment. But the experiment is working and working well.

"I believe the time will come when Government will assume the responsibility of opening the avenue to college and university training for all our citizens just as today it guarantees our children primary and secondary education.

"Certainly, a poor boy or girl who meets the scholastic qualifications of a university ought to have the same chance of improving the mind a person who is more fortunate financially has.

"At any rate, the GI bill has opened a burning question, puts it on a working basis, and proves that all Americans, regardless of race, creed, or color, can be treated equally when it comes to opportunity to go to college.

"Therefore lest this educational feature of the GI bill be scuttled and countless veterans be compelled to leave important studies they are now pursuing, I strongly urge the House to vote these increases of subsistence allowances to veterans immediately.

"I likewise recommend that we improve the on-the-job training program by raising the ceilings, now too low, so that the private initiative of each veteran manifests itself more forcefully."

Thank you.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. JOHN C. BUTLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. BUTLER. Mr. Speaker, some days ago I extended my remarks on the subject of the St. Lawrence seaway. I tried to point out how very undesirable this project would be from the standpoint of the best interests of the citizens of the United States. I have noted with interest the debate that has progressed from day to day in the other body. Certain phases of the debate have attracted my attention particularly and I desire to comment upon them.

"Changing conditions" require "changes in methods."

One very distinguished member of the other body, and a man for whom I have the highest respect, points out that new and changing conditions demand that we give serious and favorable consideration to the seaway. He very aptly says that new conditions cause an adjustment in our economy and uses as an analogy the "buggy-whip industry." He says, and very correctly, that there was a time when the buggy-whip industry was an important and very useful industry in the United States. He states further, and also very correctly that a subsidy for the rehabilitation of that industry today would be very poor economics. He infers that progress in the fields of science and industrial development, with the new and improved methods, and so forth, challenge us to make adjustments to keep pace with the advance along these lines. Up to this point, Mr. Speaker, I find myself in full agreement with my distinguished friend. However, he goes on from there and applies this reasoning as an argument for the seaway development. He points out that railroads are fast becoming obsolete. At this point, Mr. Speaker, I do feel that my friend has gotten switched on the wrong track. In my opinion, waterways, particularly inland waterways, antedate railroads. They are one of the oldest forms of transportation. They are also perhaps the slowest and most nearly obsolete of all forms of existing transportation. When compared to railroads, the railroads are modern and the waterways are obsolete, even as passé as the very buggy-whip industry to which my friend refers. It was the railroad that speeded up our transportation and made the waterway outdated. The very argument used so ably by my distinguished friend, appears to my mind to strongly support our claims that the seaway development would be a step, but a step in the wrong direction. Instead of being forward, it would be decidedly backward. It would be adjusting ourselves to a change, Mr. Speaker, but it would be the same kind of a change if we would propose that our modern garages should be declared obsolete and we would proceed to reestablish the blacksmith shop. Our young men, engineers and mechanics, would be challenged to leave the splendidly equipped garages and return to the "village smithy 'neath the spreading chestnut tree." No, Mr. Speaker, we cannot discard our 60-mile fast overland freight because it is obsolete and expend our billions to develop a 12-mile-per-hour waterway, and call it progress.

THE SEAWAY IS A POWER PROJECT

There is no doubt, Mr. Speaker, that the St. Lawrence River would lend itself well to power development. But if we want additional power developed with Government funds, why do we select a river in some other country? Why not an American river? There are plenty of them in our own country, Mr. Speaker. Rivers going right through our own American States, rolling listlessly out to sea, thousands of miles of them. They are undeveloped and our own citizens would be most happy to see power projects for American use, employing American workers, and benefiting American business. There is plenty of opportunity for development on the Penobscot, the Connecticut, the Delaware, the Mohawk, the Hudson, the Susquehanna, the Potomac, the Niagara, the Ohio, the Mississippi, the Missouri, and countless others. All of these are in America. The power problem is not necessarily dependent on the St. Lawrence seaway. I fear it is being used merely as an argument for a project that the advocates of realize is not worthy to stand on its own merit. I fail to see that our need for power development justifies the seaway any more than it would be feasible for us to scrap our fine railroad transportation in behalf of the establishment of a ship canal.

In conclusion, I should like to pose this further question with regard to power development in the United States. Is there a lack of capital within reach of our American power companies to develop additional facilities to meet any sound requirements of our people? A glance at their financial statements will perhaps answer that question. If a power project is sufficiently needed to justify the investment, is it not reasonable to suppose that the companies themselves would be only too glad to provide it? Should it be too costly for them, then, when that is discovered, it would be well for the Federal Government to consider a grant of aid to them, thus confining our appropriations to a point where it is just the amount necessary to make the development possible. This procedure, it seems to me, is much more prudent than for the Federal Government to further aggravate our inflated condition by pouring hundreds of millions into a gigantic power development to merely create further competition with private industry. Such an effort would also further aggravate inflation, further weaken the already weak dollar, increase the already too large national debt, and load still heavier the overburdened American taxpayer. Mr. Speaker, I am opposed to this proposed St. Lawrence seaway.

Federal Bureau of Asylums

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. ANGELL. Mr. Speaker, the whole subject of the commitment of deranged citizens to mental hospitals and their treatment therein is one of deep concern not only to the Federal Government but to the governments of the various States of the Union. The United States Government and State officials and members of the Federal Congress and of State legislatures for many years have been aroused over the many cases of illegal commitment of the alleged mentally deranged and the inhumane treatment accorded to them and other patients in some of the hospitals maintained for their care and treatment.

While the problem is usually one coming under State jurisdiction, the Federal Government also has certain responsibilities with reference to it. I feel that the investigation of this serious problem should not longer be delayed but should be put on the agenda for early action both by the Federal and State Governments.

I am today in receipt of a copy of a letter written by Samuel Friedman, director of the American Equity Association, addressed to the President of the United States, calling attention to the seriousness of the problem and including

a newspaper article from the Washington Evening Star under date of November 14, 1947, in which certain alleged inhumane treatment of mental patients is discussed. I have no personal knowledge as to the truth or falsity of the statements but do feel that the whole subject should not be lightly brushed aside but the Nation-wide problem should be given consideration with the view to make certain that these unfortunate citizens are not deprived of their legal rights nor subjected to treatment which is out of keeping with the high standards of a free democracy. The letter follows:

AMERICAN EQUITY ASSOCIATION,
Washington, D. C.

To the PRESIDENT OF THE UNITED STATES,
The White House.

DEAR MR. PRESIDENT: In Attorney General Clark's recent speech he is quoted as apologizing for "burdening his listeners with details (pertaining to lynchings) because he wanted to bring home the horrors that result when mob violence takes over, when lynch law replaces due process of law, and when irresponsible persons set themselves up as the judge, the jury, the prosecutor and the executioner."

We understand the Attorney General's activity was due to your ordering the investigation of mass killings. While we are in sympathy and accord with this humanitarian gesture may we call attention to the fact that deaths by lynching are few in comparison to the deaths from violence and neglect that occur in the mental hospitals of this Nation.

When attention of hospital heads and State Governors is called to mental hospital filth and brutality, many times before the exposé breaks into print, there is always a rubber-stamp denial that anything was or could be irregular or wrong. Illinois and California papers are carrying accounts of shocking conditions in mental hospitals; recently articles have appeared in Life, Reader's Digest, Cleveland Press, New York PM, and various others, which you may not have read; therefore we wish to draw your attention to an Associated Press article in which a spokesman for the panel not only speaks for Maryland but honestly voices conditions of all mental hospitals of this Nation. "We are Tearing Patients Down Before We Can Build Them Up." * * * "Said conditions result from a division between the board of mental hygiene and individual hospital boards."

Mr. President, may we again bring to your attention the need for a Federal Bureau of Asylums with well-trained inspectors who shall be free from medical or political censorship to go into these institutions, day or night, unannounced, and find out just why an atmosphere of the concentration camp is allowed to prevail, just why many sane individuals are railroaded (without due process of law) and held incommunicado—certainly a violation of the fourteenth amendment, forced to work without pay, a violation of the thirteenth amendment, many needlessly tortured and brutally murdered, a violation of the eighth amendment, and all under the sole control of an irresponsible group who have set themselves up as judge, jury, prosecutor, and executioner.

Trusting you will give the above your serious consideration, I am,

Respectfully yours,
SAMUEL FRIEDMAN,
Director.

Mr. Speaker, unfortunately many of our hospitals for the mentally ill fail to provide for the rehabilitation of mentally deficient patients. The Congress, realizing the importance of rehabilitation passed in the Seventy-ninth Congress Public Law 487 which provides for the expansion of psychiatric facilities for the treatment of mental patients to further a program of rehabilitation. I include the following interesting and helpful discussion of this subject by M. R. Rittle:

REHABILITATION OF MENTALLY DEFICIENT PERSONS

(By Counselor M. R. Little, Waycross)

(Excerpts from paper read at district conference in Savannah)

Prior to 1943 the rehabilitation of mental cases was ignored almost completely. Public Law 113, the Barden-LaFollette Act, recognized the needs of this group and the economic feasibility of restoring such individuals to employability.

No claim should be made that all, or even most, mental cases can be rehabilitated with present knowledge, but cases can be selected who are both eligible and feasible for service.

Through the years there have been marked changes in people's attitude toward mental illness. No longer do we feel that a person is possessed of the devil or controlled by some evil influence. The mentally sick are not turned out and isolated, nor are they now punished for being "witches." Relatives of the mentally sick still are inclined to feel that occurrence of such an illness is a blot on the family record. They hesitate to mention such illnesses openly and attempt to keep such information from being public knowledge. They are fearful that they themselves may become mentally ill. * * *

There are no reliable statistics to show the complete incidence of mental diseases but it is known that slightly more than one-half of the 500,000 hospital beds in the United States are occupied by mentally ill patients.

Approximately 12 percent of men between the ages of 18 and 37 years were rejected by Selective Service for mental and personality disorders, not including mental deficiency or neurological defects.

Most physicians will admit that at least one-half of the patients whom they are treating are suffering partially or primarily from some emotional disorder.

Psychiatric cases must be selected carefully for rehabilitation in order to achieve the success necessary to justify the confidence of legislators and administrators who have made the present program possible and to avoid the discouragement which failure will bring to the rehabilitation worker and the client.

In other words, we look at the emotionally disabled individual as a human being not greatly different from other human beings, except for his disability. * * *

Every person has a threshold of tolerance for stress but if he faces stress beyond this point he tends to show disturbances of emotion.

The late Ernie Pyle expressed his feeling when he left the European theater of war in this way:

"I am leaving for only one reason—because I have just got to stop. 'I've had it,' as they say in the Army. I've have all I can take for a while. * * * I've been immersed in it too long. My spirit is wobbly and my mind confused. The hurt has finally become too great. All of a sudden it seemed to me that if I heard one more shot or saw one more dead man, I would go off my nut, and if I had to write one more column, I'd collapse." * * * During his life every individual meets difficult situations producing anxiety, irritability, or frustration. * * *

Vocational rehabilitation aims at making the individual employable.

Psychiatrists as a rule are concerned with treating all phases of a patient's disability.

The law requires that hospital treatment be limited to 90 days. In most cases vocational training and placement may be carried out sometime during the course of psychiatric treatment, before treatment is actually terminated. * * *

The first question to be answered is: "Is there a vocational handicap?" Emotional disturbances are perhaps the most common cause for employment difficulties. * * *

The most difficult decision to reach in the consideration of feasibility is the question as to whether or not the condition will respond to treatment within a reasonable period of time. In general, the outlook for response to treatment is better in the psychoneuroses and the depression states. However, no hard-and-fast rules can be made.

Feasibility of treatment also will depend to a large degree on facilities available. Under the provisions of the Mental Health Act recently passed by Congress, and signed by the President, there will be a gradual expansion of psychiatric facilities throughout the country. However, it has been estimated that it will be 50 years before there are enough trained psychiatrists in the country.

A person who is feeble-minded cannot be made intelligent. However, many such individuals can be placed in more suitable work and assisted to a vocational adjustment in spite of the handicap.

The problem of placing workers in the right kinds of jobs is not new in industry. It is estimated that approximately 50 percent of workers in the United States are not well placed vocationally and are somewhat unhappy and inefficient on this account. Some veterans who have never found themselves vocationally, and who are still suffering from some minor nervous ailment when they seek employment, will be floundering and will have no clear idea as to what they want to do or for what they are fitted.

In addition to the medical history and report of psychiatrists, constructive advice will take into consideration, whenever possible, the person's mental age, his scores in aptitude tests, his personality, his high school or work history, and his social background and conflicts.

The attitude of the employer and the state of the individual himself must be considered. Many employers have shown reluctance in accepting employees who have been given psychiatric diagnosis. One employee inadequately placed will do more to increase the employer's resistance to accepting such cases than productively employed clients could do to decrease this resistance.

The vocational rehabilitation counselor must not feel that the rehabilitation process is complete when the client has been placed in employment. A careful follow-up must be made to see that the client is self-sufficient, independent, and able to travel "under his own steam."

Some workers such as the "Schizoid" type can work more effectively only in places where they are sheltered from distractions and particularly from contact with large groups of people.

The more intelligent clients are apt to do well in a research job or other position where they are dealing with facts and chemical or mechanical processes, rather than with people.

The slow learner or mentally deficient type should be placed in jobs that do not require much complex thinking. Some need a fixed routine and simple situations.

It has been said that there are more jobs for the feebleminded than there are feebleminded persons to fill them.

In actual practice it has been demonstrated that persons with mental ages as low as 5 or 6 years may be taught to do simple jobs with supervision.

Over 100 gainful occupations for men and women with IQ's between 25 and 75 have been listed. * * *

The Federal Office of Vocational Rehabilitation, in a recent report for the fiscal year ended June 30, 1946, showed (cases) persons with mental or nervous diseases "closed as

employed" in such occupations as guards, watchmen, janitors, farmers; in skilled trades as jewelers, carpenters, electricians; semiskilled trades as in machine shop occupations, routemen, chauffeurs, auto repairmen, retail managers, clerical work, sales and kindred occupations, service occupations such as housekeepers, maids, waitresses, barbers; professional occupations such as accountants, authors, chemists, teachers; semiprofessional occupations such as aviators, dancers, photographers, radio operators; managerial occupations such as hotel and restaurants; unskilled occupations such as laborers and stevedores. * * *

The R. H. Macy Co., a department store which employs 13,000 persons, established a full clinic consisting of psychiatrist, psychologist, and psychiatric social worker. In a 4-year period these professional teams were able to adjust more than half of the "problem" employees studied while they continued to work.

Cost of Government

EXTENSION OF REMARKS

OF

HON. MELVIN C. SNYDER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. SNYDER. Mr. Speaker, the cost of government has a direct effect on the cost of living. This is a basic and fundamental fact, which the President and his advisors deliberately ignore.

The Congress has been asked to appropriate approximately $40,000,000,000 for current expenses during the next fiscal year. Debt reduction is not included in that figure.

The facts are that better than 20 percent of the cost of food and goods is represented by taxes. That is why it is so essential to reduce the cost of government and to reduce taxes.

One of the main reasons that living costs bear so heavily upon the workers of the country, is because of high taxes. High taxes are reflected in the cost of every loaf of bread, pound of meat, pair of shoes, or any other item one might mention. The most effective way to give relief from the high cost of living is to cut down taxes, so that the worker will have a larger take-home pay to meet the high prices of today. For the worker, this is just as effective as a pay increase, and it will be much better because it will bring lower prices through the stimulation of production.

I call attention to two editorials, one appearing in the Philippi Republican, Philippi, W. Va., under date of Tuesday, January 27, 1948, entitled "Why Not Look After the Cost of Government, as Well as the Cost of Food?" The other editorial appeared in the Preston County Journal, Kingwood, W. Va., on Thursday, January 29, 1948, entitled "The Cost to Each of Us."

The cost of government can be substantially reduced when all agencies of the Government give to the taxpayer a dollar's worth of service for a dollar of tax money.

[From the Philippi (W. Va.) Republican of January 27, 1948]

WHY NOT LOOK AFTER THE COST OF GOVERNMENT AS WELL AS THE COST OF FOOD?

President Truman is campaigning to bring down the cost of food, but up to the present time he has said nothing about bringing down the cost of Government. Note his $40,000,000,000 budget.

Since 1939, the cost of food has gone up 100 percent, while the cost of Government has gone up 377 percent. Government now costs more than food. Few people see that a greater danger to their jobs, savings, and living standards comes from Washington, D. C., than from the corner grocery, and why? It is because the Government is getting so far away from us that we don't understand it. We can understand a pound of butter, but most of us can't understand a Government bureau.

A former Governor of Texas said, "We are moving the county courthouse and the city hall to Washington." Of course, that is not literally true, but it is true in every sense that counts. We must bring Government back home where we can see and control it.

[From the Preston County (W. Va.) Journal and Preston Republican of January 29, 1948]

THE COST TO EACH OF US

President Truman's budget message seems to most of us to be dealing in astronomical figures. Forty billions is merely a row of figures. The fact that Government expenditures now are more than twice what they were under Roosevelt's New Deal before the war started is merely comparative.

To bring it nearer home one might realize that the 1949 budget as set by President Truman would cost every man, woman, and child in the country $270. To a family of four the cost is more than a thousand dollars. Add to this $270 the average cost of your State and local governments and you will begin to see just how much Government is costing you these days.

Since the New Deal took over back in 1933 the national debt has increased $235,000,000,000. This means that each family in the country now owes as its share of the national debt $6,000 more than it owed back in pre-New Deal days. Then add on any State, local, or personal debts and see where you stand.

Yet in spite of all the expenditure, President Truman has drafted new and expensive plans for repairing the state of the Union. After 15 years of New Deal rule we seem to be farther from the end of the rainbow than ever.

Put Teeth in Mine-Inspection Law

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. PRICE of Illinois. Mr. Speaker, failure of Congress to expedite consideration of several proposals offered in both the House and the Senate to put teeth into the Federal mine-inspection law by providing enforcement features amounts to gambling with human lives. Because I feel that Congress should recognize its responsibility to grant protection to the thousands of men engaged in this hazardous, and most essential industry, I have urged the proper committee in the House of Representatives to take this legislation from its pigeon hole and report it to the House for consideration.

The seriousness of the present state of mine safety enforcement—or, I should say, lack of enforcement was forcibly brought to the attention of the Nation on March 25, 1947 in the terrible disaster at Centralia Coal Co., mine No. 5 when 111 miners lost their lives. The country was shocked not solely because of the tragedy but also at the political events which led up to it.

Congress was aroused. For awhile it appeared that the Centralia disaster would result in prompt action on legislation to give Federal authorities the power, not only to make recommendations in the interest of mine safety but to enforce such recommendations. A Federal mine inspection law had been passed by Congress back in 1940. In its original form this was the legislation needed to cope with the problem of mine safety. But somewhere along the line in its evolution from a bill to its final enactment into a law it lost its teeth. So we have in our statutes an inspection law that leaves the Federal Government with no power to enforce its recommendations.

I want Congress to restore the teeth which were pulled from the original bill. The series of mine disasters which have occurred since the passage of the inspection law should be evidence enough that Congress was in error when it neglected to provide enforcement power for the Bureau of Mines inspectors.

The question of States' rights was the chief argument used to pull the teeth from the law enacted by the Seventy-seventh Congress. Mining, however, transcends State boundaries. It is one of the most important of our national industries. Coal is a natural resource. Miners should be the special concern of our Nation.

State enforcement of mine safety regulations has been very lax. The Centralia disaster merely exposed a condition that had existed for many, many years. The miners were made the pawns of political chicanery. Illinois is not the only guilty State but the events of last year within its State mine inspection system were such that they attracted the attention of the entire Nation.

I have asked the chairman of the subcommittee of the House Committee on Education and Labor to act quickly on pending bills to restore teeth to the Federal mine-inspection law as the only answer to the problem of mine safety. Only in this way can we remove mine safety from the influence of corrupt political machines. Too many men have already given their lives while men high in State offices played politics with the inspection system.

At the time the Centralia miners were appealing to Governor Green and State officials to compel the mine owners to comply with safety recommendations which had been made by competent inspectors of the Federal Government and by a State inspector, Mr. Driscoll Scanlon, who was subsequently rewarded for his honesty in public service by being removed from his position, these State officials were more interested in a

mayoralty election in Chicago. A few weeks before the tragedy it had been publicly disclosed that the mine operators were being solicited for political contributions by representatives of Governor Green's State administration.

Four months after the Centralia disaster 27 miners were killed in an explosion at the Old Ben Mine at West Frankfort. Shortly after three miners were killed in an explosion at Orient Mine No. 2 at West Frankfort.

In every case, at Centralia, at Old Ben, and at Orient, the mine management had been warned in advance of danger. But they took chances a rigid Federal enforcement law would not permit them to take and in 5 months 141 Illinois coal miners were killed.

A United Press dispatch from Benton, Ill., dated February 2, 1948, indicates that in the face of such tragedies a lesson has not been learned. The story relates that an Illinois State mine inspector was under indictment on a charge of malfeasance and failure to take necessary precautions for the safety of miners at Old Ben Mine 11. The representatives of the State inspection system it is charged in the indictment, attempted to intimidate the representatives of the miners on safety and tried to prevent them from requiring from the mine operators the necessary safety measures.

It is long past time for Federal action. It is shameful the way the mine-inspection systems in many States have been used for political advantage and politics should be removed from enforcement of mine safety by Federal law. Mining is too hazardous an industry to permit delay in action on danger warnings. It is the responsibility of Congress to make absolutely certain that the safety regulations of the Bureau of Mines are observed to the letter.

Legislation for Widows and Dependents of War Veterans

EXTENSION OF REMARKS
OF
HON. GEORGE J. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my remarks I include in the RECORD a resolution passed by Captain Lester S. Wass Post, No. 3, American Legion, Gloucester, Mass., and endorsed by the Disabled American Veterans, Chapter 74, of the Veterans of Foreign Wars of the United States, Post 1624, the AMVETS, and the newly formed National Guard Veterans' Organization, all of Gloucester, Mass., and urging the enactment of legislation benefitting widows and other dependents of war veterans:

Be it resolved in regular meeting assembled, That the Congress of the United States be petitioned to amend all present laws and regulations pertaining to widows and other dependents of veterans of any war participated in by the armed forces of the United States to allow (authorize) the previously mentioned widows and other dependents to draw the existing pensions regardless of any other income which they may be receiving from any source whatsoever: Also be it

Resolved, That the Congress of the United States be petitioned to make all income received by any widows or other dependents of any veteran exempt from all taxation by the Federal Government.

The foregoing resolution was referred to the Committee on Veterans' Affairs.

European Recovery Plan Weakened by Near East Problems

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. WOLVERTON. Mr. Speaker, under the leave granted to me by the House, I include in my remarks a news article appearing in the Wall Street Journal, under date of February 7, 1948. The article, written by W. C. Bryant, sets forth the critical situation in the Near East and its effect upon the European recovery plan with respect to its commitment to supply petroleum during the intervening years between this and 1952. The subject matter is one that should have the careful and serious consideration of every Member of Congress. The article to which I have referred reads as follows:

OIL FOR EUROPE—CONGRESSMEN SEE LACK OF PETROLEUM AS WEAK LINK IN MARSHALL PLAN—CAN'T COUNT ON VITAL MIDWEST SUPPLIES; ARABS ANNOYED ABOUT PALESTINE—16-NATION NEEDS TRIMMED

(By W. C. Bryant)

WASHINGTON.—In public hearings and in secret sessions on Capitol Hill the past week Congressmen have spotted the weakest link in the whole plan for rebuilding European industry. That link is petroleum.

No matter how well drawn the State Department's program for a Marshall plan, the machinery would be badly affected if oil supplies ran out. Secretary Marshall's aides are trying their best to soft-pedal the obstacles facing their $17,000,000,000 European recovery program, but they have been forced to the tacit admission that the plan as now proposed may be tripped by lack of enough oil.

Middle eastern oil is the key.

To carry out the 4-year Marshall plan, as now envisaged, will take 1,667,100,000 barrels of oil. The State Department has made that estimate after careful study. The 16 European nations to be assisted will draw heavily on this supply as they build up their industries with American help. The United States already is pressed for fuel oil and gasoline, so the plan calls for a big increase in oil production in the Arabian Middle East.

NO ASSURANCE FROM ARAB COUNTRIES

Now, the State Department admits it has no assurance that the Arab countries, incensed over the partition of Palestine, will supply all that precious oil regarded as necessary for the program.

The State Department has just released a special commodity report on the petroleum needed for ERP. The report begins significantly "petroleum is essential for the recovery of Europe." It proceeds to relate how the Department pared Europe's requests for petroleum—2,290,000,000 barrels—down to what it considers a feasible figure.

This supply of oil is predicated on expansion of oil production in the Middle East. "It is believed that the necessary quantities of crude oil and petroleum products to satisfy the requirements of the participating countries as estimated by the executive branch should in general be available provided that the projects for the expansion of the world's oil production and refining, especially in the Eastern Hemisphere are completed on schedule." If this Eastern Hemisphere supply is increased, the report says, the Middle East will contribute 80 percent of Europe's petroleum needs in 1951, compared with only 23 percent in 1946.

LEWIS DOUGLAS TESTIFIES

At a hearing yesterday, United States Ambassador to Britain Lewis Douglas told the House Interstate and Foreign Commerce Committe that, if this increased Arabian oil supply does not materialize, the whole Marshall plan will have to be revised. He differed sharply, in this respect, with Interior Secretary Krug, who suggested recently that, if Arabian oil is not forthcoming, the United States might make up the difference by rationing its own consumers.

What degree of confidence do you have in your ability to get more oil for Europe from the Middle East? the committee asked the State Department. The answer, not made public, was given at a secret meeting Thursday night. Present were State Department experts and Ambassador Ali Jawdat from oil-important Iraq.

Their answer, in brief, was that they can have no confidence at all, while Palestine is in turmoil.

The congressional committee wants the State Department to come up with some allocation plans for carrying out ERP without extra oil. This committee does not have any control over the drafting of Marshall plan legislation, which is being handled by the House and Senate Committees on Foreign Affairs and Foreign Relations, respectively. But the question mark it has raised will not be missed when this bill gets on the House floor and when the appropriations committees study the plan for possible economies.

INCREASE USE OF OIL

The State Department claims to have cut Europe's oil requests pretty drastically, but the program still allows for increased use of Diesel engines in road and rail transportation, agriculture, shipping, and industry. It also considers requirements caused by conversion from coal to oil.

This raises eyebrows among the House committee members who have taken a hand in the Interior Department's program for voluntary conservation of oil in the United States. That program discourages United States homeowners from installing oil burners and encourages United States industry to change back from oil to coal.

Europe's growing dislike for coal is based on two factors—high costs and labor and machinery bottlenecks. British coal costs $10.50 per ton at the mine head, the Commerce Committee was told. Anyhow, the State Department's plan already calls for a big increase in coal production, as big as the experts think possible.

Europe's reconstructed industry is estimated to need energy in 1951 on the order of what could be produced by burning 699,700,000 metric tons of hard coal. That compares with 540,300,000 in 1947. Energy derived from petroleum would be boosted about 32 percent to help meet this goal.

LOOK TO MIDDLE EAST

To fill the increasing demand for oil, the European nations, under the Marshall plan as now drawn, would look to the Middle East, where British and American companies have

been laying pipe lines, building refineries, and dickering with local potentates for concessions at a furious pace since the war's end.

Assuming plans proceed on schedule, the European countries would get 335,000,000 barrels of petroleum products from the Middle East in 1951, compared with 124,000,000 barrels this year. The United States is scheduled to give Europe a little less oil in the first year of the Marshall plan than it did in 1947. The State Department anticipates first-year exports of 36,000,000 barrels. Exports from other parts of the Western Hemisphere, chiefly Venezuela, would also decrease as middle eastern supplies increased. This Latin-American oil would then become available to meet increased demands in the United States.

Even so, the House Commerce Committee staff figures the United States may be 1,000,000 barrels of oil per day short of meeting its own domestic requirements in 1952.

MODIFY PIPE-LINE PLANS

Already, some United States companies have modified their plans for constructing pipe lines and refineries in the Middle East as a result of trouble in Palestine. Construction on the Haifa end of the trans-Arabian pipe line has been stopped and construction crews have been shifted to the Persian Gulf end of this important project. Unless this important link between the Persian Gulf and the Mediterranean can be completed, the oil companies, already short of tankers, will need an extra 56 of these vessels to transport the desired supply of middle eastern oil.

In addition, Defense Secretary Forrestal has warned that pipe lines in the Persian Gulf area are insecure.

Middle East oil output was about 850,000 barrels a day at the end of last year. United States companies reportedly draw about 315,000 barrels daily of which the armed forces take about 60,000 to reduce their drain on scarce United States fuel oil and gasoline.

In December, Arabian-American Oil Co., organized by Standard Oil Co. of California and the Texas Co., predicted that projects then undertaken by all companies in the area would double output within a few years. These projects include, besides the trans-Arabian pipe line, two pipe lines from Kirkuk in Iraq to Haifa in Palestine, new or bigger refineries in Iran, Iraq, and Kuwait, and extensive exploration and drilling.

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a memorial to Abraham Lincoln written by the Honorable Homer Hoch, former Representative from Kansas. This world famous memorial was recently referred to me by the Honorable Phil E. Zimmerman, past national patriotic instructor of the United Spanish War Veterans:

LINCOLN

There is no new thing to be said of Lincoln. Nor is there a new thing to be said of the mountains or the sea or the stars. The mountains ever tower in solemn majesty above the drifting clouds, the mysterious sea ever sobs upon the shore, and the silent stars ever keep holy vigil above a tired world—but to mountain and sea and stars men turn forever in unwearied homage. And thus was Lincoln. For he was mountain in grandeur of soul, he was sea in deep under-voice of sadness and mystery, he was star in steadfast purity of purpose and of service. And he abides. With the name of Lincoln tears are called from old men's eyes, and with the name of Lincoln childhood learns to lisp a patriot's devotion. And there is no new thing to be said of him—what need, for such as he! But while the republic stands on whose altar he laid his great mind and heart, while liberty is cherished, while civic virtue and service and sacrifice are honored in the earth, the name of Lincoln will be spoken in undying love by the sons of men.

HOMER HOCH.

Statement of Rochester Inter-Faith Goodwill Committee

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. KEATING. Mr. Speaker, never in all history have the forces of righteousness faced a greater challenge. Godless scoffers at spiritual values occupy the seats of the mighty in sister nations. In our own country their sympathizers and agents, in idolatrous worship of unrefined materialism, seek to subvert our institutions and inoculate our people, particularly our youth, with their poisonous serum. On top of that, greed, want, racial intolerance, hatred, oppression assail us on every side. These elements are our true enemies. Only by unity of Catholic priest, Protestant minister, and Jewish rabbi, together with all those of every denomination who make their common supplication on bended knee, can the forces of right and justice prevail. Only under God, can this free Nation prosper, indeed survive.

With intense civic pride, therefore, which my colleagues may be kind enough to forgive, I set forth below, under leave to extend my remarks, the text of a recent statement issued by the Rochester Inter-Faith Goodwill Committee formed in 1934, in the city which I have the honor to represent, consisting of prominent Protestant, Catholic, and Jewish members of the clergy and laity.

Stressing the basic beliefs, principles, and ethics which unite, rather than doctrines or dogma which divide, our citizens of various faiths, this committee has performed a service of inestimable value.

TEXT OF PLEA BY INTER-FAITH GOODWILL UNIT

(Following is the text of the statement issued yesterday by the Rochester Inter-Faith Goodwill Committee:)

The Rochester Inter-Faith Goodwill Committee was formed in order to strengthen the bonds of community life. To meet the national and international problems before us, those bonds must now be made stronger than ever. As a contribution to this end the committee invites the attention of the community to its statement of purpose adopted February 23, 1934:

"The Catholic, Protestant, and Jewish communions in this city, through official representatives, have organized a permanent body known as the Inter-Faith Goodwill Committee to express their sense of comradeship and to consider such issues as may arise which are of common concern.

"The confusion of the time offers to the members of these communions an opportunity to achieve a deeper understanding and appreciation of one another. It also challenges them to emphasize in their moral and religious outlook the great common principles which they believe to be the basis of our civilization.

"The members of these communions, for instance, share the belief in the spiritual nature of man and in man's supreme responsibility to God. They are also united in the desire to maintain the rights of men, civil and religious, which are the foundation pillars of the Republic, and which are guaranteed to our citizens by the Constitution.

"The purpose of the Inter-Faith Goodwill Committee will be to express this belief and desire, shared alike by Catholics, Protestants, and Jews, and to engage in such activities as will remove prejudice and bigotry and make for an increasing fellowship in the service of the common good."

CHARTER REAFFIRMED

At this time the undersigned members of the Inter-Faith Committee would reaffirm the charter which has been the guide for its activities during the last 14 years. We believe that the great majority of the citizens of Rochester stand with us on these fundamental principles. In our meetings we have been enabled to secure a better understanding of the ideals of our people, Catholic, Protestant, and Jewish. We have directed questions at each other and have secured accurate and timely declarations of the beliefs and practices of each group. In these interchanges we have recognized always the loyalty of each group to our American Constitution, to our American principles of civil and religious liberty, and to our American doctrine of equality for all before the law.

We welcome the public discussion of every question of common concern. We recognize that there are times when the public discussion of religious as well as political differences may be a necessity if our democracy is to function in a healthy way. We believe, however, that such discussion should be carried on without impugning the loyalty of the great body of our people, Catholic, Protestant and Jewish, to the foundation principles of the Republic. Unless we recognize this common loyalty, fraternal relations become difficult and the mutual confidence essential to our working together in community enterprise becomes imperiled.

CONFIDENCE NECESSARY

Such mutual confidence is more than ever necessary in these times when we face tasks upon the successful accomplishment of which the fate of civilization itself depends. We still have to make peace and avert another world war. We have to organize our economy to provide for the needs of all without sacrificing our liberties to the tyranny of a police state. We have to find types of education that will make man, as a spiritual being, master of the science and technology that, uncontrolled, will destroy him. We have to fight racial discrimination and a deadening secularism that denies the religious basis of life.

These are the primary tasks that confront us. They are the common responsibility of Catholics, Protestants, and Jews. And the men and women who will contribute most to their achievement will come from all the communions.

The differences in outlook that separate us are important. It is essential that we acknowledge and study them. But it would be tragic if in considering these differences we should drift into attitudes of hopeless antagonism toward one another. The religious

and racial conflicts of the old world with their bitter consequences warn us against this danger. Along with the emphasis on differences, let there be also a common quest for a deeper understanding of the spiritual objectives of these great religious groups and their ways of life. From such understanding may come a new spiritual climate in which the work of all the communions may be more fruitful.

LOCAL HERITAGE

Rochester has a heritage of good will that has characterized the relations of the members of the various communions with one another since the founding of the city. We are proud of that heritage. We are concerned that it be perpetuated.

Inspired by great common convictions and the vision of great common tasks, we pledge our continued effort to the achievement of civic unity. We count upon the cooperation of the members of all our communions, for we believe they are prompted both by patriotism and religious faith to defend our precious American tradition of human freedom.

Slovakia's Destiny

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter from Mr. John C. Sedlacek, a prominent citizen of East St. Louis, Ill., who serves as vice president of Assembly 501, National Slovak Society. I found Mr. Sedlacek's letter of great interest and I insert it in the RECORD because I believe many other Members of Congress will be interested in Mr. Sedlacek's treatment of a subject which is of world-wide interest.

Mr. Sedlacek's letter follows:

Hon. MELVIN PRICE,
House of Representatives,
Washington, D. C.

SIR: In the past decade, the history of Slovakia has become known to millions of our fellow citizens. Of course, their knowledge of the land of the Slovaks is indeed meager, but at least they learned from the newspaper headlines of the spring of 1939 that the Slovaks, 3,000,000 in number, lived in the heart of Europe on the Danube; that they have inhabited this area as their homeland for 15 centuries, that they had their own kingdom in the ninth century, and at last, after more than a thousand years of foreign rule, these long-suffering people, who had survived as a national group, had proclaimed their independence and had assumed their rightful place in the family of European nations.

In World War I the Slovaks fought side by side with their Czech cousins and helped to break up the domination of the Austro-Magyar dynasty after a thousand years' rule. But their fight for national freedom was unfortunately misused by the Czechs who used the Slovaks for their own purposes to establish a hybrid Czechoslovak undemocratic state. The plot to enslave the Slovaks under Czech hegemony was foiled, however, by the great Andrew Hlinka, who led his People's Party in Slovakia to victory over the evil designs of the Czechoslovak planners in Prague.

Out of the chaos that preceded the outbreak of World War II, the Slovaks emerged as a free nation by formally proclaiming their national independence, and by immediately establishing the Slovak Republic on March 14, 1939, in Bratislava. The newly created Slovak state was truly in accord with the will of the overwhelming majority of the people; and its institutions, the framework of its national constitution, the spirit and organization of its new government followed democratic lines. Moreover, its constitutions was based on Christian and democratic principles as inspired by the Papal encyclicals and the American Constitution. The governing officials of the new republic, who were elected in a free, nation-wide democratic election prior to World War II, served Slovakia efficiently, humanely, and justly during the entire war.

Let's look at the Slovak record during World War II. The Slovak Republic, which was established by the unanimous assent of its national parliament on March 14, 1939, in Bratislava, Slovakia, compiled the following historic and amazing list of achievements:

1. England, France, Russia, Germany, Spain, Italy, all the countries of Europe, recognized the Slovak state and established diplomatic relations with its Government before World War II.

2. The Slovak Republic, even when unjustly dispossessed of its southern fertile lands by Magyar aggression and annexation (condoned by the German Reich's Von Ribbentrop in Vienna), successfully managed to build a sound national economy.

3. The Slovak people enjoyed the greatest era of prosperity in their 1,500-year-old history during the short but glorious 6 years of Monsignor Tiso's regime (1939–45).

4. Slovakian railroads and highways reached a new high in development during the democratic regime of President Tiso.

5. The number of books, magazines, and periodicals during the existence of the Slovak Republic exceeded by far the total edited in the entire 20-year period of the first Czechoslovak regime.

6. Not one person was sentenced to death by Tiso's government in its 6 years of rule. This fact testifies more eloquently than any other accomplishment to what extent the Slovak nation and its government cooperated in the spirit of Monsignor Tiso's motto: "True to ourselves—let us march forward together."

7. Nazi-pursued Polish and Jewish refugees found safe refuge and sanctuary in the Slovak Republic. Altogether more than 100,000 lives were saved through the intervention of the Slovak Government, and well-known Slovak Communists were spared the death penalty even though Slovakia was strongly anti-Communistic and was waging war against Soviet Russia. What a contrast to the bloody record compiled by the present Soviet-dominated regime in Slovakia in the course of 2 years since the Russian liberation.

8. The Slovak Revolt (August 1944–October 1944) engineered by Soviet parachutists and a few disloyal Slovak Communists, far from being a demonstration of discontent of the mass of the Slovak people, turned out to be a fiasco when it was discovered that the rumor of Tiso's arrest was false. It had been rumored that the Nazis had taken the Slovak president into custody, and for that reason a few thousand Slovak peasants in the north country joined the partisans.

9. President Tiso frequently walked the streets of Bratislava unattended and unprotected. This shows that the Slovak president was loved by the populace. Few rulers can afford this personal luxury.

10. Father Tiso's execution by the Czech Communist regime on April 19, 1947, was mourned by the whole Slovak nation. His death by hanging was a crime against the Slovak people and against humanity.

11. The Slovak Republic did not declare war against the United States of America.

12. Despite communistic pressure and the menace of Soviet power, the Slovaks voted a 3-to-1 democratic majority in the elections of May 1946.

What of the future of Slovakia? At the present moment Gottwald, Stalin's personal chief in Czechoslovakia, has assumed control of the government in Bratislava after dismissing the representatives of the Slovak Democratic Party in the Slovak capital. This further increases the danger of Soviet domination of Central Europe, thanks to the machinations of Benes and Masaryk, who have been collaborating closely with the Soviet policies of the Kremlin, and who share the guilt with their Communist chief, Stalin, for the death of hundreds of Slovak patriots and the imprisonment of thousands of innocent Slovaks. Yet in spite of these tragic developments in Slovakia, the press of America consistently adheres to the view that the Catholic-minded Slovak state, with its government and people, was a Nazi-inspired satellite state of Germany, while the second Czechoslovak republic of Benes and company, is hailed as an island of democracy in the Soviet sea of Central Europe. But even this view is rapidly changing every day because of the steady retreat of the Czech collaborators with Stalin toward Moscow. At long last the Prague politicians have been unmasked, and their champions in America very shamefacedly have had to admit that Benes and Masaryk have let them down in the crisis. Reluctantly they have come to the conclusion, accepted in regard to Hitler, that you simply cannot do business with dictators except on their own terms. And those terms have been tyranny, persecution, violence, revolution, and death. So far we have acted as if we subscribe to these terms, and thousands have had to pay with their lives for our shortsightedness. There is coming a day of reckoning; and America, the world's most powerful democracy, must not be caught asleep. Already the front lines of democracy on the Danube are shattered. We must be ready to meet the challenge to our freedom at our very door.

As you had stated in your letters of last year, your memorial address before your colleagues in the House in honor of Monsignor Joseph Tiso and the Slovak republic. It could be given on their national independence day, March 14, which also will be their ninth anniversary. The Slovak republic was established in Bratislava in 1939, or on the day that Father Tiso's execution was carried out by the Czech-Communist regime 1 year ago on April 19.

It is with much pleasure that I send you my hearty congratulations and good wishes for a successful nomination as Congressman of the Twenty-fifth District in the Democratic primary election held on the 13th day of April. Your activities and the progress of the district will be watched with interest all over the State and country.

With kindest personal regards.

Sincerely yours,

JOHN C. SEDLACEK,
Vice President, National Slovak Society, Assembly 501.

Employment of Navajos Off the Reservation

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. MURDOCK. Mr. Speaker. the Congress passed, in the recent special session, an emergency measure for the relief and rehabilitation of the Navajo and Hopi Indians in my State of Arizona and in the State of New Mexico. In the closing hours of the special session $600,000 was appropriated for relief this winter and for the start of an off-reservation employment program. I anticipate that estimates covering the remainder of the $2,000,000 authorized for the emergency program will be received shortly by the Congress.

In addition, legislation and appropriations for the long-range rehabilitation program that is essential are being considered actively by the Public Lands Committee Indian Affairs Subcommittee in the House, and by the Committee on Interior and Insular Affairs Subcommittee on Indians Affairs in the Senate, as well as by the Indian Bureau and the Department of the Interior. I hope that we can proceed unremittingly to the enactment of a suitable long-range rehabilitation program, which is even more important than the action already taken for them.

I believe that the Congress and the country should be informed of the progress that has been made on one phase of the emergency program—the off-reservation employment. I have a preliminary report from Assistant Secretary William E. Warne, of the Interior Department, in the form of a letter, which I include as a part of my remarks. It follows:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
Washington, D. C., February 4, 1948.

Hon. JOHN R. MURDOCK,
House of Representatives.

MY DEAR MR. MURDOCK: Gratifying reports have been received of the conference held January 30 in Phoenix at the Westward Ho Hotel regarding off-reservation labor opportunities for Navajo and Hopi Indians. District Director William H. Zeh, who conducted the conference, says:

"The attendance far exceeded our expectations. It was a representative group. * * * A keen interest was maintained throughout the meeting which was participated in by the Indians, present and prospective employers of Indian labor in industry and in agriculture, religious groups, and others interested in the welfare of Indians. It was significant that throughout the entire meeting this interest was both specific and practical. * * *

"The facts developed during this meeting are briefly summarized as follows:

"1. The Navajo Indian under certain conditions is willing to leave his reservation to seek off-reservation employment.

"2. The Navajo has been found to be a desirable employee.

"3. Methods need to be developed to stabilize the Navajo labor supply.

"4. The primary need was to develop stable communities off the reservation in areas where work will be available. The undesirable type of temporary migratory labor, with its attendant social problems, should be avoided.

"5. The pioneering work carried on by vegetable growers in the Salt River Valley and others in connection with the hiring of Navajo labor definitely indicates that a stable Indian labor supply can be developed with the right treatment, training in the work to be done, and by the development of satisfactory housing as well as school facilities.

"6. Problems created by language, tribal customs, etc., can be solved by a sympathetic understanding and education of both the Indian employee and the white employer.

"7. There is ample evidence to show that there are real possibilities for the development of skilled labor among the Navajos. A positive training program should be instigated, in which the Veterans' Bureau can play a major part.

"8. There are numerous agencies, both in the Government and State, as well as among private concerns, who are very interested in developing off-reservation employment of Navajos and are willing and able to help the Indian Service."

I know that you will be glad to know that this phase of our Navajo program has been well started. There will be no let-up in our attention to the details that need to be worked out. The Indian office, through the district office at Phoenix and through Mr. James M. Stewart, superintendent of the Navajo agency at Window Rock, is bending every effort to make this a continuing and successful program.

Sincerely yours,

WILLIAM E. WARNE,
Assistant Secretary.

A Word About Meat; No Rationing, Please

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Joseph's News-Press:

A WORD ABOUT MEAT; NO RATIONING, PLEASE

About 17,000,000 people—or at least their spokesmen—this week told Congress that meat should be rationed, and one lobbyist said FLANDERS' bill wasn't strong enough. Well, a Senate banking subcommittee yesterday voted 3 to 2 against the bill. But there may be other attempts at setting up meat rationing machinery under the theory that we are facing a serious meat shortage.

From the heights at Washington the meat situation looks bad; consumers agree that the price of red meat is too high, and fear that if and when the shortage comes, the price will go still higher. Now, let's look at the figures on which this anticipated shortage is based.

On January 1 there were 12 percent fewer cattle on feed than a year ago. The drop in sheep and lambs, over the same period, was 19 percent. There are no comparable figures for hogs, but here is an indication: Last fall's pig crop was 3 percent higher than a year ago, but the anticipated 1948 spring pig crop will be 11 percent smaller, which would result in a 9 percent drop in marketing of spring pigs next fall. That's the story of what is ahead as far as the 1948 meat supply is concerned. It's not a pretty picture, but it's not famine, either. You are just going to eat about 5 percent less meat this year.

Now about this price business. Most folks don't mean price control when they say price control; they mean price reduction, the fixing of a ceiling at a lower price in order that their dollars will buy more meat. Well, let's have a look at meat profits. Accurate figures are available on a steer that was purchased by a feeder January 1, 1947, and sold at $1 a pound for steaks last September.

This steer, weighing 600 pounds, costs the feeder $22 a hundred, making the feeder's initial investment $132. If he had corn on hand at the time he bought the steer, it had cost him $1.50 a bushel. In 8 months' feeding the steer was fed 50 bushels of corn, worth $75, $20 worth of supplement, and $10 worth of hay. When the steer was sent to market, the trucking charges were $3.50, yardage, 60 cents, and the commission company that sold him charged 80 cents for its service.

With the cost of the feeder animal, the feed, and marketing makes the feeder's investment $241.90. It is difficult to determine labor costs in farm operations, but observers say that labor, death loss, interest on investment, and incidental expenses incurred in feeding a steer would run about $35. That makes his investment $276.90.

The steer, weighing 1,000 pounds after 8 months of feeding, sold for $32.50 a hundred on the market, so the feeder received $325 for the animal. His profit was $48.10. (If he had fed the steer through the last 8 months he would have paid $3 to $4 more a hundred for the 600-pound animal, and would have fed it $2.75 corn.)

So the packer bought the 1,000-pound steer for $325. Labor and other plant expense in slaughtering the animal were $11.31. (We have the exact plant costs on packer operations.) But the by-products from the steer, including hide and glands, were worth $28.42 last August 27, so the steer actually cost the packer $307.89. The steer dressed out 625 pounds of marketable meat, an excellent dressing average, so the meat that the packer had to sell had cost him $49.50 a hundred. The meat weight shrunk 4 pounds in shipping it to New York, and the shipping expense was $14.64. (We are sending this meat to New York, for the industrial Northeast eats a big share of the Nation's meat.) Laid down in New York the meat had cost the packer $51.90 a hundred.

The meat from this steer sold to a large meat market for $52 a hundred. (That was the actual price for that grade of meat on September 10, last year.) The packer made 10 cents a hundred on the steer he slaughtered. If this profit seems small, it might be interesting to know that last year Swift & Co. made only a quarter a cent a pound on all the meat it handled.

Now the meat dealer had the carcass; he lost 93 pounds in unsalable bone, sinew, and shrinkage during cutting, bringing the cost to $60.50 a hundred, before labor. The work of cutting up the carcass sent the dealer's cost to 73 cents a pound. Since some cuts of beef sold for much less than 73 cents a pound last September, even in New York, the better steaks from this steer retailed for $1 a pound.

Now let's bring this price thing up to date. The feeder, paying $25 a hundred for the 600-pound steer, and $2.75 a bushel for the corn, is shaving his profit pretty close, for he's still getting about $32.50 a hundred for his 1,000-pound finished steer. The trucker, the stockyards company, and the commission firm are still getting about what they received from handling last year's steer. The live animal is costing the packer about the same, and the retailer is getting about the same for the steaks and roasts and boiling

meat. Labor in all of these categories costs a little more than it did last year.

Now, if the cost of the meat you buy is going to be pushed back and made stationary, where is the price reduction going to be put in effect? On the feeder, the packer, or the retailer? And if all of them are included in the cut, will they be given assurance that labor and other costs they have in handling the product will not show further increases?

One thing is certain. Whenever meat prices are rolled back somebody along the line between the producer of the feeder steer and the consumer is going to get hurt. The price fluctuations on the day that the rollback comes will determine which agency will get the blow.

Petroleum and the European Recovery Program

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. WOLVERTON. Mr. Speaker, an essential part of the European recovery program is a greatly expanded petroleum supply and the steel to make it possible. What we will be able to do in helping Europe's recovery largely depends on conditions in the Middle East. It also depends on what we do in supplying steel for constructing additional facilities required to develop Middle East oil production.

For some time the committee has been examining intensively into the current fuel situation, especially regarding petroleum. We have been considering present and future domestic and world petroleum demand and supply in an effort to determine just where we are and where we may be going in this highly significant area. Many witnesses already have been heard and preliminary and progress reports have been issued.

We have just concluded 2 days of testimony on petroleum requirements of the European recovery program and on the situation in the Middle East, given by Lewis Douglas, Ambassador to Great Britain; George Wadsworth, Ambassador to Iraq; Loy Henderson, Director, Office of Near East and African Affairs; and other State Department officials.

It is apparent that petroleum is one of the key commodities in the European recovery program. It has been presumed the petroleum largely could be supplied from expansion of Middle East fields. It is not at all clear, however, that very great reliance on this source justifiably can be placed in view of political unrest in these areas.

Even were there complete confidence that this source were available and could be developed, the proposed increased use of petroleum products in reviving the European economy depends upon tremendous immediate expansion in refinery and transportation facilities to process and carry such oil. Steel is required for wells, for refineries, for tankers, for pipe lines, and even for oil burning and consuming equipment. We do not yet know how far we can supply this, nor the effect on our own economy.

On January 26, this committee issued a preliminary report covering certain specific aspects of the domestic and world fuel situation. The committee then stated that, until a thorough review had been undertaken, it appeared most unwise to make—and the committee specifically recommended the deferment of making—any foreign commitment covering the supply of petroleum and petroleum products.

From our survey these past few days we are not yet in position to know what can be done.

Last summer the committee, in the exercise of its continual watch over the petroleum situation, was assured by both industry and Government representatives that there was no question about there being adequate basic supplies of oil. By December it was evident to us that this assurance was incorrect. By last week, Government witnesses testified that neither they nor industry any longer took the position that available supplies now, or even for the next few years, would be forthcoming in volume adequate to meet the tremendously increasing domestic demand.

While it appears that the State Department has made some revision downward in Europe's requirements as estimated last summer in Paris by the participating nations, it is far from clear whether the Department's estimates have given effect to the serious situation just now being developed as confronting us. Indeed, such comparisons as can be made between the program as advanced at the time of the special session last fall and as presented this week to the committee, indicate only a minor downward change of some 5 percent. This seems unrealistic in view of current and anticipated conditions.

The State Department should carefully and energetically review its estimates of Europe's petroleum requirements. It further should review the feasibility of the entire recovery program in the light of present precarious supplies and the possibility of developing alternate energy from other sources. This should be done before the Congress is asked to vote on the recovery program, not after.

The evidence presented to the committee indicates that whereas the world in 1946 used just under 8,000,000 barrels of petroleum a day, in 1951 it is expected to consume well over 10,000,000 barrels a day. The United States consumes over two-thirds of the world's production, and is estimated last year to have used some 1,970,000,000 barrels. By 1951 United States demand is estimated to increase nearly 1,000,000 barrels a day. The additional 2,000,000 barrels a day to meet this United States increased demand and the increased demand of the rest of the world must come from both hemispheres.

European requirements, as presented to us, contemplate an increase in consumption of the participating nations from 255,000,000 barrels in 1946 to 442,000,000 barrels in fiscal 1952. Whereas the Western Hemisphere in 1946 supplied 75.4 percent and the Middle East supplied 24.6 percent of Europe's needs, the executive-branch program assumes that by 1951 these proportions can be practically reversed. This means of the 408,000,000 barrels demanded that year, the Western Hemisphere will need to supply only 18 percent, and the Middle East will supply the remaining 82 percent or 335,000,000 barrels. To do this, production in the Middle East must more than double its present 850,000 barrels a day.

This means that this country can meet its increasing needs, and Europe be supplied in larger quantities, only if Europe is primarily supplied from expanded production in the Middle East.

Reliance on the Middle East as a source of supply is entirely problematical. Whether the supply can be developed at the rates and times proposed to meet these Europan requirements already seems doubtful. The committee has been informed of changes in facilities construction already occasioned by difficulties over the partition of Palestine. Europe's proposed reliance on oil as source of fuel and energy for its commendable but ambitious program to reinvigorate its industry, calls for the closest scrutiny.

While the State Department has detailed its estimates of Europe's requirements for petroleum, however, well founded they may be, so far we have not been apprised of what we are expected to furnish in the way of steel and equipment, other than a suggestion that they are large in amount. Nor do we know when and where these are wanted, nor what will be their impact on our own domestic needs.

Regardless of the fact that oil can be made available from the Middle East source, the stepped-up European requirements necessitate substantial refinery expansion. This it will take time to accomplish. In the meantime, it is stated, Europe's requirements would have to be satisfied in appreciable measure by imports of finished products from the Western Hemisphere, as well as from the Middle East.

This is significant, for 67 percent of the stated 1949–52 requirements are in our now critical categories of kerosene, gas, Diesel, and fuel oils. Although it is stated that the executive branch estimates of requirements take into account the particularly tight situation in heavy oils, it is proposed that the apparent shortage in residual fuel oil, may be reduced somewhat by increase in refinery yield at the expense of lighter fuel products. This procedure is exactly opposite to the trend today in our own operations, for greater amounts of gasoline and home-heating fuel oils have been obtained at the expense of cracking into the industrially used residual fuel oils.

The executive-branch report on the program's requirements states that the increase in European demand for kerosene and lubricating oil is moderate, but gas and Diesel oil, and especially fuel-oil, consumption show a large expansion, resulting in part from the greatly increased use of Diesel engines in road and railroad transportation, agriculture, shipping, and industry, but mainly caused by the conversion from coal to oil in industry and shipping between 1945 and 1947.

It is far from apparent the extent to which the State Department has screened the uses of not only all petroleum products but particularly of these oils; nor how far there are imposed the same restrictions on use of, or conversions to, oil for these industrial and other purposes equal to the restrictions assumed will apply on use of gasoline for motor fuel. This is of especial moment in view of the current demands being made here at home, not only for cessation of conversions but even for reconversion back to coal in uses of this character.

Some testimony has been offered to the effect that the European conversion to oil is the result of the high price of coal, now reaching $10.50 a ton at pit mouth; and that without reduction in costs in industries which are large users of power, the European countries cannot produce goods at costs low enough to compete in world trade. To the extent this is true, it would appear the remedy may well lie in effectuating a change in mining costs of an energy source locally available in these countries, rather than through imports of energy fuel oils from here.

The increased Middle East production and European use further represents substantial expansion of transportation facilities, including ocean tankers and initiation of and completion of several large pipe-line projects to the Mediterranean. Quite apart from political considerations regarding the completion of these pipe lines, is the matter of steel involved. Pipe has been and continues to be in short supply here at home for imperative drilling of wells, for transportation of petroleum, and for transportation of natural gas and the alleviation of an exceedingly critical situation.

Alternatives to pipe line construction in the Middle East involve an even larger tanker construction program than any yet contemplated. It has been stated that in the case of one line of 300,000-barrel capacity the alternative is 59 tankers which of themselves would require 357,000 tons of steel. So far no specific estimate of the steel requirements from this country for transportation expansion to meet Europe's increased oil requirements has been forthcoming.

The committee and the Congress, before voting on the Marshall plan, should be better informed of just what is involved in the petroleum aspect of this recovery program, comprising the amount and source of oil requirements, the uses to which the oil products are to be put, the steel involved in expanding collateral facilities, and the alternatives to reliance hitherto placed on the Middle East as a source of supply. Therefore, I have requested the State Department to furnish a statement covering the following:

First. Petroleum requirements under the European recovery program:

(a) Total requirements estimated by CEEC and by State Department.

(b) Such requirements by types of products by years, by countries; comparison with current and prewar years.

(c) Such requirements by source of supply—that is, United States domestic, United States foreign, other foreign—by chief supply areas, by years; comparison with current and prewar years.

(d) Such supply itemized not only as to crude source but area of refining, and amounts from these areas.

(e) Total requirements under the plan for investment in crude production, refining, transportation, and distribution facilities; itemized to show crude or refinery capacities involved, dollars or other source of investment, areas and ownership of expansion, and steel or other critical material involved, together with source of such material, with amounts.

(f) Uses by participating countries of products involved; that is, maintenance of existing demand, increased demand, conversion from other energy sources.

(g) Investment required to meet any expansion in oil-burning facilities, especially as it relates to supply from the United States, under the plan, of such equipment, together with indication of amount of such equipment, with dates.

Second. Contemplated supplying such requirements from the Middle East:

(a) Full discussion of the "degree of confidence which we justifiably may have in imports and foreign reserves, under changing political situations, especially in view of the reliance which hitherto has been placed on greatly expanded production in the Middle East"—committee report, January 26, 1948, page 17.

(b) Full discussion of whether it is proposed to meet all or any portion of the requirements from the United States which are now contemplated will come from the Middle East in the event such Middle East supply is not forthcoming in the estimated amounts; together with discussion of the consideration which may have been given, in such circumstance, to the effect upon the meeting of the domestic United States growing demand.

(c) Alternative plans for meeting European energy and fuel requirements in the event it is not proposed to meet any deficiencies as outlined in (b); that is, additional European coal production, United States exports of coal, additional European hydroelectric power; and in the latter event, the amount and kinds of equipment planned on export from the United States.

(d) The basis upon which the plan's contemplated development of Middle East production is predicated, that is, the determination regarding amount of expansion by United States companies and by foreign companies, whether on some historical pattern or otherwise, and the effect upon competitive positions in this area of United States and foreign companies.

Oleo and Butter Held Equal in Nutrition

EXTENSION OF REMARKS

OF

HON. ROLLA C. McMILLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. McMILLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of February 7, 1948:

OLEO, BUTTER HELD EQUAL IN NUTRITION—2-YEAR ILLINOIS UNIVERSITY SURVEY REPORTS NO DIFFERENCE IN EFFECTS ON HEALTH, GROWTH

CHICAGO, February 6.—Butter and fortified margarine have equal nutritional value, according to a survey reported in the Journal of the American Medical Association today.

The survey was made over a 2-year period by Dr. Anton J. Carlson, Dr. Harry Leichenger, and Dr. George Eisenberg of the University of Illinois College of Medicine.

The doctors studied two groups of children, one of which ate butter and the other standard brands of margarine, and concluded that there was no apparent nutritional difference when the source of supplementary table fat was vegetable (margarine) rather than animal (butter).

The margarine group consisted of 160 children, from 3 to 16 years of age, who were orphans or children from broken homes. They received margarine on bread, in vegetables, in pastry and fried foods.

The butter group included 107 children of about the same age group in another institution.

"The diet in each institution was carefully supervised by trained dietitians and so regulated that 25 to 30 percent of the total calories were supplied by fat," the experimenters said. "The margarine constituted approximately 65 to 70 percent of the total fat calories."

All of the children in both groups were weighed and measured each month under medical supervision. Routine red blood cell counts and hemoglobin determinations were made on each child after the study was started and again one year later.

"Growth of the group fed margarine, as determined by increases in height and weight, was comparable to that of the children fed butter and to standard height and weight values for the same age group," the doctors reported.

They added, moreover, that no increase in the amount of illness was noted in the margarine group and blood studies showed no significant difference between the two groups.

"The children in the margarine group experienced a high degree of good health during the study, and in comparing their health to that of the butter group it appears to have been much higher," the investigators said.

The doctors emphasized, however, that they were not making claims that the margarine group was healthier because their diet contained margarine, asserting that "other variables are more likely to account for their better health."

Radio Broadcast by Jack Beall

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Jack Beall over the American Broadcasting Co., January 24, 1948:

Good evening. This week, there has been a startling and important disclosure by the State Department, of the actual secret documents of Nazi-Communist collaboration leading up to the Second World War.

As you'll recall from reading the accounts in the newspapers and listening to your radio

this week, the State Department has released official documents of the Hitler government, which were captured and which had never expected to see the light of day. They lay bare in clinical detail the development of a Fascist-Communist working arrangement to divide and dominate the world between them; to define the spheres of influence of each and to take the concerted steps which started the most disastrous war the world has ever known. This captured correspondence shows definitely that they were seeking to negotiate a settlement by which the Soviet Union would come in, openly on the side of the Rome-Berlin-Tokio axis and be a full partner of Hitler in the war. It records the overgreediness of Stalin and Molotov—their asking too high a price of Hitler—a proceeding which led to a cooling off in their relations and eventually the attack of Hitler on Russia, in June of 1941.

Without the Stalin-Hitler pact, there could have been no war, because Hitler would not have dared to go to war with Poland, with a possibility that England and France would come to the aid of their ally. Germany's eastern flank had to be made secure by a treaty.

One of the important points that the disclosure clears up very plainly is the excuse which the Communists all make for the hideous betrayal of the rest of the world. They claim that Stalin was merely seeking to gain time, to build up his own strength against the attack that he knew was inevitably coming from Hitler Germany. Well, the documents show that not only was Stalin supplying Hitler with large amounts of war materials, but that he was actually straining Russia's own economy and reducing its own war potential to do it. On the other hand, aid from Germany was slight and lagged far behind Hitler's promises. But Stalin kept right on sending material to Hitler's war machine, at the cost of his own. One of the documents is a note from the German Government thanking Stalin for his valuable assistance.

All of this certainly doesn't look like a man gaining time to build up his own resources, against a future German attack, but more like a man intent on collaboration for the gains that would accrue to Soviet Russia from that collaboration. The first fruits thereof were the Soviet seizure of the Baltic States and the division of Poland between the Soviet Union and the German Reich.

In passing, I would like to point out that the first overtures for the Stalin-Hitler pact came—not from Hitler—but from Stalin. The date was April 17, 1939. That shows the perfidy of a system which claimed to be the ruthless enemy of nazism and fascism. When it found it to its material advantage, for the sake of the spoils of war, in the hope of looting the rest of the world—it embraced the Nazi system, freely, and took the first step toward collaboration.

All of this material was sought to be placed in the records at the Nuremburg trial, by Goering, Von Ribbentrop, and other Nazis, but it was excluded on the insistence of the Russians. Goering and Von Ribbentrop thought that if they were to be adjudged war criminals and sentenced to be hanged then Stalin and Molotov were equally guilty as men who helped start the war. I leave it to you to judge whether you think the Russian side, which actually initiated the talks, made territorial agreements for the carving up of Europe; gave assistance to the Germans; actually invaded Poland from the east while the Germans were coming in from the west, protected Germany's flank; gave Germany political carte blanche to go ahead with the war; assisted in that war with supplies and even a submarine base at Murmansk; and was even negotiating to join the Rome-Berlin-Tokyo Axis—and probably would have joined if Hitler had not thought their price was too high—I leave it to you to decide if you consider the Soviet rulers were any the less guilty than the Nazi rulers for starting that terrible holocaust—World War II.

In the days of the Stalin-Hitler pact, the representatives of the two governments toasted their mutual successes. They united in agreeing that their ideological differences were slight in contrast to their joint enmity toward the capitalist western democracies. Molotov then reviled American imperialism in just the terms that the Cominform does now. It was in this period that Molotov made his remarks * * * that the difference between nazism and communism, ideologically, was just a matter of taste.

Communists would now prefer to forget all about that period. They consider it provocative "war mongering" that the documents are now brought up and published by this Government. But they should never be allowed to forget that they were once the collaborators of Hitler in bringing war to the world—the Second World War—that cost more than 22,000,000 lives, the wounding of more than 34,000,000 others, and a money cost of more than $1,000,000,000,000.

In the time I have left I would like to pursue the point that there is little to choose between fascism and communism—that they are bloody brothers under the skin.

Both fascism and communism stem from the philosophy that the state is everything—the people nothing, save instruments of the state.

Both represent revolts against western liberal civilization. Both derided and despised democracy, but the Nazis and Fascists were much more frank about it. The Communists have sought to cover themselves with the mantle of democracy, to claim that they are the true democrats. In the same way, the Communists make claim to the title of "progressive" and "liberals," while they berate the western democracies as being "reactionary." They don't consider the fact that they have gone back to the most reactionary form of government on earth—that they are copying the methods that are as old as tyranny itself—that they are going back a thousand years to the despotic rule of one man.

The struggle of democracy, up through the ages, has been to put limits on the power of one man—the king, the tyrant, the despot, the absolute ruler. Only in the most backward of countries do you still find the absolute ruler—the man who has life-and-death power over his subjects. But the Communists have raised up the infallible leader, with all the old attributes—almost of god-head. And they call it "progressive," and "modern." Stalin, for example, is publicly adulated almost to the point where he is a god on earth. No criticism of him is tolerated. The chief instrument of his rule is a single party—the Communist Party. No opposition is allowed to this party. The same things were true in Hitler's Germany. How would you distinguish this from the oriental despotism of Genghis Khan? Was Genghis Khan "progressive" by present-day standards?

Hitler once ruled, as Stalin now rules, by methods of terror and of propaganda. They both used all the arts of indoctrination and discipline to get their people to accept their rule, without question. The Communist Party—just like the Nazi Party—controlled the press, the radio, the theater, the movies, the schools—all the outlets and media of expression. If propaganda should fail them and people should still try to think for themselves there was the whip, the castor-oil treatment, the torture chamber, the death furnace, the firing squad, and the exile to Siberia to coerce people back into line. All these are methods of terror, upon which the rule of these modern despots rested. The instrument of their terror had different names. It was called the Gestapo in Germany, the Ovra in Italy, and in Russia it has had a succession of names. It's latest name is the MVD. But it does its work in the old, old way of terrorizing people. The knock on the door in the middle of the night, while peope inside cower, and silently and tearfully kiss each other goodbye—for none knows which will be taken off to prison and to torture. I might say here that if Torquemada was "progressive" so is the MVD of Stalin—so was the Gestapo of Hitler. Neither permitted habeas corpus or the right of speedy trial by jury. Both could keep a man in prison, incommunicado, until he rotted, if they liked. If Louis the Fourteenth with his letters de cachet was progressive so was the Gestapo of Hitler—so is the MVD of Stalin.

While the Soviets have done away with the death penalty, they have hit upon another penalty far worse to the victim and far more practical for the State—it proceeds to work him to death in slave camps in the Arctic North, where the turn-over is 12 percent a year. In other words, where the life expectancy is no more than 8 years. Hitler, too, had his slave-labor camps and his death factories which were almost merciful by comparison in the sense of getting the torture over quickly. If, in bringing back to this modern world the age-old institution of human slavery, Stalin and Hitler were progressive, then so were the Pharaohs of Egypt, so were the Babylonians, so were the Chaldeans, so were the Incas.

The chief distinction, I believe, of the modern slaveholders and slavedrivers is that they do it on a scale unimagined in the past and they do it to their own people—not just the enemy taken in battle.

Both Hitler's Gestapo and Stalin's MVD carried on espionage against the entire population. I am told that about the only persons who aren't listed in the secret police files of Russia are Stalin himself, and Beria, the boss of the MVD. Maybe I am going too far in making these exceptions.

Of course, with the wiping out of all political parties, both the Fascist and the Communist systems either wiped out the trade unions or reduced them to the status of company unions. In both states, the right to assign people, arbitrarily, to their labors was asserted.

With the suppression of freedom of the press, went freedom of speech and freedom of public assemblage and the rights of petition for redress of grievances. The freedom of religion was originally knocked out entirely in Soviet Russia but, in more recent years, it reached the approximate status of religion under Hitler—it had to serve the state or be under very limited toleration. Both sought to substitute state-worship or leader-worship for God-worship.

And how did the two forms of the totalitarian state face the world at large?

Both had an aggressive idea of their messianic mission to spread themselves over the earth. "Germany today—tomorrow the world" was the slogan in Hitler Germany. "We have a world to gain" is the Marxian slogan.

The organization of fifth columns in foreign countries—by branches of the Communist Party and by the bunds—was common to both. The effort to keep foreign ideas from infiltrating the minds of their own people caused both countries to set up rigorous censorships and travel restrictions. However, the iron curtain of Russia is much harder to pierce than anything der fuehrer was able to construct.

Both beat the drums of war and called for the martial spirit in training their youth. Both have cultivated the same type of suspicion of anything foreign.

Both kept huge armies and exemplified the idea of guns before butter. Both grabbed whatever territory they could, adjacent to them which they thought they could grab without causing war to break out. Both adopt a hectoring, bullying attitude in their foreign relations. A speech by Hitler before

the war could only be surpassed in vilification and abuse of supposedly friendly nations, by Molotov or Vishinsky. Both seek to make friends and influence people with a club.

There are so many points of similarity that, when you come to sum up you can do no better than use the words of William Henry Chamberlain, who says "Communism is the heir of the aggressive methods and designs of fascism. Stalin and Molotov have taken up where Hitler, Mussolini, and the Japanese militarists have left off."

Our New Friends, the Japanese

EXTENSION OF REMARKS
OF

HON. ABE McGREGOR GOFF

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. GOFF. Mr. Speaker, in the February 1948 issue of the Nation's Business, an article appeared by Gen. Bonner Fellers, former military secretary to General MacArthur and Secretary General to the Allied Council for Japan. It was my privilege to serve with General Fellers both in Africa and Japan. I commend the article as an excellent statement on the occupation of Japan with sound recommendations for the future treatment of that country. Under leave to extend my remarks, I include the article, as follows:

OUR NEW FRIENDS, THE JAPANESE

(By Bonner Fellers)

Japan's war record is so black that reasonable people understandably wonder:

Are the Japanese worth saving? When occupational forces withdraw, will Japan return to militarism? Can the Japanese nation again be trusted? Can we do business with Japan?

While in Tokyo as military secretary to General MacArthur, I struggled to find answers to these questions.

I reached these findings:

The new Japan, provided we don't blunder, will eventually emerge as a Christian democracy, and a stanch friend of the United States. The new Japan will help bridge the gap between the east and west. A democratic Japan will aid the billion Asiatics who seek freedom, will stalemate Russia, and help lift some of the burden from the American taxpayers.

The unspeakable cruelty which the Japanese military forces inflicted on prisoners of war and on civilians in occupied areas has marked Japan, but an examination of some of the probable causes of this cruelty is revealing.

In the first place, human life in the greater part of the Orient is the most plentiful and cheapest known commodity. It is cheaper than horses or wagons or machines or food. Human impoverishment breeds human cruelty.

The Japanese have no God. Their indigenous faith, the Shinto cult, teaches neither compassion nor brotherly love. It does not hold individuals personally responsible for their morality. So long as a man is loyal to his chief, he can commit any act of injustice or cruelty on his fellow man without the slightest moral responsibility.

Japanese education is superficial, the written language is cumbersome. Most of the elementary education must be devoted to memorizing characters. Thus, that essential part of early education which teaches reasoning processes has been neglected. The militarists took advantage of this. As part of the universal military training, the militarists taught their own moral code. They called it moral training and its basis was cruelty.

If a soldier had as much as 2 weeks' service in the army, it entitled him—in fact it was his duty—to beat up any newcomer. Violators of rules were officially given corporal punishment. A saying came from soldiers of particular regiment—the Forty-seventh—"When you join the Forty-seventh, the contour of your face changes."

Soldiers hated this brutality but they were forbidden to discuss it. Their parents resented it, but there was no recourse since the militarists ruled Japan by force.

Lectures by army officers in all schools and to troops rounded out the picture. Japanese were a superior race; blind loyalty to one's chief was a virtue; the Emperor was divine and to die for him was a rare privilege. All foreigners were crooks. The white man, cruel, merciless, determined to dominate the Orient, was the eternal enemy of the Japanese people. Racial prejudice was taught deliberately. Japanese youth was taught to hate, and Japanese youth had not the mentality to reason himself out of this false indoctrination.

CRUELTY IS INBRED

With this background it requires no great imagination to understand how, if the Japanese were physically cruel to themselves, in extreme adversity, they would commit atrocities on an enemy whom they had been taught to hate.

Lack of moral responsibility led the militarists deliberately to deceive the people. They lied about the progress of the war. Reports from the front presented a false picture to the high command in Tokyo. Japanese soldiers captured off New Guinea believed they were on islands off the California coast. Filipino guerrillas reported that the Japanese kept order-of-battle maps showing their flag planted in California.

The militarists indoctrinated the home population, first with tales of great victory. Then, after Tokyo was bombed, they claimed the Americans intended—when they invaded—to destroy all Japanese males and to enslave all women. Girls were instructed to wear a potion of poison about their necks and to commit suicide rather than submit to American atrocities. The Emperor himself, the militarists preached, would be numbered among the invasion casualties.

When the first Americans arrived at the end of August 1945, streets in the Yokohama-Tokyo area were deserted. The first Japanese girl I saw held her parasol so that I could not see her face.

But the moral tone of the occupation must have amazed those who had believed the militarists. It was a firm but dignified occupation. There was no cruelty nor was there horseplay. The dreaded GI, though tough, turned out to be a man with a sense of humor and a friend of the weak.

In a crowded Tokyo street car two GI's moved a Japanese man from his seat to permit a pregnant woman to sit.

The posting of GI guards at Japan's sacred shrines to prevent their being desecrated made a profoundly favorable impression. News of such incidents, small in themselves, spread rapidly. Gradually, the population welcomed the foreign army. The mayor of Kobe, a devout Christian, called on General MacArthur and, with tears in his eyes, thanked him for the decency of the occupation.

During the past 2 years Japan has emerged from feudalism. She has adopted a new constitution in which sovereignty rests in the people. War as a sovereign right is renounced. Women have been given equal rights with men. Freedom of speech, of assembly, and of religion are accomplished facts.

Possibly more than 200,000 civil officials who were tainted with militarism, or whose past assignments were in ultranationalistic categories, have been purged by their own government and replaced by carefully screened personnel. The Emperor has been stripped of power but remains the symbol of the Japanese. The cost of the occupation has been borne largely by Japan. There have been no unfortunate incidents. In spirit and to the letter the Japanese Government has carried out instructions of the Supreme Commander, Allied Powers.

Today one can see signs of change. School children are happier and young people enjoy more freedom than ever before. Everyone comments on the much kindlier attitude of policemen. This is not a superficial change. Rather it is a basic shift in values. The liberal trend is likely to be permanent.

The Japanese are a proud, sensitive race. Under military domination they were plunged into a futile war. They saw their country destroyed by air strikes. The torture which the militarists claimed would come with the occupation failed to materialize. These events stunned 80,000,000 Japanese into the realization that the militarists had duped them. What was even worse, the militarists had lied to their Emperor and humiliated him.

Today Japan's militarists are dead, or in jail, or living in obscurity and disrepute. Militarism is gone. Moreover, defeat separated Japan from the means to make war. She has not the resources within her borders to create new military might.

Into the moral and social vacuum left by the pangs of hunger and the humiliation of total defeat came our Christian forces of occupation. Gradually, the realization that Shintoism had failed to sustain them swept over the Japanese people. Shintoism, which demanded loyalty, worked in time of victory, but it offered no solace in adversity. Consequently, the people began to grope for new spiritual values.

The Japanese have always respected a winner. The victorious American forces and the decency of their conduct appealed to them. There were already enough Christian Japanese—an estimated 500,000—to provide the leaven for a strong Christian upsurge. Dr. Kagawa and Miss Michi Kawai, both devout Christians, led the movement. Kagawa received word from the palace that he was to raise the moral level of the Japanese people.

The Empress dowager remarked: "What this country needs now is Christianity."

An American Quakeress came to teach the Crown Prince English and ideas of democracy. Christian churches in Tokyo suddenly filled to overflowing. One held services daily, and it, too, was crowded. Many Japanese held Sunday services in their homes. Curious, homesick GI's wandered by, heard the singing, entered and joined in the service. Most striking of all, the Diet elected Tetsu Katayama as Prime Minister of Japan—the first Christian Prime Minister in Japan's history. The Emperor, astonishingly, fits into this new Japan, far better than into the old feudalistic Japan of the militarists.

The position which the Emperor occupies in the minds of the people is not generally understood. He is a living symbol of the race and in him lie the virtues of the people's ancestors. He is the incarnation of national spirit; loyalty to him is absolute. Although no one fears him, all still hold him in almost reverential awe. Most Japanese people even now would not touch him, look into his face, address him, step on his shadow. This abject homage is sustained by a religious patriotism, the depth of which Westerners find it difficult to understand.

The poor people are especially devoted to Hirohito. They feel that his addressing them personally over the radio at the most critical period in their history makes him

unprecedentedly close. His rescript opposing the militarists and demanding peace filled them with joy. Hirohito enjoys more personal popularity among the people than has any other emperor of modern times. His renunciation of alleged divinity and Japan's adoption of the new constitution actually released him from the false position in which he had been placed by militarist domination. These changes merely enhanced his position in the eyes of his people.

Japan's swing toward western ideology is natural. A number of leaders explained to me that in 1870 Japan wholeheartedly adopted western materialism, but flatly rejected our spiritual values. With western materialism she rose to a world power—only to fall by the very power which made her great. Now, the Japanese feel, they must take the other hand which the West has to offer and assimilate western ideology.

This Japan is doing rapidly, for there is no one in the Orient to whom she can turn. In the Philippines and China hatred engendered by the war is still justifiably rampant. Moreover, China is suffering from an economic and political turbulence without parallel. Japan dares not turn to Russia because she fears her.

This is not a new fear. It is a fear which has progressively been intensified since the Red revolution. Russian conduct during the occupation has given the Japanese a taste of what they might expect if they were to fall under Red domination.

During the time I was secretary-general to the Allied Council for Japan, I learned that the bitter Japanese resentment of Russia traces back to these points:

1. Soviet stalling on Japan's request for mediation with the Allies, while simultaneously preparing to launch a belated attack;

2. Alleged slaughter of Japanese troops in Manchuria after Japan had surrendered;

3. Russian reluctance to repatriate nearly 1,000,000 Japanese prisoners of war;

4. Russian endeavor to stalemate reparations;

5. The stand that Japan cannot be "democratized" so long as the emperor system exists;

6. Opposition to measures which would bolster Japanese economy;

7. Efforts of Russian Communists to instigate strikes, to disregard property rights, and to incite chaos.

Fear of Russia and the mounting tide of Christianity are strong assurances against Communist domination, despite the fact that Japan today is a vast poorhouse, and that the Russians are doing all in their power to win the country.

It has been General MacArthur's conviction that the best way to prevent Japan from going communistic is to give the Russians and their Japanese fellow travelers, of whom there are some 25,000, an absolutely free rein. Consequently, Communists have had complete political freedom. They have been given transportation and permitted to travel. No restrictions have been placed on the size and activities of the Russian staff in Tokyo. Yet, in spite of this freedom of maneuver, the Communist movement has been a fizzle.

In the first free election, only 6 Communists were elected to a Diet of 466 members. Before the war, under military restrictions, the Communists boasted 7 members of the Diet. In the second election, out of 716 members elected to the House of Representatives and the House of Counselors—Japan's new Congress—precisely 8 were Communists. In short, Japan shows far less trend to the left than some supposedly democratic states of the West.

REDS RETAIN HOPE

Despite this signal failure, Communists still hope to win their ideological battle. Their trump card is to create economic chaos. And time and stalling are on their side. These two conceivably could counteract all our gains of the past 2 years.

Japan is cursed with a lack of resources. Only 15 percent of her land is tillable. Iron ore, oil, mercury, manganese, nickel, tin, tungsten—sinews of modern industry—appear only in negligible quantities. Only in coal, timber, and ocean fisheries can Japan hope to meet her own needs.

Every effort is being made to increase food production. Japan's feudalistic land problem is being resolved. Nearly half of the population are farmers. The average farm family tills 2.7 acres of land. Before the war, some 80 percent of this land was owned by the landlords. The tenant gave his landlord one-half the crop, did all the work, provided the seed, the implements, and the fertilizer. Naturally, farmers were impoverished. Today it is possible for a tenant to buy the land he tills. The Government is subsidizing land sales so that the landlord is not stripped of his wealth without fair reimbursement.

But, even with land reform and her fisheries back to prewar standards, Japan can never raise enough to feed her population. She must always import at least 20 percent of her food. But, to import, her economy must be set up so that she can export manufactured goods. To export, Japan's peacetime industry must be reestablished.

If, however, reparations strip Japan of her remaining industrial assets, we shall have to continue to feed her at a cost of some $300,000,000 annually. Thus high reparations—and $54,000,000,000 have been claimed by our allies—really mean that the United States in the long run will foot the bill. Moreover, it is to the best interests of American business that Japan be permitted to stabilize her economy.

Then the frugality of her people and their eternal willingness to work can be trusted to build a sound economy.

On the other hand, if her economy is permitted to collapse, Japan will be compelled to turn unwillingly to communism and be forced to help mold the Orient into a vast group of slave states under Moscow domination.

Only decisive action in the form of a peace treaty with Japan can avert disaster.

As soon as a peace is effected, our occupation forces should be withdrawn. No matter how enlightened the program may be, armies of occupation are repugnant to any self-respecting people.

The Spanish occupied the Philippines for more than 300 years. Their troops intermarried and gradually lost military effectiveness as they became a part of the population. The Japanese occupied the Philippines only 3 years, but their brutality was such that the Filipinos will hate them forever.

It is imperative that our American forces shall not fall into either of these categories. From now on the continued presence of occupational forces will encourage rather than discourage communism. General MacArthur has stated that the present government is now strong enough to hold down a general strike or any other Communist maneuver if the American Army is withdrawn. But it is not strong enough—even to survive—unless a peace is signed to provide the economic stability any government must have to endure.

It is possible, if our leadership is able, that Russia would join in a peace treaty with Japan. Certainly she would have much to gain by remaining a member of the United Nations. But the problem of whether or not Russia joins in the treaty, or if she joins would comply, is inherent in the peace now or at any future time. In the opinion of experts, including former President Hoover, a decision to make a treaty without Russia would not lead to war. But in any event, the treaty should be attempted now.

Doubtless an allied commission created to operate under the United Nations would supervise Japan's compliance with the terms of the treaty. Whether or not the United Nations would guarantee the Japanese security from aggression is something to be worked out over the peace table. It would indeed be a strange quirk of fate if Japan, which fought the cruelest war in history, became the only nation which had renounced war as a sovereign right.

In the years since 1941, we have spent much blood and treasure in defeating Japan and in bringing her universal suffrage, free speech, free press, and the decencies and responsibilities of democracy. Certainly, it is high time that America faces the fact that we must choose between a Russian-dominated Japan or a free Japan. We can do business with a free Japan. And what happens there will have a profound effect on our other world interests.

1947: A Year of Results

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. KING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Torrance Herald, Torrance, Calif., under date of January 8, 1948:

1947: A YEAR OF RESULTS—VISION: FULFILLED

Each year at the beginning of the New Year the Torrance Herald devotes one of its seldom written editorials to a review of the progress of the community during the past year and to an outline of the needs of the city.

We would be most happy if we had the space to print each of the three editorials, one published on January 11, 1945, entitled, "Torrance Needs Men of Vision"; the second published January 3, 1946, entitled, "Vision: Fulfilled?"; and the third published January 2, 1947, entitled, "Happy New Year, Vision: Fulfilled."

Space limitations do not permit such republication, but in order to present the continuity of the program suggested by the Torrance Herald in its original editorial of January 11, 1945, we shall present it briefly, as follows:

1. Torrance, the fourth largest incorporated city in total area in Los Angeles County, is exceeded in size only by Los Angeles, Pasadena, and Long Beach; in per capita wealth, Torrance is the third richest city in the county; in total assessed valuation, Torrance is the tenth largest city in the county; Torrance has nearly 60 basic industries within its boundaries and a factory pay roll which (if all employees should reside in Torrance) would require twice as many housing units as now exist in Torrance; Torrance has room for nearly a half million residents; and Torrance needs to grow into its long pants.

2. The editorial cited need for vision in the city hall; the need for water; the need for ambitious planning; the need for homes; for recreation facilities; the need for locally controlled schools; the need for adequate bus transportation; the need for highways and streets—the need for "men of vision who can sit in the city hall and see the boundary at the bluffs of Hollywood Riviera; who can see the boundary of Torrance at Redondo Beach Boulevard; who can encourage the growth of this community to its fullest to fill to its boundaries this vast area with homes, factories, and stores."

The first year saw the launching of the first of two important water districts; the start of plans for the second district; the offer of a good recreation program; the birth of the successful program to take over the schools from Los Angeles; the initial expansion of local bus lines; the start of an ambitious street improvement program; a tremendous interest shown in the city affairs by the people.

The end of the first year witnessed the accomplishment of many of the outlined needs, but in the second annual editorial, the important objectives were outlined as: Sewers for districts not served; commercial parking facilities; "shop-in-Torrance" campaigns; cultural and athletic programs, indoors and out, during appropriate seasons; adequate highway-direction signs; all telephone service through the Torrance exchange; unification of mail service through the Torrance office, encouragement of home-building programs on mass scale.

We predicted 1946 will be a year of action.

True, it was a year of action, for it saw the people vote to assume control of its schools by adoption of a city charter; it saw the formation of the two municipal water districts covering a great area of the city of Torrance; it saw new factories launch programs here, and paved the way for the accomplishments of the year 1947 which we consider an outstanding period for Torrance.

The following year, on January 2, 1947, the Torrance Herald predicted that 1947 will be a year of results, reiterating certain needs, and in a review of its program, we are proud to present the following:

1. The city charter was ratified and the new city school district formed and in operation.

2. The new junior college was located at Alondra Park as urged by this newspaper in a vigorous campaign. Torrance joined the district.

3. The city engineer's office reorganization was accomplished.

4. The first definite step toward the city-manager form of government was made with the appointment of George W. Stevens as administrator and city engineer.

5. Unification of the school districts, under one Torrance City Board of Education, was launched.

6. Busses were purchased to enable the establishment of municipal lines to North Torrance, Southwest Torrance, Hawthorne, and Long Beach.

7. Nearly 1,000 new homes were started in Torrance, with 2,000 more planned.

8. Progress toward the unification of the mails was made, with the establishment of a new rural route through North Torrance and city delivery through Southwest Torrance (Seaside Ranchos).

9. The former Army airport was acquired through right of entry and interim permit, by the city of Torrance.

10. New industrial development was undertaken here, the largest being by American Radiator-Standard Sanitary Corp.

11. New off-street parking lots were provided through the cooperation of members of the chamber of commerce with the City Council of Torrance.

12. Water districts covering most of Torrance had been formed, and new sewer districts planned.

13. A community concert association was formed to bring fine artists to the equally fine Torrance High School auditorium.

There were many other accomplishments, such as bringing about a thorough understanding between the city council and the chamber of commerce from which nothing but progress and sound civic development could result.

All of this has been accompanied by a population growth such as Torrance never has experienced in a similar period.

The average population gain for each new home in Torrance is 3.6 persons. Thus, with 1,000 new homes being completed, the gain can be readily estimated at 3,600 new residents.

This year, according to plans on file by single family and multiple-unit dwelling projects, 2,000 more homes will be built, and Torrance will enter the year 1949, we predict, with a population of more than 20,000 persons.

More than 1,000 new jobs will open up in Torrance during this year, largely due to three big industrial plants.

For the year 1948, may the following, among other things, be accomplished.

1. Establishment by charter amendment of the city-manager form of government.

2. Creation of a sound and thorough supervised recreation program participated in on a joint basis by the city school district and the city recreation department, keeping school grounds open after school and on Saturdays, and making what athletic and cultural facilities as exist in Torrance available to general use.

3. Solution of the telephone problem, which can be accomplished now that materials are available; institution of the dial system; extension of facilities for better service; unification of number systems and service so that all of Torrance may be reached through one exchange.

4. New schools to house the children of the increased population.

5. Unification of the school system under one Torrance Board of Education.

6. Further expansion of the municipal transportation system to serve all sections of the city and the new home districts.

7. Completion of the program to unify all Torrance mail under the Torrance post office.

8. Completion of the pipe-line systems of the new Torrance municipal water districts.

9. Creation of necessary sewer districts to care for expanded population.

May the people of Torrance raise their sights to view the great opportunities awaiting them; may the city hall be staffed with men of vision who can do something about it when the opportunity presents itself.

May the year 1948 exceed the year 1947 in community progress.

F. S. S.

The Bomb Secret Is Out

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert M. Hutchins, chancelor of the University of Chicago, from the December 1947 issue of the American magazine:

THE BOMB SECRET IS OUT

(By Robert M. Hutchins, chancelor of the University of Chicago)

On the afternoon of July 16, 1945, a group of nuclear scientists met around a conference table in a small, hushed room in the metallurgy building of the University of Chicago. They were meeting in an effort to save tens of thousands of civilian lives, if not, indeed, all humanity.

At 5:30 that morning, on the desert in New Mexico, the first atomic bomb had been successfully detonated. These men who had helped construct the bomb had now dedicated themselves to suppressing it.

Their purpose was not exclusively humanitarian. They knew that if an atomic bomb were dropped over Japan, all hope of preserving the atomic secret for the United States and other traditionally peace-loving nations would be lost forever.

These men knew that once the bomb was dropped, once the world learned that fission chain reaction could be accomplished, atomic bombs could be produced by any reasonably advanced nation on earth, and that the end result could be annihilation of all life on this planet.

Before the hot dark closed down on Chicago that day, a solemn letter had been drafted to the President of the United States and signed by 65 members of the university's scientific staff. It petitioned the President to prevent the dropping of the bomb.

Receipt of the letter was never acknowledged.

Five days later, two members of the group were delegated to fly to Washington and appeal personally to James R. Byrnes, then chairman of the President's Committee on Atomic Research. This appeal likewise was ineffectual. The bomb was dropped over Hiroshima on August 6, the next over Nagasaki.

Then and there, our opportunity to control atomic energy vanished.

We still had one small factor in our favor—time. Under normal circumstances, it might have taken other nations a few years to discover precisely how to put a bomb together. But this chance was destroyed a few days later when the H. D. Smyth report on atomic energy for military purposes was made public.

Mr. Smyth, in his excellent job, obligingly pointed out four specific ways in which atomic fission could be accomplished. The only problem then remaining to any nation which might desire to harness atomic energy, or to produce atomic bombs, was to decide which of Mr. Smyth's comprehensive blueprints was best and most convenient in its particular circumstances, and follow Mr. Smyth's instructions.

From that instant all talk of secrecy in connection with the atomic principle has been completely asinine, and public utterances which would have us believe we own an atomic secret are rooted either in ignorance or in deceit.

Any realistic appraisal of the status of atomic energy today, militarily speaking, must be predicated on two simple propositions:

1. There is no secret.

2. There is no defense.

To understand why there is no secret, let's go back 400 years before Christ. An atomic theory was propounded in that remote time by Democritus, a Greek philosopher. A Roman, Lucretius, wrote a classic poem about atoms before Jesus was born. The theory that all chemical elements are composed of

atoms was corroborated 145 years ago. The structure of the atom was determined and its energy known before World War I.

The fact that atoms of certain substances, specifically uranium—a metal—could be split, and that this splitting, or fission, was accompanied by the release of enormous quantities of energy was demonstrated before World War II. This was not an American secret; it was known by scientists in many countries. The only problem since that time has been to capture and control the atomic energy thus released, and discovery of methods for doing this has been only a question of time.

Much as it may discomfit some of our professional patriots, the fact is that a very great part of this preliminary work, as well as practically all the subsequent work, was done by foreigners. Of 10 scientists (Einstein, Hahn, Bohr, Strassmann, Meitner, Frisch, Joliot, Chadwick, Fermi, Wheeler) who pioneered atomic fission in 1939, 5 were German, 1 was French, 1 Danish, 1 Italian, 1 English, and only 1 American. The Germans were far ahead of us at the outbreak of the recent war.

Many foreign scientists who had recently come from Europe were employed when our Army Engineer Corps established the Manhattan District for the production of atomic bombs in August 1942. They contributed notably—so notably, in fact, that every single basic idea in atomic fission came from a European mind. Very few basic contributions were made by Americans. The American contribution consisted of applying these ideas and producing the atomic bomb.

All of these foreign scientists are entirely familiar with the processes involved in producing the atomic bomb. Today, they are scattered throughout the world—in at least four European countries, to my personal knowledge—and each of them knows all there is to be known about atomic energy and atomic bombs.

So there is no secret.

No fewer than 5,000 individuals knew we were making an atomic bomb, and many of them knew the essential steps that were taken. An effort was made to compartmentalize the work, certainly, but this in itself would have been ridiculous if carried out according to directives. Compartmental regulations were violated every day. If they had not been, production of the atomic bomb might have been delayed for several years.

As a matter of simple truth, no harm would have been done had the whole enterprise been published in the newspapers, for at that time we were the only Nation on earth able to carry on such a monumental enterprise. The Germans had no facilities and the Japanese wouldn't even have known where to start. We could have given them all our plans and still they could not have duplicated our work, merely because they lacked the physical resources.

That is not the case today with Russia. When we speculate on what may be going on behind the iron curtain, we must concede at the outset that the production of atomic bombs now is only a matter of mobilization of physical resources—materials, machines, manpower.

Can Russia make them? Of course. If we told the Russians all we know at this moment—and we know a great deal more than we knew in 1945—this knowledge would not shorten their work by more than 6 months.

Is Russia making them? We would be foolish to assume that she is not. An able scientist prophesied after reading the Smyth report that Russia would complete her first atomic bomb within 3 years and thereafter would produce them more rapidly than we could. That prediction was made more than 2 years ago.

There are no less than 27 first-class nuclear physicists in Russia and no fewer than 700 universities. Assuming that each university has a fairly competent nuclear scientist on its staff, Russia has an excellent scientific corps.

Through our gratuitous contributions to her knowledge, she is able to bypass the heartbreaking succession of blind alleys and dead ends we had to explore between 1940 and 1942, when we set off the first self-maintaining nuclear chain reaction—the principle of the bomb—under a grandstand on the campus of the University of Chicago. Russia today is able to drive full tilt along a line, broad, clearly marked avenue of general knowledge. For, today, the production of atomic bombs is merely a manufacturing process. There is no secret.

But why is there no defense?

All theory of defense against aerial weapons—and the atomic bomb is essentially an aerial weapon to be transported by aircraft or controlled missiles such as rockets—is based upon absorptions, the amount of punishment a target can absorb before it capitulates or is destroyed.

With the atomic bomb there can be no question of absorption. No known target can absorb the punishment the bomb can administer. When one medium-sized bomb can wipe out of existence a target of the size of Indianapolis, what can be left to absorb any further punishment? Moreover, the problem of attempting to destroy an atomic bomb on its way to a target when carried by a high-speed missile is as difficult as attempting to destroy an artillery shell in flight.

It is theoretically possible to make atomic bombs 1,000 times more powerful than any thus far demonstrated. Let us assume that an enemy nation has only two bombs of that gigantic size. With these two bombs, by taking advantage of location of detonation and direction of prevailing winds (central California and northern Oregon, for example, when steady winds were blowing toward the east) this enemy would have a fair chance of making the United States uninhabitable.

Why? Because areas not destroyed outright through concussion, heat, and fire would be contaminated as the winds swept the highly radioactive air over the face of the land. This was conclusively demonstrated when rays from the test explosion at Bikini reached the United States in detectable strength in 1 week. And it is much farther from Bikini to Los Angeles than it is from Los Angeles to New York.

What refuge can there be from a lethal element which permeates the very air upon which we depend for life? Could we go underground? Well, even assuming it would be possible to dig caverns enormous enough to hold such industrial behemoths as Pittsburgh and Detroit, and others large enough to shelter all the people in the United States, what would we do for fresh air? Subbasements might shelter us from concussion and fire, but eventually we would have to draw outside air into them. A thoughtful soldier once remarked that the only defense against the atomic bomb is not to be there when it goes off, but even distance is no guaranty of safety if the air is contaminated for thousands of miles.

England found no defense against the V–2; her only defense was to win the war. If the war heads of the V–2 had been atomic bombs instead of TNT, England would not be here today; for 16 ounces of U–235, the critical element in the atomic bomb, is capable of as much destruction as 8,000 tons of TNT, and it is not even possible to make a bomb with as little as 16 ounces of U–235.

Added to the annihilating force of aerial detonation is the possibility of sabotage. An atomic bomb of average size detonated under the surface of New York Harbor when the wind was right would cover all of Greater New York with a deadly atomic spray. So it is reasonable to conclude that there is no known defense against the atomic bomb.

Could any nation win an atomic war against another nation which also had atomic bombs? Probably not, although this is slight consolation, indeed. Let us imagine that Nation A has 1,000 atomic bombs and feels dominant and secure because Nation B has only 150 atomic bombs. Nation A starts the war by firing its 1,000 bombs at all known targets. The targets are destroyed and so, to all practical purposes, is Nation B.

But somewhere, in some secret place, Nation B still has its 150 bombs and the means to transport them, and it has enough rugged men left alive—although burned and contaminated and doomed to slow death—to explode those bombs over Nation A. One hundred and fifty atomic bombs will ruin any nation on earth.

The result, of course, is that the nations destroy each other. Some individuals in remote places will escape, and by incredible struggles against contaminated soil, crops, and water they will temporarily survive. But disease, plague, and famine will overtake them since all surviving creatures and facilities upon which they depend for existence will be weakened and doomed to destruction, and so all life must eventually disappear.

That is the extremely unpleasant but completely realistic prospect facing mankind if atomic energy is unleased for war.

Is there a solution? I think so.

Many of us who have thought the situation through have concluded that our only salvation lies in establishment of international morality, a mutual acceptance of the futility of further warfare and a mutual avowal to keep the peace. Three years ago I would have considered such a thought absurd, human nature being what it is. Today I believe it is the only chance for the survival of humankind. Unfortunately, this conviction seems not to be shared by the rulers of nations.

I believe that all the nations must sit down together and agree to be good. It is no longer possible to say, as we seem to be saying: Let's be powerful so we can force everyone else to be good. Force can never again be a national monopoly. No nation can be dominant militarily for more than a moment in the dawning atomic era.

Nor is it enough for one nation to decide to be good. If we were to decide to be good, and another nation were to decide to be bad, the result doubtless would be most uncomfortable for us.

No, if we are to preserve ourselves, we must acknowledge that a world crisis exists—not next week nor tomorrow, but now, today, for there is very little time remaining. Instead of glowering at one another, nations must understand that we are inevitably destined to have one world or none at all. Rather than wave atomic bombs at one another, we must recognize that here in our hands is a method to produce cheaper and better goods, cure all ills, give us leisure beyond all our dreams; that there in our hands lies the most important means of improving the well-being of mankind that has appeared on the earth in 4,000 years.

Perhaps the practical solution is the establishment of a world government. Such a blueprint is now being formulated for presentation to all nations. I would have said before the accomplishment of the atomic fission that we might have a world government within the next 500 years. Today I

am convinced that we must try to attain it within the next 5 years. That's about all the time we have left.

What can we gain by attaining it? What could life be like in a peaceful atomic age?

Once more we must start with a correlated group of basic truths:

1. Atomic energy is here, now. It is an accomplished fact.

2. It is the most important discovery to mankind since the discovery of fire.

3. Medically, it provides the most important tool since the invention of the microscope.

4. Economically, which means industrially and commercially, it is the most important discovery since the discovery of the wheel.

The astounding difference between atomic energy and the energy with which we are familiar is the enormous amount of atomic energy which can be produced from a very small quantity of atomic fuel. I cannot imagine how many millions of tons of falling water, how many millions of tons of coal, how many millions of barrels of petroleum are required to produce all the electricity consumed in the United States in an average month.

But I know that less than 15 pounds of atomic fuel, no more than a small child can carry in a basket, will produce enough electricity to meet all the demands of the United States for 1 year, with a comfortable excess in reserve. One boxcar of atomic fuel will produce enough energy to heat every building, illuminate every electric bulb, and operate every machine in the entire world for 1,000 years.

Two types of atomic power plants are presently projected. One type will be a large land-based installation from which power will be transmitted to distant points by the usual methods—conduits, tubes, wires. The second type will be a large installation on an ocean liner or a battleship. Both types must be large and heavy because of the enormous quantities of insulating materials necessary to protect workers from dangerous rays inherent in their operation. That is why you cannot expect an atomic engine in your automobile or airplane for a long time to come. But you will ride in streetcars powered by energy from atomic plants, and quite likely in atomic-powered trains, in the foreseeable future.

The size and weight of atomic power plants will be reduced, for the process of producing atomic energy will be better understood as we go along, just as the processes of making steel or fabrics improved as they developed. Millions of dollars must continue to be spent in research to broaden our knowledge and improve our methods. And someone—whether it be the Government with a view toward Federal monopoly of this colossal force, or whether it be private industry with a view toward perpetuating our traditional economic system—must spend it.

The principal predictable benefit from this improved knowledge will be that atomic energy will be produced more cheaply than is now possible. Yet, even now, the cost of producing atomic energy is far less than it was 2 years ago. In a short time it should be the cheapest energy the world has ever known, just as today the atomic bomb is far cheaper than TNT in terms of destructive power.

The cyclotron, for example, was until very recently believed to be the best, if not the only, method by which radioactive isotopes could be produced for medical and industrial purposes. To produce 1 millecurie, an infinitely small amount, of these substances with the cyclotron costs about $1,000,000 and takes 3 years. Today, through a simplified process called an atomic pile—the machine, or furnace, which was developed at the University of Chicago and which made the atomic bomb possible—the same quantity can be produced overnight for less than $50.

No serious scientific or engineering problems remain to be solved aside from those of normal evolution. Atomic power is no longer a dream. It is a present-day reality.

Atomic energy makes all our conceptions of daily living obsolete, eradicates virtually all our limitations, cures all our maladies, and opens the door to a way of life as uncomplicated as that of a South Seas native basking in the sun and plucking his food from the breadfruit tree. Our paramount problem, our chief hazard in the atomic age will be what to do with our spare time.

Assuming that world government is accomplished and world peace established, and that we shall have a future at all, it is not impossible to draw a reasonably accurate blueprint of the atomic city of tomorrow. Such a conception necessarily hinges upon a thousand and one developments which are now only gleams in the scientific eye. Basically, however, the atomic city will be built along scientifically functional lines to provide maximum comfort and convenience to its inhabitants. Streets will be hundreds of feet wide. Buildings will be far apart.

The only smoke will come from fireplaces used for pleasure. They will not be needed for heat. Heat will be so plentiful that it will even be used to melt snow as it falls. Fireplace wood will be cheap and plentiful because wood will not be needed for construction.

Lawns and gardens will be luxuriant, for atomic energy promises fertilizers and soil balances more powerful than any known today. There will be flowers such as we do not have at present, for the atomic principle has the power to alter forms of plant life, just as it alters the atomic structure of minerals.

Parks, playgrounds, and other places of recreation will abound, for leisure will be almost unlimited. A very few individuals working a few hours a day at very easy tasks in the central atomic power plant will provide all the heat, light, and power required by the community and all its surrounding areas, and these utilities will be so cheap that their cost can hardly be reckoned.

There will be factories, of course, but because atomic energy is so much more potent than the forms of energy employed today, factories will operate only a comparatively few hours a week to produce more goods than can be used. They will produce, among other things, new metals, new types of self-insulating building materials, new fabrics, foods, furnishings, communication devices which will eliminate time and space, and vehicles which will run for a year on 2 ounces or less of atomic fuel.

The atomic city will have a central diagnostic laboratory but only a small hospital, if any at all, for most human ailments will be cured as rapidly as they are diagnosed.

If this seems too fanciful, consider how incredible, how utterly impossible even a small modern town would have seemed to a Dawn Man squatting on his haunches before a blaze he started, dimly conceiving that here in his hands lay a tremendous new power, a new force—fire. Today, we are the Dawn People of the atomic age.

How far are we along the road to this Utopia?

Farther than you think.

Medically, atomic energy is already at work all over the world. To understand how it is being used, and what its implications are, we must realize that the human body is like a chemistry laboratory a bull has just charged through. All the pieces are there, but they're all mixed up.

The medical scientist, with his microscope and X-ray and test tube, is able to follow and understand certain processes which take place in the body and thus correct many maladies. But beyond these are many more processes he cannot follow, does not understand, and at which he can only guess. Thus people continue to die of cancer, tuberculosis, hypertension, and other bodily malfunctions which the physician can relieve temporarily and to a degree, but which he cannot cure.

Today, through application of atomically produced substances called radioactive isotopes, the human body becomes as transparent as a pane of glass.

A radioactive isotope is a speck of material—carbon-14, a species of carbon, is the commonest now used—which has been made radioactive through subjection to atomic radiation, much as a needle is magnetized by proximity to a magnet. The immediate result is that it throws off rays which are detectable through flesh and blood with a simple instrument called a Geiger counter. Rays thrown off by the isotope make a clicking sound in the Geiger counter.

Radioactive isotopes, or tracers, are introduced into the body through the mouth, a vein, or in other ordinary ways. As they begin their wanderings through the jumbled chemical laboratory of the body, they can be followed with the Geiger counter. The medical scientist is able to determine exactly what is taking place, as surely as though he were looking through a window.

There is every reason to believe that we shall know almost at once what causes the calcification of joints in one form of arthritis and the disintegration of tissue in another. And it is axiomatic that medical science can cure or prevent what it clearly understands.

With cancer, the major problem is not what will cure it, but what causes it, why the cells go wild. Since cancer is fundamentally growth, although abnormal and uncontrolled, the problem of cancer is allied with the whole mysterious question of growth. Why do things grow?

As a kindergarten example, medical science knows that phosphorus introduced into the body becomes an element of bone, making bone grow. It does not know why or how this happens. But with radioactive isotopes as tracers it becomes possible to follow the precise events that make up this phenomenon, and when it is understood we shall know something, at least, about the mystery of growth.

The procedure is essentially the same with cancer. When we find out why a cancer grows we shall be in a position to determine how to prevent it from growing, or to kill it altogether. Here the same elements which acted as the means of diagnosis may be found to be the means of cure.

Radium has been widely used in the treatment of cancer because it emits rays. Radium treatment has been impossible for the vast majority of cancer sufferers because there is not enough radium to go around. All the radium now available for medical use would fit into a small cigar box. But through the atomic principle it is possible to give many substances the power to emit rays—in other words, to make them radioactive. These substances are the isotopes, and they are already being ground out cheaply, quickly, and in enormous quantities.

The next and fairly simple step will be to find a method to shoot a stream of radioactive rays unerringly into cancerous growth, much as bullets are fired from a machine gun, and kill the cancer without serious injury to adjacent tissue.

I am convinced that we shall understand the mystery of cancerous growth within 7 years.

Thyroid disorders, reasonably prevalent and not too well understood, are already being conquered by radioactive iodine. Blood disorders of rare but fatal types are succumbing to radioactive phosphorus. The end of all human suffering is in sight. If we are permitted to live at all, there is no reason we cannot expect to live as long as Methuselah.

The principles of diagnosis and cure apply likewise to all animals and most plants. Diseases of plants, now only dimly understood by a very few specialists, will become clear and methods of eradication will follow.

These are not dreams. These are not visions of the distant future. These are realities of today and the immediate tomorrow.

Industrially and commercially, the world was revolutionized by discovery of the wheel. The harnessing of atomic energy launches another era of equally tremendous economic progress. In the field of metals especially, this progression is already well under way.

There are many things wrong with metals. Nearly all of them—steel, particularly—should be 10 times as strong as they actually are. Aluminum, magnesium, copper, all have faults. For example, wire reduced to very low temperatures loses virtually all its resistance to electricity. Why? We shall find the answer, and when we do the cost of electricity under existing production systems will be reduced sharply.

We have found it necessary to develop several entirely new metals, unlike any hitherto known on earth, for the sheer purpose of producing atomic energy. Ordinary metals cannot resist the enormous heat generated by atomic fission. So we have used atomic energy to produce new metals, so they can be used to produce still greater quantities of atomic energy.

But the net result, to industry, is the appearance on earth of metals of such incredible strength that they must inevitably revise all our standards of stress and strain and replace many of the metals now in common use.

Alchemists dreamed for centuries of transmuting mercury into gold. This has not yet been accomplished through atomic energy, but I have no doubt it will be, perhaps before these words can be printed. We have already transmuted gold into mercury.

Even more dramatic is the impact of atomic energy upon the petroleum industry.

The fundamental problem of the petroleum industry is locating new and untapped stores of oil in the ground. Oilmen have accomplished this with all sorts of devices and sciences ranging from doodlebugs to meteorology, but none have been infallible.

Today, the same sort of radioactive isotopes used in medicine are being employed to locate subterranean oil pools, and not only to locate them but to measure their extent and volume. Through the employment of radioactive isotopes, the very earth itself becomes transparent, and the greatest gamble in the petroleum industry is eliminated.

At first glance it might appear that this would present a grave danger—the exhaustion of all natural supplies of oil. This is extremely improbable, since we already have known reserves of oil for hundreds of years. But even if we were to find, tap, and pump out all the oil in the world and pour it into the sea, we could still produce, with the aid of atomic energy, more oil than we could possibly utilize.

This is possible because of substances called catalysts. Catalysts are guiding and accelerating agents employed in refining crude oil into gasoline and other common petroleum products. During the recent war, the Germans used catalysts to produce oil from coal. Today, through employment of radioactive isotopes, the entire field of catalysts is revolutionized, immeasurably improved. If we find it necessary or desirable to make oil from coal, the means are in our hands. The process is simple and relatively inexpensive. And we have enough coal in the United States alone to meet all the demands of the world, both for coal and for oil, for the next 3,000 years.

These are not dreams. These are simple truths.

So today we stand at the fork of the road.

To the right lies peace, productivity beyond all our imagination, ease of living beyond our brightest dreams.

To the left lies war and the eventual end of all life on earth.

For the first time since creation, we truly hold in our hands the power to shape our own destiny, to choose our own fate.

We must make our choice within 5 years.

Allowances for Flight Training of Veterans

EXTENSION OF REMARKS
OF
HON. MITCHELL JENKINS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. JENKINS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE KLISCH FLYING SCHOOLS,
WILKES-BARRE WYOMING VALLEY AIRPORT,
Forty Fort, Pa., January 14, 1948.

Congressman MITCHELL JENKINS,
House of Representatives,
Washington, D. C.

DEAR SIR: In reading over the President's message to Congress of Monday, January 12, with reference to budget allowances for the year of 1948, we feel that an injury has been done to the aviation industry and we should like to enter our protests for the record.

Mr. Truman, during the course of his speech, spoke of cutting down allowances to the Veterans' Administration for the rehabilitation of veterans for avocational lines, and, in doing so, specified flying together with dancing—evidently placing them in the same category. We, of the aviation industry, feel this a direct insult to one of the major industries of the Nation, and, while in many ways flight training may not seem to be effective as a rehabilitation program for veterans, we feel that Mr. Truman is overlooking many angles in which the aviation industry and flight training may bring a larger benefit to the Nation as a whole than any trade or artistic training might afford.

Much has been said about allowing large sums for national defense; in fact, Mr. Truman spoke of that in the same speech. If you will recall, one of the first steps in national defense was to send millions of young men to flight schools, no different than the one I represent, for the initial nomenclature, orientation, and primary flight. How better can we prepare for national defense than to have the thousands of young men now enrolled in flight training under the Veterans' Administration to acquire the same knowledge and skill that, in case of another threat of war, will cost the budget millions of dollars and millions of hours of precious time to obtain at a moment when time is at a premium. It seems that aviation is even more important in thinking of future national defense than it was during World War II.

Second to the above reason, aviation as a means of transportation is becoming more and more prominent. The light plane industry is growing rapidly, and light aircraft will become in the near future as widely used as automobiles are at the moment.

How then can the preparation for inevitable future events be classified in the same category as the artistic talents of dancing or of the drama or of music or of art, which are also studied under the GI bill of rights, although not mentioned by Mr. Truman as avocational and pleasure training.

I believe I can speak as a representative of the aviation industry (since I have been in the aviation business for some 20 years) in saying that Mr. Truman has grossly insulted one of the largest and fastest growing industries in the Nation which he leads; and, I believe, that in his contemplation of removing flight training from the curricula of the Veterans' Administration, he is being very short-sighted in both business and national preparedness.

Very truly yours,

ROLAND KLISCH.

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by the gentleman from Illinois [Mr. DIRKSEN] before the annual Republican Lincoln dinner of Washington, D. C., Statler Hotel, February 5, 1948, over the Mutual Broadcasting System:

ABRAHAM LINCOLN

We meet to remember a common man who became great. He was a common man with common attributes raised to the highest power and implemented by character and self education.

As we meet in this annual fellowship to pay tribute to Abraham Lincoln, the same questions arise which have addressed themselves to every generation since his passing.

What manner of man was he that so eminent a historian as H. G. Wells should catalogue him as one of the six greatest characters of all mankind and place him beside Christ, Confucius, and Buddha?

Why should we continue to return to his wisdom and inspiration for guidance after the elapse of fourscore and 3 years since his passing?

What was the grand designs of his life which somehow enthralls each generation and enhances his place in history?

If we could experience the miracle of looking through his eyes and from his heart, what course would we as a Nation pursue both at home and abroad?

He was a common man whose words and deeds made such lasting impression upon mankind that he belongs not to one Nation or generation but to all nations and all generations, and is worthy of our deepest devotion.

What manner of man was Abraham Lincoln? Some years ago I saw a little girl, perhaps 6 years of age, look upon his marble likeness in the Memorial. As she gazed, a chubby hand found the reassuring hand of her mother. There was awe and reverence

in that childish voice as she spoke. "Mother, there is Mr. Lincoln." It was as simple as that—as simple as the wide, round eyes of a child. "Yes, dear, that is Abraham Lincoln." There were no questions. There was no recital of his achievements or of biographical data. It was unnecessary. To a child it was Mr. Lincoln and there was no other Mr. Lincoln.

In a single year nearly 2,000,000 Americans have looked upon that sitting figure in the memorial, where sadness and concern were captured in marble. Why this mass tribute? What mystic magic makes him tower even greater in the esteem of his fellow countrymen and mankind as the years go by? It is neither mystic nor magic. It is but the tribute which grows from year to year to a common man in whom was gathered up an honest heart, a noble soul, a love of humanity, a wisdom which springs from compassion for and an understanding of men, a matchless humility and an unyielding will in the cause of freedom.

How candid he was and how refreshing that candor would be in an age that is marked by so much egotism and double talk. Less than a year before his nomination to the Presidency when he was already 50 years of age, he wrote a brief biographical note to an old friend in Bloomington, Ill., in which he said:

"When I came of age I did not know very much."

In this day and time how many individuals after 50 years of life had gone by would admit in writing where all mankind might see that at age twenty-one they did not know very much. But such was the manner of this great common man.

His moral integrity shines as a light down the corridor of the years. As never before we need that same virtue in the social, economic, and political life of our country. In his note to the chairman of the Republican National Convention in 1860, in which he accepted the nomination, Abraham Lincoln stated so briefly and so simply that:

"The declaration of principles and sentiments which accompanies your letter meets my approval; it shall be my care not to violate it or disregard it in any part."

How often the planks in a party platform are designed as mere lures for various groups of voters and not especially intended for subsequent action. Yet here is the first Republican President in the history of the Nation stating in a letter that all might see and know that it would be his care not to violate or disregard the declaration of principles and sentiments in any part. This was the manner of this common man.

How modest he was. Standing in the chill November air of 1863 before that group which had assembled at Gettysburg to do honor to the men who had fallen in the cause of this great Union, Lincoln said:

"The world will little note nor long remember what we say here, but it can never forget what they did here."

But the world did note, and the world did remember. The few words which he uttered there comprise one of the few speeches in the history of the spoken word which were graven in stone as a masterpiece of diction, and it will be remembered as long as the English language is spoken on the earth. Such was the manner of this common man.

What rare compassion graced his spirit. It can be found in a thousand places. But nowhere is it better exemplified than in those words which he addressed particularly to the members of his own party at Cooper Union Institute less than 3 months before the national convention was scheduled to meet in Chicago. He was pleading for peace and harmony for the Nation, and in the course of that plea he said:

"Let us Republicans do our part to have it so. Even though much provoked, let us do nothing through passion or ill temper. Even though the Southern people will not so much as listen to us, let us calmly consider their demand and yield to them, if in deliberate view of our duty we possibly can."

Such was the compassion and the forbearance in this heart which could hold no malice. Are the problems of today any greater in importance and magnitude than those which confronted him? It might, therefore, well be asked what good healing and confidence in this difficult hour would spring from an exercise of that forbearance, understanding, and compassion which he so richly exemplified toward all groups and all sections of the country. Such was the manner of this common man.

A rare kind of moral courage marked his life and his course where principle was involved. In his day, no less than in ours, the art of political appeasement and political compromise was a well-known and practiced art. He knew full well that it existed, and so dealt with it openly and fearlessly. In that portion of the Cooper Union address which he devoted to the arrest of the spread of slavery in the Territories and free States, he went boldly to the heart of the matter when he said:

"Let us be diverted by none of these sophistical contrivances wherewith we are industriously plied and belabored—contrivances such as groping for some middle ground between the right and the wrong."

For him there could be no middle ground where the simple morals of right and wrong were involved. And there can be no middle ground today. So many of our problems are no less moral than they were 4 score and 9 years ago. As the past looks down upon us and the future beckons, may we be no less wanting in that moral courage which marked his course. Such was the manner of this common man.

What a liberal he was. Unlike some of the self-styled liberals of today, Abraham Lincoln was a true and classical liberal. It can be safely said that he was the most discerning liberal in the history of this Nation, and so he could with propriety express his confidence in the ultimate justice of the people. He did not use the types of meaningless expressions which are in such common usage today to identify his liberalism. He stated it very simply so that all might understand.

"When one starts poor, as most do in the race of life, free society is such that he knows he can better his condition; he knows there is no fixed condition of labor for his whole life."

In recent years we have witnessed the development of a kind of fixed condition of labor which did pursue the common man for his whole life. This condition sprang in part from the intrusions of government and in part from the vast power which was built up in private organizations and in the leaders of those organizations. It was a strange combination of public and private power which was designed to keep the common man common, and it became necessary to emancipate him from this condition and restore his freedom. That is true liberalism, and such was the manner of this great common man known to history as Abraham Lincoln.

Perhaps his rarest and most endearing virtue was patience. Perhaps that is not so strange, after all, for patience is the companion of true wisdom. How else could he have saved the country in an hour when hate ran high, when bitterness was in the hearts of so many, and when both sides to the conflict needed that kindly counsel which comes from a patient spirit which is so hungry for peace and union?

It was only 3 days before his death and while he was appealing to the serenaders at the White House for the support of the new State government of Louisiana as a first step in reconstruction that he expressed that patience in a single homely phrase which all can understand. On that occasion his heart was so glad. Richmond had been evacuated and Lee had surrendered. A new vista of life had been suddenly opened to him. Naturally he was not unaware of the sharp differences of opinion among people in the North as to the mode and manner and means of reconstruction. Knowing all this and having made his argument for the proposal which he envisioned as the first step toward restoring the harmony of the Union, he said so very simply:

"We shall sooner have the fowl by hatching the egg than smashing it."

He knew the tumult in the human breast and the need for patience. This homely expression which he used was like Paul's admonition to the Thessalonians when he wrote: "Be patient toward all men."

Such was the manner of this common man called Abraham Lincoln.

There was greatness in his simplicity. In this day and time how complicated life has become. The administration of government itself has become so complex with its myriad functions and its millions of people intruding themselves more and more into the lives and liberties of the people of the country. Despite the stories and anecdotes which we best remember about Abraham Lincoln and which somehow make it appear that he gave over a vast amount of time to details, he was, in fact, forever backing life into a corner and reducing it to its lowest terms. There is something so rich and revealing in the incident of the Confederate envoys who came to sue for peace before the war had ended. Having patiently heard their proposals, it is said that Lincoln wrote two propositions on a sheet of paper and then informed them that they could fill in any other terms which they deemed proper and that he would sign it, so long as his proposals remained a part of the terms. It is said that they examined what he had written and then quickly departed. He had, in fact, written but nine words: "The Union must be preserved. Slavery must be abolished."

How simple and fundamental it was. All else was mere detail. Somehow in the very midst of war's turmoil he could reduce the future to such simple essentials. In this brave new world of ours so full of seeming complications both abroad and at home, how much easier the problems of government and the tasks of mankind would be if simplicity was a more practiced art. But such was the manner of this great common man.

This then was the manner of this great common man whom we honor today. This is the manner of this man whose soul is everywhere; this man who could find time to pencil a note to a mother who lost five sons in battle; this man who before the crucial battle of Gettysburg could promise God that if He would stand by the troops, he, Abraham Lincoln, would stand by God; this man who could arise from his bed late at night to listen to the plea of a New York Congressman to save a young military offender from execution, and who could so quickly cut through all admisintrative complexities and save a young life; that man who could express regret for the 110 horses lost at the Battle of Fairfax but not for the captured brigadier generals, because he said he could make a general in 5 minutes. This was Abraham Lincoln, a common man grown great, who is the embodiment of the spirit and the purpose of America.

To a cynical person it may seem the mark of weakness to return over and over again to Abraham Lincoln for inspiration and guidance, but it is neither weak nor sentimental. Somehow close communion with him can furnish an answer to the ills and frustrations of today.

He is such an essential part of what we call the American tradition. How often that word "tradition" is used and how threadbare and nebulous it seems. Perhaps we have not examined into it quite enough.

What then, is this American tradition about which we hear so much? In brief, it is that whole body of customs and practices, of principles and events, of personalities and achievements which are handed down from one generation to another and which constitute the very substance of our greatness. It is, in fact, the lineage of the Republic.

This Nation is not some vague and rootless thing without background which springs anew with each generation. It is like a family which has continuity and extends back from son to father and to grandfather and to great-grandfather. And like the family, it has its spiritual heirlooms, its romance, its glory, its achievements, its splendor, its causes and its purposes. Something of this sort must have been in the mind of that very wise apostle Paul when he wrote to the Thessalonians: "Hold to the traditions which ye have been taught."

What then do we find in this tradition of America, which is so glorious and exciting and gives it continuity and a cohesive bond?

There are those hundred and two original adventurous refugees known as the Pilgram Fathers, who took 63 days to cross the Atlantic to find freedom and to lay the foundation for the greatest republic that ever existed on earth. It is said that 4 days after their arrival they ate their first Christmas dinner aboard the vessel which brought them, and first thanked God for his blessings. It is said that in the following spring when the Mayflower was ready to return and more than one-half of the pilgrims had died, yet not one of those who remained went back to England. What a vital and compelling faith they had. They are a part of the American tradition.

Every sacrifice at Valley Forge where Washington's soldiers froze and hungered while nearby barns were stocked with food and fuel is a part of the American tradition.

Thomas Jefferson, who not only wanted to be remembered for the establishment of religious freedom and the Declaration of Independence but also for his contribution to American agriculture by sending olive plants to Charleston and bringing a new strain of rice from Africa, is a part of that tradition.

The vigor and common sense of Thomas Paine, whose trenchant pen had much to do in stirring the sluggish emotions of the Colonists and who was certain that but for America the candles of liberty would have gone out through the universe, is a part of that tradition.

The unselfish Washington who had everything to lose and nothing to gain by assuming command of the forces of independence is a part of that tradition.

Lexington and Concord, the Bill of Rights, free schools, Harper's Ferry, the Monroe Doctrine, Uncle Tom's Cabin, the Emancipation Proclamation, the exploits of millions of soldiers in every generation that freedom might carry on, and the tears of unnumbered widows and orphans—all these are a part of that tradition.

Stephen Decatur and John Marshall, Daniel Webster and Elijah Lovejoy, William Lloyd Garrison and Susan Anthony, Roger Williams and John Brown, Daniel Boone and William Penn, Ann Rutledge and Florence Nightingale—what a glorious cavalcade of personalities it really is, and all are a part of that tradition.

Towering large in that tradition and in that glorious dream is Abraham Lincoln. What he said and did, what he stood for, and what he achieved, what he accomplished for all mankind and what he did for humble people is an iridescent pattern in the whole design of America, and so as we pay tribute to him, so we honor the traditions of this Republic.

But traditions become rootless unless they are kept vital and fresh and alive by those who come after. If then, through frustration and defeatism, through confusion and cynicism, through emotional instability and softness, those traditions become dim or meaningless, what is there to tie to? What shall succeeding generations use for moral and spiritual anchorage, and who will deny that in this feverish period cynicism and defeatism are among the more common of our mass emotional diseases?

It is indeed no accident that as faith in and contact with the American dreams and the American tradition becomes dim and slender, so defeatism and escapism multiply. At a time when the world is beset with spurious ideologies and transient creeds which are inimical to the holy cause of freedom and the divinity of human personality, it is so necessary to rediscover and to reglorify the tradition of which that great common man, Abraham Lincoln, is so large a part. It can be done by reasserting the very virtues and causes whereby this became a great land.

We need as never before a generous dose of old-fashioned patriotism. To be sure, it is an old-fashioned remedy, but the moral weaknesses from which we suffer are equally old-fashioned.

At a time when true freedom is under attack in virtually every quarter of the globe and is being so subtly and gradually impaired at home it is imperative that we manfully make the sacrifices that are required for its preservation even as sacrifices were made in the generations which have gone before.

It is high time to meet the threat of defeatism with a new kind of pageantry which reasserts the glory, the greatness, and the romance of our own past. Can anyone imagine that self-educated man known as Abraham Lincoln, speaking of the bankruptcy of the Republic and indulging in those gloomy prophecies that come so readily from the lips of men with faltering hearts and a feeble faith. The true capacity of this Republic which was bequeathed to us through his zeal and devotion, has not even been scratched.

It is time to stop lamenting the lack of opportunity in America when it offers so much to so many. One need but call the roll of American business, agriculture, labor, and government to find emblazoned there the names of men and women from humble beginnings who found opportunity in every generation even as it was found by Abraham Lincoln.

Despite every dour and gloomy prediction of the last two decades, the grass is not yet growing in the streets and grows only on the streets of defeatist thinking which cannot envision a rosy and dazzling future for this blessed land. It is when we rediscover the dream and the tradition which is America, of which that great common man, Abraham Lincoln was such a noble part, that a rooted faith will return and frustration cease. Over and over and over again we must reassert it. It is because we must recapture the very purpose of America that we should return to the wisdom and guidance of this common man whose faith never faltered. As he once observed, if the dream of America ever comes to an end it will come not by conquest but by suicide.

In every purposeful life there is a grand design, and so there was in his. It was the freedom and the happiness of the individual, as distinguished from that strange collectivist philosophy which is sweeping so many parts of the earth and reducing the individual to a kind of serfdom in the interest of the collective good.

While Abraham Lincoln may not have been the originator of the movement for the freedom of the Negro race, he was the author and finisher of the final destruction of this ghastly form of tyranny in our own land.

As a flatboatman on the Mississippi, he vowed in his heart to crush the institution which enthralled human beings because of their color. It was the sense of justice which spoke within him, and from that time forward there was an unquenchable fire in his soul. One can see it everywhere in the grand design of his life.

It was manifest in Lincoln, the lawyer, while practicing law in Springfield, Ill.; in Lincoln, the State legislator, in Lincoln, the Congressman, in Lincoln, the antagonist of Douglas in that celebrated series of debates which are so rich a part of the American tradition; in Lincoln, the defeated candidate for the Senate; in Lincoln, the Republican nominee for the Presidency; in Lincoln, the Republican President of the United States. To that very hour when the assassin's bullet found its mark, freedom's fire burned brightly within him.

At Gettysburg the design of his life found such sublime expression. There he said that this was a Nation conceived in liberty. There he asked whether a nation so conceived could long endure. There he hoped and prayed for a new birth of freedom. That was the soul speaking.

Here then is a revelation of his insight and wisdom. How well he seemed to know that there could be no secure freedom for any man, anywhere, anytime while any other man was a slave. He knew that the divided house could not long endure.

Nor was his interest in the whole question of freedom limited merely to striking the physical shackles from the Negro race. Over and over he reaffirmed the principle of freedom and individual liberty in all our domestic affairs as well. When he spoke of a free society as the just and generous and prosperous system which opens the way to all men to better their condition, he at the same time added a warning against the surrender of the political power of freedom. His words are as fresh and as vital and as timely as if they had been uttered today.

"Let them beware of surrendering a political power which they already possess and which if surrendered will surely be used to close the door of advancement against such as they and to fix new disabilities and burdens upon them, till all of liberty shall be lost."

This then was the grand design of his life—the design of freedom—in all things both at home and abroad.

More than 11 months before he had affixed his signature to that great document whereby this dreadful and awful vestige of human tyranny which remained as one of the unsolved problems of the Constitution, came to an end. What a document the Emancipation Proclamation is and what a delightful sound it carries. Its language is worth recalling.

"By virtue of the power and the purpose aforesaid, I, Abraham Lincoln, do order and declare that all persons held as slaves within such States are and henceforward shall be free, and upon this act, I invoke the considerate judgment of mankind and the gracious favor of Almighty God."

To his own generation and to posterity he was saying that human beings are and should

forever be free. He was asking God and mankind to look with favor upon this act. It was indeed one of the most compassionate events in the whole history of mankind. Such was the purpose of this common man.

But this recital to his devotion to the cause of freedom would not be complete without adding two other observations. They are indeed so timely now.

The first of these was contained in his message to the Congress on December 1, 1862. On that occasion he said: "In giving freedom to the slave, we assure freedom to the free."

If we could experience the miracle of seeing through his eyes and from the heart of Abraham Lincoln, the problems of today, what courses would we be impelled to follow to serve humanity best and earn for ourselves the acclaim of our fellow men and the gratitude of posterity? What should we do to enrich the tradition of America? Somehow in moments of stress and anxiety, we like to call upon the wisdom and guidance of those who have gone before. It was this very natural inclination which impelled the poet Wordsworth, in a critical moment in the history of England, to cry out from his very soul: "Milton, thou should be living at this hour!" In that same spirit when frustration besets us and the current scene is not too peaceful, we too might utter such an entreaty and say, "Lincoln thou shouldst be living at this hour!"

And why not? His wisdom and inspiration is not denied to us. He still speaks. Even as Paul in speaking of the sacrifices of Abel to gain righteousness reminds us that "Abel being dead, yet speaketh," so this great common man yet speaketh to every generation which shall come after him.

Surely in any personal communion with him we would at once be challenged with a question which might take the very form of the words he used in his first speech at Springfield, Ill., in the campaign of 1858: "Do we know where we are? Do we know whither we are going? Can we know what we must do until we get our true bearings and a sense of direction? If a nation cannot endure half slave and half free, can an integrated world in which time and space have been annihilated endure half slave and half free? And what is the state of freedom in the world?"

Out of this provocative and challenging question there would quite naturally ensue so many things which we already know.

Let us refresh ourselves on the events of the last few years. It is but 30 months ago that mankind's costliest war for freedom came to an end. It was a moral war. It was the age-old conflict of right and wrong, the right of humble people to be free, the wrong of iron dictatorship that would despoil that freedom. At every turn the conflict was sparked by the battle cry of freedom. The pronouncements of the Atlantic Charter and the Four Freedoms were reasserted over and over again. They were reasserted in Washington and in Moscow, in Tehran and in Yalta, and from it all the world looked for so much.

It was a costly struggle. Millions of men, women, and children died. Other millions were uprooted. Other hundreds of millions were saddled with burdensome taxes. For other hundreds of millions the whole economic, social, and political design of their lives was destroyed.

And not the least of the cost was the complete destruction of hope for so large a segment of mankind.

This awful cost of freedom seems so quickly forgotten. One is reminded of the soldiers of King David, who with great danger to themselves went to Bethlehem's well to bring water for their King, and when it was brought David suddenly became conscious of its worth and would not drink. It was then that he said: "With the jeopardy of their lives they brought it." And we must ever remember that it was with the jeopardy of their lives—millions of lives—that we earnestly hoped that the water of freedom would again be brought to humanity.

And now that this chimerical dream of blood and despair has for the moment vanished, what is the state of freedom in the world? With that ancient prophet, Haggai, we can in truth cry out today and say: "Lo! Ye looked for much and it came to little."

Since the drone of planes and the roar of artillery was stifled to mark the end of World War II, more freedom has been liquidated than was won upon European battlefields. One by one the candles of freedom are again being extinguished.

One need but lift his eyes and assess the state of freedom behind the "iron curtain" from Finland to the Aegean. One need but appraise the fears of Austria and Czechoslovakia. One need but examine the fever and unrest in Italy and France. The liquidation of freedom has been accomplished by fear, brutality, and by the complete and subtle distortion of the concept of real democracy. Somehow the Atlantic Charter with all its affirmations has been forgotten in many places. One may well wonder what dead and bruised GI's might say about all this. Freedom—that kind of freedom for which Lincoln crusaded—the freedom for which millions died—the freedom which is the very purpose of this Republic—that freedom began to vanish from the earth before the cannon of World War II was cold.

Its gradual extinction has brought a strange overtone of anxiety and misgiving upon the whole world and upon us. We cannot plan for the future of our country and ourselves. Everything we say and do is calculated in terms of what communism may do. Never as a Republic have we entertained such a strange anxiety, and what do we propose to do about it?

We must finish the business of freedom. Abraham Lincoln finished his task. The words of the proclamation come down to us with ringing force. "The slaves are and henceforth shall be free," but he went even further. He said also that if the people should make it an executive duty to reenslave such persons, another and not he must be the instrument to perform it. He did not utter the plaintive cry of Haggai that "ye looked for much and it came to little." He finished the work he was in.

But we have not finished the work which we are in. The menacing force of communism daily grows bolder and bolder. Its plans for the complete engulfment of Europe must be reasonably clear to all men. Communism knows what it believes and where it wants to go. It entertains no doubts about its objectives. It is moving like an engulfing shadow.

Now we are confronted with requests for aid from the people in those countries where freedom's light, though feeble, still burns, and it is for us to determine whether our rendezvous with freedom shall be kept.

Will we be deterred by softness and political timidity from doing our full duty? Will we haggle and delay while the time for action is here? Do we fall back upon threadbare cliches to avoid our duty? Will selfishness deter us from action? Will we permit the isolationist ghost to rise again?

Perhaps we forget that communism is as much a religion as it is a system of government and economics. It is a struggle for the souls as well as for the minds of men, and already in the last three decades it has brought more than 20 percent of the world's habitable land under its control. There are some who believe that the gap between enslaving collectivism and individual freedom can be bridged, and that these systems, as opposite as day and night, can dwell together in this earth in concord and understanding. They can dwell together only if we are ready to let freedom perish from the earth.

To save freedom abroad and at home and arrest the spread of this evil force will cost money. But in Lincoln's day it was also a costly business to achieve freedom at home. To provide necessary aid to meet the challenge to freedom may to some degree feed the fires of inflation, but as Lincoln pursued with an amazing singleness of purpose and devotion the end which he had in view, there was also inflation in the land. It will require sacrifice of the most heroic kind to meet this challenge, but it also required great sacrifice in his day no less than in ours. In fact, so burdensome was the sacrifice that even the great Greeley permited it to sway his trenchant pen.

In fact, as Lincoln stood at Gettysburg in those dark hours while desertions ran high, blood and tears were everywhere, and the credit of the Union was shakey, there was still no deviation from the course which this great common man pursued.

Would we be honoring his memory tonight if he had forsaken the struggle for union and freedom because blood, inflated prices, heavy expenditures from the public treasury, and grim sacrifices by all people were required. Had he yielded to these, we would rather remember him with contumely and shame.

Conscience rides herd upon our generation. We looked for much and thus far it has come to little. Shall we now meanly forsake the struggle for freedom because it involves other and costly sacrifices?

If so, what shall we do when the political and economic and spirtual slavery of Communism moving as a cloud over the earth, weaponed by the unlimited manpower of the east and the resources of Europe, should at long last direct its attention to us as the last remaining citadel of freedom. It is then that we shall know the wisdom of Abraham Lincoln. He was so emphatic in his conviction that the Nation could not endure half slave and half free. One or the other must triumph. And in this highly integrated world in which time and space have been annihilated, and it is no further from Washington to Berlin than it was in his day from Washington to Atlanta, who will contend that such a world can endure half enslaved and half free. We are but on the threshold of this contest. Even as the world worked long and hard during the war to devastate and destroy, so it must work longer, harder, and more sacrificially than ever before to rebuild what was destroyed, including faith, hope, and ideals.

Abraham Lincoln kept his rendezvous with freedom. Do we keep ours?

There is another facet to the problem of today, and that is freedom at home. Here again his wisdom would be equally clear and persuasive.

I can picture him before a large crowd in the city of Peoria, Ill., more than four score years ago. These were his people—the kind of people whom he represented during his only term in Congress. Here again he devoted himself to the fabric of freedom, and his observations were such that they justify careful quotation:

"My faith in the proposition that each man should do precisely as he pleases with all that is exclusively his own lies at the foundation of the sense of justice that is in me. I extend the principle to communities of men as well as individuals. I so extend it because it is politically wise as well as naturally just; politically wise in saving us from broils about matters which do not concern us."

This was the doctrine of that great common man. Yet there are those today who would in peacetime impose unwanted restrictions upon the people's liberty and action. It is the incredible approach of meeting the problem of inflation and scarcity by division instead of multiplication. It is a

testimony to our softness, to the ease with which we grow accustomed to restrictions on liberty, and to the escapist view of finding the easiest way out of our dilemma.

In time of war we were only too glad to swap butter for guns that the victory might be the sooner won in the world contest for freedom. But what about swapping butter for the weapons of freedom to win the unwon peace? Without freedom there can be no peace, and without peace there can be no freedom.

One need not be an alarmist to say that this is a time of crisis for mankind. It is a moral crisis, for defeatism exists both in and out of government. A measure of our faith has been leached away and replaced by confusion and timidity. What better can we do as we honor the memory of Abraham Lincoln than in truth and in fact to fall back upon the standard which he raised for his party as its first President. Sorely do we need his faith, his simplicity, his patience, and his singleness of purpose. We need his guidance to marshal a return to the American tradition and so stop the dangerous drift which is upon the land. We need to take his design of freedom if we would serve humanity. We need to look through his eyes to rediscover the greatness of America. We need to make this exalted common man our patron saint in something more than name.

Let me add this brief epilogue to my story.

In the year 1832 when Lincoln was a volunteer captain in the Black Hawk War in northern Illinois, a young man but a few years out of Harvard who was to distinguish himself as a minister of the gospel, had composed the words to a song. His name was Samuel Francis Smith. There had come to the attention of Samuel Smith a rather solid melody which was more than 100 years old. The words of the song did not impress him and so in a moment of inspiration he wrote within the space of half an hour, five stanzas to this melody which suited him better. One stanza was subsequently dropped. But so was born a song which has risen from the lips of millions upon millions of Americans from the day it was written. In childhood we commit it to memory, and it never leaves us:

"My country, 'tis of thee,
Sweet land of liberty,
Of thee I sing.
Land where my fathers died,
Land of the Pilgrims' pride;
From every mountain side,
Let freedom ring!"

I do not know when or in what degree this song of freedom may have come to the attention of Abraham Lincoln. Often have I puzzled over this song, especially the last line, "From every mountain side let freedom ring." Abraham Lincoln, common man of the ages, did something more than let freedom ring.

He made it ring. In this generation, when the world is so beset with the challenge to liberty, there is upon us the sacred duty to make freedom ring.

True American Wants Opportunity—Not Charity

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. HOFFMAN. Mr. Speaker, under permission granted, there is inserted herewith a letter received from a resident of the district which I have the honor to represent:

SOUTH HAVEN, MICH., *January 10, 1948.*
CLARE E. HOFFMAN,
House of Representatives,
Washington, D. C.

DEAR MR. HOFFMAN: Perhaps this won't interest you, but as a mother of three children and trying to bring them up healthy and happy, and with pride in America, I have to "pop off" to someone and express my views (and many of my friends) on helping Europe with billions of American dollars.

Constantly we are being asked via radio, newspapers, and other publications to help the children in Europe. No one wants to see them hungry or mistreated, but neither do we like to see our own do without.

When they speak of sending all this money to Europe, do any of them stop to consider the families in this country in my position, and believe me we are in the majority, who wonder from day to day how they are going to get through the expenses of the next day?

Here are a few points of comparison for them to look at and think about:

In 1942, 3 years after my husband had passed away, I was still able to pay my grocery bill in full, drive a car, keep my house as warm as I wished and buy my children, not luxuries, but the necessities of life. Also to instill in them that this was a mighty fine country with everyone having the right to pick their own vocation and, if they had enough initiative, to make a spot for themselves. All this was done on the insurance my husband had been foresighted enough to provide.

It is now 1948, and I have been working 3 years. I couldn't work before because my youngest child was born 3 months after my husband died and I was unable to leave him alone and help was unobtainable. I am head over heels in debt (and not a great deal of hope for the future in clearing it up). I lose my appetite, and I mean literally, when I think of ordering groceries because of the price and knowing that my children need the right kind of foods. I can't even promise them they will be warm this winter because I run from day to day with the threat of having no oil. I am not a home owner that converted recently to oil, either. I had a complete unit installed in my home in 1939. When I get oil I now pay as much for 100 gallons as I formerly paid for 200. All this when I am still getting insurance payments and a salary. Incidentally I haven't owned a car either in 5 years. I sold it because I thought someone engaged in war work would receive greater benefit from it than I.

Ask Mr. Marshall and some of these others that are all for doling out our money—after all you can't deny, that in our small way, we of the so-called middle class are going to pay it eventually—if they have ever wondered on December 23 and even the morning of December 24, if they were going to be able to place anything under the tree for three youngsters for Christmas morning? Maybe if they thought of a few of those things they might know why the people of the United States have failed to follow through with a great cooperation on meatless Tuesday, eggless Thursday and some of the other brilliant ideas. I'll grant you they have some excellent ideas at times, but the times have been too few.

I don't want anyone to pay my bills for me or any part of social aid; all I'm asking is an opportunity to take care of my own obligations and feel that when I have concluded a day's work that I have made a small step forward in the security of my children until such time as they can provide for themselves.

I am not a radical, Mr. HOFFMAN. I was brought up in a good Republican atmosphere, where we were taught that we should work for what we wanted. There was opportunity for all, and there still is if some of those lame-brains would concentrate on the problems of our own people before taking on the world.

I know many families in South Haven, and, believe me, they feel just as I do, and they are all in the same position as I.

As you can gather from the above, I am seething with anger over the futility of working day to day and going backward instead of forward.

You are the recipient of this as you are the only one from Washington that I have ever met (though I wouldn't expect you to remember one out of thousands) who, I feel, might read this and realize my sentiments for what they are.

At least I have the feeling that someone in Washington will know what we are up against.

Sincerely yours,

OLIVE S. CAIN.

Poem by W. D. Thomas

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. HOFFMAN. Mr. Speaker, under leave granted, I insert herewith a poem received from a resident of my district, Mr. W. D. Thomas:

Hillbilly Harry, the man from the hills,
Is now down in Washington and does as he wills.
Bighearted Harry must feed the whole world,
If the people at home into starvation be hurled.
When Harry became master of the big chair,
He said to the King: "Your troubles I share.
"We will feed you and clothe you regardless of cost,
"For the royal family must never be lost.
"What care I if we starve and freeze,
"If the royal family can live in ease.
"We will dish out the cash and millions of men,
"To see that your troubles all come to an end.
"And now, dear King, on my bended knee,
"I make you a present of our Treasury's key."

Margarine and the Growth of Children

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 11 (legislative day of Monday, February 2), 1948

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Margarine and the Growth of Children," by Dr. Harry Leichenger, Dr. George Eisenberg, and Dr. Anton J. Carlson, which appeared in the American Medical Association Journal for February 7, 1948. I have been informed by the Public Printer that the article will make 2¼ pages of the RECORD, at a cost of $159.75.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARGARINE AND THE GROWTH OF CHILDREN [1]

(By Harry Leichenger, M. D., George Eisenberg, M. D., and Anton J. Carlson, Ph. D., M. D., Chicago [2])

This study was undertaken to determine whether there is any nutritional difference, as shown by increases in height and weight in significantly large groups of children, when the source of supplementary table fat in their diets is vegetable (margarine) rather than animal (butter).

For a number of years there has been some controversy among nutritionists and other workers in the field of fat nutrition regarding the relative merits of animal and vegetable fats in the human diet. A great deal of experimentation has been carried out, the laboratory rat being used, in the main, as the experimental animal.

Little experimental work has been done in fat nutrition, however, among human subjects. For that reason, the present study was decided on. To insure valid results, examinations of the 267 children (white) included in this study were made for a period of 2 years.

As early as 1925 Holmes,[3] in studies carried out on human sujects, found that margarine was from 93 to 97 percent digestible. Bunker,[4] in 1927, stated:

"Beef fat excreted in the milk of the cow is no different in its origin from beef fat which is retained within the animal, although the chemistry of butter fat and oil differ somewhat. Each is a suitable food. The vegetable oils, also, such as olive oil, palm oil, coconut oil, peanut oil, cottonseed oil, and others are all suitable foodstuffs. The digestibility of the various animal and vegetable fats is high."

Some years later Carlson [5] stated:

"All the scientific data on the digestibility, flavor, and color of the dietary fats show clearly that there is no significant difference in digestibility between animal and vegetable fats and that the acceptability of those fats in regard to color and flavor is a matter of past conditioning of the individual and of no other significance in nutrition."

Boutwell [6] and others, after experimental studies on rats, concluded:

"1. With lactose as the sole carbohydrate * * * rats showed superior growth when fed butter or lard as compared to corn oil, coconut oil, cottonseed oil, soybean oil, peanut oil, olive oil, and hydrogenated cottonseed oil.

"2. With a mixture of carbohydrates composed of sucrose, starch, dextrose, dextrin, and lactose in the diet, the average growth response of the animals fed vegetable oils was equal to that of the animals fed butter and lard. The growth rate on this ration was more rapid than when all the carbohydrate was present as lactose.

"3. Properly fortified oleomargarine fats gave growth equal to butterfat over a period of 6 weeks when the above mixture of carbohydrates was incorporated in the rations."

Deuel,[7] on the other hand, found no difference in the growth of weanling rats at any time over a 12-week period whether they were fed mineralized skimmed milk powder, vitamin supplements and butter, or corn, cottonseed, peanut or soybean oils, or margarine. The extent of growth was confirmed at 3 and 6 weeks by roentgen determinations of length of the tibia. Also, the efficiencies of conversion of these various fats to body tissue were identical. These experiments refute the idea that butterfat possesses certain fatty acids not present in other fats, which are essential to growth.

The Council on Foods and Nutrition of the American Medical Association [8] stated:

"It is therefore possible to conclude that at present there is no scientific evidence to show that the use of fortified margarine in an average adult diet would lead to nutritional difficulties. A similar statement is probably justified in the case of growing children, but preliminary reports from animal experiments indicate that more work is necessary before any specific conclusions can be made."

Graves [9] stated:

"When pure, all fats are equally available for the energy needs of the body * * * the shortening powers and keeping qualities of both butter and margarine are about the same and they are equally assimilable."

Again, Bloor [10] pointed out:

"Very little need be said about the relative nutritional value of fats and hence of availability and distribution for the reason that most of the ordinary food fats of both plant and animal origin consist mainly of the same few fatty acids—oleic, palmitic, and stearic—in varying proportions, and it is to be expected that they would not differ much in digestibility or in metabolic usefulness."

Recently Deuel [11] reaffirmed the fact that vitamin-fortified margarine has a nutritional value substantially equivalent to that of butter. This belief is supported by the conclusions of an entirely unprejudiced group, the Committee on Public Health Relations of the New York Academy of Medicine, which recommended in its report of February 1, 1943, that wide publicity, both lay and professional, be given to the fact that margarine fortified with vitamin A is nutritionally equal to butter. A similar conclusion was reached by the food and nutrition board of the National Research Council in its reprint and circular series No. 118, released in August 1943.

Cowgill [12] concluded:

"Edible fats, the melting points of which are not too high to prevent liquefaction in the alimentary tract, are digested and absorbed to about the same degree. Such differences as have been found are of no practical nutritional significance. * * * Natural fats differ with respect to their content of the essential unsaturated fatty acids, but the amounts needed by the organism are so small that these are probably of no practical nutritional significance. Natural fats have not been found to differ appreciably in their effect on the body's needs for other dietary essentials. * * * In a diet otherwise nutritionally satisfactory, a vegetable fat such as that contained in a margarine can serve adequately in place of butter fat for growth and reproduction, as shown by experiments with eight and more successive generations of rats."

Boer and colleagues [13] recently reported on the presence of vaccenic acid in summer butter. They stated that vaccenic acid has growth-promoting properties in rats. Euler and associates,[14] however, reported inability to demonstrate any growth-promoting factor peculiar to butter. Moreover, the same authors [15] in later studies "to characterize the physiological influence on the rat's organism of different fats * * * compared the growth, the fertility, and the longevity of rats, which were reared on a fat nutrition, consisting either of butter or of margarine (fat mixture MW)." They concluded "that the nutritional and physiological value of the slightly varying fat mixtures, which we employed under the designation of MW and which correspond to the margarines manufactured in Sweden during the period from October 1943 to November 1946, is in no way inferior to the value of butter."

Deuel and associates,[16] meanwhile, found vegetable fats and margarine equal to or better than butter in supporting augmented growth in two series of tests with rats, based on administration of growth hormone from the anterior lobe of the pituitary body.

PLAN OF STUDY

Two groups of children were included in the study, which covered a period of 2 years. One group received only margarine as the table fat in the diet. It was used on bread and vegetables, as well as in the making of pastry and in frying. Fortified margarine was supplied by a number of the various companies now manufacturing the product and was the same as that sold to the public. The margarine used was all derived from vegetable fats and contained no fat from animal sources. The second group of children used only butter for the same purposes.

The margarine group lived in an institution housing 130 children ranging in age from 3 to 16 years. The children were half-orphans, for the most part, from broken homes. They attended the neighborhood schools and returned to the institution for lunch. Samplings also indicated that the children were served margarine on their occasional visits to families outside the institution.

The butter group was in another institution some 10 miles (16 kilometers) away. It included 125 children, ranging in age from 6 to 17 years, who were mostly orphans.

The diet in each institution was carefully supervised by trained dietitians and so regulated that 25 to 30 percent of the total calories were supplied by fat. The margarine constituted approximately 65 to 70 percent of the total fat calories.

All of the children in both groups were weighed and measured each month under medical supervision. A careful check was made from time to time to be sure that weights and measurements were accurately determined. Routine red-blood-cell counts and hemoglobin determinations were made on each child after the study was started and again 1 year later. Specialists in pediatrics supervised the medical care of all the children. A record was kept of the character and duration of all illnesses contracted by the children.

RESULTS

At the close of the study more than 200 records were available for analysis in the margarine group. Because of the turn-over in the institution, the period of study was not uniform and ranged from about a month to a maximum of 24 months. In the butter group there were about 150 records available, ranging up to 24 months' observation time on weight, height, red-blood count, hemoglobin, and illnesses.

It was found that those children who stayed a very short time had extreme irregularities in weight gains. Since it would serve no useful purpose and only increase the margin of error in the computations, all those records of children who were studied less than 6 months were discarded. About 40 in each group were so eliminated, leaving 160 records in the margarine group and 107 in the butter group.

Blood studies

There were 65 children in the margarine group and 85 in the butter group from whose records differences in erythrocyte count and hemoglobin could be computed. At the beginning of the study there was an average red-cell count of 4,284,000 in the margarine group, the lowest being 3,710,000 and the highest 4,870,000. One year later the average was 4,198,000; the low, 3,440,000; and the high, 5,560,000. Comparable figures for the butter group were as follows: At the beginning, the average red-blood-cell count was 4,629,000; low, 3,940,000; high, 5,640,000; 1 year later the average was 4,640,000; low, 3,920,000; and high, 5,560,000.

In the margarine group the average hemoglobin was 13.7 Gm. per hundred cubic centimeters, with a low of 11.3 and a high of 16.6. One year later the figures were 13.4, 10.5, and 18.6, respectively. For the butter group, at the beginning of the study the hemoglobin figures were: Average, 15.4 Gm.; low 13.8; and high, 17.9. One year later the findings were: Average, 15.3; low, 12.4; and high, 17.5.

All these figures are within normal limits in our clinical experience. Moreover, according to Osgood and Baker,[17] there is an average of 12 gm. of hemoglobin, ranging from 10 to 14 gm., in the blood of normal children from 4 to 13 years of age. Griffith and Mitchell[18] stated that the red blood cell count remains at about 4,500,000 to 5,000,000 throughout childhood. Hence it would appear that the blood cell counts in both institutions were in line with counts found in similar groups of children. Furthermore, any variations which occurred were well within the usual errors in making hemoglobin and red blood cell determinations.

Height and weight

All the records contained data on weight in pounds and ounces and height in inches. Gains in weight and height are partly a function of time, so a further adjustment had to be made to facilitate valid comparison. The basis of exactly 1 year was used for standardization. The period of the greatest majority of the cases was over a year. Since this means that the majority had to be reduced in value to be standardized, chance errors tend to be reduced as well.

An analysis of the total cases in each group is shown in tables 1 and 2. Average annual weight and height gains for boys and girls are shown. For additional comparison, the average gains from standard height-weight tables are included under the column headed "Standard."

Since changes in weight and height are also a function of age, only groups of like age are compared.

The standard error is appended to each value in the margarine group, and comparable value in the butter group. For a test of statistical significance at the 5-percent level, the difference between two comparable entries in the margarine and standard columns must be greater than twice the standard error. For instance, on the first line in table 1, under "Boys," in the column headed "Margarine," the average yearly gain in weight was 6.7 pounds (3,039 gm.) with a standard error of 0.6 pound (272.2 gm.). Twice 0.6 is 1.2, which added to 6.7 gives 7.9 pounds (3,583.4 gm.). The average gain in the standard column is 7.2 pounds (3,265.9 gm.), well within the range of the standard error, and the difference is, therefore, not statistically significant.

TABLE 1.—*Average yearly gain in weight (in pounds) for children observed at least 6 months*

Age, years	Boys			Girls		
	Margarine	Butter	Standard	Margarine	Butter	Standard
All (2 to 15)	6.7±0.6		7.2	7.4±0.6		6.9
All (6 to 17)		7.9	7.9		5.9	7.1
6 to 13	7.2±0.7	8.8±0.9	7.5	8.9±0.7	7.2±1.0	8.0
2 to 5	4.2±0.3		5.2	3.9±0.4		4.6
6 to 9	5.3±0.5	7.1±2.2	5.5	7.5±0.5	8.3±1.7	6.2
10 to 13	12.3±1.7	9.4±1.0	9.5	10.6±1.3	7.1±1.1	9.7
14 to 17		6.6	8.7		3.4	5.2

TABLE 2.—*Average yearly gain in height (in inches) for children observed at least 6 months*

Age, years	Boys			Girls		
	Margarine	Butter	Standard	Margarine	Butter	Standard
All (2 to 15)	2.2±0.1		2.3	2.1±0.1		2.2
All (6 to 17)		1.5	1.8		1.0	1.7
6 to 13	2.0±0.1	2.1±0.1	2.1	2.0±0.1	1.2±0.1	2.1
2 to 5	2.5±0.1		3.0	2.3±0.1		2.7
6 to 9	1.9±0.1	1.9±0.2	2.0	2.1±0.1	1.5±0.3	2.2
10 to 13	2.2±0.2	2.2±0.2	2.2	2.0±0.1	1.2±0.1	2.0
14 to 17		0.7	1.2		0.4	1.0

For a test of significance between a margarine and butter value the formula

$$\sigma_{\bar{x}_1-\bar{x}_2}=\sqrt{\sigma^2_{\bar{x}_1}+\sigma^2_{\bar{x}_2}}$$

is used. In only three cases does it seem necessary to perform this test. This is in table 1, under boys, ages 6–13 and ages 6–9, and table 3, under boys, 6–9 years of age. In none of these cases was the difference found significant.

In both table 1 and table 2 all average gains in the margarine group were at least as great (including the standard error) as the gain in either the butter group or a standard group, with two exceptions. These exceptions were in the 2- to 5-year age groups. This is due to the fact that the average age in this particular group in the margarine study was greater than the midvalue of the group. In fact, there were only one boy and one girl 2 years old included in the study.

It is believed that the adjustment of all the values to an annual basis is accurate. However, to eliminate doubt as to the validity of the method, comparisons were made using only those subjects who were observed for the maximum time. There were 51 children in the margarine group who were studied the maximum time of 24 months. In the butter group there were 53 under observation for the maximum 24 months.

Again the values were reduced to an annual average gain, going far to reduce chance errors, since all values were practically halved. Tables 3 and 4 exhibit the data.

TABLE 3.—*Average yearly gain in weight (in pounds) in children observed 24 months*

Age, years	Boys			Girls		
	Margarine	Butter	Standard	Margarine	Butter	Standard
All (2 to 15)	6.7±0.9		7.2	8.2±1.0		6.9
All (6 to 17)		8.1	7.9		6.3	7.1
6 to 13	7.4±1.2	8.7±1.2	7.5	9.5±1.1	8.3±1.2	8.0
2 to 5	4.6±0.5		5.2	4.0±0.4		4.6
6 to 9	5.1±0.6	6.7±2.3	5.5	8.3±1.1		6.2
10 to 13	12.2±2.4	9.4±1.3	9.5	11.0±1.7	8.3±1.2	9.7
14 to 17		7.0	8.7		0.7	5.2

[17] Osgood, E. E., and Baker, R. L.: Erythrocyte, Hemoglobin, Cell Volume and Color, Volume and Saturation Index Standards for Normal Children of School Age, Am. J. Dis. Child. 50: 343 (August) 1935.

[18] Griffith, J. P. C., and Mitchell, A. G.: The Diseases of Infants and Children, ed. 2, Philadelphia, W. B. Saunders Co., 1937, p. 38.

In only one case, the 2- to 5-year-age group in the boys, in table 4, is the comparison unfavorable. In all other combinations margarine shows up as at least as efficient a source of fat for growth as butter in the normal diet.

COMMENT

It is evident from the tables that growth of the group fed margarine, as determined by increases in height and weight, was comparable to that of the children fed butter and to standard height and weight values for the same age group.

Furthermore, it was noted that in the margarine group there was no increase in the amount of illness. Illnesses in general had been on the decline in the margarine group for the last 4 or 5 years, and this decrease in the incidence of illness continued during the period of the study. This compares with conditions present in the community for the last 5 years.

It was interesting to observe how the children accepted margarine. When it first made its appearance on the table—in its white form—and the study was explained to the children, the younger children promptly accepted it. The children in the older age group did not take to it too kindly. Very shortly thereafter, however, a shipment of colored margarine came in. This was cut up into the usual pats and all the children then ate it readily and liberally. Thereafter it was always served cut in pats and colored.

At no time during the period of the study was it considered that vitamin A played any definite role in the results of the study. The reason, of course, is that all the margarine used contained 15,000 units of vitamin A per pound—which is equal to or greater than the amount present in average butter.

Blood studies showed that there were no significant differences between the margarine or butter groups.

The children in the margarine group experienced a high degree of good health during the study, and in comparing their health to that of the butter group it appears to have been much better.

TABLE 4.—*Average yearly gain in height (in inches) in children observed 24 months*

Age, years	Boys			Girls		
	Margarine	Butter	Standard	Margarine	Butter	Standard
All (2 to 15)	2.2±0.2		2.3	2.2±0.2		2.2
All (6 to 17)		1.6	1.8		0.9	1.7
6 to 13	2.1±0.3	2.2±0.2	2.1	2.2±0.2	1.2±0.2	2.1
2 to 5	2.5±0.1		3.0	2.5±0.1		2.7
6 to 9	2.0±0.4	2.0±0.1	2.0	2.4±0.2		2.2
10 to 13	2.3±0.3	2.2±0.2	2.2	2.0±0.2	1.2±0.2	2.0
14 to 17		0.7	1.2		0.1	1.0

When infirmary records are compared it is readily seen that the margarine group fared much better than the butter group. We are not making any claims that the margarine group were healthier simply because their diet contained margarine. Other variables are more likely to account for their better health.

At no time during the course of the study did either institution experience any type of epidemic, and no doubt this may in part be due to the fact that both institutions practiced accepted preventive measures on all their children.

CONCLUSIONS

Growing children experience normal growth in height and weight when their diets contain only fortified margarine as table fat, as shown by comparison with children fed on similar diets with butter as the source of table fat and by comparison with standard height and weight tables.

Whether the greater part of the fat of the diet is derived from vegetable or animal sources has no effect on growth and health as shown by changes in height and weight and health records of children observed over a 2-year period.

During a 2-year period the health of 267 children was uniformly good so far as serious illness is concerned, regardless of whether margarine or butter was the source of the greater part of the fat in the diet.

If there is a growth factor present in butter which is not present in margarine, there is no evidence in the present study that such a factor plays any important part in the growth of children as determined by increases in height and weight.

Margarine is a good source of table fat in growing children, as determined by a 2-year study. Children readily accept margarine as a table spread when it is colored and served in pats.

Archibald Roane—Correspondence Between Jefferson Davis and Caleb Cushing

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, February 11 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an historically interesting narrative written by Mr. E. E. Patton, which appeared in a recent isssue of the Knoxville Journal, a daily paper published at Knoxville.

Mr. Patton is a very prominent businessman, historian, outstanding citizen, and statesman, who lives in Knoxville, Tenn. He has served as mayor of that splendid city and in his research, which is a kind of side line or hobby with him, he frequently comes up with a story of human interest.

The story I speak of today concerns a letter written by Caleb Cushing on the 20th of March, 1861, to Jefferson Davis, President of the Confederate States. This story relates how this letter appeared to haunt Cushing in later years, actually preventing him from being nominated by President Grant as Chief Justice of the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LETTER TO JEFFERSON DAVIS SPELLED DOOM FOR CALEB CUSHING'S CAREER

(By E. E. Patton)

Horace Maynard was a scholar, a lawyer, a statesman, a politician, a teacher, a diplomat; he represented the Second Tennessee District in Congress; he was minister of Turkey; was Postmaster General. He said it is better to ride 20 miles on horseback and talk with a man rather than write him if it is on a delicate matter. My advice to all young people is, never write a letter when you are mad. In this article I shall endeavor to show how a man was destroyed by a letter he wrote.

Caleb Cushing was a native of Massachusetts; was educated at Harvard; spent 2 or 3 years in Europe learning the modern languages and taking extensive courses in international law. He held various offices, including several terms in the House of Repre-

sentatives. He was Attorney General in the Cabinet of Franklin Pierce from 1853 to 1857. Incidentally, Pierce is the only President who kept his Cabinet intact for 4 years.

In that Cabinet was Jefferson Davis, Secretary of War, and a graduate of the United States Military Academy at West Point. He had also seen service in the Mexican War under his first father-in-law, Zachary Taylor. He had also seen service in the Black Hawk War, having been the commanding officer of the division in which Abraham Lincoln served as a captain of volunteers. Davis was President of the Southern Confederacy and on March 20, 1861, Cushing wrote Davis the following letter:

WASHINGTON, *March 20, 1861.*

Hon. JEFFERSON DAVIS,
President, the Confederate States.

DEAR SIR: Mr. Archibald Roane, for the last 6 or 7 years a clerk in the Attorney General's office, desires from me a letter of introduction to you, and he desires it not in the view of anticipating administrative favors, but that he may have the honor of your personal intercourse. Of this I take pleasure in assuring you he is eminently worthy. A Southern man by birth, family, and affection, he has carefully studied and ably discussed, in Mr. DeBow's Review and other Southern works, the lamentable events which have at length overthrown the American Union. Whilst a practical man, he is also a ripe and accomplished scholar, with, indeed, predominant literary tastes and habits. In the discharge of his official duties he has combined in a singular degree the purest integrity, enlightened intelligence, with modest contention of his lot, having more than once declined offices of more conspicuous employment in the public service. He now resigns his present office from sentiments of devotion to that which alone he can feel to be his country, namely the Confederate States, from one of which (Texas) he was appointed.

I most heartily commend him as a gentleman and a man to your confidence and esteem. And I am, with the highest consideration, your obedient servant.

C. CUSHING.

By way of explanation, it is said that this Archibald Roane was a son of Archibald Roane, second Governor of Tennessee, and whose remains lie in a cemetery about one-half mile from Farragut High School in Knox County.

This Archibald Roane, whom Cushing recommended so highly to Davis, had a patent rifle which he desired to call to the attention of the "President of the Southern Confederacy."

In 1873 President Grant appointed Cushing to the high office of Chief Justice of the United States, and this nomination went, in its usual course, to the United States Senate for confirmation or rejection. It seems that in his younger days, Cushing treated a young man in his city with somewhat hauteur and contempt; in fact, he insulted this young man by the name of Aaron A. Sargent. Sargent went to California and in 1873 was a Senator from that far-western State. He was told about this letter. He got the letter in his possession and got the Committee on the Judiciary called together. He then proceeded to read the letter and show the members of the committee that it was in the handwriting of Caleb Cushing. He asked for a show-down, but there was not a man on that committee who was willing to risk his political life by voting to confirm Cushing for that high office, a man who had written a letter to Jefferson Davis when that man was in open rebellion against the power and authority of the Nation.

No doubt there are those who would like to know how Sargent found out about this letter and further, how it happened to be preserved. When it was known that Richmond could not hold out much longer, a clerk in one of the offices of the Confederacy decided it was time to take the records of the Confederacy to a place of safety. So he had them crated and hauled out some distance from Richmond and stored.

He later went to Washington and offered to sell them to Secretary of the Treasury, but he was not very much impressed; he could see no reason why he should put out good money for a large lot of "Rebel" records. But some of his subordinates suggested that since every claimant for damages to his property had to prove his loyalty to the Union Government, he would likely find thousands of letters from Southern sympathizers attesting their loyalty to the Confederate Government; that by purchasing these letters and other records, he could save the government untold millions of dollars in damages. So he bought the letters and other records and it is said that he paid out 90,000 good dollars for them.

Evidently some one in the Department who knew Caleb Cushing, decided it might be well to preserve it; this was done. A clerk in the Department knew of Sargent's hatred toward Cushing and lost no time in getting the information to him.

Status of the Aircraft Industry

EXTENSION OF REMARKS
OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article written by me entitled "Status of the Aircraft Industry." This appeared in the New Hampshire Morning Union of February 5, 1948, and in the Manchester Evening Leader of February 5, 1948. Both papers are published in Manchester, N. H.

STATUS OF THE AIRCRAFT INDUSTRY

IMPORTANCE OF THE AIRCRAFT INDUSTRY

Every American should be deeply interested and vitally concerned in the trends and the conditions of the aircraft industry. It is of utmost importance for the United States to have in being an aircraft industry continually designing, developing, and producing the latest types of aircraft and aerial missiles for immediate use should an emergency arise. It is essential that the industry be capable of rapid expansion.

It is perfectly obvious that air power will play the major role in our future national security. It is certainly clear that in the event of future war the United States will be attacked from the air by missiles, conventional bombers, and atomic weapons. If our national security is to be guaranteed, we must have the facilities to replace the exceedingly heavy losses which the Air Force will sustain in the first weeks of an emergency. The decisive factor in any war of the future will be the ability to produce aerial missiles and aircraft in the first weeks of the struggle.

Planes become obsolescent with great rapidity. At the present time, obsolescence is one of the outstanding characteristics of the equipment in use by the Army and Navy air forces. We must have a vigorous, healthy aircraft industry to make replacements so that the Air Force will be modern and up to date.

The President's Air Policy Commission in its report dated January 1, 1948, entitled "Survival in the Air Age" devotes the second section to the aircraft manufacturing industry. The chairman of the Commission was Mr. Thomas K. Finletter. The report has already become a famous document on national security. In this report emphasis is placed on a strong aircraft industry as a vital element in the achievement of United States air power. The Commission holds an air establishment is useless unless it is backed by an industry which possesses skill in technological application, is high in production efficiency, is capable of great expansion, and has a strong financial basis.

OBSOLESCENCE

The task of replacing the equipment in the Air Force, most of which has now become obsolete, is huge in consideration of the present low-production level. The armed forces estimated in statements to the President's Air Policy Commission that they should have in their striking arms and in their reserves some 26,000 planes. It is conceded that air equipment for military purposes should be replaced every 5 years because of attrition and obsolescence. The current rate of production is about 1,500 military aircraft a year. At this rate the equipment of the air-striking arm and the reserves could be placed not every 5 years, but once in 15 years. This situation is so startling that we should be gravely concerned.

THE TIME FACTOR

The time required to construct an airplane from the drawing-board stage to the date when it rolls off the assembly line emphasizes the importance of having an aircraft industry in readiness. From 5 to 7 years are necessary to plan and produce an airplane. All the plans for the planes used in World War II were on the drawing boards before the outbreak of hostilities In the event of another conflict entirely new planes will be employed and the industry must be capable of producing them in mass quantities.

Even under ideal conditions a long time is required to expand the rate of production of aircraft. In World War II when all the resources of the United States could be mobilized in a leisurely fashion, when there was never at any time a question of attack or of interruption by sabotage, 5 years elapsed before the industry reached adequate production. We were exceedingly fortunate to have Allies standing between us and the enemy. This situation which prevailed in World War II, also in World War I, will never be repeated again and in a future conflict there will be no one to hold back the enemy while we proceed to expand the aircraft industry.

THE REPORT OF THE AIR COORDINATING COMMITTEE

About 2 years ago the official Air Coordinating Committee made a study of the amount of aircraft production that should be maintained for the purpose of national security. The committee reached the conclusion that, as maintenance of world peace is well assured and a substantial degree of disarmament has taken place, the minimum production of military aircraft should be about 3,000 units a year. However, if there is need for a substantial striking force ready at all times to cooperate in the maintenance of world peace, the report came to the conclusion that the production of military aircraft ought to be 5,780 units a year. We certainly need a substantial striking force to guarantee the peace.

In view of the 3,000-unit level recommended after the maintenance of peace is assured and the 5,780 units if a substantial striking force is required, it is most alarming to realize that the production of military aircraft in 1946 was only 1,330 units and that production of aircraft in 1947 was approximately 1,500 units.

REQUIREMENTS

In his recent statement before the Air Policy Commission the Secretary of the Navy held that the program for naval aviation alone requires an annual production of 2,500

to 3,000 aircraft a year. A similar statement presented to the Air Policy Commission by Secretary of the Air Symington places the Air Force needs at an annual production of 3,200 planes a year.

Current production then is less than one-third of the minimum estimated requirements of the two air services. This is a perilously wide margin of failure to supply our air-striking arm with the new equipment they need to maintain operating air forces trained with modern equipment.

PAST AND PRESENT STATUS OF PRODUCTION

In 1946 production of military aircraft was 1,330 units. In 1947 it was about 1,500 combat units plus a few liaison and personal aircraft. The production ran around 1,500 a year for the 2 years, compared with the wartime peak of 96,000 units in 1944. In 1940, the aircraft industries produced 6,019 planes; in 1941, 19,433; in 1942, 47,836; in 1943, 85,898; in 1944, 96,318; and in 1945, 47,714.

EMPLOYMENT

In the airframe and engine industries employment has declined to 175,000. This is about 30,000 fewer employees than were on the pay rolls at the end of 1946. At the height of production, late in 1943, and early in 1944, the total employment reached was 1,300,000 in the airframe and engine plants.

The above figures on the contraction of employment in the aircraft industries illustrates how rapid has been the dissipation of production and engineering teams built up during the war. Any further decline in employment threatens the complete dissipation of the nucleas of the teams of management, production, and engineering forces required to maintain an industry capable of producing the equipment we require in undertaking the expansion necessary in case of an emergency.

FINANCIAL STATUS

During 1946 and 1947, the American industrial economy experienced its greatest boom. Yet in this period when our industries were experiencing unprecedented activity, the aircraft manufacturers operated at a loss which menaces the survival of the industry. In 1946 most of the larger units in the aircraft industry responsible for the astounding production of the wartime years operated at a heavy loss. For 15 of the largest companies in the airframe and engine field, the operating loss before application of tax carry-backs and postwar reserves in 1946 amounted to $81,591,000. Even after making fullest utilization of tax carry-back provisions the net loss experienced by these companies in 1946 amounted to $11,684,000.

The picture for 1947 is even gloomier. Based on the latest information the Aircraft Industry Association estimated the operating loss of the 15 companies in 1947 as exceeding $100,000,000. After the application of the tax carry-back credits, and additional reserves accumulated during the war years, the net loss of these 15 companies for 1947 is expected to be at least double the $11,000,000 loss they experienced in 1946. Thus, for two consecutive years the aircraft industry has been operating in the red. Survival has been assured by tax carry-backs which will not be available after 1947. This grave and serious condition has not invited the confidence of investors or prospective employees particularly the employees equipped with the necessary scientific and engineering talents.

LAG IN AIR PREPAREDNESS

Secretary Symington of the Air Force in an article written for the American Magazine states that the United States is no longer the leading air power of the world. In quantity we have slipped behind the Soviet Union and qualitatively both Russia and England have numerous developments that exceed our own efforts. England, despite her severe economic strain as a result of the war, is devoting a greater portion of her defense budget to an air force than we are.

Guy W. Vaughn who is president of the Curtis-Wright Corp. asserted only recently that Russia is more powerful in the air at the present time than the United States was in World War II. He stated that Great Britain and Russia are ahead of the United States in research because of the very liberal appropriations of their governments. These warnings should make us determine to appropriate the funds required to prevent us from hopelessly lagging in the air race.

IN CONCLUSION

This alarming summary of the status of the aircraft industry emphasizes how imperative it is that we increase our plane orders sufficiently to make it possible for companies to remain organized. This is necessary for expansion sufficient to ensure production of the aircraft required in case of an emergency. The aircraft companies cannot be expected to maintain their financial positions and to retain their organization of high technically trained personnel in order to manufacture planes in the event of a conflict unless they receive financial aid through orders given by the Government. There isn't the demand for planes outside of the Government to keep the companies functioning.

Air supremacy cannot be achieved and maintained without the aircraft industry. A well-organized aircraft industry capable of expanding and a well-staffed organization of employees possessing the skill to build airplanes is prerequisite to achieving control of the air which is necessary for our national security. Even a cursory inspection of the industry causes us to pause, and we have every reason to be deeply concerned over the deplorable condition in which the companies capable of manufacturing military aircraft find themselves.

The acquiring of air supremacy is the most important issue before the country. One of the most important factors in gaining air supremacy is the maintenance of a healthy aircraft industry. Without the industry we cannot manufacture the planes and without the planes we cannot hope to achieve or maintain air supremacy; and without air supremacy we have no guarantee of security, and without air security the United States cannot survive.

The Daughters of the American Revolution and the Future of America

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, February 11 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD a very interesting and timely editorial taken from last week's issue of the Knoxville Labor News, published at Knoxville, Tenn.

This editorial is entitled "The Daughters of the American Revolution and the Future of America," and is one which pays high and worthy tribute to this splendid organization. After complimenting the DAR, the editorial proceeds to say we must see to it that our liberty and freedom are handed down unimpaired to future generations of Americans. It suggests that this can best be done through our public schools by constantly teaching students the too-often-taken-for-granted basic rights and guaranties of their liberties, and by contrasting them with the lack of such rights in other countries like Russia.

I commend the Knoxville Labor News and its editor, Hon. John L. Essary, for this thoughtful editorial, and for the patriotic suggestions he makes, as well as the splendid tribute he pays to that fine, patriotic women's organization, the DAR.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DAUGHTERS OF THE AMERICAN REVOLUTION AND THE FUTURE OF AMERICA

The National Society of the Daughters of the American Revolution is composed of women whose ancestors fought in the Revolutionary War to gain our liberty, freedom, and independence. Their main objective is to collect all history pertaining to the Revolution; mark historic spots; and foster certain worthy and worth-while schools in America.

There could be nothing nobler or finer in sentiment than this agenda. But there is a companion obligation imposed on this great society: that is to see to it that our liberty and freedom are handed down unimpaired to future generations of Americans. This can best be done through the medium of our public schools. The English language should be used in every public school. By that we do not mean to outlaw teaching other tongues.

In every schoolroom there should be constant reference made to our Declaration of Independence, to our Constitution, to our rights to "life, liberty, and the pursuit of happiness" in drastic contrast to the lack of those basic rights in such countries as Russia and all of her satellite countries which are forced to do obeisance to Stalin and his gang.

No student should be permitted to leave high school without a full and complete knowledge of our fundamental laws; the value of our rights, freedoms, and liberties. He should be required to read A Man Without a Country.

Recently there appeared in the Knoxville Journal an article on the mothers of Presidents and in this was included:

"There is a small monument in Fredericksburg, Va., on the side of which are carved these words: 'Mary, mother of Washington.' When the people of this country fail to understand fully these words, there will be no necessity to take thought about the safety of the country, for it will be gone."

Lord Macaulay tells us in his immortal poem that Horatius said to himself:

"And how can man die better
Than facing fearful odds;
For the ashes of his fathers
And the temples of his gods?"

If the Romans could die for that cruel country, how much nobler is it for Americans to die, or to live for this country. The DAR, in their State convention, should pass resolutions favoring the teaching of these basic governmental subjects in every school in Tennessee and they should also ask the National DAR Convention to take similar action.

Prohibition Next?

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the

Cincinnati Enquirer of February 5, 1948:

PROHIBITION NEXT?

The liquor industry is getting much the better of its argument with President Truman and other powerful opponents. The President and other crack-the-liquor-industry salesmen are peddling the idea that the industry's grain supplies must be cut in order to help Europe.

They cannot prove that Europe is to obtain much more than another kernel of grain through the medium of slashing the liquor industry's grain tonnage.

They cannot deny:

That the industry uses less than 1 percent of the Nation's grain output.

That the industry employs more than 2,000,000 well-paid workers.

That cutting the industry's grain supply in half literally would make ghost towns of Lawrenceburg, Ind., a clean, thriving community of 5,000 persons, and 60 other liquor-producing towns similar to Lawrenceburg.

That the industry pays to the Government billions of dollars in tax revenue each year, more than enough to pay half the cost of the Marshall plan.

That British and Canadian distilleries are running at capacity, are selling whisky in the United States.

That the welfare of an American liquor worker must be as important to the Government of the United States as the welfare of a European.

That, of the less than 1 percent of the Nation's grain used by the industry, more than 45 percent becomes pork chops, steaks, milk, butter, eggs, because distilling produces a residue chock full of vitamins and proteins, a byproduct used by farmers to feed animals and poultry.

Since the industry's opponents cannot deny that the Nation's economy is damaged irreparably when the liquor industry is handicapped, their reasoning is suspect. The suspicion is that they want the return of prohibition upon the United States. With prohibition came the gin mills, the slaughter of persons killed by bootleg whisky, the gangsters operating the bootleg traffic.

Prohibition didn't stop a single drinker. It merely robbed the Nation of revenue, permitted teen agers to drink because irresponsible gangsters were operating the liquor traffic.

Because the use of corn for distilling doesn't deprive anybody of a slice of bread, because the distilling industry uses less than a thousandth of 1 percent of the total wheat supply, it is good that we now have a responsible liquor industry.

It is far better to have Lawrenceburgs than gin mills. An American's appetite for food or liquor cannot be removed by legislation.

Nomination of Edward Allen Tamm

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, February 11 (legislative day of Monday, February 2), 1948

Mr. O'CONOR. Mr. President, the President of the United States has recently forwarded the nomination of Edward Allen Tamm to be an associate justice of the United States District Court of the District of Columbia. This is an ideal selection. Mr. Tamm has earned distinction as one of the directing heads of the Federal Bureau of Investigation. This fact indicates clearly the type of individual we have the privilege of confirming, because this important agency, so closely identified with activities of the Department of Justice, is composed of men of unquestionable integrity and devotion to the public service.

If proven competence, sterling attributes, and conscientious public service are tests by which judicial nominees can be gaged—as unquestionably they are—then Edward Allen Tamm measures up in every respect to the qualifications of the judiciary. He will grace the bench, and, based upon his record of faithful and efficient performance of duty, he will make a creditable addition to the district court.

Recently the Washington Star published an editorial in which reference was made to Mr. Tamm, and I ask unanimous consent to have these excerpts printed in the Appendix of the RECORD for the information of the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Some criticism of the appointment of Mr. Tamm can be expected. A native of Minnesota, he entered the FBI in 1930 as a special agent at the age of 23. And since FBI agents do not operate in the spotlight, he is relatively little known in Washington. He has not had the kind of legal experience that one ordinarily expects to find in the record of an appointee to the Federal bench, and his appointment was announced without waiting for any recommendations from the local bar.

Generally speaking, this would provide ground for opposition to the appointment. The Star does not believe, however, that this holds good in the case of Mr. Tamm. For his record at the FBI and his attitude toward law enforcement are such as to lead to the conclusion that he will make an excellent judge.

There will be, naturally, considerable speculation as to the reasons for the selection of Mr. Tamm. The best guess seems to be that it was a personal choice on the part of the Attorney General, and it may also be that the President desired to indicate his confidence in the FBI in the face of some criticism which has been leveled at this agency. But the particular reasons for the selection of Mr. Tamm are not of first importance. What is important is that these three appointments tend to strengthen our courts, where political appointments would have weakened them. It would have been easy, especially in an election year, for the President to have treated these vacancies as political plums. That he did not do so indicates that he has a proper regard for that political independence which ought to be the first attribute of the Federal judiciary.

Decentralize or Perish

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 11 (legislative day of Monday, February 2), 1948

Mr. WILEY. Mr. President, I have noted in the February 4, 1948, edition of the Wheeling Intelligencer, published in Wheeling, W. Va., an editorial entitled "Decentralize or Perish."

This newspaper, of which Mr. Herman Everett Gieske is editor, has called attention in the editorial to the suggestions made by me on behalf of Federal decentralization. I believe that an editorial on so important a subject deserves wide reading, and I am, accordingly, asking unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DECENTRALIZE OR PERISH

Item:

"New York's land and buildings, regarded as the richest segment of real estate in the world, have risen in value to $17,684,240,921 on the city's tax books for the coming fiscal year."

Item:

"Writing in the Reserve Officer, United States Senator ALEXANDER WILEY, Republican, of Wisconsin, said atomic war with Russia could turn this Capital (Washington) into a 'death trap' for American liberty. We are now living in a fool's paradise of apathy and inertia. We must decentralize or risk a destiny of national extinction."

The above two news items may not seem to be related, but they are. Something has got to be done about the big cities of the United States, as Senator WILEY suggests, we risk national extinction.

If some foe, from without or within, were to wipe out overnight such great cities as New York, Washington, Philadelphia, Chicago, San Francisco, and St. Louis, to mention only a few, our national economic and government system would fall.

Those living in smaller cities can well feel a sense of security against such a doom. But they, too, are vitally affected. Should the National Government fall from such an atomic blow, the dwellers in the hinterlands would find it difficult not only to retain their freedom but merely to subsist.

Senator WILEY is a thousand times right. Our biggest cities must be decentralized and scattered and converted into smaller cities of, we would suggest, not more than 500,000 population.

The difficulties are staggering. New York City's taxable value of over $17,000,000,000 stands in the way of that, because when population goes, realty values would shrink, and the smaller cities would be the gainers.

In the atomic age, the agglomeration of huge masses of people in immense hives, with population running into the millions, is fully as fantastic as atomic energy itself.

Right now we should be building an alternative or "summer" capital of the United States somewhere near the geographical center of the North American Continent, equipped with bomb-proof subterranean chasms wherein our Government, including the Senate and the House, could function unmolested when atomic war comes.

We realize this smacks something of the Maginot-line psychology, but this need not be so. We could at the same time have atomic bombs poised to paralyze a foe in his homeland and still not be without protection and organization at home, should worse come to worse and we awaken some morning to find New York City and Chicago had vanished overnight.

Doubtless Senator WILEY at present is as a voice crying in the wilderness. But we trust he will not remain so. We commend him for his vigilance and foresight. With reguard to atomic energy, we are in much the same predicament as we were when the Wright brothers' flimsy crate first flew; when the first flickering movies were viewed; when the first weak wireless call went out into the air; and when the first balky horseless carriage trundled its way along. It was not

clear then that these forces would change the world socially and economically.

Nor are the full implications of atomic energy at all clear at the present time. But is it not better to be safe than sorry?

Memorial Services for Mohandas K. Gandhi

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Wednesday, February 11 (legislative day of Monday February 2), 1948

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I am delivering this afternoon at memorial services for the late Mohandas K. Gandhi. The services will be held at the Department of Labor Auditorium.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the passing of the great disciple, Mohandas K. Gandhi, our common manhood has lost a kinsman. Probably no man since Christ has more devotedly and literally followed and lived out the teachings of the Master of Men than he whose memory we honor today, and I am grateful for the privilege of lifting up my voice with others to pay a tribute of the esteem and regard in which he was held throughout the civilized world. Conscious of the greatness of his mission, he sacrified himself for others, imposing on himself rigid restrictions, abstaining from fleshly lusts which war against the soul. He truly walked with God.

In a world torn with dissensions, tossed about by madly swirling currents of greed and lust for power, with many great powers reverting to the law of the jungle, seeking to impose their will on others by the destruction of life and property, this man of God turned to the sword of the spirit, which is the word of God. He became the leader of teeming millions of people. Striving to bring about his ideals for the benefit of his fellowmen, not through resort to guns and armaments but in glorious contrast, he followed the formula given by our Lord and Master: "Not by might nor by power, but by My spirit, saith the Lord."

So mote it be that as we face the future, seeking to bring order out of the chaos which threatens the peace of the world, that America and the nations of the Old World might put their trust, not in reeking tube and iron shard, but in obedience to the divine command to "Love the Lord thy God with all thy heart, and thy neighbor as thyself."

In so doing we would speed the day when the kingdoms of this world will become the kingdoms of our Lord and his Christ.

The press states that Gandhi is dead. This is true only in a mortal sense, for he spoke truly who wrote:

"A good man never dies, in worthy deed and prayer,
And helpful hands and honest eyes,
If smiles and tears be there.
Who lives for you and me,
Lives for the world he tries to help.
He lives eternally.
A good man never dies."

Such a man was Mohandas Gandhi. India and all peoples are better because he lived.

"So valiant, for truth, passed over, and all the trumpets sounded for him on the other side."

But Gandhi, being dead, yet speaketh.

Tolls and the Seaway

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, February 11 (legislative day of Monday, February 2), 1948

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Tolls and the Seaway," which appeared in the February 8, 1948, issue of the New York Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOLLS AND THE SEAWAY

In 1934 Army engineers predicted that a St. Lawrence seaway would carry a maximum annual tonnage of 27,000,000. The St. Lawrence survey report arrived at the closely similar result of 25,000,000. Last year the National St. Lawrence Association raised these figures to 37,000,000. The discrepancies indicate that no one knows what the potentialities of the proposed St. Lawrence seaway are. Secretary Harriman has testified that the Department of Commerce has not yet made a detailed analysis of potential traffic on the seaway. Lt. Gen. R. A. Wheeler furnished the Committee on Foreign Relations of the Eightieth Congress with Army estimates of expected traffic—estimates which have been used to prove that the seaway can be made to pay for itself by levying tolls—but declines to be bound by them in the absence of a thorough study of all prospective traffic, the character and amount of tonnage that would actually move under a toll system * * * and the actual net income from those tolls as compared with the assessed navigation costs. In other words, all estimates of potential seaway traffic are little better than romantic hopes.

Proponents and opponents of the seaway split on the issue of self-liquidation. Last year's Senate joint resolution fixed a maximum toll of $1.25 a short ton of laden cargo that would pass through the deep-water navigation works, with exemptions in the case of local or way or Government traffic. Probably $1 would be the average cargo-ton toll. A study made by the Port of New York Authority indicates that the annual cost of maintaining and operating a channel 27 feet deep, exclusive of power facilities, would be $20,000,000 annually to American taxpayers. There are not more than five and a half million tons of toll-paying traffic in sight, so that on the basis of a $1-a-ton average (Secretary Harriman thinks that 50 cents a ton should be the maximum for grain, coal, petroleum, wood pulp, and ores), a belief in the possibility of self-liquidation seems mere daydreaming.

Costs, too, have risen since the St. Lawrence seaway was first seriously discussed in 1921. Last year the Chief of Army Engineers estimated the total cost of the work still to be done on the whole navigation and power project from Duluth to Montreal at $674,707,000, of which $491,609,000 would be borne by the United States—an estimate that allows nothing for deepening channels of lake ports and providing adequate harbor basins. Every one of our great engineering projects outran the estimates. The Welland Canal was to have been built for $70,000,000, but cost three times as much; the Chicago drainage canal cost not the estimated $16,000,000 but $53,000,000; and the New York State barge canal cost $176,000,000 instead of the expected $53,000,000. If the seaway should be constructed, it would probably cost American taxpayers annually far more than $20,000,000 for fixed, operating, and maintenance charges, so that the prospect of self-liquidation becomes more and more dubious.

Congress would be well advised to proceed with caution. We need a more thoroughgoing study of engineering costs and potential traffic than has been made before it can be asserted with confidence that a seaway can be made self-liquidating by levying tolls that shippers will pay.

Inconsistent Foreign Policy

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. HOFFMAN. Mr. Speaker, for the moment, let us forget the muddling foreign policy, which did not keep us out of war, and confine our present observations to what has happened since the fighting ended.

We have spent, since that time, billions of dollars in foreign lands and we have given away tons upon tons of farm and industrial machinery; of fertilizer; of oil—fuel, lubricating oil and gasoline; almost everything we were asked to give. Secretary General Marshall now admits that policy will call for sacrifice on the part of all of our people, but, more particularly, upon the part of farmers who just cannot produce food for us or anyone else without tools and fertilizer.

Now, no one objects to making sacrifices in order to help the unfortunate, but, as Herbert Hoover said just a few days ago, and as I have been trying to say for more than a year, it is idiotic to weaken one's self so much that one can neither care for himself nor help others.

Every farm girl and boy knows that you must adequately feed the cow, the hen, the pig, or you will not get milk, eggs, or ham. The city boy knows he cannot run dad's auto without gas. But that which to us seems a truism, our great intellectuals, who are so dissatisfied with our way of doing things, who wish to adopt some foreign ideology, just refuse to accept.

Our international policy has been not only inconsistent, but absurd. It would be funny if it were not so tragic in its results. Here we are, the strongest Nation in the world, frightened half to death by the propaganda which tells us that unless, in the 15 months after April 15, we give to foreign nations $6,800,000,000; unless we spend eleven additional billions on our armed forces; unless we grab each boy in the country who has reached 18 years of age and, for a period ranging from 6 months to a year and a half, turn him over to the military authorities for compulsory military training, someone is going to lick heck out of us. Communism is going to sweep this country.

Then these propagandists of fear, who try so hard to convince us that some unnamed potential enemy is about to destroy us if we do not accept without the dotting of an "i" or the crossing of a "t," their program to keep us out of war, face

in the other direction and do the very things which history tells us create war. They stick our nose into every quarrel, whatever the issue, wherever it may be. They send our marines to Greece; they send our officers to lead the armies which are fighting in the powder keg of Europe—for centuries the place where wars have been conceived—they insist that we meddle in Palestine and are now talking about sending your boys to make Palestine safe for either the Jews or the Arabs. And, to top it off, they even still make it possible for Russia, through the use of our money and materials, to gird for war. They spend billions to stop communism from Russia; they give billions to Britain which enters into a trade agreement with Russia which strengthens Russia and communism.

Billions to stop communism 3,000 miles away, but coddling it here. This week, right here in Washington, there is a strike in Government cafeterias which feed 80,000 Federal employees. The union, whose members work in these semigovernmental cafeterias operated in Federal buildings, refuses to sign the anti-Communist affidavit required by law. The President of the United States did not protest when his Secretary of Labor and the marshal of the United States Supreme Court ordered two cafeterias closed, thus depriving the women and men who wanted to work there of the opportunity to work, making it impossible for some 10,000 Federal employees and others to eat there, furthering the program of a union whose officials refuse to comply with the law requiring them to sign an affidavit stating they are not Communists.

Spending billions to fight communism abroad, nursing it here at home, does not make sense.

Spending billions to create opposition to communism in Europe, giving other billions in dollars and material to communistic-dominated countries in Europe which aid communism, patting Communists on the back here at home, is ridiculous.

Our foreign policy for the last 15 years has been ruinous. It is time this administration and the present State Department are kicked out and a policy that will protect our own welfare and interests adopted.

The Present Status of the Alaska Highway and the Defense of Alaska, Our West Coast, and the Western Hemisphere

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, when we became involved in World War II, we established far outposts of defense to our security. Even though we then had strong allies, we deemed it necessary to take effective measures to ward off possible attack at points many hundreds of miles from shore.

We looked forward to the successful end of the war and we assumed that thereafter we could with safety relax our defensive outposts. Within the past 2½ years we have acted upon that assumption.

We have unlimbered for a voyage on what we thought would be a sea of peace, and now dark-red flashes of the tempest appear on the horizon. Our forecast of general postwar calm was in error. The hurricane of aggression is still in the winds. We must prepare ourselves to ride out that fury until it spends itself in oblivion.

We must reassume a posture of active defense. We must reestablish those outposts of protection that are necessary to the present threatening circumstances.

Among the most strategic points of dynamic defense is our Territory of Alaska. As an air and sea base, it commands the northern Pacific and is an outpost of protection to our entire west coast and the Western Hemisphere.

In a very recent study of Alaska entitled "Alaska Study Mission" made by the gentleman from Illinois [Mr. CHIPERFIELD] and the gentleman from Michigan [Mr. JONKMAN] is a quotation from a report previously made by the permanent Joint Board of Defense for the United States and Canada, as follows:

> The Board reported that the effective defense of Alaska was considered of paramount importance to the defense of the continent against attack in the Pacific, because Alaska is one of the areas most exposed to any attack by an enemy wishing to establish a foothold in North America.

Senate Report No. 548 of the first session of the Seventy-eighth Congress, on the Alaska Highway, reads, in part, as follows:

> Failure to adequately defend it (Alaska) would result in the establishment of enemy air and naval bases for operation against the western part of the United States and against Pacific shipping. Defense of Alaska and the Aleutians was supplied almost entirely by the Pacific water route then being attacked by enemy submarines. * * * Military strategy dictated that the air route to Alaska be conditioned for the movement of whatever number of planes might be required in operations in the northwestern Pacific area and for providing Alaska with the essential supplies, should the water route become too hazardous. This has required grading and surfacing a connecting highway and building airport facilities.
>
> The need was immediate and urgent, and while the situation is now materially improved, the necessity remains for both a highway and air route suitable for large operations as part of the permanent Alaskan defense. It was evident that the highway to Alaska would have a variety of peacetime uses and would contribute to the development of both Canada and Alaska, but the decision to build the highway was based solely on military considerations.

The building of the Alaska Highway will remain a saga of World War II. On February 16, 1942, a declaration of military necessity concerning the highway was made by the Secretary of War to the Secretary of State with the view of securing rights-of-way through Canadian territory. Shortly thereafter commenced the greatest single highway construction job ever undertaken. Seven regiments of United States engineers equipped with Diesel tractors, bulldozers, dump trucks, gasoline shovels, carryalls, graders, portable sawmills, and pile drivers, together with 12,000 civil workers, built the 1,500-mile highway into the Arctic to connect the United States with Alaska, between the spring of 1942 and November 1943. The cost of the highway was about $130,000,000, paid completely by the United States. The highway was built along the route that follows the general line of airports, Fort St. John, Fort Nelson, Watson Lake, Whitehorse, Boundary, Big Delta. It was built to serve as a military highway for transport and was in support of the line of air fields between the United States and Alaska. It is a vital link in the protection of the Northwest.

One of the sentences from Senate Report 548, quoted above, is worth repeating:

> The necessity now remains for both a highway and an air route suitable for large operations as a part of the permanent Alaska defenses.

It therefore becomes important to determine the present status of the Alaska Highway as a highway and an air route in connection with permanent Alaska defenses.

Mr. Speaker, the United States presently has no legal basis for the use of the Alaska Highway for military purposes should the necessity therefor arise. This highway was built by the United States during the late war as a military highway and to provide a ground supply route for a chain of military airfields in northwest Canada and Alaska. However, that portion of the highway lying in Canada—1,257 miles of it—was, under the basic construction agreement, completely turned over to Canada on April 1, 1946, "to become an integral part of the Canadian highway system subject to the understanding that there shall at no time be imposed any discriminatory conditions in relation to the use of the road as between Canada and United States civilian traffic." In other words, the only purpose for which we may now use the highway is for civilian traffic and that only to the extent that a Canadian citizen may use it on the basis of nondiscrimination.

The Alaska Highway was built by us for the military defense of Alaska and now we may use it only for civilian purposes.

If the necessity for the defense of our west coast suddenly arose, Alaska would immediately assume major significance. We would then have to begin negotiating with Canada for military use of the Alaska Highway for military surface traffic and for its use as ground-supply route for a chain of military airfields for northwestern Canada and Alaska. On February 12, 1947, a joint announcement was made by our Government and by Canada based upon discussions within the Joint Board of Defense, as to extension of continuation of wartime cooperation between the armed forces of the two countries during the postwar period. This announcement is the last word, so

far as I know, of the status of joint defense arrangements between the two countries. It reads, in part, as follows:

The collaboration will necessarily be limited and will be based on the following principles:

* * * * *

4. Mutual and reciprocal availability of military, naval, and air facilities in each country; this principle to be applied as may be agreed in specific instances. Reciprocally, each country will continue to provide with a minimum of formality for the transit through its territory and its territorial waters of military aircraft and public vessels of the other country.

* * * * *

No treaty, executive agreement, or contractual obligations has been entered into. Each country will determine the extent of its practical collaboration in respect to each and all of the foregoing principles. Each country may at any time discontinue collaboration on any or all of them.

This is the basic document underlying present joint defense arrangements of our two countries. It probably contemplates the possible future making of an agreement respecting our military use of the Alaska Highway. But until such agreement is made, we have no legal right to such use. Furthermore, under the provisions of the February 1947 joint statement Canada "may at any time discontinue collaboration" with regard to our military use of the highway.

This is not a sound international arrangement for the defense of Alaska. However, there are some that say if the military use of the highway became necessary we would not hesitate to use it. Others will say that it would embarrass the Canadian Government and its citizens to ask such an agreement at this time. But these are not attitudes of frankness and honor. We need much more of these qualities in international relations today. We have had far too much Atlantic Charter talk and Yalta action. I do not know what kind of diplomacy is going to be necessary for the atomic age. But I do know that polite evasion and duplicity are going to prove hopelessly inadequate. I have a suspicion that a strong and entirely new kind of technique will have to be employed by the diplomats—the technique of truth telling and dealing in honesty. The very terms of the February 1947 joint statement contemplates further agreement as to the defensive use of the Alaska Highway by the United States. Why does not the Joint Defense Board arrange it now?

Must we wait for another situation to develop such as the one in Panama? The Panamanian Government has told the United States "to get out" of certain strategic defensive positions in their protection of the Panama Canal. Our State Department certainly did not look too good in failing to have arranged agreements for the maintenance of those positions. What kind of American diplomacy is it that fails to take proper and honorable steps to guarantee the defensive use of an outpost such as the Panama Canal. Both Alaska and the Canal are necessary for the protection of the Western Hemisphere. Neither of them is intended in any respect for any kind of interference with the internal affairs of any other country in the Western Hemisphere.

It is true that the international relations between the United States and Canada are probably the most exemplary in the world. But if I were Canada at a time when it became necessary for the United States to defend Alaska, I would much rather have an executed agreement between the two countries assuring the United States the military use of the highway. If I were Canada at such a time confronted as it would be with the opposing attitudes of the United States and its enemy, I would be embarrassed—to say the least—in granting the military use of the highway to the United States under pressure of crisis of war. It most comports with international honor and realistic understanding of world tensions today for Canada and the United States to enter into an agreement granting the use now rather than to put the United States in the position at a later time of a nation that would have to thrust its way across another country to defend its outposts.

Another sound reason why we should immediately have a permanent agreement for the plenary use of the highway is that the important Territory of Alaska will, in the not distant future, attain the position of statehood. When that time comes, we should certainly have to have an assurance of the military use of the highway. A tentative understanding such as is contained in the February 1947 statement would be entirely insufficient. When Alaska is a State we certainly should have full use of the highway connecting her with the United States. This is in no way detrimental to Canada. In fact, it comports with the best interests of Canada. A strong Alaska is a guaranty to Canada as well as the United States against the designs of any enemy of the Western Hemisphere coming from the Orient.

I believe it is the feeling of some members of the Joint Defense Board that it is not necessary at this time to enter into such an agreement with a nebulous arrangement based on previous expressions of good will between the United States and Canada. A definite agreement such as I have proposed is not inconsistent with the best of good will. The New York Central Railroad maintains a right-of-way across Canada from Detroit to Buffalo. It does not rest content with the international goodfellowship between the United States and Canada as a basis for its right-of-way. This right-of-way is protected by a 999-year lease entered into in August of 1903. When the Canadian National and the Canadian Pacific Railroad used a right-of-way across the upper part of the State of Maine, they did not rest content with international friendship as a basis for the use of a rail highway across an American State. They obtained from the State of Maine the enactment of a law in 1868 incorporating an international railway company and assuring the use of the railway in Maine to the Canadian companies. If private corporations can obtain definite agreements for the use of right-of-way in a foreign nation, should the Government of the United States hestitate to formulate an agreement with Canada for use of the Alaska Highway, built by the United States, built as a military highway and built for the military protection of the United States and the entire Western Hemisphere?

Mr. Speaker, I urge the early consideration and adoption of the resolution I am introducing today to facilitate the making of an agreement between the United States and Canada whereby the United States is definitely assured the military and civilian use of the Alaska Highway both as an overland and an air route. The world has not arrived at the pacific state whereby we can afford to relax those outposts of defense that seemed so vital to us even in World War II. Alaska is a bridge to the Orient. We cannot permit an invasion to come across that bridge and penetrate into the heart of the American Continent.

It Is a Tax on Happiness and Recreation

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. HAGEN. Mr. Speaker, the war is over, and I think it is about time that we eliminate some of the excessive taxes that hit the average citizen whose income is in the middle and lower brackets.

Almost everyone goes to the movies—the theater. Some families go at least once a week, and others two or three times a week. Attending the movies is something the whole family can do together, and for two happy hours they escape from the troubles of their everyday life and achieve a relaxation hardly possible under other circumstances.

Dr. M. M. Hargraves, who is associated with the Mayo Clinic in Rochester, Minn., points out that recreation is an essential to good health, and urges people to make recreation a must on their list of activities.

I have introduced a bill, H. R. 5011, which will abolish the wartime tax on theater and other amusements. My bill does not eliminate all taxes on admissions, but merely that extra tax that was legislated as a war emergency.

As Members of Congress, we surely do not want to penalize the vast majority of people whose chief recreation is a night at the movies.

I urge your support of my bill. The text of it follows:

Be it enacted, etc., That (a) in the case of the tax imposed by section 1700 (a) of the Internal Revenue Code (tax on admissions) the rate of tax applicable with respect to any period after June 30, 1948, shall be determined without regard to the war tax rate of 1 cent for each 5 cents or major fraction thereof specified in section 1650 of such code (war tax rates of certain miscellaneous taxes).

(b) In the case of the tax imposed by section 1700 (b) of such code (tax on permanent use or lease of boxes or seats), and of the tax imposed by section 1700 (c) of such code (tax on sales outside box office) the rate of tax applicable with respect to any period after June 30, 1948, shall be determined without regard to the war tax rate of 20 percent specified in section 1650 of such code (war tax rates of certain miscellaneous taxes).

(c) In the case of the tax imposed by section 1700 (e) of such code (tax on cabarets, roof gardens, etc.), the rate of tax applicable with respect to any period beginning on or after 10 a. m. on July 1, 1948, shall be determined without regard to the war tax rate of 20 percent specified in section 1650 of such code (war tax rates of certain miscellaneous taxes).

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. MILLER of Connecticut. Mr. Speaker, at my request the Legislative Reference Service of the Library of Congress has prepared figures showing the cost of our foreign-aid program to each of the counties in the State of Connecticut and to the towns and cities in Hartford County.

I insert these figures not as an argument for or against the European recovery program or, as it is better known, the Marshall plan, but simply to give the residents of the First Congressional District of Connecticut an idea of what the Marshall plan will cost and just what the European relief program has cost the taxpayers of the same district since the end of the war:

Cost of foreign aid to counties in Connecticut and towns in Hartford County

	Population	Foreign aid July 1, 1945, to June 30, 1947, (population × $183.028) based on $24,099,211,087	Foreign aid proposed by Marshall plan, 1948–52 (population × $129.11), based on $17,000,000,000	Total foreign aid provided and proposed, 1945–47, 1948–52 (columns 2 and 3) based on $41,099,211,087	Property taxes collected in 12 months ended Mar. 31, 1945
Counties:					
Fairfield	418,384	$76,575,987	$54,017,558	$130,593,545	$22,293,740
Hartford	450,189	82,397,192	58,123,902	140,521,094	25,170,841
Litchfield	87,041	15,930,940	11,237,864	27,168,804	3,262,241
Middlesex	55,999	10,249,385	7,230,031	17,479,416	1,848,044
New Haven	484,316	88,643,389	62,530,039	151,173,428	23,338,343
New London	125,224	22,919,498	16,167,671	39,087,169	4,149,498
Tolland	31,866	5,832,370	4,114,219	9,946,589	733,421
Windham	56,223	10,290,383	7,258,952	17,549,335	1,328,194
Total for counties	1,709,242	312,839,144	220,680,236	533,519,380	82,124,322
Towns in Hartford County:					
Avon	2,258	413,277	291,530	704,807	66,007

Total	450,189	82,397,191	58,123,900	140,521,091	25,170,845

Sources: Population figures, Sixteenth Census of the United States: 1940, Population, vol. II, pt. I, pp. 836–37. Census Bureau, Department of Commerce. Information Relative to the Assessment and Collection of Taxes, 1945. State of Connecticut, Public Doc. No. 48, pp. 106–22.

NOTE.—1940 population figures for the continental United States are used because later figures are not available for every local unit. Population of the Nation (excluding armed forces overseas) has grown from 131,669,275 in 1940 to 143,382,000 (estimated) by July 1, 1947. If the latter figure is used, the per capita cost of foreign aid between July 1, 1945, and June 30, 1947, is $168.08 rather than $183.03. It should also be noted that the foreign-aid figures cover a period of over 6 years while the county tax receipts cover only 1 year. The county tax receipts reflect the income of only 1 unit of government and not all local and State receipts and expenditures.

The Dismantling of German Factories

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks, I include a splendid editorial entitled "The Dismantling of German Factories," which appears in the February 5 edition of the Wanderer, a national Catholic weekly newspaper published in St. Paul, Minn. The editorial discusses the pamphlet Destruction at Our Expense and urges a more Christian approach to the great question of rebuilding Germany. The editorial follows:

THE DISMANTLING OF GERMAN FACTORIES

At a time when the world is crying, and even dying, from lack of industrial production, writes former President Herbert Hoover in his foreword to the pamphlet Destruction at Our Expense, we seem to pursue, nevertheless, the policy of destruction of the gigantic productive equipment in the western zones of Germany. This policy, Mr. Hoover thinks, of dismantling and shipping abroad hundreds of German factories of all kinds, "means less essential goods for all Europe, greater delay in recovery of the world, and larger drain on the American taxpayer * * * as we vainly spend a billion a year to keep alive these millions of (forcibly made) idle Germans."

The afore-mentioned pamphlet, edited and endorsed by a special committee (Common Cause, Inc., 137 East Seventeenth Street, New York), contains valuable information and pertinent suggestions relative to the currently employed economic policies of the Western Powers in occupied Germany. Specifically, the pamphlet takes issue with the plan, long operative in bankrupt Germany, of dismantling thousands of factories which otherwise might be put to vitally needed, peacetime productive use. Its criticism focuses on two main points: First, that many of the German plants have been allocated for shipment to the Soviets; and, second, that in all three zones in Germany from which the factories are being removed, there is at present a huge economic deficit which must largely be met, either directly or indirectly, by the American taxpayer.

After pointing out that the arguments used by proponents of this plan have been proven false by outstanding American economists and political leaders who point to the enormous production vacuum which has thus been created in Germany, the pamphlet refers significantly to some of the chief dangers being courted by the dismantling program. The "discouraging effect," it points out, of the dismantlings on German labor and on other democratic elements, on which we must rely to build democracy and resist communism in Germany, are only too obvious. The German people must not only have bread, but hope. And yet, if they are asked to continue what must seem an insane process of destruction amid the desolate ruins which surround them, realizing that in too many instances they are destroying the factories on which their very livelihoods and jobs must depend, they can hardly be blamed if they resent such a program and,

if the program continues, gradually come to despair.

The desire to remove German industry now, the pamphlet asserts, as a means of preventing future German aggression, can to a certain extent be explain d psychologically. But it is unwise and unnecessary. For the period of the present crisis, and for as long as the Allies occupy western Germany, it is utterly irrelevant. "As for the future, there are other and better means of preventing aggression, such as disarmament and disarmament inspection; treaties to provide joint action against aggression from Germany or elsewhere; the building of a democratic Germany, and, above all, the building real international organization with its own police force."

We heartily concur, if not with everything as set forth in this pamphlet, then at least with the basic idea of finding a more Christian approach to this question, an approach which respects the justified claims for security and hope for the future on the part of the millions of dispossessed victims of Nazi aggression. (W. L. M.)

Irving Martin, Grand Old Man of California Journalism

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. JOHNSON of California. Mr. Speaker, next April 8 will be the fifty-third birthday of the Stockton Record. The founder of this paper is Irving Martin. Today, at the age of 82, he is the active head of the Stockton Record Publishing Co.

Mr. Martin has had an interesting and useful career. Under leave to extend my remarks, I am including an article from the publication entitled "Editor and Publisher," under date of January 10, 1948, which just came to my attention.

From long personal knowledge, I know how active the Record and Mr. Martin have been in helping foster sound and beneficial public projects. His son, Irving Martin, Jr., prior to his death, wrote a daily column on the editorial page of the Record entitled "As the Sun Sets." That column gave impetus to many important public efforts. One was to try to develop the Stockton Symphony Orchestra, organized in the city of Stockton. By publicity and encouragement, he helped make the orchestra a distinct success and asset to the city. Every holiday season Irving Martin, Jr., collected through his Sunset column thousands of dollars for the parent-teachers' association for the purpose of providing lunches for underprivileged children. In every way the Stockton Record has been a wholesome influence on Stockton and the surrounding area.

To describe Mr. Martin is a difficult thing, but I believe his two outstanding characteristics are his tolerance and his kindness. He has supported many important men, including our present Governor, Earl Warren. These public men have themselves differed violently on public questions, but Mr. Martin has nevertheless maintained his friendship with them and also his convictions.

The article referred to reads as follows:

MARTIN SAYS PUBLIC WANTS HONEST OPINION

(By Campbell Watson)

STOCKTON, CALIF.—The youth who would be publisher in a city known as a "graveyard of newspapers" is silver-haired now, a veteran of 52 years at the head of one newspaper—the Stockton Record.

The same courage which brought success in publishing caused him to switch his traditional political stand in four Presidential elections, and on one of these occasions his paper's influence was a vital factor in swaying a close election and changing the course of history.

He built a successful newspaper where others failed, though once he defied a community's wrath and an advertising boycott for the stand he believed just.

HONEST OPINION A DUTY

These factors lend real significance this national election year to the views of Irving Martin, Sr., when he speaks on the value of a newspaper's editorials.

Mr. Martin asserts firmly that honest expression of opinion is a duty of the newspaper which its readers expect the publisher to assert. He does not think such editorial opinions should be for influence alone, holding that the prime purpose is to perform a public service.

Likewise outspoken on labor conditions, Mr. Martin does not believe the Chicago system of photoengraving is the real answer to the existing dispute between printers and publishers.

"It seems to me that men can get together. We must get together here in this country if we are to succeed in solving world problems," he declared.

THREE ITEMS IN HIS CODE

As a daily newspaper publisher since he founded the Record April 8, 1895, Mr. Martin lists the three principal duties of a newspaper in this fashion:

"First, to get and publish as much news as you can.

"Second, to interpret that news and make it plain.

"Third, to provide descriptive comment and opinion.

"This last," he hastened to add, "does not necessarily mean that the readers are going to follow you and be influenced by you. They want your opinion as a mark to shoot at and will follow you only to a certain extent.

"But it does not make much difference whether the readers agree with you. It does matter that they are stimulated by it and thereby find and learn their own opinion. An editorial viewpoint is offered not only as an influence. It is given primarily as a public service."

This is especially true, Mr. Martin explained, in advice given on the long series of propositions which regularly face the California voters at each election. The Record always offers yes-and-no lists, and has been gratified at the number of newspaper clippings appearing in the hands of voters going to the polls.

"This is a most effective way of giving effective thought to the community," he explained.

"The Record has facilities to investigate each ballot proposition and determine its merits. We are happy to provide this service."

STILL ACTIVE AT 82

Alert and vigorous at 82, Irving Martin summed up his views of editorial responsibilities by stating:

"It is not important whether readers agree with you or not. If you express your honest convictions, few readers will quarrel with you."

A reputation for printing the news the community has a right to expect is essential in building repute for editorial forthrightness, Mr. Martin hastened to explain. The Record always refused to suppress news. There were big tests when a community figure absconded with a huge sum of money and when civic officials were arrested in an early morning gambling raid, yet these proved the Record could be relied on to tell the story—also, that the public cannot be fooled, Martin stated.

STARTED AS A PRINTER

Fifty-three years come next April is a lengthy span of publishing for any man, but even before that Irving Martin was coowner of a weekly, the Stockton Commercial Record. Before that he was a Stockton Independent reporter, and he began newspapering by learning the printing trade at the age of 17.

Martin entered the daily field here, despite the failure of four others who attempted to publish dailies. In the course of events he absorbed the Stockton Mail, which has hailed his venture with a cartoon showing the "gravestones" of his predecessors. But he did not succeed hands down. He subsequently confessed his debts at one time reached $165,000.

The Mail held Stockton as a stronghold when the Record began to publish, and Martin gained his foothold by courting the nearby communities and the countryside. His policy was to build up circulation, render service to the community, and improve his plant as he went along.

SUPPORTED WILSON

In 1912 Martin stuck out his jaw all the way and endorsed Woodrow Wilson for President, despite warnings that this interpretation of "independent Republican" policy would ruin him. Martin remained in business and struck out for Wilson again in 1916. Chief Justice Hughes was hailed the election winner as vote counting continued in California's hinterlands, and then came the tally which returned Wilson to office.

"I do not say that the Record decided the election," Martin stated. "But it is interesting to note that California went Democratic by a margin of 3,600 votes, and the State then was nominally regarded as well within Republican ranks, so the Record's stand was important."

Martin also supported Cox against Harding and backed Franklin D. Roosevelt over Landon in Presidential contests, but he was always regarded as a progressive Republican. His stanch stands and his integrity of character resulted in a series of State laurels. He was water commissioner, railroad commissioner, chief of finance of the board of control, chairman of the California Tax Commission, and a member of the group which revised the constitution.

PUBLISHED DURING QUAKE

The Record moved along. It had just installed a new rotary press in 1906 when San Francisco was hit by earthquake and fire. The Record kept its new press rolling for almost 24 hours, printing extra after extra and building a reputation for progress. Rivals were unequipped to meet such production.

Then, in 1914, the community was rent by a dispute over unionization. Refusal of merchants to recognize a clerks' union was the spark which flared over the entire community. A group of store owners suggested the Record endorse the open-shop move, but Martin refused on the grounds his first re-

sponsibility was to publish a paper as he saw fit. The merchants debated cancellation of advertising contracts in a secret session, and Martin immediately returned all contracts.

"I had to rely on the countryside, which fortunately I had cultivated, to stay in business. It was bitter strife. It divided churches, lodges, and even families. I am glad to say that I was able to do some work which helped effect an eventual compromise."

Throughout his half century as a publisher, Martin's ideal was to link the newspaper and the community so the paper would lead and reflect the area's progress. Among many contributions to this was a long fight which created a deep-water port at inland Stockton.

GRANDSON IN TRAINING

Greatest loss in Martin's long career was the death of his son, Irving Martin, Jr., then vice president of the Record Publishing Co. This happened during wartime, when a grandson was in military service with the Army Transport Command.

The grandson, Irving Martin III, is now in the Record news room, training for future responsibilities as publisher. He worked in the advertising department, evenings and vacations, when in high school, and later in the circulation department. Irving III likes the news room best.

"He now has a knowledge of the concordance of a newspaper's departments which I believe essential," the publisher explained. Martin is especially sold on that unity of departments. He has a common plant entrance for all employees, designed his newspaper building so no one would be away from others, and annually has all workers as guests at a great Christmas party.

Nearby Lenten Services Available to Members of Congress

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. HAGEN. Mr. Speaker, I wish to call the attention of the staffs and the Members of the Congress to a community religious enterprise here on Capitol Hill which began on Wednesday of this week.

A service of worship and meditation will be held in the Church of the Reformation, at 212 East Capitol Street, just opposite the Folger Shakespeare Library and within a block and a half of the Capitol, each weekday noon until Easter from 12:10 to 12:30 o'clock.

Dr. Oscar F. Blackwelder, of the Church of the Reformation, emphasized that these would be general Protestant services, to which everyone is invited. Ministers and representatives of the various denominations will speak.

The purpose of these services is to deepen our moral and spiritual thinking, especially during these Lenten days and at a time when all of us need to refresh our minds on the basic principles of the Christian religion, which has meant so much to the life of America and all mankind. I hope many Members of the Congress and their staffs may find it possible to attend these 20-minute services each weekday.

Tennessee-Tombigbee Inland Waterway Would Strengthen Our National Defense

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. RANKIN. Mr. Speaker, while our moon-gazing internationalists are plunging this country toward another war, they seem to imitate Nero of old, who fiddled while Rome burned, by their refusal to build an adequate air force, and to coordinate it with our atomic bomb plant at Oak Ridge on the Tennessee River.

Everybody with any intelligence knows that the atomic bomb is the most powerful and destructive weapon the world has ever known. It would be more effective in a war today than all the navies in the world, or than untold millions of individual ground soldiers without adequate means of transportation—and without the atomic bomb.

Our main plant for the construction of this powerful weapon, on which we must depend for our future defense, is at Oak Ridge on the Tennessee River. Two years ago we authorized the construction of a new inland waterway along the Tombigbee to connect the Tennessee River with the Gulf of Mexico at Mobile, Ala., which would shorten the water distance from Mobile, Ala., to Oak Ridge by more than 800 miles; and would reduce the cost of transporting strategic materials from Mobile, Ala., to the Tennessee River from $2.79 a ton to 62 cents a ton, or to less than one-fourth; and on a barge load of 14,000 tons would save $30,380 on its fuel bill alone.

One of the greatest oil fields in the world is just west of Demopolis, Ala., in Mississippi. All water transportation coming out of Birmingham, Ala., where many strategic materials for war purposes are provided, has to come through Demopolis. This new route would shorten the water distance from Demopolis, Ala., to this Oak Ridge plant by 1,246 miles, a reduction of 82.7 percent.

This project would reduce the cost of transportation from Demopolis to the Tennessee River from $3.08 a ton to 34 cents a ton, or to less than one-ninth of the present cost, and on a 14,000-ton barge load would save $38,360 on its fuel bill alone.

In testifying before the Senate committee in 1944, General Robins, Assistant Chief of Army Engineers, said:

> If that waterway were in operation today it would be of tremendous value for national defense, but you cannot put a money value on it any more than you can put a value on winning the war.

Yet, while the Dnieprostroy Dam in Russia is being rebuilt with American money, and while some of these internationalists are arguing that we proceed to build dams on the Jordan River at the expense of the American people, we are having tremendous difficulty getting an appropriation with which to start work on this great inland waterway, which in addition to giving us a slack-water route to all points on the Ohio River up to Pittsburgh, Pa., as well as what amounts to a slack-water route into the Great Lakes at Chicago, and to Minneapolis and St. Paul on the Mississippi River, would be the greatest contribution to our national defense of any inland waterways project ever proposed in providing this cheap slack-water route to and from Oak Ridge, the site of our greatest national defense project.

I am appealing to the Committee on Appropriations, and to the other Members of Congress from every State in the Union, to join us in this effort to strengthen our national defense, and to make it possible to more easily protect our country against all comers at all times.

Here is the table worked out by the Army engineers, showing in distances this project would provide:

Tennessee-Tombigbee waterway

WATERWAY DISTANCES TO GULF PORTS

From—	To Gulf at New Orleans via Mississippi River	To Gulf at Mobile via Tennessee-Tombigbee	Savings	
			Miles	Percent
Minneapolis-St. Paul	1,718	1,610	108	6
Chicago	1,398	1,290	108	7½
St. Louis	1,043	935	108	10
Cairo	860	752	108	12.5
Hickman	824	788	36	4
Pittsburgh	1,841	1,641	200	11
Cincinnati	1,379	1,179	200	14.5
Louisville	1,236	1,036	200	16
Paducah	906	706	200	22
Chattanooga	1,370	740	630	46
Wilson Dam	1,165	535	630	54
Junction of Tennessee River and Tombigbee Canal	1,121	491	630	56.2

DISTANCES VIA TENNESSEE-TOMBIGBEE WATERWAY VERSUS EXISTING WATER ROUTES

From—	To—	Distance via present waterways	Distance via Tennessee-Tombigbee	Savings in miles via Tennessee-Tombigbee	
		Miles	*Miles*	*Miles*	*Percent*
Junction of Tennessee River and Tombigbee Canal.	Fulton, Miss	1,711	57	1,654	96.7
Do	Aberdeen, Miss	1,673	95	1,578	94.3
Do	Columbus, Miss	1,635	133	1,502	91.9
Do	Demopolis, Ala	1,507	261	1,246	82.7
Do	Birmingham, Ala	1,687	441	1,246	73.9

And here is one showing the savings in the cost of transportation:

From—	To—	Via Mississippi per ton	Via Mississippi per tow of 3,500 tons	Via Tombigbee-Tennessee per ton	Via Tombigbee-Tennessee per tow of 3,500 tons	Average savings per ton	Average savings per tow of 3,500 tons	Average savings per tow of 14,000 tons
Houston, Tex	Cairo	$2.34	$8,190	$1.94	$6,790	$0.40	$1,400	$5,600

European Recovery Program

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution memorializing Congress to enact a sound and effective European recovery program

Whereas there is great need of aid by the United States to certain countries of Europe in order to protect the inhabitants of such countries from privation and starvation to assist them in their own efforts to restore their shattered economies and to prevent the spread of communism and to preserve the democratic form of life: Therefore be it

Resolved, That the Senate of the Commonwealth of Massachusetts hereby respectfully urges the Congress of the United States to enact as speedily as may be consonant with careful consideration a sound and effective European recovery program; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of Congress, and to the Members thereof from this Commonwealth.

In Senate, adopted January 29, 1948.

IRVING N. HAYDEN,
Clerk.

A true copy. Attest:

[SEAL] F. W. COOK,
Secretary of the Commonwealth.

Walter Anderson—Man of the Year in Florida Agriculture

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. SIKES. Mr. Speaker, it is with pride and appreciation that I note the designation by the Progressive Farmer of Walter Anderson, of Greenwood, Jackson County, Fla., as man of the year for agriculture in Florida. I can think of no finer selection. Walter Anderson is a good farmer, a good citizen, and a good American.

The Progressive Farmer, a noted farm publication, has for many years selected outstanding men throughout the South for its man-of-the-year awards in recognition for their services to agriculture. Here is what was said about Walter Anderson:

FOR FLORIDA: WALTER ANDERSON

Walter Bryan Anderson is one good farmer who is not without honor in his own country. Now farming in the same community in Jackson County, where he was born 48 years ago, he has led the way in soil improvement and in use of new and better crops and has served well his community, his State, and the Southeast.

The oldest of five boys, he left college after a year and a half at the University of Florida to begin farming on his father's place. At first he raised mostly hogs, cotton, corn, and peanuts. Always, however, he had a high appreciation for good soil and early learned the things that deplete soils and some of those which build up fertility. During World War II he took over an old run-down plantation, had it producing twice as much an acre within 2 years.

He was one of the first farmers in Jackson County—early in the 1920's—to plant Austrian peas. He continued to grow them until blue lupine came along. He got 100 pounds of blue lupine seed from the Florida Experiment Station in 1939, planted them too deep, and had a near failure. Undiscouraged, he increased his acreage rapidly the next few years and has been a principal source of seed in his county.

He was the first farmer to plant Dixie Runner peanuts, agreeing to work with the Florida Experiment Station before the field value of this new variety was known. Since 1942 he has produced hundreds of tons of Dixie Runner seed, as well as GFA Spanish seed.

He is also planting Dixie crimson clover, kudzu, and other legumes. For 15 years he has been producing good Hereford beef cattle.

He was chosen a community AAA committeeman in 1933 when the plow-up campaign was begun, a county committeeman in 1934, and a State committeeman in 1936. He has served continuously for 11 years.

He became a director of the GFA Peanut Association when it was organized in 1937. He is now first vice president. It has a membership of 51,000, with assets over $400,000.

In Re Continued Contributions to Europe and Lack of Cohesion in the Republican Party

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. REED of New York. Mr. Speaker, I have just received a letter which ought to be of interest to those internationalists who are determined to give this country away:

JANUARY 16, 1948.

IN RE CONTINUED CONTRIBUTIONS TO EUROPE AND LACK OF COHESION IN THE REPUBLICAN PARTY

Because I love my country and, notwithstanding the downhill path which it has traveled for the last 15 years, think it is still the best country in the world in which to live and still offers more promise to its citizens than any other nation, I have endeavored to reduce to writing the views which I have expressed to you in our several recent conversations on the foregoing subject and the position which I think the Republican Party should take with respect to continued contributions to Europe and our present internal difficulties.

What troubles me most at present is the lack of cohesion in the Republican Party (of which you and I always have been members) upon both of these two important subjects, to-wit, (1) contributions to Europe, and (2) the domestic situation, coupled with the demand of the President for further regimentation and continued high taxes.

I intend to discuss these subjects, if I can, both from the historical and philosophical point of view, and also from the economic point of view.

THE FOREIGN SITUATION

The difficulty which I find with contributions to Europe, which, of course, includes the so-called Marshall plan (which must have had the Presidents approval or it would not have been promulgated), is that it grows out of a fundamental misconception of the philosophy of war, especially all-out war, and its necessary economic results.

An all out war, in its ultimate analysis, necessarily means the economic and national destruction of the defeated party. It was not until recent years that there has

grown up a theory that there was some duty on the part of the victors to reestablish the defeated, notwithstanding the fact that the victors themselves paid an enormous price for their victory.

I do not recall that after the Napoleonic wars there was any philosophy or eleemosynary conception of duty which required the victors to add to the price of their victory the duty of supporting the vanquished. Certainly, Great Britain and its allied victors were not concerned with the imposition of taxes upon their own citizens to support those whom they had destroyed. There was no philosophy in that period which required it.

I don't suppose that there is a country in Europe which was more savagely and ruthlessly destroyed in the late war than were the Southern States by the northern armies in our own Civil War.

At that time Great Britain was the secret ally of the Southern States—almost its affirmative and overt ally—but I do not recall that Great Britain, then at the zenith of its strength, felt any moral obligation to tax its citizens to reconstruct or enable the citizens of the South to reconstruct themselves. Neither do I recall that the Northern States, which, through their victorious armies, had destroyed and ravished the Southern States, felt any moral obligation to tax the citizens of the Northern States to rebuild and reconstruct what they had destroyed in the South. On the contrary, the duty of reconstructing themselves was left just where it was—on the survivors. They had to dig themselves out by work, production, and suffering and it took them more than half a century to even begin to do it. They haven't arrived yet.

Now, suddenly, there has been thrust upon the citizens of the United States a conception that in some way it is their duty to still further destroy themselves by taxation for the purposes of restoring the civilization which was destroyed in Europe.

We did not begin this war. It was thrust upon us. The nations which began it knew that if they were defeated they must pay a terrible price. The very philosophy of war requires that they be left to dig themselves out.

However, it is said by some Republicans that somehow or other the duty is now imposed upon us to destroy ourselves in order to help the other countries who destroyed or are destroying themselves. It is said that some or all of these countries will go communistic if we don't destroy ourselves by further taxing our citizens, and thus adding to the price of victory the policy of self-destruction. It goes without saying, that as long as we can be blackmailed, foreign countries will continue to blackmail us by the threat of communism.

A few days ago there was a royal marriage in London. It must have been a gorgeous pageant. It must have been enormously expensive to the citizens of Great Britain. Such expenditures were made at the very time when American taxpayers had been contributing to the destitute taxpayers of England. We are asked to further contribute, at our expense, to relieve their destitution. Yet everyone who thinks must know that this is only a "hangover" or an extension of the New Deal—an application to foreign countries of the magic formula which was invented by the late President by which the underprivileged could remain underprivileged without work or want, without destroying initiative and without impairing accumulated wealth. But everyone knows that destitution in England could be quickly relieved if the destitute workers of England would go to work, produce as much as they can, and dig themselves out of their difficulties, which are no greater than those which confronted our ancestors who landed at Plymouth Rock and Jamestown and who, surrounded by countless dangers, were required to work overtime in order to support themselves and to lay the foundation for the great prosperity which this country later experienced.

Parenthetically, I might observe that it might be a good thing for this country if instead of supporting workmen who won't work to the utmost in England, we let the Socialist experiment which is now going on there demonstate its utter incapacity to succeed.

Those, however, who favor continued taxation here to support Socialist England and western Europe say that it must be done in order to prevent Russia, with its communistic theories, from overrunning western Europe.

Communism, as it exists in Europe today, is either a faith or an economic status which the absolute political control by Stalin makes it impossible for the slaves, in what is equivalent to a slave state, to throw off.

If it is the latter, it is quite possible that Russia may break down internally.

If it is the former, a faith and not a political condition, people who believe in it will fight for it just as the Mohammedans did centuries ago when they tried to impose Mohammedanism on western Europe by military force and failed.

Further, if it is a faith, there isn't any doubt that if we are going to be able to successfully defend our theory of free enterprise, we have got to make ourselves strong enough to be able to fight when we have to fight, and to give our citizens an incentive to work by enabling them to keep what they earn and not to destroy them by devastating taxation.

Nations are very much like boys. Every boy who has ever grown up outside of a large city learned by personal experience that the only way to defend himself against the town bully was to make himself ready, willing, and able to fight. The town bully always left that type of boy alone. The same thing is true of nations.

At present we are weakening ourselves playing right into the hands of the international bully. We allow ourselves to be insulted without resentment. The representatives of the United States Senate are refused admission to its own embassy in Moscow and no political notice is taken of it. Instead of letting the international bully know that we won't be bullied, we continue to let him know that we are perfectly willing to be bullied and show no national resentment.

My thought is that this Nation should save its energies to build up its strength. Communism as a faith and free enterprise as a faith can't exist side by side. Sooner or later there will be a clash of arms and the more able and willing we are to accept the challenge, the less apt we are to be challenged.

These are my views on the foreign situation, on foreign relief, on the continued oppression of American taxpayers, and the continued weakening of our own resources. I know they are shared by numbers of our people. The Republican Party owes it not only to itself, but to the Nation to refuse to continue the blackmailing financial contributions to Europe and to make itself and the Nation strong.

THE DOMESTIC ISSUES

The domestic issues are confused largely by the President himelf. Everyone who reads the news intelligently has reason to believe that he places his demand for enlarged regimentation and for continued contributions to Europe upon the alleged fact that charity requires it, whereas, as a matter of fact, self-protection requires us to do the very reverse.

As to the President's demand for increased regimentation: It never occurs to anyone—at least I never see it in print—that the instant Government attempts to regiment anything, other regimentation is necessary in order to offset the economic evil resulting from the first. It never seems to occur to anyone that the real way to get rid of the economic evils which have been thrust upon us is to abandon all regimentation and allow these economic evils to be settled by the free play of the law of supply and demand.

Of course, such a course would result in temporary suffering here, there, and yonder, but I submit that suffering is the price which we must pay to restore manpower lost during the war, the destruction of wealth caused by the war, and the reestablishment of free enterprise.

It is an economic and as well a physical law that any individual or nation which has indulged in a long drunken debauch or a long economic debauch must suffer before either of them can recover. The sooner this Nation undergoes that suffering and emerges from it, the better off we will be. However, we can't "feather bed" recovery along by hopeful wishing (including regimentation) and restore the prosperity which existed before the war. It can only be restored by the abandonment of all control, and we must all suffer severally and jointly until economic balance has been restored.

The President says that he thinks it can be restored by regimentation. He is giving an unsound excuse for it and is doing the very thing which will prolong suffering and ultimately result in self-destruction.

The Republican Party is in control of both Houses of Congress. It can refuse to adopt the President's policy and refuse to go along with increased regimentation of American citizens in time of peace, the enlargement of Government bureaus, the continuance of discouraging and exhausting taxation, both income and estate taxes. The latter should be definitely lower, as well as the former.

If it is defeated in such a program, I would rather see it defeated than to see it victorious by the adoption of a policy which goes a long, long step toward socialism and the destruction of the right of free citizens.

Personally, I have been a member of the Republican Party all my life, have been for years a member of the Republican Citizens Finance Committee of Illinois and a contributor thereto. I have also contributed during the last three Presidential elections as much to the Republican National Committee as any one citizen, under the law, can do. But I think I might as well plan to discontinue such contributions if the Republican Party goes even half way along with the President's demands. We must be a party in real opposition and not a party of part imitation. If we aren't, we might as well stand aside and let our party help the President ruin the country.

* * * * *

I have written at great length and very seriously. There are other things which our party might do to help restore freedom and sanity in this country, but I have already written at far too great length. I hope that you won't be bored with this very long letter.

RALPH M. SHAW.

CHICAGO, ILL.

American Civilian Victims of Japanese Maltreatment During the War—A Suggestion for a More Speedy Relief Is Made by Lawyer-Economist Vicente Villamin, of Los Angeles, Calif.

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in

the RECORD, I wish to include the following article written by Attorney-Economist Vicente Villamin for the Manila Bulletin, Manila, Philippines.

The article discusses the relief of American civilian victims of the war in the Pacific, numbering about 6,000. The House, on January 26, 1948, passed H. R. 4044, providing for their monetary relief. It provides for a commission to investigate claims, then report them to Congress before January 3, 1949, with recommendations for further legislation, including the creation of a second commission which will actually consider claims and pay them. On the face of it, delay in the payment of the claims is evident, and the intent of Congress to help the American war victims would be frustrated.

Mr. Villamin suggests that the example of the Philippine War Damage Commission, which was created by Congress by the act of April 30, 1946, be followed and only one commission be created with the full and final power to approve claims and pay them. There is great merit in that suggestion. It should be studied for possible adoption.

Mr. Villamin's article follows:

DELAY IN AMERICAN WAR VICTIMS' RELIEF

(By Vicente Villamin)

If the Americans who were interned by the Japanese during the war expect to receive monetary relief under H. R. 4044, which passed the House and is now in a Senate committee, before at least 2 years from now, the bill will have to be modified with respect to the provision of title II regarding the War Relief Commission to be created. The relief is approved by all departments and agencies of the Federal Government and not a single Member of the House had opposed it. The only question is how to give the relief so it will actually relieve the pressing necessities of the prospective beneficiaries.

Under the bill, about $50,000,000 will be paid to some 6,000 American civilians who were interned, disabled, or killed by the Japanese during the war in Wake, Midway, Guam, and the Philippines. The amount will be debited against the former enemy assets, estimated at approximately $250,000,000, now under the control of the Alien Property Custodian.

The first bill on this subject matter was introduced more than 2 years ago, but delays and more delays overcame its consideration. Further delay may be expected under an amendment adopted by the House when it passed the bill on January 26 last to the effect that the War Relief Commission shall make the required report to Congress, not before March 31, 1948, as originally provided in the bill, but before January 3, 1949, or 9 months later. The bill's author himself, Representative CARL HINSHAW, introduced the amendment.

The idea of the Commission was the center of the debate in the House. Fear was expressed on all sides that it might cause such a delay in paying the internees that it would defeat the immediate intent of the bill. But no alternative was presented during the debate, except an amendment by Representative GEARHART, which was voted down. The amendment would do away with the Commission altogether and lodge the power to consider and approve claims in the United States district court wherein the claimant is resident, thereby greatly expediting their disposal.

Under the bill as passed by the House, the duty of the Commission is to receive claims, study and classify them, and then report to Congress with recommendations for new legislation to carry out the intent of title III of the bill. So, if there is no postponement of date, sometime after January 3, 1949, the Eighty-first Congress, which is not bound in the matter by the present Eightieth Congress, might take it up and pass a bill incorporating the recommendations and creating a new commission charged with the actual approval of claims after its own investigation, and the payment thereof. Judging by the speed of the average Federal commissions, the first payment may be expected not before 1950, that is, if the preliminaries went along according to schedule.

Representative GEARHART dramatized the foreseeable situation when he said during the debate in the House: "If you reject my amendment, it will merely mean that you have set up one more commission whose members will draw $12,000 a year, three men who will learn to like their jobs very, very much. At the end of the year, they will come in and say that they have not been able to complete their work and, therefore, will ask Congress to extend their time, and they will keep on asking for extensions. Then they will recommend the setting up of another commission to adjudicate claims in accordance with the recommendations of the first commission * * * and then perhaps the grandchildren of the internees will get the claims paid at last."

The hope is in the Senate. The question is what plan could be advanced to forestall the delay inherent in the two commissions contemplated in the House bill. The Gearhart amendment, while well intended, would complicate matters because there will be no standard for the treatment of claims by the courts unless such standard, which at best is subject to different interpretations by different courts, is specifically set forth in the enabling act. Besides that, judicial processes are usually slow and court dockets are full and the claimants will have to spend money as in other court cases both in the first instance and on appeal. The determination of a commission is uniform, final, and not appealable, and thus more satisfactory, efficient, and economical. The present case is clearly for a special commission to administer.

The author believes that the case of the Philippine War Damage Commission offers a possible solution. That Commission has more claims to consider than the proposed War Claims Commission—over 1,000,000 as against 6,000. And it has more money to disburse, $520,000,000 as compared to $50,000,000. Its work is more complex and involved, but it is working satisfactorily and, as far as commissions are concerned, speedily.

The Philippine War Damage Act was enacted by the United States Congress on April 30, 1946. On April 18, 1947, a year after, it made its first payment. Considering the magnitude of the work of this commission, including the recruiting of its staff in the United States and installing them in Manila and informing the whole Filipino people of its work, the proposed War Claims Commission under H. R. 4044 should be able to make the first payment in 2 or 3 months after the bill becomes law. Specifically, if the bill is enacted into law in April, the first payment to claimant should be made before July—July 1948 and not in 1950 or thereabouts.

The vital point is that in the case of the Philippine War Damage Commission the Congress empowered it to receive and approve claims and pay them. There will be only one commission with the power of final and unappealable adjudication of claims. Why cannot this formula be adopted in the case of the American internees' relief? The two cases are roughly similar and parallel. During the debate in the House, no Member mentioned the Philippine War Damage Commission despite the fact that it was an illuminating precedent. If it had been brought up, it would have appealed to many Members of Congress as the solution of the problem of delay involved in having two commissions. The only explanation for the omission is that no one remembered or knew it, and if a Member had read the commission's second semiannual report to Congress he was not on the floor during the debate to call it to the attention of the House. This omission must not be repeated in the Senate.

Again, let it be emphasized that there is unanimity in Washington in favor of extending monetary relief to American civilian victims of the war, and the only question outstanding is how to extend that relief without unnecessary delay. It is obvious that the bill that passed the House (H. R. 4044) with all its good and generous intentions, does not meet that situation satisfactorily. A new solution must be found and the suggestion above mentioned is submitted for consideration. The war victims must be aided in time. Justice must be done them. And oftimes delayed justice is denied justice.

Nailing an International Lie

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. KLEIN. Mr. Speaker, more than once I have risen on this floor, and so have scores of other Members, animated wholly by a sense of devotion to the high ideals and immense power and prestige of our country, to call attention to the propaganda activities of the Arab Office, a quasi-diplomatic agency representing the intransigent feudal states which comprise the Arab League.

It now appears that we should have included in our warning the British Foreign Office and its spokesmen.

In the past weeks a sudden flood of insinuation, innuendo, libel, and false and distorted charges have been widely published in this country. I have said sudden; but what is sudden about it is the new vast volume of the output, and the fact that it now appears to be emanating from high places in both the United States and the United Kingdom, yet clearly following the Fascist-Arab line.

The intent, and possibly the effect, of this river of words is to subvert the stated foreign policy of the United States as enunciated by the President and the Secretary of State in regard to the Middle East.

There appears to be a serious effort to portray these medieval Arab states, with their masses of poverty-stricken illiterate, unhappy peasantry, as progressive citadels of democracy, threatened in their native lands by an inundation of fanatic Jews tainted with the dread disease of communism.

FANTASTICALLY UNTRUE

That such a portrait is fantastically untrue goes without saying.

Every objective authority who has studied Palestine and the Middle East agrees that the nomadic tribes of the backward Arab States, living by the sword, legalizing rape and plunder and destruction, have reduced the land of milk and honey to a desert waste in centuries of misgovernment and mismanagement.

Only the Jews indigenous to the area or settled there in immigration from Europe have been able to keep alive the tradition of culture and industry and fruitful agrarian husbandry. In only a few decades the colonies of newcomers—who entered Palestine, be it noted, under specific treaties—have made vast steps toward reclaiming the fertile land from the hungry desert.

If the United Nations decision is carried out expeditiously and determinedly, they will continue to develop the natural resources of the country.

MOST CRUEL OF ALL

Most cruel of all recent propaganda is the absurd allegation that the desperate Jews on the two refugee ships, *Pan York* and *Pan Crescent*, are parts of a Communist fifth column.

I am glad to find in the New York Post a remarkable news story by Hal Lehrman "debunking" the fraud, and an important and decisive editorial dissecting and nailing the whole international lie.

Lehrman's findings square with private information I have had pointing to a new wave of anti-Semitic hysteria in all Europe under Russian domination. I cannot judge the authenticity of my information except by the earnestness with which it has been presented, except in Rumania and in Poland, where both official and unofficial sources have agreed on the virulence and the great proportions of anti-Semitism.

Under leave, I am inserting at this point both Lehrman's article and the editorial from the New York Post of Friday, February 6, 1948:

JEWS QUIT SOVIET SPHERE IN PANIC—NOT AS RED SPIES

(By Hal Lehrman)

Economic misery, fear of pogroms, and Communist suppression of liberty are goading eastern Europe's Jews into a desperate search for escape—by any road—from the lands of Soviet domination.

After a year and a half as correspondent in the satellite states of Russia's Europe, this writer can testify that the mass Jewish exodus from the Balkans is no sinister plot engineered by the Kremlin to spirit Communists into Palestine.

On the contrary, it is an irresistible urge among hundreds of thousands of survivors of Hitlerite extermination to get away from Soviet-"liberated" countries where they have no tolerable present and no secure future.

These self-made "displaced persons" who head for Palestine, who pack the DP camps of Austria and Germany, will go anywhere that will offer them a safe refuge.

When the remnants of Balkan Jewry struggled back from Nazi crematories, or the forests where they had hidden, many were indiscriminately taken as "enemy aliens" by the Red Army and shipped to labor camps in the Soviet Union.

Those who reached home found high-sounding decrees of the new Communist-run regimes abolishing racial discrimination, but failing to restore the property grabbed from the Jews by wartime Fascist governments.

I know a Yugoslav Jewish industrialist whose factory had been confiscated by the Germans after he fled. When he returned, Tito jailed him and confiscated the factory again on charges of "collaboration."

In Hungary and Rumania thousands of Jews were unable to redeem their homes from pro-Nazis.

One Jewish woman of Budapest who was raped and tortured by Hungarian Fascists of the Arrow Cross, was compelled after "liberation" to share her small apartment with an ex-Arrow Cross family who had joined the Communist Party.

It was the exception for Jews to get back their shops, factories or homes. The Communist Party newspaper in Hungary even denounced such Jewish claims as a clamor for special privileges.

Despite millions of dollars spent by the American Joint Distribution Committee and other relief agencies, the Jews of Russia's Europe, have been permanently made a depressed class by Communist legislation against private enterprise.

Congenitally anti-Semitic, the masses—resentful under Communist rule—are turning to the Jews for their usual scapegoat, although only an infinitesimally few are active in the new Communist regimes, and those are not friendly to the Jews. In fact, thousands of ex-Nazis have been forgiven and enrolled into Communist parties, while Zionists have been persecuted.

In Rumania, the Jewish desire to get out is currently at fever pitch, which renders absurd the recent British allegations that Palestine-bound emigrants are cloak-and-dagger Communist agents.

The latest major Jewish exodus from Rumania began last summer, when famine swept large areas of Rumania. Communist "stabilization" this fall reduced the value of Rumanian money 20,000 times and the last paltry Jewish savings were wiped out.

Badgering private enterprises into quitting made the few remaining Jewish merchants willing to exchange for an exit visa.

Dr. William Fildermann, who had saved many Jews by defying the Nazis, was persecuted by the Communists to force him to bring his union of Rumanian Jews into the fold.

The net result was to make the Jews want to get out, rather than accept communism.

The camps in Rumania which London sources now describe as Red-supported training centers for Communist agents to Palestine were really Hachsharoth—where youthful applicants for emigration, supported exclusively by Zionist and western funds, lived and awaited departure for Palestine. The closest they came to military training was to study the Hebrew language and take a few lessons in farming.

Of the Jews aboard the *Pan York* and *Pan Crescent*, which the British pulled into Cyprus and described as packed with Communist provocators, 4,000 were Halutzim (pioneers) from those Zionist camps.

Fifteen hundred more of the "subversive" emigrants were less than 2 years old. Another 4,000 were between 2 and 11 years of age.

All the rest were special distress cases: widows of the Nazi pogroms and refugees from Bessarabia and northern Bukovina—provinces annexed by the Soviets.

I saw some of the rigid screening which applicants for Palestine visas had to undergo by their own Jewish leaders. Quotas were apportioned severely among the different Zionist groups and only the neediest, most legitimate cases were approved.

If there had been room aboard the ships, not for a few thousands, but for 150,000, there would still not have been enough for all the passionately non-Communist Jews who want to shake the dust of the new "democratic" Rumania from their weary feet.

The editorial follows:

NAILING AN INTERNATIONAL LIE

It began last December, this particular smear campaign; almost immediately after the United Nations, backed by Russia and the United States, decided in favor of finally creating the Palestine state promised the Jews in 1919 under the Balfour Declaration.

Some 12,000 carefully screened, desperately tried Jews managed to assemble at Balkan ports, to sail on two ships, the *Pan Crescent* and *Pan York*, for Palestine.

The Jewish Agency screened them with meticulous care; they were trained Zionist pioneers chosen by members of the various Zionist organizations, except for 1,400 who were not selected.

These 1,400 consisted entirely of very little children.

The British Government, as alert to prevent any more Jews reaching Palestine as they have been to provide the Arabian states with weapons to kill those who are already there, intercepted the two vessels and interned the passengers in concentration camps in Cyprus.

They—those who are still alive—are still in concentration camps.

On January 1 a New York Times correspondent cabled his newspaper from London that he had learned from authoritative and official sources that the British had intercepted 12,000 Jew Communists on their way to take over Palestine.

Later modifications of the same authoritative reports began to weaken the figure somewhat, but ever since, when things were dull in London or in other anti-Palestine centers, a new version of the same canard would be solemnly filed, or as solemnly commented upon.

The New York Times has printed several variations on the original theme. Latest version was that 1,000 Communists had been definitely identified among the 12,000.

On February 3 a New York Post columnist, Marquis Childs, writing out of Washington, wrote that he thought it would be an excellent idea if some provable facts were substituted for the innuendo, the anonymous charges, and the flat denials that were becoming an increasing topic of undercover conversation among Washington residents, official and otherwise.

The same day under officers of the State Department placed on Secretary of State Marshall's desk a memo saying that the Department "had been informed" that there were 150 or 200 Communists among the 12,000 or so refugee Jews intercepted by the British and interned in Cyprus.

The Secretary informed the reporters, and this time the press of the entire Nation was treated to the "Jew-Communist" plot with which had been associated the dignified name of Secretary Marshall. Still without any facts, or any disclosed responsible source.

At the same time an intelligent reporter, seeking some facts, questioned the British commander, Sir Godfrey Collins, commissioner in charge of the refugees at Cyprus.

Sir Godfrey is evidently an honest man, and his reply proved so disconcerting to certain British officials in London that it may be said for certain that Sir Godfrey has hardly heard the last of it. What he said was, however, that there was no indication whatsoever that any Communist agents were among the immigrants. He also denied reports that any Communist literature or identity papers had been found on the immigrant ships *Pan York* and *Pan Crescent*.

This was the lie nailed—almost. But not quite.

In London there was consternation.

The British Foreign Office, finally smoked from cover as the heretofore "anonymous" but "authoritative" source of the story, admitted it.

The New York Times correspondent cabled from London that the Foreign Office had finally consented to reveal its identity as the source of the original and subsequent libels—only, of course, the Foreign Office didn't admit they were libels.

The Foreign Office wasn't sure how many Communists it claimed were among the detained refugees, but indicated there were a good many.

Questioned about the statement of Sir Godfrey, who certainly should be in a position to know, the Foreign Office retorted

angrily that he wouldn't have acted that way if he had been a Foreign Office man, but that alas, he was a Colonial Office man.

"The immigrants were questioned by the Foreign Office, not the Colonial Office," says the dispatch from London darkly.

The Foreign Office denial was followed by a Colonial Office statement in behalf of Sir Godfrey that he had not said there were not any Communists among the refugees; he said merely that, if there were any, he didn't know it. Besides, he was speaking for himself and not for the Colonial Office.

Today, in the New York Post, an Overseas News Agency correspondent presents the palpable truth about the refugees.

They were, it seems, almost as anxious to escape from the anti-Semitism still rampant in certain Balkan countries, notably Rumania, as they were to enter Palestine.

His story makes interesting—and factual—reading.

But, of course, the end is not yet in sight; and the refugees are still not in Palestine, but in British concentration camps; the Allied refinement on Hitler's Dachau.

And there are, indeed, a few Communists in Palestine, as there are some in every country in the world, including the United States; there their political impact to date has been perhaps somewhat less, but no matter.

The resourceful British and their American and Arabian allies will continue to pour out half truth and innuendo in carrying on the campaign to finally make partition appear to be another Soviet plot against the Western World.

Watch for those dispatches, statements, etc.—and read them with care. They contain a secret substance more destructive than the atom bomb—secret intrigue against international honor, justice, and decency.

Concurrent Resolution of the Senate and House of Representatives of the State of Mississippi

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1948

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith on behalf of the entire Mississippi delegation in the House of Representatives the following concurrent resolution of the Senate and House of Representatives of the State of Mississippi:

House Concurrent Resolution 22

Concurrent resolution of the Senate and House of Representatives of the State of Mississippi memorializing the Congress of the United States of the grave apprehension and vigorous opposition of the people of this State to the recommendations of President Truman's Committee on Civil Rights and urging opposition to any congressional enactment of said recommendations

Whereas President Harry S. Truman, by Executive order, on December 5, 1946, did establish the President's Committee on Civil Rights; and

Whereas this committee did function and submit its report to the Nation in the form of a public document; and

Whereas the report did recommend, among other things, the enactment by the Congress of an Antilynching Act, an Anti-Poll-Tax Act, a Fair Employment Practices Act, an act forbidding segregation, and other acts of this same character and devious purpose, which acts are obviously directed against certain geographical sections of the Nation, more particularly the Southern States, and which acts are aimed at nothing less than the subjugation of the sovereignty of the 48 States of this Union in favor of a gigantic and compelling Federal system of appointive boards with powers equal to those of the State or the judiciary; the subjugation of the majority to the demands of various minority groups and, not least among these recommendations, certain ones whose effect would be to deprive the States of their rights with regard to suffrage and election laws, and passing this power to the Federal Government for their dictates; and

Whereas the recommendations of this committee constitute an assault on the fundamental principles of division of powers between the Federal and State governments; and

Whereas the recommendations of this committee constitute an attempt by a group of persons not qualified by training or experience to recommend basic changes in a social and economic system arrived at after centuries of adjustments and changes accompanied by progress and enlightenment; and

Whereas the recommendations of this committee constitute nothing less than an attempt to inflict on the States by Federal legislation a social, economic, and political framework totally in derrogation of the sovereignty of States guaranteed by the Constitution of the United States: Therefore be it

Resolved by the house of representatives (the senate concurring therein), That the Congress of the United States be, and is hereby, memorialized of the grave apprehension with which the people of this State view these proposals, and be further memorialized of the vigorous, indignant, justifiable, and considered condemnation of and opposition to these said recommendations, and that the Congress be urged to defeat any and all of these recommendations; be it further

Resolved, That a copy of these joint resolutions be transmitted to the President of the United States, the President of the Senate, the Speaker of the House of Representatives, and to the Mississippi delegation in Congress, with the request that said delegation continue their steadfast, determined, and courageous defense of the traditions, customs, and ideals of the State of Mississippi and the South.

Adopted by the house of representatives, January 29, 1948.

WALTER SILLERS,
Speaker of the House of Representatives.

Adopted by the senate, January 30, 1948.

SAM E. LAMPKIN,
President of the Senate.

In the Name of Peace

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. SIKES. Mr. Speaker, I call attention of the House to a splendid letter from President Harry S. Truman to Brig. Gen. E. A. Evans on the subject of participation in the Nation-wide observance of National Security Week by the Reserve Officers Association. The letter was published in the February issue of the Reserve Officer:

THE WHITE HOUSE,
Washington, January 7, 1948.

Brig. Gen. E. A. EVANS,
Executive Director, Reserve Officers Association of the United States, Washington, D. C.

DEAR GENERAL EVANS: I am glad to know that the Reserve Officers Association is planning a Nation-wide observance of National Security Week during the period between February 12–22. You have my indorsement of this program.

In these times the inclusion of all of our people in the study of the things which must be done to guarantee our national security is very important. I hope the ROA can bring into this program every State and community. National security is the obligation of every citizen. Its responsibilities know no social, economic, religious, or partisan lines.

Our National Security Week observance in 1948 will end almost exactly 30 months after VJ-day. We, as a Nation, gave everything we had to win the victory over the Axis Powers and Japan. We must continue to give everything that is needed to win the peace. The price of victory was lives, dollars, and materials. The price of peace calls for application of our minds, hearts, and our resources, just as we applied them in war. I believe that the people of our Nation have the character to go ahead with the tasks which are before us.

Among the many fortunes which the American people enjoy is the leadership of her citizen defenders, the men and women who have won our victories and who are the trained bulwark against aggression. I feel sure that national preparedness means preparedness for peace and not for war.

Therefore, in the name of peace, I commend National Security Week to all the people of these United States.

Sincerely yours,

HARRY S. TRUMAN.

Chairman Andrews' Interpretation of National Security Week

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. JOHNSON of California. Mr. Speaker, the period of February 12 to 22 has been designated as National Security Week. I know of no more qualified person to interpret the meaning of national security than Hon. WALTER G. ANDREWS, chairman of the Armed Services Committee of the House of Representatives. Congressman ANDREWS started his Reserve service prior to the incident which called American troops to the Mexican border in 1916. He served in the Twenty-seventh Division of the National Guard of the State of New York in World War I. He was a company commander in the rugged fighting which that division participated in on the western front. For gallantry in action over and above the call of duty he was awarded the Distinguished Service Cross. He continued his interest in national security following the termination of the war and the demobilization of his division. He

entered Congress on March 4, 1931, and became a member of the Military Affairs Committee. Today he is the chairman of the Armed Services Committee. As chairman of that committee, following the reorganization of the committee structure of the House, the gentleman from New York [Mr. ANDREWS] had a complicated and difficult job. He performed that job in the most excellent manner to the satisfaction and admiration of the members of that committee. No man in the entire Congress, in my humble opinion, has a better grasp on the security problems of the United States than Chairman ANDREWS. His interpretation of what National Security Week means should be read with interest and profit by every Member of Congress. Under leave to extend my remarks, I include his statement, which was published in the February issue of the Reserve Officer, a magazine owned and operated by the Reserve Officers' Association. It reads as follows:

National Security Week, as sponsored by the Reserve Officers' Association, invites the attention of every American citizen to a simple and compelling truth which has never lost its validity in the 172-year history of the United States; namely, that eternal vigilance is the price of liberty and that vigilance must be combined with an adequate military posture, in order to assure the respect of the world and to deter the ambitions of potential aggressors.

This truth was never more applicable than it is today when our continued existence as a free people literally depends upon our determination to prevent military weakness on our part inviting a war.

I am thus in full accord with the purpose of National Security Week and urge every citizen to ponder carefully its meaning.

WALTER G. ANDREWS,
Chairman, Armed Services Committee, House of Representatives.

The United Nations and Palestine

REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of this House to the activities of a Christian gentleman in connection with the outrages now current in Palestine and which threaten to increase unless brought to an immediate halt. On February 5, 1948, the Honorable John Cashmore, president of the Borough of Brooklyn, sent the following telegram to the President of the United States:

FEBRUARY 5, 1948.

Hon. HARRY S. TRUMAN,
President of the United States,
White House, Washington, D. C.:

I am deeply disturbed by the turn of events in Palestine. The defiance of the edict of the United Nations by the Arab higher committee is reprehensible. The bloodshed and sabotage must stop. I urge you to use all your influence to see that law and order are reestablished in Palestine and that the authority of the United Nations is observed and respected there. To achieve this result it is necessary to lift our embargo against the shipment of arms to those who are trying to uphold the power and dignity of the United Nations. It is also necessary for the United Nations to establish an international constabulary to keep order in the Holy Land. Unless such immediate action is taken, the United Nations is doomed to the fate of the League of Nations, and Palestine and Israel will serve as a new Manchuria and a new Ethiopia.

JOHN CASHMORE,
President of the Borough of Brooklyn.

Mr. Speaker, this is not the first time Mr. Cashmore has spoken out in the same matter. Nor did his efforts cease with the sending of the telegram.

I know, not only from him, but from other sources that, without fanfare and without publicity, he has been working ardently and long to bring about the desired result as demanded in his telegram to the President of the United States.

I am glad to note that others, too, have learned of Mr. Cashmore's efforts in this connection.

Following is a copy of a telegram sent to me by the President of the Brooklyn Jewish Community Council, the original of which was sent on February 10, 1948, to Mr. Cashmore:

FEBRUARY 10, 1948.

Hon. JOHN CASHMORE,
President, Borough of Brooklyn,
Borough Hall, Brooklyn, N. Y.:

As president of the Brooklyn Jewish Community Council embracing 850 constituent organizations, speaking in behalf of 1,000,000 Americans of Jewish faith in Brooklyn, I bespeak their eternal gratitude to you for the part played by you in molding public and official opinion prior to the historic decision of the United Nations establishing a Jewish homeland. Your quiet but forceful efforts had much to do in bringing about the decision which Jews for 2,000 years had prayed for. And now when the UN decision is imperiled you have come forward again and taken effective action to safeguard the hard-won decision. What you have done openly as well as what you have done quietly at the highest official level will ever be remembered.

MAXIMILIAN MOSS,
President, Brooklyn Jewish Community Council.

Mr. Speaker, my hat is off to a real leader, a true Christian gentleman. Would that others talked out and acted as promptly and as vigorously.

Observations From Europe

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from a Minatare farmer, who is now a lieutenant in the Army and stationed with the American Army of Occupation in Germany. It seems to me that his observations should be of interest to the country.

Another soldier writes me that he wonders who is being occupied—Germany or the Army of Occupation. He states that his observations are to the effect that the State Department cannot possibly handle the intricate problems of Germany—that the Germans only understand force and power. He feels that the continued dismantling of German factories which are needed to produce the things the Germans needed is wrong. American money is being poured into Germany to build new factories similar to those which are being dismantled.

These observations come from two fine Nebraska soldiers who are stationed in Germany. I commend their observations to you for your reading:

MUNICH, GERMANY, *February 1, 1948.*

Hon. A. L. MILLER,
House of Representatives,
Washington, D. C.

DEAR SIR: A blind Minatare farmer may not be a competent observer, still he may be a good listener. Some of the ideas gained by listening since coming here may be of interest to you.

Europeans appear to believe that aggressive warfare is a legitimate function in national existence. Reparations and annexations is the immediate goal and that the possibility of winning them is justification for war. The smaller nations that are used to being plundered or have often been innocent bystanders accept the devastations as unavoidable and set to work in an earnest attempt to rebuild. They are succeeding. Germans are not yet able to believe that they did lose the war and appear to think that the benevolence of Britain and the United States will save them from the consequences. They know that Russia will deal with them just as they dealt when they occuppied parts of Russia.

Democracy does not mean a wide range of personal liberty in thought and action here as it does in the United States but rather a very limited choice in very restricted fields. For example, a nation of motorists voluntarily drive with care through school zones cannot be imagined. But if policemen were stationed closely enough so it was "drive carefully or go to jail," they would understand and consider the choice democratic. The thought that Justice is right cannot compete with the idea that might is right. Germans lived 100 years on the master-race creed. That creed collapsed in 1945 and now the Germans are desperately trying to rebuild it or to find a substitute. In rebuilding Europe most of these countries are putting first things second. They are bending their effort to produce export goods rather than food, clothing, and fuel. Even so the smaller countries are achieving some balance in their efforts. The notion that hunger breeds dictators can be only partly true since dictators have flourished when food was both plentiful as well as when scarce. Then you will recall that a few years of our WPA system we taught a large segment of our folks that the Government owed them a living. Large percentages of the population of these countries have had similar lessons over much longer periods. This is probably one reason why luxury export goods are being made instead of exerting the extra effort required to produce the necessities.

In Nebraska if our neighbor has a broken leg in the spring we go in and plant his crop, but we do not agree to cultivate, irrigate, and harvest it or to pay his bills. I think the European recovery plan should operate in about the same way. It seems to me that factional strife in each of these governments is likely to make it most difficult to make ERP effective. The Russian plan is simpler. In it the opposition is liquidated either by killing or by economic pressure. All these people understand their method and they don't understand altruism in either economics or politics.

My guess is the Russian deflation was effected for these reasons. To drain off surplus buying power so that demand would be limited to the meager supply of consumer goods. To dispel any postwar unrest that surplus money would tend to prolong. To have her economic house in order to profit when the depression comes. The news I have concerning her recent trade pacts with her neighbors all seem to be based on the principle that Russia buys goods that are in current production and pays for them later with seasonable goods. The late war was largely financed by such methods. Hitler used the method for several years. It is doubtful if it works so well or so long under the new management.

I think we should put ERP to work. To be effective it will have to foster a change in the thought as well as the economy of these people. The amount of financial help and method of using it as well as the method of reeducating these people should be determined by experts for the Department of State and Congress. I think great stress should be on local production for home consumption. A passion for personal liberty would check communism and I have no idea how to instill such a passion. Trade pacts having long-deferred payment clauses with a country that is not too strict about honoring its pledges might be checkmated by pacts with current exchange of goods.

Yours truly,

A LIEUTENANT IN THE AMERICAN ARMY OF OCCUPATION STATIONED IN GERMANY.

The Truth Will Out

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the RECORD, I wish to submit a copy of a newspaper article published in the Washington Times-Herald, of date February 11, 1948, by columnist Willard Edwards, entitled "Britain Plans Diverting United States Aid to Empire" which article I think would be of interest at this time.

The article follows:

BRITAIN PLANS DIVERTING UNITED STATES AID TO EMPIRE—SENATOR MALONE REVEALS ADMISSION BY CRIPPS

(By Willard Edwards)

Great Britain has secret plans to divert American billions received under the Marshall plan to a program of empire reconstruction in Africa, Senator MALONE (Republican), of Nevada, revealed yesterday.

MALONE related a conversation with Sir Stafford Cripps, British Minister of Economic Affairs, in London last November in which Cripps stated Great Britain could take care of its own industrial recovery.

HOW IT WILL BE SPENT

"We will use American aid for rehabilitation in south and central Africa," Cripps was quoted as saying. "It will be spent on railroads, mines, and development of resources. Great Britain has enough money of its own to invest in British industry."

MALONE was visiting Europe as chairman of the Senate National Resources Economic Committee. In an effort to determine Europe's actual needs he explored coal mines, steel mills, and industrial establishments in the United Kingdom and other European countries.

The Nevadan said he was flabbergasted by Cripps' statement. He noted that State Secretary Marshall has outlined a prospective share of $5,000,000,000 for Great Britain. This was supposedly for investment in plants, machinery, ships, and vehicles within the island of Britain. Marshall said this American aid was absolutely essential to the recovery of western Europe.

AND EXPECTS NO RETURN

MALONE said he had planned to save his startling disclosure for a Senate floor speech attacking the Marshall plan after debate starts March 1.

"Cripps made it very clear," he said, "that Great Britain wants American funds for British Empire, not British industrial recovery. Its own production, including agriculture, is now above prewar levels.

"I talked to another high British official, Ben Smith, who controls coal production. He said very bluntly that we had better extend our aid in the form of lend-lease and expect no return. Otherwise, he threatened, Great Britain controls three-fourths of the world's raw materials and, if necessary, could clamp down on us."

This Matter of Segregation

EXTENSION OF REMARKS

OF

HON. CARTER MANASCO

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. MANASCO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Alabama Baptist of February 5, 1948:

NOTED JURIST DISCUSSES THIS MATTER OF SEGREGATION—IS SEGREGATION UNCHRISTIAN?

(By Judge Horace C. Wilkinson)

The efforts of the secular press, supported by some churchmen, to make it appear that segregation is unchristian, and your reference in the Alabama Baptist of January 8, 1948, to the growing tension between the white and colored people of the South because of segregation, and your report that the Negroes refused to have part in the city-wide Protestant meeting at Legion Field for reaffirmation of the principles which sprang from the Reformation, should challenge the attention of every Baptist in Alabama.

It is my conviction that the Christian religion does not call for or demand social and political equality of the Negro in the United States, and churchmen who advocate the contrary are threatening the destruction of one of the most priceless gifts of God to man.

Is segregation unchristian?

Let's answer the question with another. Is racial purity un-Christian?

Purity of race is a gift of God. Man can destroy that gift just as he can and does destroy other gifts. But when man destroys his racial purity it can never be redeemed.

"And God said, Let the earth bring forth the living creature after his kind, cattle, and creeping thing, and beast of the earth, after his kind: and it was so." (Genesis 1: 24.)

Thus was the law of racial purity established in the beginning by divine command that every living thing reproduce "after his kind." As long as that law is obeyed the color line cannot be lawfully crossed.

God saw fit to segregate and separate the different races by placing each in different lands. He divided them by color lines as well as by territorial lines so that each race could maintain its racial integrity. God did his part to prevent intermingling. What God has done churchmen may succeed in undoing, but that which some churchmen seek to do God cannot undo.

"And Isaac called Jacob, and blessed him, and charged him, and said unto him, Thou shalt not take a wife of the daughters of Canaan." (Genesis 28: 1.)

The prophet Jeremiah propounded this interrogation:

"Can the Ethiopian change his skin, or the leopard his spots?" (Jeremiah 13: 23.)

The advocate of social equality who would have the white man lost in the intermingling process of bleaching the Negro might well ponder the words of the prophet.

In Deuteronomy 23: 2 we read:

"A bastard shall not enter into the congregation of the Lord; even to his tenth generation shall he not enter the congregation of the Lord."

It might be well to point out that the real Negro seldom agitates for the abolition of segregation; it is the mulatto—the bastard element in the Negro race that agitates against segregation. This element is sometimes aided and abetted by some people who claim to be white, but I think those with light skins who advocate abolition of segregation fall into one of three classes: (1) They are misguided, or, (2) they are motivated by political considerations, or (3) they have a Negro strain in them.

There are many reasons why segregation is desirable but the main reason is that we know beyond a reasonable doubt and to a moral certainty that social association and political intimacies between people of different races inevitably brings about and leads to intermarriage. We also know that intermarriage destroys racial purity. The destruction of racial purity is the destruction of one of God's priceless gifts to man.

Can a course of conduct that leads to the destruction of that gift be morally right, Christian, or even socially expedient?

If God gave the Negro the inalienable right to social equality and intermarriage with whites then it must necessarily follow that God gave them the right to destroy the white race. I wonder if any of our misguided churchmen would sponsor a charge of that kind against God Almighty?

If the Negro has the inalienable right to social equality and intermarriage with the whites, and if social equality leads to intermarriage, and intermarriage is destructive of racial purity and the loss of racial purity is catastrophic, how are we to escape the conclusion that God endowed the Negro with the right to destroy the race through which God has revealed Himself to men?

The destruction of any race is not in accordance with the divine plan of God. Miscegenation and amalgamation is in direct defiance of the will of God. A gospel of equality of the races cannot but end in free miscegenation of the races.

Which is better—a mongrel race whose origin is sin and which represents the worst of all races, or a race, whatever its limitations, yet true to its own racial peculiarities and striving to attain, intact, the best and highest of which it is capable.

Those who seek a mongrel America often quote from Paul's sermon on Mars Hill where, in speaking to the Greeks, he said:

"God that made the world and all things therein, seeing that he is Lord of heaven and earth, dwelleth not in temples made with hands;

"Neither is worshiped with men's hands, as though he needed any thing, seeing he giveth to all life, and breath, and all things;

"And hath made of one blood all nations of men for to dwell on all the face of the earth, and hath determined the times before appointed and the bounds of their habitation;

"That they should seek the Lord (God), if haply they might feel after him, and find him, though he be not far from every one of us;

"For in him we live, and move, and have our being; as certain also of your own poets have said, For we are also his offspring." (Acts, 17: 24–28.)

In emphasizing the statement: "Hath made of one blood all nations of men," those who seek a mongrel America overlook the fact that we live in many worlds; they ignore the implication of the remainder of the verses quoted. There is a physical kingdom and a spiritual kingdom. Laws for the regulation of the physical kingdom are not necessarily appropriate to the regulation of the spiritual kingdom and vice versa.

Jesus never sought to bring about the social or any absolute equality among men on earth. He distinctly said: "My Kingdom is not of this world." His Kingdom is a spiritual kingdom, not a physical kingdom.

The statement by the Apostle Paul that God "hath made of one blood all nations of men" is just as much spiritual as the other statement that He "dwelleth not in temples made with hands." It is as spiritual as the further statement that "we are His offspring," because in Him "we live and move and have our being."

We do not physically live in God; we do not physically move in Him; we do not physically have our being in Him. The apostle was talking about the spiritual kingdom, every citizen of which is made of one blood, the blood of the Lamb. But that passage does not even purport to deal with the physical kingdom or to teach that all men physically are made of one blood. The passage referred to also states that God "hath determined the times before appointed, and the bounds of their habitation."

The Master said:

"In my Father's house are many mansions; if it were not so I would have told you. I go to prepare a place for you" (John 14: 2).

All of which, in my judgment, clearly demonstrates that the subject dealt with on Mars Hill was spiritual as distinguished from physical.

The surest way to destroy the white race through which God revealed Himself to men; the surest way to destroy the white race that has spread the gospel of Christ over the face of the earth; the surest way to destroy the white race that is now supporting the great missionary movement; the surest way to destroy the Christian church is to mongrelize the race that has fought for, defended, and advanced the cause of Christianity. Mongrelization is an inevitable result of the destruction of segregation. One follows the other, as does night the day.

There is nothing un-American and un-Christian in racial segregation. God expects us to preserve the color line. It is high time we Baptists concern ourselves about His business in that respect.

National Security Week, February 12–22, 1948

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. TEAGUE. Mr. Speaker, I am very glad to note the constant support given by the Reserve Officers' Association to adequate measures for our national security. The Reserve Officers' Association is sponsoring the twenty-sixth annual observance of National Security Week which has the unqualified endorsement of the Department of the Army.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the endorsement of the Secretary of the Army, Mr. Kenneth C. Royall, which appeared in the Reserve Officers' magazine in observance of National Security Week, February 12–22, 1948:

DEPARTMENT OF THE ARMY

Observance of National Security Week, under auspices of the Reserve Officers' Association, gives me the opportunity to commend to the attention of all citizens the serious problems currently confronting the Nation and the world.

Peace was not won automatically with the cessation of hostilities 2 years ago. The dislocations caused by war in the economies and in the political and social interests of the various nations can be adjusted but slowly. Until these adjustments are complete, danger of further dislocations is ever present. This danger makes it imperative that we be prepared and alert, that we may, by example and by wise guidance, lead the community of nations along paths of democracy to that peaceful future for which a most bitter and costly war was fought.

A strong peacetime defense establishment, deriving its strength from our traditional democratic citizen army, must be our insurance against any eventuality. A strong, well-trained Organized Reserve Corps must be a very important element in our solution of the problem of national security. The role of the Reserve Officer is fully as important in peace as it was when Reservists materially expedited our victory in war.

I congratulate the Reserve Officers for taking the lead in support of our program of National Security by sponsoring National Security Week and I urge every citizen, during this week, to consider his personal share of the responsibility for national defense.

KENNETH C. ROYALL,
Secretary of the Army.

Price Drop Should Reduce Marshall Plan Cost

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. VURSELL. Mr. Speaker, Mr. Charles F. Brannan, Assistant Secretary, Department of Agriculture, in his recent testimony before the Senate Committee on Grain Allocations, brought out the fact that weather conditions over western Europe, because of plenty of snow and moisture, were most favorable for heavy wheat and bread grain crops, in that entire area for 1948.

Estimates at the present time, in view of the favorable weather throughout the United States, indicate a much larger wheat crop than was anticipated a few months ago. In fact, world conditions generally are most promising for bumper world wheat and bread grain crops.

These recent reports have had their influence in breaking the grain market and turning the price spiral downward. This downward trend will most likely continue and prices will be stabilized at probably lower levels than at present.

The Members of the House and Senate should take into consideration the possibility of still lower grain prices, and they should scale down the $6,800,000,000 request for the Marshall plan to offset the drop in prices.

Mr. Speaker, the number of bushels requested in this first 15 months of the Marshall plan will cost millions of dollars less, and more important in reducing this cost to the American taxpayers is the fact that because of favorable weather conditions European countries will produce many millions more bushels of wheat and bread grains over last year, which should greatly reduce the number of bushels the United States will be called upon to supply.

Mr. Speaker, lower prices for wheat should mean lower appropriations to the Marshall plan. More wheat produced in Europe should mean less wheat that will be needed from the United States. Here is the chance for the Members of the House and Senate to save many millions of dollars.

Out of the billions for various articles of manufactured products, raw material, and so forth, provided for in the Marshall plan, including cotton, tobacco, and textiles, it should be possible to save other millions, because as grain prices seek lower levels further wage raises will not be necessary, which will reduce costs generally of all articles requested under the Marshall plan. Here is a chance for a saving of many more millions.

The Congress must take these facts into consideration in the interest of the American people.

Statement Before House Un-American Activities Committee in Support of McDonough Bill, H. R. 4581, To Define Communism and Make Its Active Practice Treasonable

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. McDONOUGH. Mr. Speaker, it would be impossible to underestimate the necessity for adequate legislation at this time to halt the activities of Communists and the spread of communistic doctrines and propaganda in the United States.

I know that the members of the Un-American Activities Committee are fully informed concerning the methods used by Communists in this Nation in their consistent efforts to undermine the foundations of our free democratic government. I am sure the committee has the whole record of communistic infiltration into unions, agitation within the armed forces even during war, and propaganda within our schools and universities. You also have the record of the insidious efforts of the Communists to gain a foothold in the motion-picture industry, where they hoped to find an

outlet for their propaganda which would carry it to every corner of the Nation.

The fact that we have been able to hold the malignant growth of communism in America in check by exposing it has not destroyed the threat of communism to our national security. We need legislation which specifically defines communism and makes it illegal to spread Communist doctrines or engage in other treasonable activities for the Communist movement.

There is need for a clear understanding of the term "Communist" as it is applied to an accused individual. Today it is a term loosely used as an epithet to be hurled against persons who may be communistic or may merely be extremely liberal in their opinions. It is used to smear the innocent, as well as to brand the guilty, and even the courts of the Nation have failed to agree on the meaning of the term, though it has been established in court that the use of the term "Communist" when directed against an individual damages his character and reputation.

Until a clear definition of communism is established by legal procedure—a definition from which the actions of a man may be determined to stamp him as a Communist or clear him of the charge—there is no basis whereby effective action can be taken by our security agencies to protect the Nation from the insidious sabotage of the real Communists in America.

Communists are not merely members of a political party, though they may use such a party in an attempt to legalize their assault on democracy.

Communism actually is the long arm of an international conspiracy; it is not a political party. Outlawing of the Communist Party alone will not halt communistic activities or destroy Communist-front organizations.

Communism is an atheistic and anti-religious ideology which would destroy freedom of religion in America.

It is a conspiracy which advocates and practices deceit, confusion, subversion, revolution, and the complete subordination of man to the state.

Communism has for its purpose and intent the overthrow of this or any other democratic or non-Communist form of government by force and violence, if necessary.

The position that passage of a bill to define and combat communism would drive the Communists underground is, in my opinion, a defeatist attitude toward legislation, especially since the Communists are apparently underground already.

During the last war we saw the development of a new technique of warfare, the fifth column with its infiltration, propaganda, and prepared quislings. We saw governments fall to the enemy without a single overt act of treasonable violence. We cannot afford to take the "can't happen here" attitude. We must enact legislation which will permit our law enforcement agencies to investigate activities which are un-American and treasonable and bring persons guilty of such activities within the jurisdiction of the law.

I introduced H. R. 4581 for the purpose of clearly defining communism and making the active practice of communism a treasonable act in the United States. My bill would not attempt any form of thought control. Only persons actively practicing communism would be exposed and treated as treasonable enemies of the United States, persons who actually owe allegiance to an international conspiracy whose ultimate aim is the overthrow of established democratic government and destruction of individual liberty and freedom.

The response to my introduction of H. R. 4581 was tremendously in favor of such legislation, and I have received letters not only from those in my own district but from persons in every part of the Nation. I am submitting excerpts from these letters for your consideration.

In my opinion effective legislation is necessary to halt communism in America. I firmly believe that passage of H. R. 4581 will meet the Communist threat in America, and I urge the members of this committee to report H. R. 4581 favorably to the House.

The excerpts referred to follow:

EXCERPTS FROM LETTERS RECEIVED BY CONGRESSMAN GORDON L. M'DONOUGH ON H. R. 4581

Jacksonville, Fla.: "Your proposed legislation to make it treasonable to belong to the Communist Party is the most important news item in our paper today, but, unfortunately, it was not given front-page position as it so rightly deserved."

Beverly Hills, Calif.: "Your fine work in promoting the anti-Communist measure is one of the worthiest pieces of legislation of the present time. You deserve and have the gratitude of the vast majority of United States citizens and it is most opportune to advance this patriotic work in the stressful and difficult period in our history."

Los Angeles, Calif.: "We would like to compliment you on your past efforts in formulating and promoting good legislation, especially regarding the anti-Communist bill, and we hope you will continue to do your utmost to push this bill through the Congress."

Cavalier, N. Dak.: "Please keep up your work and make communism so unpopular that it will fade entirely from the picture. I hope you get real support for your efforts. Your 'guts' may save our country more than anyone can realize."

Los Angeles, Calif.: "I am heartily in favor of your bill, H. R. 4581. It is high time we are fighting un-American activities in our country. More power to you."

San Antonio, Tex.: "On November 26, 1947, the San Antonio Express carried a brief item to the effect that you planned to introduce legislation in the House to make it a treasonable act to belong to the Communist Party, or to practice communism, and that violation of the proposed act would be prosecuted under the treason laws. May I take this occasion to salute you, and to congratulate you on your proposed course of action. It is high time that American leadership was aggressively developed to perpetuate the institutions which our forefathers struggled so hard to secure."

Los Angeles, Calif.: "We are in favor of your bill, H. R. 4581, which you presented to the first session of our Eightieth Congress, and are of the opinion that they should pass it as it is with as little delay as possible."

Los Angeles, Calif: "I want to thank you personally for your fight against communism, for the bill which you introduced will clarify the issue and bring the fight out into the open. Today it is a life-and-death struggle; it is our way of life or communism."

Washington, D. C.: "I have just read with a great deal of satisfaction the report in yesterday's CONGRESSIONAL RECORD of the introduction of your bill to define communism and make the practice of communism a treasonable act in the United States. To me, it seems just as urgent that we take action to forestall the spread of communism at home as it is that we do so abroad. I hope your suggestion will receive the consideration it merits and that the adoption of it or an equally effective method of destroying this threat to the United States may result."

South Wales, British Isles: "Seeing that you have introduced legislation to reveal and cope with the fact that communistic activities are actual treason, my daughter and I feel we must send you our thanks and every wish that you may succeed as you certainly would if enough people understood the trend of affairs clearly enough to realize the appalling menace to civilization of allowing these spies and agitators to be at large, paid by a foreign power to sow seeds of confusion and disorder people—your plan is the only one to get rid of them all—it's them or us. There is no time or room now for any middle way."

San Antonio, Tex.: "It gives me great pleasure to congratulate you on your anti-Communist bill. I hope you make the fight of your life to get that bill through Congress at this session."

Lincoln, Nebr.: "I note by the press a bill was introduced by you to get legislation to make it a treasonable act to belong to the Communist Party or to practice communism. I have this date discussed with a number of men the proposed legislation above referred to. The men are of different political parties and different lines of business. Without a single exception they are in favor of such legislation. They agreed generally that communism is an ideology for world revolution, against free press and free speech and for the overthrow of representative government. Many join me in wishing you success in having enacted into law the proposed legislation along lines above outlined."

Tacoma, Wash.: "I am greatly in favor of your bill presented, making active practice of communism in America as treason, as reported in today's press."

Philadelphia, Pa.: "Your bill to outlaw communism is most appropriate and I hope you will get enough votes to put it through."

Kansas City, Mo.: "Reading your proposal to outlaw communism in the Kansas City Star this morning prompts me, a life-long Missourian, to say: It's the best answer yet to the terrible threat of communism."

Proctorville, Ohio: "I want to congratulate you on your stand against traitors. I hope that you find enough friends of the same opinion to outlaw the Communist Party for the safety of these United States. This must be done."

Philadelphia, Pa.: "In a tiny dispatch on an inside page of the paper recently, I read of your introduction of a bill to outlaw communism. Your bill will no doubt have a rough time of it—even supposing it ever sees the light of day. To me the most stultifying sort of opposition will come from those snide sentimentalists who must perforce bend over backward to see that the other guy gets his chance, when the only chance he's looking for is one to stab you in the back. Communism should be outlawed just as murder and treason are outlawed, and for much the same reason."

Cleveland, Ohio: "As an American World War veteran I want to thank you for your militant actions and alertness of the menace of communism within the gates of our Republic. Indeed, I am wholeheartedly in favor of legislation making it a treasonable offense for any person or group to circulate untruths, thus undermining our constitutional form of government. The majority Members of both Houses of the United States Congress are sound Americans today. That is why I am appealing to you today to enact

drastic legislation, with teeth in it to prevent Communists and their fellow travelers from overthrowing our Government by force, violence, etc."

Los Angeles, Calif.: "Was glad to see in Los Angeles Times your bill for outlawing the Communist Party. Better get our own country free of them."

Indianapolis, Ind.: "Communism is secretly eating into the very heart of many local unions and international unions in and around New York City and elsewhere. They work night and day because in many instances with them it is their only religion. In other words, they are fanatics and in other instances, it is my personal judgment, they are under the supervision and direction of the Soviet Government and in such cases a certain amount of fear exists on those idolaters of the Soviet regime. The trouble with our Government is we are too much afraid of offending a foreign power that has no hesitancy in endeavoring to undermine our Government. * * * I favor very much your bill to define communism and to make the practice of communism a treasonable act in the United States. You may not be successful, but at least it is worth trying."

Los Angeles, Calif.: "Communism must be overcome everywhere, even in our own country."

Tucson, Ariz.: "We were deeply gratified to learn of your bill to define communism and to provide adequate sanctions for so-called Americans who are Communists."

Seattle, Wash.: "Attached hereto is a clipping taken out of the Seattle Post Intelligencer, Wednesday, November 26. (Clipping relative to H. R. 4581.) It is the most impressive piece of reading I have seen in a long time. I sincerely hope that you will get the support of both the House and Senate on this much-needed piece of legislation. As for me, if this is not accomplished, this good country of ours is going to h— in a hurry."

Los Angeles, Calif.: "Since the Communist Party in the United States is a representative of a foreign power, dedicated to the overthrow of our lawful Government by violence and bloodshed, I urge you to vote for legislation outlawing the Communist Party in the United States."

Erie, Pa.: "God bless us for men like you are and make your constituents vote communism as treason."

Stetlersville, Pa.: "Please be advised that I received a copy of your H. R. 4581. I think you are right in having the term 'communism' properly defined. It is about time we know exactly what it is."

Madison, Wis.: "I am particularly interested in your H. R. 4581, to define communism and to make it a treasonable act in the United States. For many years past it has been my judgment that this is the one most certain, most reasonable manner in which to handle the Communist problem in the United States."

New York, N. Y.: "Your letter of December 9 is very much appreciated and I am in fullest sympathy with the bill you introduced in Congress, H. R. 4581."

Los Angeles, Calif.: "I am with you on your bill to outlaw communism as a party and I hope it will be your measure that will win out. Do not compromise with the idea that to do so would drive the enemy underground for we all know that is where they have always been and where they are today."

A recent poll conducted by the Republican open forums compiled from participants in 33 States showed:

	Percent
Those who believe American Communists follow the dictates of the Russian Communists	82
Those who believe American Communists are attempting to overthrow the governmental, economic, and social system of this country	84

A recent poll conducted by the American Association of Small Business among 20,000 members throughout the Nation showed:

	Percent
For H. R. 4581	82
Against H. R. 4581	10
No vote on H. R. 4581	8

Should Rent Controls Be Continued?

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Sunday Oregonian of February 1, 1948:

SHOULD RENT CONTROLS BE CONTINUED?—YES—WOMEN VOTERS POINT TO FOOD COSTS RISE IN OPPOSING CHANGE

(By Mrs. Blair Stewart, president, League of Women Voters of Oregon)

"Should Rent Controls Be Continued?" will be the subject of lively debate in and out of Congress from now until February 29 when the present Rent Control Act is due to expire. Great public pressure has been built up by organized property-owner groups for decontrol in spite of the fact that it would almost certainly impose an intolerable burden upon millions of American families. The League of Women Voters believes that, in view of the present highly inflationary situation, we should not only maintain and extend existing restraints upon the rising cost of living but also reinstate some additional ones. The league will support extension of rent control beyond February 29, and oppose any across-the-board increase in rents.

The League of Women Voters' position is not one hastily or recently arrived at, but is rather the result of 6 years of activity in relation to inflation control and an interest in, and knowledge of, the Nation's housing needs that go back to the early thirties.

When the United States entered World War II the League of Women Voters realized that one of the most serious problems that could confront any nation at war was inflation. Accordingly, it adopted for support a many-sided program designed to minimize the inflationary pressures made inevitable by the rapid conversion from production for peace to production for war. An important part of that program was price and rent control. When hostilities and pressures for decontrol mounted the League of Women Voters supported an extension of controls at least through the reconversion period and until production could begin to catch up with the Nation's pent-up demand.

In June 1946 most price controls ceased to exist and almost every American family has learned the bitter meaning of inflation—learned it the hard way through rising costs of food, clothing, services, and other living essentials. The only important control still in existence is that of rents and even under control the President of the United States recently estimated that rents for the country as a whole are rising at the rate of 12 percent a year—a rate which he called too high.

HOUSING: ACUTE SHORTAGE AFFECTS RENTALS

Many of the rent advisory boards, citizen groups created by the present Rent Control Act, in major cities across the country, have recommended that rent controls be extended until the housing shortage becomes less acute and the danger of mounting inflation lessened. Portland's rent advisory board was one of those. In view of the alarming rise in food prices, a rise from June 1946, the last month of effective price control, until October 1947, of 116.9 percent, a majority of the local rent advisory board believed that a similar rise in rents would almost certainly follow if controls were lifted.

At the same time the board did not fail to take into account the economic difficulties facing some landlords or the weaknesses in the law that make adjustments difficult. Accordingly it recommended that the Congress strengthen the law and appropriate enough money to permit its effective administration. It is true that landlords represent that last important segment of our economy to remain under wartime restrictions but we now recognize that many of the other controls were prematurely relaxed.

Any discussion of rent controls must inevitably take into account the Nation's acute housing shortage which has accumulated over a period of 25 years. Principal reasons for the shortage are the depression of the thirties and the recent war, when home building virtually ceased.

In 1925–26, the Nation's largest building year, about 975,000 houses were built. By 1933 the number had dropped to 100,000. After the depression there was a gradual increase until 1941 when approximately 750,000 were built; then the war halted all but the most essential building.

The estimated national need based upon the 1940 census is for at least 1,300,000 dwelling units per year for 10 years in addition to the demand for farm dwellings and repairs to existing houses. In 1940, before current pressures developed, it was estimated that 37 percent of the population lived in houses in need of major repairs or lacking sanitary facilities. Add the fact that over 400,000 new families are created each year and the further fact that at least 200,000 houses fall into obsolesence or disuse each year, and the magnitude of the need becomes apparent.

The housing needs of Oregon differ only in degree from those of other parts of the Nation. Dr. Bayard O. Wheeler, housing economist of Seattle, Wash., writing in the November 1947 issue of Oregon Business Review, published by the bureau of business research, School of Business Administration of the University of Oregon, estimated the population increase in Oregon between 1940 and 1946 at 33.3 percent with a corresponding increase in the number of new families created. Analysis of figures of various agencies indicate an increase in Portland of at least 30 percent. At the same time the bureau of census, "Current Population Report—Housing," dated August 13, 1947, dealing with the Portland metropolitan area, indicates an actual decrease in rental units in 1947 from 1940. Dr. Wheeler estimates that merely to attain the same ratio of dwellings to families as existed in 1940 Oregon immediately needs 108,996 new dwelling units.

One of the groups most seriously affected by the housing shortage and excessive costs is the veteran group. While the shortage has forced doubling up of many families, the percentage of veterans having to live under such conditions is over four times as great as in the case of nonveterans. Two percent of nonveterans live so, while 9 percent of veterans' families live with relatives or friends.

VETERANS PRICED OUT OF MARKET IN TRYING TO BUY HOME

The Oregon Department of Veterans' Affairs recently submitted a housing questionnaire to veterans throughout the State. The results, as report on December 27 by Director of Veterans' Affairs W. F. Gaarenstroom, reemphasize the housing shortage and reflect general dissatisfaction with rental housing. Complaints include high rents, cramped

quarters, inadequate facilities, and undesirable locations.

Some report a desire to move to other cities within the State where employment is available but are unable to do so because it is impossible to find housing.

Also stressed is the fact that most veterans even if they wish to purchase new homes find themselves priced out of the market.

Another important point emphasized by Director Gaarenstroom is that his office finds in administering the veterans' farm and home loan act that "the asking price of older houses is generally considerably higher than the appraised value." Hence most veterans cannot afford either new or old houses.

REPORT URGES ACCEPTANCE OF LOWER STANDARDS

Another recent report of more than passing interest is one made by a committee of the Oregon Building Congress on low-cost housing in relation particularly to veterans of World War II in the Portland area. It clearly defines the problem and deals with the housing deficit, the paying ability of workers, the kind of housing desired, the cost of construction, and other items. However, all of the facts set forth add up to some surprising conclusions in the minds of the committee. The first is that lower standards of housing must be accepted. Of course, the committee refers to standards in new housing but it is little comfort to the veteran living doubled up with relatives or in one of the 45,944 substandard houses in Portland to be told that he must lower his sights as far as a home is concerned.

Government-subsidized low-income group housing is dismissed as an unacceptable solution because the controls that would be exercised over all phases of building and marketing of such houses are unsavory to a free people. The committee recommends the starter house that would provide about 700 feet of living space to be increased to about 1,050 square feet as the owner's prosperity increased. However, the cost of the starter house is estimated at $4,500 exclusive of site, and most veterans have reported that they cannot afford to put over $5,000 into a house, including ground.

It is apparent that the only real solution is building, but building at prices which the average family can afford. Even under the liberal terms of the Federal housing administration, many builders are hesitant to enter upon any large-scale building operation because of the shortage of materials as well as the high prices.

Two solutions then present themselves for consideration. One, the long-term solution, must inevitably be governmental aid to local communities in meeting the housing needs of the lowest-income group. The other, the immediate solution, a Government program of controls and allocations on the most essential building materials, with continued rent controls.

In the long-run picture, it has been demonstrated through the years that private enterprise has never been able to build profitably for the low-income families. Much has been said about building new homes for those who can afford something better, thus making their old homes available to others. However, while that would make a few homes available it could never wipe out the accumulated deficit of 25 years, especially since the country as a whole has never produced more than 1,000,000 homes in any year.

Organized real-estate interests have consistently opposed governmental expansion in the housing field, and were successful in blocking passage of the general housing bill in the Seventy-ninth Congress. However, the bill, known as the Taft-Ellender-Wagner bill, was reintroduced during the first regular session of the present Congress, and extensive public hearings have been held on it by the Senate Banking and Currency Committee. Much public misunderstanding has been created by the opponents, who call public housing "socialization of the building industry."

Actually, the Taft-Ellender-Wagner bill provides, as does the United States housing act, that such housing can be built only after the local community makes a formal decision that it is needed and that it cannot be provided at a profit by private builders. The construction job is undertaken by the local housing authority through private contractors. Local labor is employed at the going wage rates and the land is bought through local real-estate dealers. As a nonprofit public agency, the local housing authority owns and operates the projects, establishes rent scales, selects eligible families, and takes care of repairs, maintenance, and other management functions. The only function of the Federal Government is to provide the annual subsidy to cover the difference between aggregate rents paid and an economic return on the investments. In 1945 cost to the Government in existing housing projects was $6.03 per family per month.

The Nation's greatest housing shortage, however, is in the middle-income field and the pending housing legislation would provide many aids to independent business in meeting that need.

RECORD OF RAPID BUILDING IN WARTIME CITED

The Federal Public Housing Administration, a wartime agency, given responsibility for all emergency housing, had, by war's end, provided shelter for 9,000,000 persons including 4,000,000 workers in defense areas In addition, all of the facilities for community living were provided, schools, streets, cafeterias, recreation centers, sewers, and utilities. Existing housing took care of about one-half but the rest had to be new construction. Private capital, working with and aided by Government, provided more than half of the additional 1,900,000 units required and it was done during a period of unprecedented shortages of time, labor, and materials.

Much of this temporary housing is still in use and will need to continue in use until permanent houses can be provided for its present occupants.

If Government and private industry could create such a record during the war, why can it not do a similar job now when the need is daily becoming more acute?

It is a curious paradox that the organized real-estate interests that spearhead the fight against extension of rent control are the very same interests that most vigorously oppose Government aid in alleviating the housing shortage which makes rent control necessary.

In view of the highly inflationary situation, the League of Women Voters is advocating not only continued rent control but extension and renewal of other controls plus maintenance of present tax rates. The league advocates these steps in the interest of a solvent United States, able to meet its responsibility of world leadership.

SHOULD RENT CONTROLS BE CONTINUED?—NO!—LANDLORDS COMPLAIN FIXED INCOME UNFAIR ON MOUNTING MARKET

(By E. L. Wilson, president, Oregon Apartment House Association)

On the 29th of February 1948 the rent-control law will expire—unless the Congress sees fit to renew it. Now that the law is about to expire, there are voices being heard to say it should be renewed.

If rent controls are to be continued, the Nation as a whole must be the main beneficiary. If the national welfare demands that the owner of rental housing forego his constitutional right to be treated on a parity with all other businessmen, it must be on the basis that an emergency has arisen which can be circumvented in no other manner. To take the rights from one class of our citizens and bestow benefits on another class is not within the letter or spirit of our Constitution as written by the founders. This is the manner in which a Fascist state operates.

The only justification for the continuance of rent control is that an impasse has been reached in our housing situation that will disrupt our economy unless the Government by edict takes from one and gives it to another. To justify rent control, it must be assumed that our economy has broken down and there is no other way of solving our housing problem.

Let us examine some of the facts that lead up to this so-called housing shortage. In 1940, according to the Bureau of the Census, the United States had 34,855,000 occupied homes and dwellings. In November 1945 it had 37,600,000, according to the same Government report. This is an increase of 7.9 percent in housing. Meanwhile, between the same periods, the population increased from 131,669,000 to 140,200,000, or an increase of 6.5 percent. It will be seen that the increase in housing is greater than the increase in population.

POPULATION INCREASES MORE SLOWLY THAN HOUSING FACILITIES

In April 1940 there were 264.5 occupied dwellings per 1,000 persons in the United States. In 1946, there were 269 occupied dwellings per 1,000 persons. It will thus be seen that between 1940 and 1946 housing increased faster than population increased.

The same census report tells us that the number of houses and apartments occupied by only one person rose from 2,677,000 in 1940 to 3,481,000 in 1945, an increase of 30 percent in 5 years. The number housing only two persons rose from 8,630,000 to 10,529,000, an increase of 22 percent in 5 years. Meanwhile the number of dwellings occupied by six or more persons dropped from 5,414,000 to 4,208,000, a decrease of 22 percent. The number of rooms per person has increased from 1.45 to 1.58, an increase of 9 percent.

It will thus be seen that during this period when rents have been controlled renters have found housing one of the cheapest commodities on the market. As wages and incomes went up the renter found it very easy to afford additional housing space. Where a man and wife in 1940 were struggling along in an apartment for two, paying say $40 per month, which was 20 percent of his salary, by the time 1946 arrived he finds his salary has doubled. By adding a few dollars to the $40 he now finds he can rent an apartment that was designed for three or four persons, and his budget still calls for less than 20 percent which is the usual amount set aside for rent with the average earner.

In Portland, there are hundreds of large apartments occupied by only one person, thus preventing owners from renting to families because of rent controls.

CONTROLS KEEP RENTALS TIED UP, FORCE VETERANS TO BUY

This spreading out of families into larger and more commodious housing units is only natural when their incomes go up and they look about and see that housing prices have been frozen. When thousands and thousands of families all over the country do this a shortage in housing is the result. If all housing was permitted to command the rental commensurate with the incomes of the renters, there would be a bidding for each unit that would readjust the whole rent structure shortly. Families would give up the extra room or rooms that they had been getting for a few dollars. These rooms would house thousands and thousands of people. Before we knew it we would find our population housed again.

As it works out now the returned veteran seldom gets a chance to rent one of the frozen units. It is so cheap that the occupant would not think of giving it up. He knows he is getting $60 worth of housing for perhaps $40. He knows that if he were to duplicate it by building that his housing would probably cost him more than $60. So the returned veteran, being unable to rent, must go out and buy a home, at an exorbitant price.

Assuming that controls were necessary during the war, the time has now come to get back to the form of economy that has made these United States click. These very controls have created the so-called housing shortage in large part. To continue them is only to complicate the situation still more.

Not many people know that France adopted rent controls during the First World War. Thirty-three years have now elapsed and they still have the controls in France. Each year they declare that the situation is an emergency and they continue them for another term. Today France has probably the worst housing shortage of any of the western nations.

FRANCE: EXAMPLE OF CONTROLS GETTING OUT OF HAND

Worst of all the housing in France has deteriorated until there is scarcely a roof that does not leak or a wall that is not cracked. The price of rents there have been controlled, but other commodities such as materials and labor have been allowed to rise until no landlord can afford to pay for repair. General commodities and labor have risen 65 times. Rents have been allowed to rise only 5 times.

No new housing has been built in France. The controls have so discouraged private industry that it can no longer be induced to function. In France the Government has spent all its money and has borrowed its limit and has nothing to subsidize with. If the United States continues to borrow it will soon be in the same situation. Then, if it has driven private industry from the field, we will be in the same dilemma in this country.

Again we want to state that the only justification for continued rent control is that such an emergency exists that without it the Nation will be rocked to its very foundation. The advocates of rent control would have us believe that the Congress is all-seeing enough and wise enough to set up machinery that will work more efficiently than the law of supply and demand. One control only calls for another with the situation becoming more and more involved. While the experiment in Government control goes on we get farther and farther away from the rugged individualism that built this Nation.

Far too much of the thought back of controls is to protect one person from taking advantage, and another from being taken advantage of. If this same thought was given to making our economy free again, there would be profit and opportunity for all. Most advocates of controls seem to think that they should be extended to guaranteeing to every family a subsidy to put it on a parity with every other family. Just the fact that a man is born in this country in their minds entitles him to all the gadgets that go to make up the American way of living, regardless of whether he is industrious, resourceful, and appreciative.

In France they have reached the point long ago where there is insufficient net income from housing to permit the landlord to maintain the housing out of net income. This situation is now developing in this country. Many owners of rental property themselves have not come to realize that their buildings are wearing out and they do not have a sufficient margin of profit to keep them in repair. During the war period materials have not been available and they have not priced the materials and labor to bring their buildings up to first-class condition again.

There is a fallacy being propagated by the advocates of rent control to the effect that the landlord is making more now than he ever did. They state that due to full occupancy, now he is getting 20 or 25 percent more income than in 1942 when the rents were frozen. This is far from the fact. In 1942 the post office department made a survey and they found that there was only a 2½-percent vacancy. So a 2½-percent increase in rental is all that the landlord has been able to enjoy.

TAXES CONTINUE UPWARD AS DO EXPENSES

In the meantime our tax-levying bodies have met year after year between 1942 and the present and raised the mileage, all of which has resulted in an increase of taxes year after year. The last year alone most housing units were raised from 20 to 30 percent.

Anyone in the housing business in a substantial way scarcely ever finds that a day has passed when someone does not notify him some of the services he has been supplying will be raised the following month. Sometimes there are several raises in the same month. Thos who have planned the rent controls make no effort to modify these controls to take into consideration these increases.

Most of the larger housing units are heated with oil these days. We have no alternative but to continue to use oil even if it takes the last penny of net income there is. In 1942 the oil was sold to us at $1.17 per barrel. Raise after raise has resulted in this price being boosted to $2.90 per barrel. We are paying roughly two and one-half times as much for oil now as we did in 1942. This has had to come out of the income because there has been no way for the landlord to pass it on to the renter. If it was costing $1,000 in 1942 to heat a building, it is now costing $2,500. Controls have taken $1,500 from one class and given it to another class.

RENTS FROZEN IN 1942 WERE ON DEPRESSION LEVEL

This increase in the price of services has extended to everything that enters into the housing picture, because there are no controls on anything nowadays except rents. Plumbers, carpenters, painters, electricians, and the materials are all two or three times what they used to be.

It must be borne in mind that the rents the landlord was charging in 1942 were really the depression rents. Not one landlord in twenty in 1942 realized that the depression was over and had raised his rents to a point that paid him a return on the money he had invested in his property. It was about the time of the freeze on rents that the city fathers of Portland made a special appeal to landlords not to raise their rents. While he was being a patriotic citizen the machinery in Washington was turning to freeze everything as of March 1, 1942.

In conclusion, we want to state that continued rent controls, without the control of every other commodity, including labor, is a tacit admission that politically we are going over into a Fascist state where those in power arbitrarily take from one and give to another to perpetuate themselves in office. It is highly discriminatory and unfair to hold one class of citizens under restrictions when all other segments of our economy are operating free from controls. However, the retention of controls on everything is an admission that our democracy is not working. A return to the system that in 150 years has made the United States the most prosperous nation in the world is what is needed. There can be no compromise between free enterprise and a planned economy.

The Cattle Situation and Outlook

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. TEAGUE. Mr. Speaker, I have been very interested in the welfare of our farmers and ranchers who have contributed a great deal to the wealth and greatness of our country. I feel sure it will be of interest to them to have the considered opinion of one of the country's most qualified agricultural economists as to the present cattle situation and outlook.

In a recent issue of the Country Gentleman magazine, an editorial has this to say:

Charles A. Burmeister, of the United States Department of Agriculture, and regarded by many as the ablest analyst of the livestock industry, figures 1951 as the nearest date to look for an increase in cattle number. The facts of the situation—our increasing population, the demand for meat, higher labor income, the lack of import competition, the sound financial condition of the range—all add up to one of the most favorable prospects cattle raisers ever had. In fact, livestock generally looks like the No. 1 best risk in agriculture.

Mr. Charles Burmeister is a graduate of the Agriculture and Mechanical College of Texas and has been rendering a great service to the Department of Agriculture and to the country as an agricultural economist in the Livestock Branch, Production and Marketing Administration. I am very glad to learn of his many accomplishments and the recognition he has gained.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address made by Mr. Burmeister before a meeting of the Mississippi Cattlemen's Association at Jackson, Miss., on January 16, 1948:

THE CATTLE SITUATION AND OUTLOOK

Developments during and since the war have brought about many changes in our economic life and there is much uncertainty as to how the country will finally adjust to the new conditions and what the adjustments will be. The beginning of this new year is a good time for stockmen to review the situation and consider prospects for the future, so as to determine if changes in their plans seem desirable.

Fifteen months have elapsed since most of the wartime price controls were discontinued. During that period prices have been free to find their natural level as determined by supply and demand operating without restrictions, as they did prior to the war. Demand, backed by consumer incomes more than double those of prewar years, has caused prices of many products to rise to new all-time highs. The average of all commodity prices is now about at the peak reached in 1920 after the First World War. Naturally there is great concern as to this situation and as to whether prices will continue to rise. For those who have to look far ahead in planning operations, it is even more important to consider the possibilities of a sharp decline in prices and how far it might go, once it gets under way.

Last year was generally favorable for livestock producers, despite a rise in production costs, particularly costs of feed. Demand for meat was sustained by the highest level of consumer income on record. Disposable income of consumers averaged more than $1,200 per person, compared with an average of slightly over $500 in the 5 years prior to the war. Livestock prices rose to new peaks, even though cattle marketings exceeded all previous records and meat supplies generally were very large. Meat consumption per person was the largest since 1909. Slaughter of cattle and calves totaled about 36,000,000 head, or 12 percent more than in the previous year and 50 percent more than the average of the 5 years preceding the war. Slaughter

of hogs, totaling about 76,000,000 head, was about the same as in 1946, but because of heavier weights the output of pork was greater. Slaughter of sheep and lambs decreased about 15 percent. This decrease reflected the sharp drop in sheep numbers that has been under way since 1942 when numbers were at an all-time peak.

After price controls were discontinued in mid-October 1946—15 months ago—prices of livestock rose sharply as unrestricted demand quickly came into balance with offerings. Seasonal increases in supplies caused prices to decline during the winter, but this was followed by a rise in the spring and prices of most classes and grades advanced to new highs. During the second half of the year, cattle prices were well maintained, even during the period of the seasonal increase in grass cattle when prices of the lower grades normally decline. Near the end of the year marked strength developed, cattle prices reached new peaks, and hog prices started their seasonal rise in November—somewhat earlier than usual.

The year ended with prices up 7 percent over the previous December on hogs, 13 percent on lambs, 18 percent on cattle, and 30 percent on calves. Except on calves these increases were only about enough to offset the rise of 14.5 percent in prices of the goods farmers buy. The purchasing power of lambs decreased 1 percent and that of hogs 6 percent. Purchasing power of dairy products and poultry declined even more. Prices of cattle, hogs, and lambs are now up about 50 percent above their parity prices. They were even further above parity in September. Compared with their purchasing power in 1941, cattle are up 25 percent, lambs 22 percent, and hogs 54 percent. In 1941, hogs were 5 percent below parity and cattle and lambs about 21 percent above.

Because of the unusually high prices now received for livestock, one would expect to find livestock production expanding. On the contrary, the trend is downward. During the next 2 years at least we may expect to see fewer cattle, hogs, and sheep for slaughter. This means less meat for the consumers regardless of their buying power and the prices they are willing to pay. The reasons for the decrease in production are different for each kind of livestock.

Sheep numbers have been decreasing since 1942, primarily because during the war period production costs increased in relation to returns and sheep raisers found alternative enterprises more attractive. Stock sheep numbers at the beginning of last year were down 17,000,000 head, or 34 percent from the all-time peak reached 5 years earlier. It appears that numbers now are about a million less than a year ago, and the present total is the smallest since the Civil War. This year's lamb crop will probably be the smallest in the last 50 years. This means fewer lambs for slaughter, and if next summer and fall sheepmen are inclined to start holding back ewe lambs to rebuild their flocks slaughter supplies will be even smaller. The rebuilding of flocks appears almost certain to get underway either this year or in 1949. But it can be accomplished only by holding back more than the usual proportion of ewe lambs from slaughter; hence smaller supplies of lamb and mutton are in prospect for the next few years.

It seems unlikely that sheep numbers will again increase to the peak level reached in 1942, when we had more than 49,000,000 stock sheep. The sheep industry in this country has always been primarily a frontier industry, operating largely in mountain areas and regions of limited rainfall where sheepmen could compete more advantageously with other agricultural producers. Expansion in sheep raising will have to be based primarily on the prospective demand for lamb, rather than wool, since wool prices will be determined largely by supply and demand conditions for wool in other parts of the world. The strong demand for beef and dairy products will tend to hold down sheep production in the farm flock States. In the Western States, excluding Texas, expansion will depend on the availability and cost of herders, and the extent to which weather conditions in the next few years might tend to restrict cattle production in those States. Sheep numbers have been reduced less in Texas than elsewhere, and there is some uncertainty as to whether sheep numbers there will or can expand greatly in the next few years.

The trend in hog production is now downward because of the reduction in supplies of feed grains, primarily corn, which resulted because of the unfavorable crop weather last year. Corn prices have risen relatively more than hog prices, and this is causing hog producers to market hogs at lighter weights and to breed fewer sows. Instead of an increase of 9 percent in the number of sows farrowed last fall, as was indicated in the intentions report of last June, the increase realized, as reported in December, was only 4 percent. The December survey shows that producers are now planning a reduction of 11 percent from last year in the number of sows to farrow this coming spring. We are glad to note that here in the South little or no decrease is contemplated. In the Corn Belt States, the indicated decrease is 14 percent. With average size litters, the 1948 spring pig crop will total about 48,000,000 head, or nearly 5,000,000 less than last year. These pigs will come to market next fall and winter.

The short corn crop of last year not only has caused farmers to produce fewer pigs but it also caused them to market last spring's pig crop earlier than usual. Slaughter during the period October to December exceeded that of a year earlier by more than 2,000,000 head, although the 1947 spring pig crop was less than a million greater than the 1946 crop. The supply of hogs now on farms for market during the next 4 months appears to be about 2,000,000 less than a year ago.

The supply of hogs for slaughter from May to September will come largely from the pig crop produced last fall and from the sows farrowing pigs this spring. These hogs will provide the sows and gilts that will farrow next fall's pig crop. If prospects for the corn crop are favorable in June and July the hog-corn price ratio at that time is likely to be sufficiently favorable to encourage farmers to increase fall farrowings, and this would thus reduce the supply of hogs for the summer market. An increase of 10 percent in sows and gilts held for farrowing next fall would reduce the summer market supply of hogs by a half million head. These indications as to probable supplies point to a possible reduction of about 4 percent in the number of hogs for slaughter during the next 9 months. Since market weights will be less than in 1947 when they were considerably above average, the reduction in pork output will be relatively greater than the decrease in numbers.

If more sows are bred to farrow next fall as a result of favorable prospects for the corn crop next summer, the increase in pigs raised will not be reflected in increased pork supplies until the spring and summer of 1949. Beginning at that time we may see an upward trend in pork production under way which might continue for 2 or more years, depending on the availability of plentiful supplies of corn to maintain increased production.

In contrast to the factors causing the downward trend in hog and sheep production, the supply of cattle and calves is being reduced because of the high level of cattle prices and the uncertainty as to how long these prices will continue. Cattlemen are in much the same position as the owner of a house who has an opportunity to sell it at a price far above what he paid for it, and who thinks he might be able later to buy another house equally as good for considerably less. They are inclined, therefore, to sell cattle more closely than ever before—thus reducing their breeding herd and replacement stock—and hoping that later when prices decline to lower levels they can rebuild their herds by buying breeding stock from those who did not sell. While this is generally considered to be a wise practice in most lines of business, it results in reducing cattle numbers and making fewer cattle available when the seller desires to restock.

The slaughter of 36,000,000 cattle and calves last year indicates that cattle numbers now total around seventy-six to seventy-seven million head, or about 4,500,000 less than a year earlier. Cattle numbers reached their peak 3 years ago when the total was estimated at 85,600,000. They were reduced by 4,500,000 head in 1945 and 1946, and apparently by about the same number last year. Present cattle numbers, therefore, are indicated to be about 9,000,000 less than the peak of 3 years ago—which is a decrease of a little more than 10 percent.

The official estimates of livestock numbers will be released late next month, and not until then will we know for certain which classes of cattle have been reduced most. During the first half of last year an unusually large proportion of the available supply of steers and heifers was slaughtered. During the second half the slaughter of cows was very large in relation to cow numbers. Calf slaughter during the year was near a record proportion of the calf crop produced, being equivalent to nearly 40 percent of the crop.

The indications on cow and heifer slaughter in 1947 point to a probable reduction of about two and one-half million head in the total number of all cows and heifers 2 years old and over, but it is not certain as to how the indicated decrease is divided as between beef cows and milk cows. The sharp drop in the ratio of prices of milk and butter to feed prices last year probably caused dairymen to cull their herds more closely than normal, especially during the fall months, and this may account for much of the large increase in cow slaughter at that time.

Because of the large reduction in cattle numbers last year and the reduced supplies of feed grain now available, we can expect fewer cattle for slaughter this year. The number of cattle on feed January 1 was 12 percent less than a year earlier, and the smallest since 1940. In the Corn Belt the decrease in number on feed was 19 percent. Outside the Corn Belt the total on feed is 12 percent greater than last year and the largest on record. Most of this increase is in California and Colorado. Supplies of hay, roughage, and byproducts of sugar beets used for cattle feeding are somewhat more abundant this year in the Western States, and demand for all classes of livestock for slaughter is unusually strong on the Pacific coast because of the great increase in population there since prewar years.

It is somewhat uncertain as to how large the decrease in slaughter of cattle and calves this year will be, but it probably will be relatively less than the decrease in number of cattle fed. The goal for combined slaughter of cattle and calves is 32,000,000 head. Stopping the decline in cattle numbers this year would necessitate reducing total slaughter to about thirty million, or about 17 percent below that of last year. With demand for meat as great as it now is, a reduction this large in slaughter is not to be expected. A reasonable expectation would be around 10 percent.

In years of short feed supplies, the general practice is to market fed cattle early and to produce relatively few long-fed or highly finished cattle for the summer and early fall markets. This pattern of feeding and marketing is likely to be followed this year, as is indicated by the kinds and weights of cattle taken out for feeding last fall. Ship-

ments of stocker and feeder calves from the four larger markets in the last half of 1947 were 36 percent less than a year earlier. This indicates a large reduction in supplies of fed cattle in the late summer and fall. Feeder shipments of cows, heifers, and bulls were reduced by 38 percent, which means a much smaller supply of these kinds for slaughter during the winter and spring than a year earlier when they were unusually large. Total shipments of feeder steers from the four markets were 19 percent less than in the last half of 1946, and all the decrease was in steers weighing under 900 pounds. From these indications as to numbers and kinds of stocker and feeder cattle bought last fall, and as to supplies, we can expect the reduction in beef supplies this year to be relatively greatest after June, and be most marked in the better grades.

Meat production in 1947 totaled slightly more than 23,000,000,000 pounds. Output this year is expected to be down about 2,000,000,000 pounds, or nearly 10 percent. The reduction will be relatively greatest in the second half of the year. Fewer fed cattle will be available during the summer and fall, and hog marketings in the last quarter will be down sharply from the previous year.

There is little prospect of increased imports of livestock or meat from Mexico and Canada, our main sources of such imports. Imports of live cattle from Mexico, formerly an important supplier of stocker and feeder cattle, are now barred from entry here because of foot-and-mouth disease in that country, and will continue to be barred until it has been determined that the disease no longer exists anywhere in Mexico. For several years we imported about a half million cattle yearly from Mexico—mostly calves and yearlings for grazing on pastures in the Southwest before going to feed lots or to slaughter. With these cattle no longer available, Western stockmen and packers will have to look to you cattlemen here for some of their needed supplies.

Imports of cattle and meats from Canada are only nominal now because of an embargo imposed by the Canadian Government so as to enable it to carry out commitments to furnish beef for export to Great Britain. These commitments extend into 1950. Since cattle prices in Canada are only about half as high as in this country, the removal of this embargo so as to permit the entry of Canadian cattle here would cause meat prices to rise sharply in Canada and bring marked complaints from consumers there.

Although the proposed plans for aiding economic recovery in Europe provide for shipments of large quantities of food products abroad, it is unlikely that any meat other than horsemeat will be included in these shipments—at least for the first 2 years the program is in effect.

Looking beyond 1948 into 1949 and the early fifties, the indications point to continued decreasing supplies of lamb and mutton and beef and veal, but probably an upturn in pork output beginning in the late spring or fall of 1949. The increase in pork production will depend on the outcome of the corn crop this year and next, but it is doubtful if the increase obtained will be sufficient to offset the probable reduction in the output of other meats.

How much longer cattle numbers will decrease is somewhat uncertain. The downward trend will end when producers have more confidence in future price stability and when they find it necessary to retain cattle to obtain the maximum net return from their pastures and crops. A good stand of grass is a great incentive to own cattle. Pastures without cattle are like a house for rent without a tenant. You can never recoup for the time not used.

When cattlemen start holding heifers and cows to increase numbers, this will further reduce the supply of cattle for slaughter for at least 2 or 3 years after this action is taken. Assuming that the present downward trend in cattle numbers is not likely to end before 1950, there is reason to expect that supplies of cattle and calves for slaughter will probably continue to decrease until 1952 or 1953. During the low years the yearly total probably will be less than 30,000,000 head. Because of increasing population—now expanding at the rate of nearly 2,000,000 a year—the supply of meat per person will decrease at a faster rate than the total supply, and will probably drop close to the levels of the decade of the thirties when per capita consumption for the period averaged about 130 pounds. Last year it was about 155 pounds and this year it is expected to be about 143 pounds.

The most uncertain factor in the immediate and long-time outlook for the livestock industry is the probable demand for meats. Those engaged in analyzing business trends and the factors determining the incomes received by consumers are forecasting a continuation of the present high level of business during the first half of 1948, with some possibility of a slight decline in the second half. In the latter period, production of some items now in short supply is expected to catch up with demand. For years beyond 1948, demand prospects are much less certain, but producers should keep in mind that this country is in a much different position than other countries, and much different from what it was before the war. Its population and standards of living have increased, and the requirements of its people are much greater. Meat is one of the foods most greatly desired. Supplying that desire is an obligation of livestock producers and also a challenge. By meeting the challenge you not only will increase your contribution to society, but over the long period you stand to increase your profits.

In my judgment the long-time prospects indicate a need for greater livestock production to take care of future demands. The possibilities of increasing cattle production appear to be greater here in the South than in most other areas, and now is the time when action should be taken to get the increase that will be needed.

1948—The Outlook for Peace

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. JENISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address on a subject of grave concern to our country and the world, delivered by a distinguished citizen of my home town of Paris, Ill. The speaker was Allen D. Albert, D. Sc., early president of Rotary International and widely known scholar in the allied fields of government and world affairs. The occasion was his annual address to the Paris Rotary Club. Because it presents a comprehensive survey of world conditions and a scholarly analysis of hopes for peace, I commend it for study by every Member of the Congress:

1948—THE OUTLOOK FOR PEACE

The greater the war the greater the turmoil left behind.

World War II was in every way the greatest war of history.

The turmoil left behind for us to allay was and is the most widespread, the most intricate, the most nearly hopeless of all the afflictions that have come upon mankind.

Yet the men and women who look into world progress most analytically, the social and political scientists, look upon that coil of difficulties without panic. They perceive in it, I am confident, a hope that contradicts our current headlines of "The Third World War." They take it to be altogether probable, I am confident—

1. That in 1948 humanity will grind along nearer and nearer to what is called world peace, meaning the cessation of armed hostilities.

2. That with or without the atomic bomb Russia can be counted upon not to undertake a major war within a generation.

3. That the United Nations is doing more than fairly well the work for which it was designed.

AMERICANS COULD WELL STOP TO THINK

We are to try today to see the present confusion of the world as these specialists see it and we may well begin with a momentary look at ourselves. Norman Makin, Australian Ambassador to our country, afforded such a glimpse lately by quoting an American industrialist as saying:

"It is strange that so many of us were once upon a time deluded into believing that such a devastating hurricane would suddenly blow away and disclose a brave new world with all of our dreams come true.

"For 6 years our human society was in a terrible convulsion. It took the greater part of those 6 years for America to reach a high peak of efficiency in destructive war. We are now but 2 years away from convulsive destruction. How much of that destruction did we expect to remedy in 2 years?"

Another misjudgment is suggested by Ralph Sockman, president of the Church Peace Union:

"Too often we think that the will to peace is found only in America. We are wrong. For the will to peace is present everywhere in the world, among men and women of good will who want to make this world both neighborhood and brotherhood."

Again, we people of America in particular have come to live by headlines. We must have a new headline every 24 hours. Any of us who can wedge a moment of thoughtfulness in between the news summaries on the air will realize that any important influence upon human living should be the subject of a thought now, a meditation later on, through a week, or a month, or a year.

GOOD AND BAD AFTER THE WAR

Suppose in that fashion we look into the turmoil brought upon us by World War II.

Storm, drouth, flood, earthquake, fire, disasters of the air and sea and land have come to the four corners of the earth in 1947.

Organized labor, conscious of a new political weight, and organized management, fearful of further constraint, have so contended with each other that in the richest country of the earth employment and prices are continuously threatened with instability.

Science has entered all our calculations—

With new possibilities of unlimited good, as in the treatment of disease, the increase of health, the prolongation of human life, the devising of new instruments of navigation, the release through atomic fission of unlimited resources of industrial power.
